Chic. American pop group. It was formed in 1976 by Nile Rodgers (*b* New York, 19 Sept 1952; electric guitar) and Bernard Edwards (*b* Greenville, NC, 31 Oct 1952; *d* Japan, 18 April 1996; bass guitar) and included Tony Thompson (drums), Norma Jean Wright and Alfa Anderson (both vocals): Luci Martin replaced Wright in late 1977. Their first hit *Dance, Dance, Dance* (*Yowsah, Yowsah, Yowsah*) (1977) introduced their basic compositional approach: chant-like group vocals during the choruses alternated with more melodic female-dominated or solo female vocals during the verses. The focus of the recordings, however, was the instrumental sound featuring infectiously interlocking rhythms produced by Edwards's extraordinarily mobile bass-playing, Rodgers's syncopated, choked guitar style and Thompson's four-on-the-bar kick drum. This combination produced a slick funk sound verging on disco with a texture that remained remarkably spare despite the use of orchestral instruments to sustain pitches and play riffs. Edwards combined the steady accents and octave runs typical of disco with percolating off-beat rhythms and wide-ranging melodic lines, fulfilling the function of both bass and lead instruments. After *Dance, Dance, Dance* the band's most successful singles were *Le Freak* (1978), *I want your love* (1978) and *Good Times* (1979) which provided the basis for the Sugarhill Gang's pioneering hip hop record *Rapper's Delight* (1979). Chic's popularity waned after 1979 and the group broke up in 1983. As producers, Edwards and Rodgers continued to be in demand both together and individually, and were involved with such performers as Sister Sledge, Carly Simon, Debbie Harry, Diana Ross, Aretha Franklin, Madonna (*Like a Virgin*), Robert Palmer (*Addicted to Love*) and David Bowie (*Let's dance*). When producing, Rodgers and Edwards often played as well, thus lending the Chic sound to these records, particularly with Sister Sledge. Chic reformed in the early 1990s but their reunion album *Chic-ism* was a commercial failure.

DAVID BRACKETT

Chicago. City in Illinois, USA. It is the third-largest city in the USA, and an important musical centre.

1. Early history. 2. Orchestras, choirs and festivals. 3. Opera and musical comedy. 4. Music schools and libraries. 5. Music publishers and instrument makers. 6. Composers and writers on music. 7. Jazz and blues. 8. Traditional music.

1. EARLY HISTORY. Chicago was established in the late 18th century as a trading post near the southern end of Lake Michigan, and in 1803 Fort Dearborn was built there. The village was incorporated in 1833 and received its city charter in 1837. Much of the city was destroyed by fire in 1871, but it was rebuilt and soon became a centre for trade and transport.

Chicago's concert activity until about 1880 was provided chiefly by touring artists and amateur music societies. The impresario P.T. Barnum brought musical attractions to Chicago as early as 1840. Later important touring artists included Adelina Patti, who made her first Chicago appearance in April 1853 with the violinist Ole Bull, and the pianist L.M. Gottschalk, who performed there several times in the 1860s. Early concert halls included Rice's Theatre and McVicker's Theatre; the first auditorium designed for concerts was Tremont Music Hall, which opened in 1850 in the Tremont Hotel. As bigger theatres were built, opera companies, orchestras and concert artists made regular visits to the city.

There were music schools and private music teachers in Chicago as early as 1835, and amateur performing groups soon followed. The Old Settlers' Harmonic Society (1835–6, sometimes called the Chicago Harmonic Society) was the first formal musical organization in the city. Other societies were the Chicago Choral Union (1846), the Mozart Society (1849), the Musical Union (1858–66), the Oratorio Society (1868–71) and the visiting Germania Musical Society. The Apollo Musical Club, still active (as the Apollo Chorus of Chicago) in the 1990s, was organized as a male chorus by Silas G. Pratt and George P. Upton in 1872; women formed an occasional auxiliary chorus from 1874 and were admitted permanently in 1885.

2. ORCHESTRAS, CHOIRS AND FESTIVALS. Chicago's first orchestra, the Philharmonic Society, performed from 1850 to 1868, conducted first by Julius Dyhrenfurth and later by Hans Balatka. Another orchestra performed under Henry Ahner from 1856 to 1858. The Chicago Orchestra was formed in 1891, with Ferdinand W. Peck as president. Theodore Thomas, who with his orchestra had visited Chicago for several seasons and was to be musical director of the World's Columbian Exposition (1893), was appointed its first conductor. The orchestra performed in the Auditorium Theatre, and moved in 1904 to the new 2566-seat Orchestra Hall (see illustration). Thomas died in 1905; from 1906 it was called the Theodore Thomas Orchestra, and in 1912 it was renamed the Chicago SO. Thomas's successors were his assistant, Frederick Stock (1905–42), Désiré Defauw (1943–7), Artur Rodziński (1947–8), Rafael Kubelík (1950–53), Fritz Reiner (1953–63), Jean Martinon (1963–9), Georg Solti (1969–91) and Daniel Barenboim (from 1991). Significant premières given by the orchestra include Prokofiev's Third Piano Concerto (1921), Stravinsky's Symphony in C (1940), Kodály's Concerto for Orchestra (1941), Roy Harris's Seventh Symphony (1952), Martinon's Fourth Symphony, *Altitudes* (1965), Henze's *Heliogabalus Imperator* (1972), Tippett's Fourth Symphony (1977), Lutosławski's Third Symphony (1983), Corigliano's First Symphony (1989), Takemitsu's *Visions* (1989), Carter's Partita (1994) and Birtwistle's *Exody* (1998). Resident composers since the 1980s have been John Corigliano, Shulamit Ran and Augusta Read Thomas. The orchestra achieved international renown through its recordings, particularly under Reiner and Solti, and overseas tours beginning in 1971. The Chicago Symphony

Orchestra Hall, Chicago, designed by Daniel H. Burnham, opened 1904

Chorus, founded in 1957 by Margaret Hillis, has made tours and recordings both independently and with the orchestra.

The Civic Music Association of Chicago was founded in 1913 in order to encourage the study of music; in 1919 it helped Stock organize the Civic Orchestra of Chicago for the training of young instrumentalists. The Chicago Children's Choir was established in 1956. Music of the Baroque, a professional chorus and orchestra, was founded in 1971 to perform the oratorio repertory. In addition, a number of early music groups have been based in Chicago, including the chorus His Majestie's Clerkes, the Chicago Baroque Ensemble and the Newberry Consort.

Two major annual summer festivals have been held in Chicago. From 1906 Ravinia Park, in the northern suburb of Highland Park, has held a summer season of music, dance and theatre which was suspended only during the 1930s depression. Its music directors have included Seiji Ozawa (1964–8), István Kertész (1970–72), James Levine (1973–93) and Christoph Eschenbach (from 1995). In July 1936 the Chicago SO played for the first time at the Ravinia Festival, which then became its regular summer home. A municipally sponsored summer orchestra series has been held since 1934 in a bandshell originally erected by the Works Progress Administration in Grant Park, on the lake shore near the centre of the city. Originally Grant Park Concerts, the series was renamed the Grant Park Music Festival in 1995.

3. Opera and musical comedy. Chicago's first opera performance was of Bellini's *La sonnambula* in 1850. A second season was held in 1853, and from 1858 opera was a regular part of the music calendar. By 1875 more

than 60 operas had been heard in the city, many of them recent works. Crosby's Opera House opened in 1865 with a stage suitable for full-scale grand opera; it was destroyed in the 1871 fire but quickly rebuilt. For the next decade light opera, operetta and musical comedy dominated the city's stages, and grand opera was not revived until the early 1880s. During the 1883–4 season the rival New York companies of Henry Abbey and James Henry Mapleson visited Chicago. In 1889 the Metropolitan Opera of New York performed Wagner's complete *Ring* cycle in the new 4000-seat Auditorium Theatre, which was to be the city's principal venue for opera for the next four decades.

In 1910 Chicago's first resident opera company, the Chicago Grand Opera Company, was formed with Harold McCormick, a financier, as president and Cleofonte Campanini as musical director. During its first season Mary Garden, who was to be a central figure in Chicago opera for 21 years, performed in Debussy's *Pelléas et Mélisande*, Charpentier's *Louise* and Richard Strauss's *Salome*. A highlight of the Garden years was the première of Prokofiev's *The Love for Three Oranges* in 1921 during her one season as general director of the company.

Between 1910 and 1946 there were some seven opera companies in the Chicago area (several of them successive names for the same, reorganized company). All shared artists with the Metropolitan and leading European theatres, all presented a diverse repertory and all ceased operation because of financial difficulties. From 1912 to 1931 a summer season of opera was presented at Ravinia Park. In 1929 most opera performances moved to the new 3500-seat Civic Opera House.

The Lyric Theatre of Chicago, with Carol Fox as general manager, presented its first three-week season there in November 1954, during which Maria Callas made her American début in Bellini's *Norma*. In 1956 the company was renamed Lyric Opera of Chicago. It was essentially an Italian company (often called 'La Scala West'), with nearly 70% of its repertory Italian. Fox and Ardis Krainik, who succeeded her in 1981, looked largely to Europe for new talent. Later, American singers and conductors made more frequent appearances, and the scope of the company's repertory widened; notable works commissioned by Lyric Opera include Penderecki's *Paradise Lost* (1978), Bolcom's *McTeague* (1992), Anthony and Thulani Davis's *Amistad* (1997) and Bolcom's *A View from the Bridge* (1999). Resident composers since the 1980s have included Bright Sheng, Bruce Saylor, Shulamit Ran and Michael John La Chiusa. Opera is also presented by numerous smaller groups, notably the Chicago Opera Theatre, founded in 1974, which performs opera in English with an emphasis on works best suited to a smaller theatre.

From the turn of the century to the outbreak of World War I Chicago was also a centre for musical comedy. Among the composers who wrote for this regional market were Reginald De Koven, whose operetta *Robin Hood* (1890) and opera *Rip Van Winkle* (1920) were first heard there; Gustav Luders (*King Dodo*, 1901; *The Sho-Gun*, 1904); Raymond Hubbell (*Chow-Chow*, 1902, later produced on Broadway as *The Runaways*); Ben Jerome (*Louisiana Lou*, 1911, a vehicle for Sophie Tucker; *The Girl at the Gate*, 1912); and the prolific Joseph E. Howard who between 1904 and 1915 wrote some 17 shows for the LaSalle Theatre. Later, musical comedy in Chicago was provided chiefly by touring companies of New York productions or revivals produced locally. An exception was the long-running Broadway musical *Grease* (New York opening, 1972), originally a successful Chicago production, greatly altered for New York.

4. Music schools and libraries. Chicago's first important music conservatory was the Chicago Academy of Music, founded in 1867 by Florenz Ziegfeld; it later became the Chicago Musical College and then part of Roosevelt University. Ziegfeld was its president until 1916; among his successors were Felix Borowski (1916–25) and Rudolph Ganz (1933–54). Other conservatories were established by Hans Balatka (1879), John R. Hattstaedt (1886) and William H. Sherwood (1897). The University of Chicago has had outstanding courses in Renaissance music studies, composition and ethnomusicology; it also sponsors a professional performing group, the Contemporary Chamber Players. Northwestern University, in the northern suburb of Evanston, began to offer music instruction in 1873, and a school of music was established in 1895. Its library has a special collection of materials relating to Cage, part of the Moldenhauer Archive of 20th-century manuscripts, and extensive memorabilia, scores and correspondence of Fritz Reiner.

The Newberry Library has a rich collection of Renaissance and American music sources, and the music library of the University of Chicago has an important music history collection. The Chicago Historical Society contains documents of the city's musical history as does the Chicago Public Library. The Field Museum of Natural History has an important collection of musical instruments. Three newer repositories of source material for Chicago's musical history are the Chicago Jazz Archive at the University of Chicago, the Chicago Blues Archive at the Chicago Public Library and the Center for Black Music Research at Columbia College. The sheet music collection of Walter N.H. Harding, a valuable source of research material particularly for British and American popular song, went to the Bodleian Library, Oxford, in 1973 after its owner's death.

5. Music publishers and instrument makers. Chicago has had many publishers of school music books, gospel music and popular sheet music. The most important early firm was Root & Cady (1858–72); others included S.C. Griggs & Co. (1848–71), the first music publisher in Chicago; Joseph Cockcroft, the first in Chicago to print music from movable type (1853–4); Higgins Brothers, later H.M. Higgins Co. (1855–67), publishers of the popular songs of H.P. Danks and J.P. Webster; Clayton F. Summy, a leading publisher of educational music from 1888 to 1932; and the firm of Will Rossiter, founded in 1891 and the city's leading sheet music publisher in the early years of the century. After 1920 New York's domination of popular music publishing forced many Chicago firms to move east or to go out of business. The University of Chicago Press has published Monuments of Renaissance Music, a series of critical editions of 15th- and 16th-century music, and, in association with Ricordi in Milan, the critical edition of the works of Verdi.

Musical instrument manufacture, particularly of pianos and organs, was an important industry in Chicago from the mid-19th century. The W.W. Kimball Company was founded as a distributor in 1875 but began manufacturing organs in 1880 and pianos in 1887. Lyon & Healy,

established as a music shop in 1864, began making musical instruments in 1885; later the firm was an innovatory manufacturer of harps. Organ builders have included Story & Clark, Wilcox & White, and Estey.

6. Composers and writers on music. Popular songwriters who were active in Chicago in the mid-19th century include Henry Clay Work, who began as a music printer and later composed Civil War marching songs and parlour ballads; George F. Root, a partner in the firm of Root & Cady, also remembered for his patriotic songs of the Civil War; and Carrie Jacobs-Bond, also a publisher but better known for her sentimental ballads. The organist and composer Dudley Buck lived and worked in Chicago from 1869 to 1871, and P.P. Bliss, a composer of evangelist and gospel music, worked there from about 1864 until his death in 1876. Joseph E. Howard, in addition to his musical comedy scores, wrote popular songs in the ragtime style.

20th-century composers who have been associated with Chicago include John Alden Carpenter, who enjoyed critical acclaim during the 1920s while also pursuing a successful business career, and Leo Sowerby, who taught at John R. Hattstaedt's American Conservatory from 1925 to 1962 and for most of that time was choirmaster at the Episcopal Cathedral of St James. Ralph Shapey, Easley Blackwood and Shulamit Ran have all been members of the faculty of the University of Chicago, and Alan B. Stout joined that of Northwestern University in 1963. Other Chicago composers who achieved distinction in the latter part of the century include John Austin, John C. Eaton, George Flynn and Howard Sandroff.

Important among the city's writers on music are George P. Upton, who in 1863 became the first music critic on the *Chicago Tribune* and was a writer on opera and on individual composers; W.S.B. Mathews (1837–1912), author of books on music education and founding editor of the journal *Music* (1892–1902); and the composer and educator Felix Borowski (1872–1956), music editor of the *Chicago Sun* and programme book annotator for the Chicago SO.

7. Jazz and blues. Throughout the 20th century Chicago played a central role in the evolution of jazz and blues. There are several reasons for this. First, the city's industrial might attracted a massive influx of young workers from around the world during the first two-thirds of the century. Many of these people arrived at the time of the so-called Great Migration of black Americans from the southern states. Their increased numbers created a new demand for cabarets, cafés, restaurants, dance halls, amusement parks and cinemas, particularly on the South Side, while also stimulating the market for racially orientated music there and in the city's other entertainment districts. Mayor William Hale Thompson created a permissive city environment for the flouting of Prohibition as well as the enjoyment of new musical entertainment. The concentration over several generations of so many black Americans in the South Side ghetto generated an intense and culturally distinctive creative environment for both jazz and blues.

Ragtime pianists, important precursors of jazz, gravitated to the World's Colombian Exposition in 1893 where they set in motion the grand procession of 20th-century popular music styles associated with the city. Since New York's Tin Pan Alley dominated the music publishing business, Chicago tended more to attract performance artists rather than professional songwriters, and specialized in musicians who excelled at nightclub and dance hall work. New York swiftly took national control of the recording, broadcasting and booking of popular music as well, so that by comparison Chicago produced less heavily mediated music, often thought, for that reason, to be more authentic. As early as 1906, such influential performers as the pianists Tony Jackson and Jelly Roll Morton experimented with new improvisational possibilities that did much to transform ragtime into jazz. So, too, Chicagoans listened to cornettist bandleaders Freddie Keppard, Manuel Perez and, especially, King Oliver well before the 1920s. While most of the earliest Chicago pioneers were black Americans, a white group calling itself Stein's Dixie Jass Band performed at Schiller Caf in 1916. Several members of this band subsequently reorganized as the Original Dixieland Jazz Band and in 1917 played on the first jazz records ever made.

Chicago's attraction proved especially powerful for musicians from New Orleans and the Mississippi Delta. Bountiful club work and, beginning in 1923, the possibility of making records proved irresistible. From 1917 to 1923, groups like King Oliver's Creole Jazz Band, which included such powerful instrumentalists as the cornettist Louis Armstrong, the clarinettist Johnny Dodds and the drummer Baby Dodds, travelled between Chicago and Richmond, Indiana, to record for the Gennett label. But new popular labels such as Okeh, Paramount and Vocalion soon organized active recording programmes in Chicago. Louis Armstrong with his Hot Five and his Hot Seven recorded for Okeh in Chicago, as did the pianist Earl Hines and the clarinettist Jimmie Noone. The jazz and blues speciality labels worked the black American race market, and Chicago soon developed the reputation of being the nation's centre for authentic blues and jazz recording of emigrant Southern musicians.

The excitement of the city's nightlife, combined with an increased awareness of New Orleans jazz and the vaudeville blues of Ma Rainey and Bessie Smith, led to the formation of many white jazz groups. Among the most influential in the 1920s were the New Orleans Rhythm Kings, who played a 17-month engagement at Friar's Inn nightclub. A variety of recording groups which often included the banjo player and tenor guitarist Eddie Condon, the cornettist Jimmy McPartland, the clarinettist Frank Teschemacher, the tenor saxophonist Bud Freeman, the pianist Joe Sullivan and the drummer Dave Tough, soon came to be known as the 'Chicagoans' and their music as Chicago Jazz, retrospective labels used by New York recording executives. Some of these youngsters hailed from Austin High School in Chicago's west end and sometimes referred to themselves as the Austin High Gang. Their ties to that school were not close, however, and the city itself rather than the suburbs remained the focus of jazz activity. Several young white 'Chicagoans' hailed from the city. The clarinettist and orchestra leader Benny Goodman went on to become the King of Swing in the 1930s and 40s, most often with drummer Gene Krupa spurring him on. The pianist Art Hodes built a long and successful career as a blues-influenced piano stylist and the cornettist Muggsy Spanier made many important records. Many other white jazz musicians often associated with Chicago, such as Eddie Condon, Wild Bill Davison

and Bix Beiderbecke, migrated in and out of the city from various locations in the Midwest.

Most of the more professionally ambitious members of the 1920s jazz scene in Chicago left for New York City late in the decade. The media and the music business increasingly centralized into national organizations run from the eastern city, a trend that the Depression accelerated. Such influential musicians as Jimmie Noone, the Dodds brothers, Art Hodes and Earl Hines continued to live and perform in Chicago, however.

The national media transformed jazz into Big Band Swing, beginning in the mid-1930s, but the blues remained a more ethnic, speciality taste that was relatively less commercialized, less nationalized, and therefore a more authentic musical style closely associated with Chicago's South Side. The Paramount, Vocalion and Bluebird labels recorded many of the leading blues singers in their Chicago studios, including Blind Lemon Jefferson from Texas, Big Bill Broonzy and Sonny Boy Williamson from Mississippi, Blind Blake from Florida and Thomas A. Dorsey and Tampa Red, both of whom had emigrated from Georgia. Such record producers as J. Mayo Williams, Lester Melrose and the Chess brothers shaped performances that created urban musical memories of the rural south. A Chicago school of emigrant blues pianists that included Cripple Clarence Lofton, Jimmy Yancey, Meade 'Lux' Lewis, Albert Ammons and Pine Top Smith performed at South Side rent parties and led a national craze for boogie-woogie piano stylings during the time of the Depression.

During World War II a new and more urbanized blues style emerged in Chicago through the work of such performers as Willie Dixon, Elmore James, Little Walter, Muddy Waters, Howlin' Wolf, Otis Spann, Otis Rush, Memphis Minnie, Jimmy Reed, Sonny Boy Williamson and Bo Diddley. The 1920s sound of the solitary male vocalist singing in a Southern rural manner while accompanying himself on the guitar melded with the jazz rhythm section, electrified instruments and a more commercial pronunciation of the lyrics. As recorded by the Chess label in Chicago, this style, variously termed urban blues, city blues and northern blues, strongly influenced Berry Gordy, the first African American owner of a successful record company, who founded Tamla Records in Detroit in 1959 which became Motown two years later. Berry further extended blues crossovers into popular song formulae.

The post-World War II years on Chicago's South Side brought a revolution in jazz. In the 1950s the South Side avant-garde pianist/bandleader Sun Ra organized a jazz collective to promote performances and recordings of his Solar Arkestra. In 1961, responding to the decline of Chicago's jazz clubs, the history of racial exploitation in the music business and heightened interest in African-inspired cultural nationalism, a group of young, innovative hard bop and free jazz musicians further developed this idea of a musician-operated performance organization by forming the Experimental Band. Reorganizing themselves into the Association for the Advancement of Creative Musicians, such musicians as Anthony Braxton, Malachi Favors, Joseph Jarman, Roscoe Mitchell, Leroy Jenkins, Don Moye and many others challenged the musical traditions and political parameters of jazz. The AACM advocated free, atonal music arranged into multi-sectional units and minimized the role of the individual soloist. The AACM's flagship ensemble the Art Ensemble of Chicago further defied the isolation of jazz from other art forms in its blends of experimental music with costumes, make-up, dance, pantomime, comedy, dialogue and playlets. These musicians performed regularly across the USA and in Europe throughout the 1980s.

Today one can find venues in Chicago for many different jazz styles. The city continues to attract emigrants and tourists for whom jazz remains a vital expression of urban excitement and cultural diversity. From the turn of the 20th century to the present, Chicago musicians have pioneered in both the commercial promotion of jazz and in musical rebellions against the highly unequal distribution of fame in the media.

8. Traditional music. The population of Chicago is ethnically and racially diverse, and most groups strive to retain their own musical traditions. Black musicians contributed significantly to the development of jazz and blues in Chicago (see §7). The gospel music tradition in the city's black churches has also produced music and musicians of more than local importance, among whom the best known was Mahalia Jackson. The tradition of street evangelists, in which blind musicians were important, was curtailed by vagrancy laws after World War II but continued to the 1960s. Chicago has served since the beginning of the 20th century as a centre for recording, publishing, broadcasting and distributing Polish music, as well as being the home of numerous well-known performers and performing groups. Irish music has a long tradition in Chicago; much of it was gathered by Francis O'Neill (*b* 1849), compiler of *Music of Ireland* (1903) and other collections of traditional Irish tunes, who settled in Chicago in 1871. Germans were influential in the early development of mainstream musical institutions in Chicago, and have also been enthusiastic supporters of amateur choral singing.

Chicago jazz. A sub-species of New Orleans jazz developed by young white musicians in the Chicago area during the mid-1920s. A number of these musicians were associated with the so-called Austin High School Gang (Jimmy McPartland, Dave Tough, Frank Teschemacher, Joe Sullivan and Bud Freeman); others, notably Benny Goodman, Gene Krupa and Muggsy Spanier, were native to Chicago, while still others, such as Eddie Condon, PeeWee Russell and Red McKenzie, moved to Chicago early in their careers. Although only intermittently active in Chicago, Bix Beiderbecke and Frankie Trumbauer are also sometimes associated with this school. At first the Chicagoans merely copied the New Orleans style of King Oliver and the New Orleans Rhythm Kings, but brought to it in some cases a superior instrumental technique (Goodman) and a more hectic and extrovert rhythmic basis (Krupa), together with a greater emphasis on solo playing. In general, however, they varied the basic features of New Orleans jazz rather than developing an independent style. With the suppression of Chicago's speakeasy culture in the late 1920s most of these musicians moved to New York, where several of them became important figures in the swing style of the 1930s. (W.H. Kenney: *Chicago Jazz: a Cultural History, 1904–1930*, New York and Oxford, 1993)

J. BRADFORD ROBINSON

Chickering. American firm of piano makers. Jonas Chickering (*b* Mason, NH, 5 April 1797; *d* Boston, MA, 8 Dec 1853) had apprenticeships with cabinetmakers in New Ipswich, New Hampshire, and Boston, and from 1819 to 1823 with the Boston piano maker John Osborne. He formed a partnership in 1823 with the British maker James Stewart; they built about 100 pianos in Boston until 1826, when Stewart returned to London. Chickering then built about 30 to 40 pianos a year until 1830, when he joined in partnership with the wealthy Boston shipping merchant John Mackay. The infusion of capital allowed Chickering to improve and increase the manufacture of square, cabinet upright, and by 1840 grand pianos (in 1839 his firm made over 580 pianos), while Mackay expanded markets for the instruments in American and foreign ports. By 1837 Chickering had developed a one-piece cast-iron frame (patented 1840) for the square piano that improved on a design of Alpheus Babcock, who was then working for Chickering. By 1845 he had devised a circular scale that allowed for freer movement of the hammers, especially in the bass. He was the first important American maker to manufacture grand pianos, for which in 1843 he patented a one-piece iron frame, his most significant innovation. This device gave the instrument solidity, made it more resistant to severe American climates, and permitted higher string tension, so that thicker strings, providing a richer tone, could be used. This frame laid the groundwork for the American system of piano manufacture which, by the 1870s, was dominating the world market. The firm was awarded a medal for its square pianos and a commendation for its grand pianos at the Great Exhibition of 1851 in London. Gottschalk, who toured with Chickering pianos in the 1850s and 60s, praised their fine, delicate tone.

Chickering moved premises in Boston more than once. In 1852 the factory was destroyed by fire; Jonas Chickering died before the completion of his impressive new building. His sons continued the firm as Chickering & Sons. The eldest, Thomas E. Chickering (*b* Boston, 1824; *d* Boston, 14 Feb 1871), was president of the firm until his death. Frank (Charles Francis) Chickering (*b* Boston, 20 Jan 1827; *d* New York, 23 March 1891) directed the company's operations in New York from 1859; he obtained seven patents between 1861 and 1886. George Harvey Chickering (*b* Boston, 18 April 1830; *d* Milton, MA, 17 Nov 1899) managed the Boston fatory. Chickering & Sons won a gold medal at the Universal Exhibition of 1867 in Paris (resulting in a widely publicized conflict with Steinway over which firm won the highest award). A Chickering grand piano of the 1860s typically included a rosewood case, a one-piece metal frame with parallel supports, damper and una corda pedals, and a range of seven octaves and a minor 3rd (*A''* to *c'''''*). In the 1890s financial difficulties led the Chickering brothers to share control of the company with C.H.W. Foster and George L. Nichols. From 1905 to 1911 Arnold Dolmetsch worked with the firm, establishing his own department to build harpsichords, clavichords, lutes and viols. In 1908 Chickering became a division of the American Piano Company. The plant was moved to East Rochester, New York, in 1927 and became part of the Aeolian American Corporation there in 1932 (*see* AEOLIAN (II)). The Chickering name and assets were owned by Aeolian Piano, Inc. from 1980 to 1985, when the bankrupt company was purchased by Wurlitzer; in 1988 the names of Chickering and Wurlitzer were bought by the Baldwin Corporation, which continues to produce pianos with the Chickering name.

CYNTHIA ADAMS HOOVER

Chicotén. *See* TAMBOURIN DE BÉARN.

Chierici, Sebastiano. *See* CHERICI, SEBASTIANO.

Chierisy (*fl* early 15th century). ?French composer. He shares his name with two villages, one just north of Chartres, the other west of Cambrai. His sole surviving work is the Credo which opens the eighth gathering of *GB-Ob* Can misc.213 (ascribed 'Chierisy' but listed in the index as 'Chierisi', and with the characterization 'Virilas'). It is among some of the earliest music in the manuscript, and is for two equal voices, constantly overlapping, with the 'Amen' section in canon at the unison.

DAVID FALLOWS

Chiesa (It.: 'church'). In the Baroque period the qualification 'da chiesa' was added to the title of an individual vocal or instrumental piece, or to an entire volume, denoting that the work or collection was suitable for performance in church. In the late 17th century it was most commonly applied to a four-movement sonata, in the form slow–fast–slow–fast, with at least the first of the fast movements in fugal style.

MICHAEL TILMOUTH/SANDRA MANGSEN

Chiesa, Melchiorre (*b* ?Florence; *fl* Milan, 1758–99). Italian composer. According to Eitner a manuscript work in the Proske collection identifies him as a Florentine, but the only manuscript that Eitner listed from that collection bears only the composer's surname and may be of doubtful attribution. A manuscript motet (in *D-Dl*) was composed in 1758 in Milan, and in June 1762 he was appointed *maestro di cappella* of S Maria della Scala in Milan. In January 1771 Chiesa took over the second harpsichord in the orchestra of Mozart's opera *Mitridate* when Lampugnani moved to the first harpsichord to replace Mozart after the initial performances. He was *maestro al cembalo* with Lampugnani at La Scala for the inaugural season of 1778–9. In 1799 he was judge of the competition for the post of *maestro di cappella* at Milan Cathedral.

In his time Chiesa seems to have been highly regarded as a composer. In 1771 Leopold Mozart wrote in a letter to his wife:

> If about 15 or 18 years ago, when Lampugnani had already composed so much in England and Melchoir Chiesa in Italy, and I had heard their operas, arias and symphonies, someone had said to me that these masters would take part in the performance of my son's composition, and, when he left the clavier, would have to sit down and accompany his music, I should have told him that he was fit for a lunatic asylum.

Burney, in Milan in 1770, wrote that 'Chiesa and Monza seem and are said to be the two best composers for the stage here at present'. Chiesa, however, is not otherwise known to have composed for the theatre. His existing works are sacred (principally in *CH-E*, *D-Dkh*, *Dl*) and instrumental (principally in *A-Wgm*, *D-DS*, *KA*, *Mbs*, *I-Mc*), including a concerto and several flute sonatas. He published a set of six trio sonatas op.1 (Paris, n.d.). Another set of six that appeared in London may be a partial reprint of these.

Chievre, Robert de Reins La. *See* Robert de Reins La Chievre.

Chifonie (Fr.). *See* Hurdy-gurdy.

Chihara, Paul (Seiko) (*b* Seattle, WA, 9 July 1938). American composer. He studied composition with Robert Palmer at Cornell University (MA in English literature 1961, DMA 1965), and continued his studies with Boulanger in Paris (1962–3), Ernst Pepping in Berlin (1965–6), and Schuller at the Berkshire Music Center (1966). He joined the faculty of UCLA in 1966 and was associate professor of music until 1976; during those years he founded and directed the Twice Ensemble, conducted the collegium musicum and was composer-in-residence for the Los Angeles Chamber Orchestra (1971–4). He was Andrew Mellon Professor at the California Institute of Technology in 1975 and taught at the California Institute of the Arts (1976). In 1980 he became composer-in-residence for the San Francisco Ballet. He re-joined the UCLA faculty in 1996 and was Visiting Professor in 1999. He has written over 15 film scores and has worked as a consultant and arranger for stage musicals, including Duke Ellington's *Sophisticated Ladies* (1981). He has received commissions from the Boston SO (Saxophone Concerto, 1981), Los Angeles PO (Symphony no.2, 1981), the Cleveland Orchestra (Viola Concerto, 1989), and the Chamber Music Society of Lincoln Centre (*Minidoka*, 1996) among others.

Chihara's works reflect his interest in oriental music through their emphasis on shifts in timbral colouring and limited pitch movement. *Logs* for double bass (1966) explores a group of brief phrases that may be repeated and combined in different orderings, or altered by the use of vibrato, accent, microtones, or unusual performance techniques. The resultant sonorities may be modified electronically. His later music develops these techniques, emphasizing the patternings of pitch and timbral units. Chihara also employs borrowed materials, as in the *Missa Carminum* which makes use of liturgical chant and traditional folksongs. (*EwenD*)

RICHARD SWIFT/STEVE METCALF

Chilcot, Thomas (*b* ?Bath, *c*1707; *d* Bath, 24 Nov 1766). English composer and organist. He was educated at Bath Charity School, and was apprenticed in 1721 to Bath Abbey organist Josias Priest, on whose death in 1725 he became acting organist on full salary. In 1728, when his apprenticeship was due to end, his appointment was confirmed, and he remained in the post until his death, rarely travelling far from Bath. He married Elizabeth Mills of Bath in 1729 and had seven children, of whom four survived. Following Elizabeth's death, he married Anne Wrey, a member of a prominent West Country family, in 1749; Thomas and Anne are depicted on a memorial tablet in Tawstock Church, near Barnstaple. Chilcot was active in the concert life of Bath, rented out instruments, and was a freemason and a founder-member of the Society of Musicians. His large private library, including a collection of Handel manuscripts, was sold by auction in 1767 and again in 1774. His pupils included Thomas Linley (i).

Chilcot's *Six Suites of Lessons* for harpsichord are Handelian in style and are well crafted. The first suite, which opens with a French overture and chromatic fugue, is considered to be comparable in quality with Handel's suites. The suites also show Chilcot's first attempts at extended binary parallelisms, a sophisticated formal techique not popularized before Domenico Scarlatti's first publication four years later. This technique became the cornerstone of Chilcot's concerto first-movement form. The *Twelve English Songs* follow the fashions of British song collections in the 1740s, with texts by William Shakespeare and Anacreon, a preference for binary (sometimes strophic) rather than da capo form, pastoral or boozy texts and the occasional Scotch snap. Chilcot's instrumentation, however, is imaginative.

The 12 concertos are sophisticated, large-scale works. The meticulously planned first movements are cast in binary form (occasionally evoking sonata forms), but the relationship between solo and tutti resembles ritornello form. Like the early works of Domenico Scarlatti, the first set of concertos is full of hand crossings, several-octave arpeggios and leaping figures. The second set is more restrained and mature. The slow movements are *galant* in style: the D minor Adagio from the fifth concerto of the 1765 set, for instance, has long coloratura melodies without losing its sense of direction. Orchestral parts were published for the 1756 concertos, and a set once owned by William Boyce was catalogued in 1928, but all copies are now lost (except for a single violin part at *GB-Gm*). The second set of concertos was intended to be published in the early 1760s, but was not actually issued until early 1767, shortly after Chilcot's death. The title-page mentions 'accompanyments', but it is uncertain whether orchestral parts were ever issued.

TIM RISHTON

Child, Francis James (*b* Boston, 1 Feb 1825; *d* Boston, 11 Sept 1896). American ballad scholar. He was educated at Harvard and at the universities of Berlin and Göttingen and in 1876 he was appointed the first professor of English at Harvard. His fame rests largely on his masterly compilation, *The English and Scottish Popular Ballads* (1882–98), a five-volume work in which he applied to the ballad the comparative and philological analysis he had brought to his work on Chaucer and Spenser. Although the majority of ballads in his edition of 305 ballad 'types' (i.e. plot types, in over 1000 versions) were from folk tradition, the texts were derived with few exceptions from books and manuscripts rather than from oral sources; he also corresponded extensively with scholars such as Svend Grundtvig, the editor of Danish ballads. The final part of Child's work contains an 'Index of Published Airs' compiled by William Walker: it contains 447 references to Child's ballad numbers and titles, a count raised to 500 by the printing of 53 tunes from manuscript, and shows Child's awareness of the tunes and their importance. He acknowledged Walker's assistance, and most of the latter's work eventually appeared in the selection of Child material edited by Alexander Keith (*Last Leaves of Traditional Ballads and Ballad Airs*, Aberdeen, 1925). A comprehensive thesaurus of ballad tunes based on Child's numbering of types was later completed by Bertrand Harris Bronson.

JAMES PORTER

Child, William (*b* Bristol, 1606/7; *d* Windsor, 23 March 1697). English composer and organist. According to Wood he was a pupil of Elway Bevin, organist of Bristol Cathedral, but there is no evidence for his having been a chorister of the cathedral. He was, however, apprenticed to Thomas Prince, one of the lay clerks, on 5 April 1620,

but since there is no record in the Bristol Burgess Book of Child's admission as a freeman, it is possible that he left the city before completing his apprenticeship.

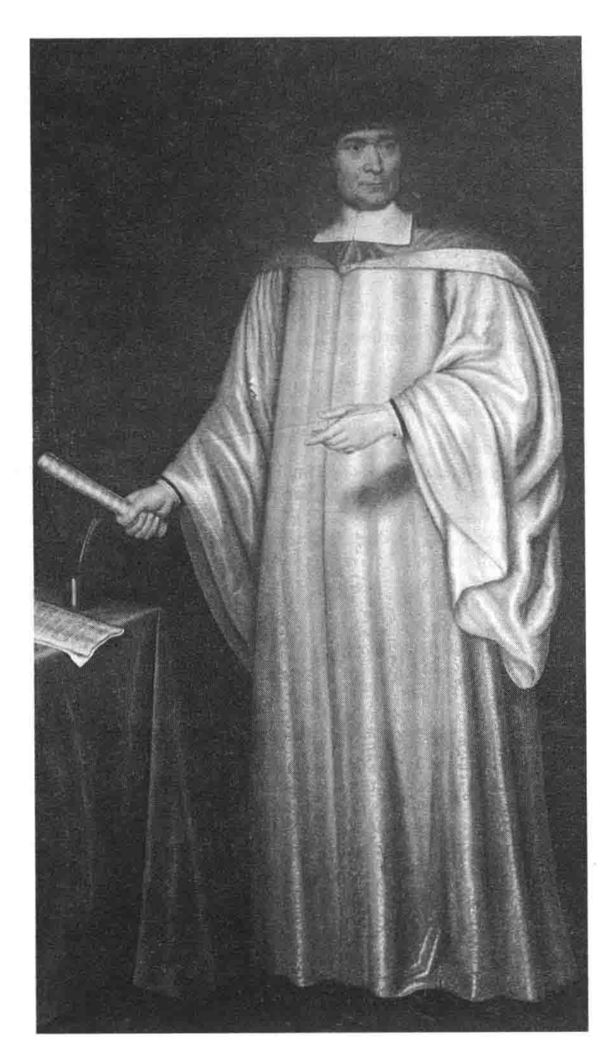
On 19 April 1630 Child was elected to the next vacant clerkship at St George's Chapel, Windsor. Shortly afterwards John Mundy died, and since Child is referred to as organist in a Chapter Act of 1632 (assigning to him one of the St Anthony's almsplaces) it is probable that he took Mundy's place. In 1634 the other organist, Nathaniel Giles, died, and it was agreed that Child, who had been standing in for Giles, should succeed to that place also, provided he found an adequate deputy when he was absent. Child did not take over from Giles as Master of the Choristers, however, though he taught the boys for a few months in 1633 as a stopgap.

Child was admitted BMus at Oxford on 8 July 1631, when he was required to compose 'cantilenam quinque partium' as part of his exercise. According to Tudway (*GB-Lbl* Harl.7338, f.18*r*) this was *Sing we merrily*, though it is in eight parts. He may have been confusing it with the exercise for Child's DMus, which he took after the Restoration, in July 1663.

Some time before 1634 Child appears to have married Joan Prince, the daughter of his old Bristol master, for in his will (1634) Prince made his 'welbeloved sonne in lawe William Child' executor and residuary legatee. Presumably Joan was already dead, since the Windsor parish registers record the marriage of a William Child to Anne Kewe in 1631. The baptisms of two of Child's sons are recorded in the registers of St George's; one at least seems to have been a chorister in 1639.

In 1639 Child's only printed collection was issued by James Reave, and reissued in 1650 and 1656, under the title *Choise Musick to the Psalmes*, by John Playford. Child's settings were probably much in demand at 'private meetings' during the interregnum.

During the Civil War, Child and the rest of the Windsor establishment were ejected from St George's Chapel. No evidence has yet been found to support the statement made by Arnold and others that he retired to a farm, although in May and October 1647 the Committee for Sequestration in Bedfordshire paid salary arrears to 'Wm Child, late organist of Wyndsor ... and his son late Quirister there' of £20 18s. 2d. (and a second payment of half that amount). During this period he received £24 8s. 0d. by order of the House of Lords (1646) and £5 'on certificate of his poverty', by an order of the Trustees for the Maintainance of Ministers (1658). He returned to his former office at the Restoration, and was also made one of the organists of the Chapel Royal. In addition he was granted the post of 'Composer of Wind Musick', initially at least, and cornettist in the King's Music at £46 10s. 10d.; both positions were in effect sinecures. He was in attendance at the coronations of Charles II (1661), James II (1685) and William and Mary (1689), and may have written *The king shall rejoice* and *O Lord, grant the king a long life* for the first two respectively. In 1663 he was exempt from the subsidies due to Charles II and, in 1669, from 'the retrenchment of his Majesty's musick'. In 1686 he was paid £161 5s. 0d. in arrears of livery money.



Child's duties at Whitehall seem to have cut across those at Windsor during the early Restoration, and for some years (1662–5) he was forced to pay Benjamin Rogers to assist him during his absences. The chapter also felt that since he was already being paid £44 a year for a double place at Windsor (in addition to his court appointments) he could not expect certain other perquisites, such as double dividend from the knights' offerings and burial fees. A chapter minute of 7 May 1666 decided that he should have only a single share of these emoluments, since he could 'doe but one duty'. Six years later, however, having obtained some support from the choir, a similar claim was accepted by the chapter. Relations between Child and Matthew Green, the Master of the Choristers, were also strained for a time, and in 1668 Green assaulted him 'and gave Dr Child uncivill and rude language while he was doeing his duty in playing the Organ, and ... did trip up his heels, and when down, did unhumanly beat him'. As a result Green was censured and ordered to pay Child £5, and put on a bond 'for future security of his peaceable behaviour'.

Pepys was acquainted with Child: on 23 November 1660 he records in his diary that among his fellow guests at Lord Sandwich's were 'Mr. Childe and Mrs Bochett, who are never absent at dinner there – under pretence of wooing'. On another occasion, at Windsor, Pepys and his wife having arrived at the Garter Inn 'sent for Dr Childe who came to us, and carried us to St. George's Chapel and there placed us among the Knights' Stalls ... And hither comes cushions for us, and a young singing-boy to bring us a copy of the Anthemne to be sung. And here, for our sakes, had this anthem and the great service sung extraordinary, only to entertain us' (26 February 1666).

The last years of Child's life seem to have been untroubled. The dean and chapter allowed him his house rent-free from 1675, and following the unexpected payment of arrears in his court salary he paved the choir of the chapel with marble at his own expense (this released him from a bargain he had made with the chapter to accept £5 and some bottles of wine in lieu of his back pay). Other acts of generosity included a gift of £50 to the poor of Windsor and £20 towards building the town hall.

Child was buried 'in Woollen' in St George's Chapel on 26 March 1687, and his gravestone is near the present entrance to the organ loft. His will, proved on 6 April and now in Windsor Castle (Register, XIII. B.2), includes a bequest 'to the Clerks of Saint Georges Chapple within the Castle of Windsor to each of them a ring of the value of Tenn shillings'. An oil painting of Child in his doctoral robes (see illustration) hangs in the Bodleian Library, Oxford.

The influence of Italian Baroque style on English church music was felt only gradually during Charles I's reign; Child paid overt tribute to this influence in his *Psalmes*, which he described as 'Fitt for private Chappells or other private meetings with a continuall Base either for the Organ or Theorbo newly composed after the Italian way'. His anthems and services, however, are more conservative, but even in his early works the sort of counterpoint found in Gibbons and Tomkins had given place to a rather stiff style in which mild Italian influences, such as declamatory chordal writing and colourful harmonic juxtapositions, make their appearance. His contrapuntal skill is well illustrated by *Sing we merrily*, while *Turn thou us, O good Lord* shows him at his most expressive. These anthems predate the Civil War, as do other items of service music, such as the famous Sharp Service (in D), which Charles I 'much delighted to hear', the Whole Service (in G), written for Bishop Matthew Wren of Ely

William Child: portrait by an unknown artist, c1663 (Bodleian Library, Oxford)

and containing every sung item in the liturgy, and a *Te Deum* and *Jubilate* in Latin, written for Dr John Cosin when he was Master of Peterhouse, Cambridge. Compared with the best service music of the earlier part of the century, these works are rather dry and skimpy.

With the Restoration, Child came into his own, singlehandedly remedying deficiencies in the cathedral repertory and pointing the way such music should go in the new situation. Most of his services probably date from this period, as well as many of his anthems. The full service, more or less devoid of counterpoint, became the norm, while in the verse service, declamatory (and occasionally florid) solos, duets and trios to an organ continuo replaced the old-fashioned contrapuntal texture of solo voices and organ. A tentative chronology of Child's services and anthems is proposed by Spink 1995, and it seems likely that Child remained active as a composer at least until the early 1680s. His Whole Service (in C) probably dates from about then, being in triple time throughout and quite at home in the company of similar services by Blow, Wise and Aldrich. His latest anthems, such as *Save me, O God, for thy name's sake* and the second setting of *O Lord, rebuke me not*, are characterized by contrasting sections of affective declamation with melodic triple-time verses, an approach that comes close to anticipating recitative-aria pairing.

Much of Child's music suffers from its transitional nature and its utilitarianism, the latter forced on it in part by the need to make a new start and re-establish old traditions after 1660. Burney, though critical of certain harmonic progressions, gave muted praise to the full anthems and found a 'glow of rich harmony' in the Sharp Service. Most writers in the first half of the 20th century have found Child's music lacking in depth and imagination. He was dismissed by Walker as 'a distinctly second-rate composer', and Fellowes, writing of the service praised by Burney, commented: 'In the light of modern ideas this service is devoid of interest ... the material is frequently ill-suited to the words'. Since then editions of his music have revealed Child, in a handful of his best pieces, as a composer of vitality with a sensitive feeling for the words he was setting. His importance was as a model for the first generation of Restoration composers, re-defining the forms of English church music and handing on (and to some extent transforming) a great tradition, which was to flower again in the work of Blow and Purcell – some of whom transcribed his music (*GB-Cfm*). Among his best works are *O bone Jesu, O God, wherefore art thou absent from us* and *Turn thou us O good Lord*, the latter considered by le Huray as 'arguably his finest composition'.

FREDERICK HUDSON/W. ROY LARGE/IAN SPINK

Child ballad. A term applied to any of the 299 ballads contained in Francis James Child's *The English and Scottish Popular Ballads*, i–v (Boston, 1882–98/*R*). *See* BALLAD; ENGLAND, §II, 3(i); SCOTLAND, §II, 5(i); SWEDEN, §II, 3; UNITED STATES OF AMERICA, §II, 1(ii)(a).

Childe (*fl* 15th century). This name is written above a two-part carol, *Blessid be that Lord*, in *GB-Ob* Arch. Selden B.26, a collection of 15th-century carols, and is probably the name of the composer of the piece (ed. in MB, iv, 1952, 2/1958, no.40). Harrison suggested that the composer may have been the William Child who was assistant master at Eton from 1446 to 1449, later Fellow of New College, Oxford, and rector of West Lydford, Somerset (*d* 1487).

DAVID GREER

Childe, Anne. *See* SEGUIN, ARTHUR.

Childs, Barney (Sanford) (*b* Spokane, WA, 13 Feb 1926; *d* Redlands, CA, 11 Jan 2000). American composer. He studied at Deep Springs College (1943–5), the University of Nevada (BA 1949), Oxford University (Rhodes Scholar, BA 1951, MA 1955) and Stanford University (PhD in English literature 1961). Childs's composition teachers included Leonard G. Ratner (1952–3), Carlos Chávez (1953), Aaron Copland (1954) and Elliott Carter (1954–5). After teaching English literature at the University of Arizona (1956–65) and acting as dean of Deep Springs College (1965–9), he became composer-in-residence at Wisconsin College Conservatory (1970). In 1971 he was appointed Fellow of Johnston College, University of Redlands, where he taught composition and music literature, and directed the New Music Ensemble. He also served as associate editor of *Perspectives of New Music*, co-founder of Advance Recordings, and advisor to the American Society of University Composers, the ACA and the Charles Ives Center for American Music. Among other honours he received four fellowships from the MacDowell Colony (1963, 1970, 1974, 1978). He wrote a number of articles on musical aesthetics and compositional technique.

Childs's music explores a range of innovative techniques including indeterminacy, improvisation and what he called 'self-generating structures', which derive from associations inherent in the musical materials. Many of his pieces from the early 1960s, notably *Interbalances I–VI* (1960–63), are indeterminate. Works such as *Keet Seel* (1970) and *When Lilacs Last in the Dooryard Bloom'd* (1971) use non-functional triadic sonorities. In the mid-1970s he composed various intense and reflective works dedicated to friends, such as the Trio (1972). Later compositions exhibit free, linear, mildly repetitive shapes and multi-sectional, non-hierarchic structures. (*EwenD*; *VintonD*, B. Johnston)

RICHARD SWIFT/PAUL ATTINELLO

Chile (Sp. República de Chile). Country in South America. It is bordered in the north by Peru, east by Bolivia and Argentina and south and west by the Pacific Ocean. The country occupies a narrow strip of land running for 4200 km from north to south, with an area of 736, 905 km². Further territory includes Easter Island (Rapa-Nui), the

Juan Fernández Islands and many other islands to the west and south.

I. Art music. II. Traditional music.

I. Art music

1. Colonial period. 2. Composition since independence. 3. Musical life since independence.

1. Colonial period. References to music in chronicles and histories dealing with the 16th century are scarce. Opportunities for the Spanish soldiers to sing villancicos, to play the vihuela, flute or trumpet, were limited at a time when the settlers lived under the constant menace of Indian attacks. Yet by the end of the century the officials of the Spanish Church, who had observed the power that music had over the indigenous peoples, began using it as a missionary tool. The singing of the Mass with the participation of Spaniards and indigenous peoples became customary, and Amerindians were trained to make and play European instruments.

More peaceful and prosperous conditions in the 17th century favoured the development of music. In churches the use of plainsong alternated with hymns honouring the Virgin and with villancicos sung in unison, in two, three or four parts, or by a vocal soloist accompanied by guitar or harp. Pontifical Masses were complemented with 'fanfares of trumpets, cornets and drums'. The death of Charles II in 1700 and the accession of Philip V to the Spanish throne favoured an increasing French influence, notably in music. The first spinets and clavichords were imported, and around these and other instruments there developed among well-to-do Chileans *tertulias* (social gatherings). Salon dances, imitative of those current in France, also became popular.

2. Composition since independence. The work of the first native composers coincided with the struggle for independence (1810–17) and with the rise of a society increasingly influenced by European Romanticism. Music-making was mainly for an upper-class audience and was largely confined to a repertory of patriotic band tunes although occasionally this was augmented by the works of Stamitz, Haydn or Pleyel. The first pianos were brought to Chile in the early 19th century, and their importation increased at such a pace that in 1820 the British traveller Mary Graham wrote that the 'love for music in Chile is amazing, there is no house that lacks a piano'.

Composers showed an increasing awareness of the main trends of European music, particularly Italian opera and virtuoso instrumental composition. In spite of their limited techniques they knew how to attract their audiences with faithful replicas of Cramer, Hummel, Herz or Thalberg or with florid imitations of bel canto and coloratura. Such were Manuel Robles (1780–1836), author of Chile's first national anthem (1820), Isidora Zegers (1803–69), José Zapiola (1802–85), Federico Guzmán (1836–85), Guillermo Frick (1813–1905), a German who moved to Chile in 1840, and Aquinas Ried (1810–69), a native of Bavaria, who composed the first opera written in Chile, *Telésfora* (1846).

In the early 20th century Chilean composers began to lose interest in opera and increasingly turned to chamber, choral and orchestral forms with a growing concern for the development of a national idiom. Widely different styles existed concurrently: Enrique Soro was committed to the most traditional forms of Romanticism; Pedro H. Allende, Próspero Bisquertt, Carlos Isamitt and Carlos Lavin drew on Impressionism and made deliberate use of folk music idioms, Ibero-American and Amerindian; Alfonso Leng adhered to German post-Romanticism; Acario Cotapos was self-taught and used non-conventional methods; Domingo Santa Cruz avoided the spell of nationalism and drew on Hindemith's linear technique.

The composers of the following generations profited greatly from the Asociación Nacional de Compositores (founded in 1936; since 1948 the Chilean section of the ISCM), and from the generous system for the promotion and remuneration of creative work established in 1947 through the Premios por Obra y Festivales together with private awards such as the Olga Cohen Award (1952) and the CRAV Prize (1964), donated by the Compañia Refineria Azucar Valparaiso, one of Chile's largest sugar refineries.

The scope of composition has broadened to include a growing variety of techniques while all forms of musical nationalism are rapidly disappearing. Even Jorge Urrutia Blondel, Alfonso Letelier and René Amengual, initially its supporters, adopted the more cosmopolitan outlook advocated by Juan Orrego-Salas and a large younger generation, among whom Eduardo Maturana, Abelardo Quinteros, Gustavo Becerra, Claudio Spies, Darwin Vargas, Juan Allende-Blin, León Schidlowsky and José V. Asuar have gained international recognition. This group includes supporters of the most strictly controlled methods of composition, whether tonal or atonal, as well as those who give scope to chance and improvisation in the creative process. The first Chilean electronic music studio was established at the Catholic University of Santiago in 1959.

3. Musical life since independence. Steps towards a more organized and permanent musical life that included more than opera were made with the establishment in Santiago of the Sociedad Filarmónica (1827), followed by similar organizations in other cities: Concepción (1829), Valparaiso (1845), Valdivia (1853), Talca (1855), Copiapo (1862), Osorno (1866), Antofagasta (1889) and others. But by the end of the century most of these societies were moribund, although in southern Chile, as well as in Valparaiso, they greatly benefited from the support of the German settlers.

Another important step forward was the foundation of the Conservatorio Nacional de Música in Santiago (1849), which remained until the end of the century the only official institution offering specialized education in music; private teaching also increased considerably throughout the country.

In 1857 the Teatro Municipal, Santiago, was inaugurated with Verdi's *Ernani*, but opera had started earlier. In 1830 Rossini's *L'inganno felice* was presented in the Cifuentes's spacious family mansion in Valparaiso a few weeks before its performance in Santiago. Valparaiso's first opera house, the Teatro de la Victoria, opened in 1844, and Copiapo's in 1847; increasingly in the 1850s Chilean citizens enjoyed elegantly ornamented theatres and well-furnished productions of opera and zarzuela. To a repertory dominated by Rossini, Bellini, Donizetti and Mercadante there were gradually added the works of other composers such as Auber, Gounod, Halévy, Hérold, Massenet, Bizet and Verdi. Mozart was first heard in 1870 (*Don Giovanni*) and Wagner in 1885 (*Lohengrin*). Before the 20th century the only opera by a native composer to have been staged in Chile was *La florista de*

Lugano (1895) by Eliodoro Ortiz de Zárate (1865–1953), following the première of his *Juana la loca* at La Scala (1892).

The tours of some soloists of international reputation, such as Henri Herz (1850), Miska Hauser (1853) and Louis Moreau Gottschalk (1866), satisfied Chilean enthusiasm for instrumental virtuosity, but these were still sporadic events. There were no regular concerts by permanent ensembles until after 1910. In 1913 a short-lived orchestral society (1912–14) gave the first performance in Chile of the complete cycle of Beethoven's symphonies. At this time a number of choral and chamber groups were formed by local communities and groups of young people; these sought the guidance of such respected professionals as Alberto Garcia-Guerrero (1886–1959) and Luigi S. Giarda (1868–1952), a skilful Italian composer who settled in Chile.

The Bach Society (1917–32) flourished beyond the rest and prepared the way for Chile's musical life to develop on a level with the best in Latin America. Under the guidance of Domingo Santa Cruz it promoted the reorganization of the Santiago Conservatory (1928) and the establishment of the faculty of fine arts (1929) at the University of Chile, which gave music teaching a place in higher education. Music studies were later introduced elsewhere: at the Catholic University of Santiago in 1959, at the Catholic University of Valparaiso in 1960, at the Austral University, Valdivia, in 1962, and at the University of Concepción in 1963.

The reform of specialized music education in Chile culminated in the creation by a Bill of Congress of the Instituto de Extensión Musical (1941), as part of the University of Chile. Its vast programme began with the establishment of the Symphony Orchestra of Chile (1941) and the National Ballet (1942; based on members of the Jooss Ballet), the University Chorus and Revista Musical Chilena (both 1945); there followed the biennial Chilean music festivals (1948), the sponsoring of various chamber and choral ensembles, and the opening of an educational radio station in Santiago (1967).

A second full-time orchestra, the Municipal PO, was established in Santiago in 1955; other cities that have their own orchestras include Concepción (1952), Valparaiso (1954), Viña del Mar and Osorno (1956), Temuco (1957), La Serena (1959), Valdivia and Antofagasta (1960).

During the mid-20th century choral ensembles reached international standards; outside Santiago these include the Coros Polifónicos of Concepción (1934) and the Coro de Cámara of Valparaiso (1954).

Music education in public and private schools has been given strong encouragement by the Asociación de Educación Musical (1946) and by the Inter-American Institute for Music Education (1960), while research and preservation work was initially entrusted by the University of Chile to the Instituto de Investigaciones Musicales (1947).

The Chilean Jeunesses Musicales (1960) and the Consejo Chileno de la Música (1962), the national branch of UNESCO's International Music Council, reinforced the country's ties with international organizations, and the incorporation of music to the Instituto de Chile through its Academy of Fine Arts (1964) furthered the recognition of the professional musician among other distinguished representatives of the liberal arts and sciences.

The politics and development strategies that were established during the reign of the military government led to a pronounced reduction in state support for public organizations such as the University of Chile, especially after 1980 when the national university system was reorganized. The Agrupación Musical Anacrusa, a private, underground association consisting mainly of young musicians, was established in 1984. Over the next five years, under the leadership of the composer Eduardo Cáceres, the group was successful in disseminating new Chilean and Latin American compositions. In spite of severe budget restrictions, the University of Chile has continued to promote Chilean music. In 1998 it re-established the Festival of Chilean Music. The Music Institute of the Catholic University of Santiago has also supported national and international contemporary music by running various festivals. Since the mid-1980s new universities, including those of La Serena, Playa Ancha (Valparaíso), Santiago, and the Universidad Metropolitana de Ciencias de la Educación (Santiago), have also carried out important work in the field of music.

II. Traditional music

From about 12000 BCE Chile was inhabited by indigenous hunter-gathering Amerindian peoples. As a result of the Spanish conquest of Chile in 1583 and its subsequent colonization, contemporary Chilean musics comprise both indigenous and Hispanic traditions which have interacted, co-existed and amalgamated in varying degrees. Further hybridization has occurred as a result of urbanization. Although small numbers of African slaves were taken to Chile during the 17th century, it is likely that African musical influences in Chilean music came from shared cultural histories with neighbouring Latin American countries, especially ARGENTINA, BOLIVIA and PERU. Contemporary indigenous ethnic groups comprise the Aymara, Atacameña, Kolla, Rapa-Nui, Mapuche, Kawéskar and Yámana. These groups still distinguish between the *antiguo* (old) and *nuevo* (new), that is, their traditional musics and those which are the result of acculturation.

Some common musical elements may be discerned among the indigenous peoples of Chile. Free musical forms develop from melodic cells which are juxtaposed in varied sequential repetitions. In contrast, strophic musical forms are based on poetical texts, dance schemes or pre-existing patterns. Evidence of acculturation may be seen in the increasing use of equally tempered scale-types. Heterophony, intervallic parallelism and Western functional harmony are associated with certain specific chordophone repertories and with the music of choral or instrumental groups. Free rhythms and strophes as well as isometric or polymetric sequences appear in both fixed and improvised music. In both fixed and free-time performances sudden changes between slow and fast parts occur in some dances, for example in the *huayño* of the Aymara. Many indigenous vocal music styles are characterized by a lack of vibrato, a nasality of tone, vocal tension and the use of glissando, appoggiatura and portamento. A great variety of vocal techniques are used, including beating, ritenuto, portamento, falsetto, exhalation, inhalation, crying, sobbing, whispering, closed-mouth singing, emphatic accents, fluctuations, oscillations and tonal deflections. Improvisation predominates, based in processes of transformation of melodic outlines or brief melodic cells.

1. AYMARA MUSIC. The Aymara music of Chile is an inseparable part of Andean culture, sharing genre and stylistic features with the Aymara music of neighbouring areas of Bolivia and Peru. Genres of music and dance are related to categories of ritual: animal fertility rites, Carnival, patron saint festivals and the *pachallampa* or the ritual sowing of potatoes. During animal fertility rituals *tonos de enfloramiento* are performed by a soloist or by a spontaneous chorus, with or without accompaniment by the *bandola*, an instrument of Spanish colonial origin, which has a total of 16 strings divided into four sets of four. These songs are sung during the decoration of llamas and alpacas with multicoloured woven pieces of wool, while incisions are made in the ears of new or unmarked animals. Female animals from herds of different origin are considered 'mestizo' rather than Andean. Their decoration is undertaken by women a week after the ritual for male animals. *Tonos de floreo* are performed according to the dedicated animal, its gender and its functions and actions. Other *tonos* are dedicated to the sacred emblematic animals of the pastoralist, the feline *tite* or *suinave* and the *chullumpe* bird, which represents the spirit of the llama, reflecting pastoralists' relationship to their animals.

Each *tono*, based on a solo melody, is usually divided into two phrases repeated according to textual difference and the energy of the interpretor. The scales used indicate gender differentiation: diatonic major for males, pentatonic minor for females. The latter also characterizes the sacred songs of pastoralists and animals. The melodic compass is usually less than an octave; tempo is stable and moderate.

Carnival is the great community event closing the annual cycle of agricultural activities. It coincides with the harvest period and the seasonal transhumance of animals and aims to encourage the fertility of the earth and of animals. *Tonos de carnaval* (Carnival songs) and *ruedas* (circle dances) are performed by a *pandilla*, a group of musicians who accompany adolescent singers and dancers; their leader is usually an expert *bandola* player and singer. The music accompanies dancing based on circular movements following the direction of the sun and involving the displacement of the young women. Each young woman wears on her right arm a *culebrilla* (little snake) of woven wool symbolizing her own maturity and fertility. During Carnival in mountain communities, the *tonos* and *ruedas* are led by an expert guitarist and a solo singer who organizes the responses to the songs as well as the circle dances of the ritual community, in particular the *zapateo* (step dance) parts of the men. Each song has a melodic scheme characterized by intervallic structures which reveal either an Aymaran or Hispanic origin. It has lively, stable tempos underscored by *bandola* and guitar accompaniment from the instrumental group.

The aesthetic of vocal styles tends to affirm traditional gender roles and power relations: masculine vocal styles are characterized by what is considered an emphatic and self-affirming emotional tension, while female vocal roles are distinguished by what is considered a 'weak', 'timid' and 'soft' approach, of low volume with a sharp register. Two musical groups acompany songs and dances in the pre-Cordelite area: the *tarkeada* composed of a group of *tarkas* (indigenous recorders/flutes) with *caja* (a drum with two skins) and *bombo* (large drum); and the *orchestra*, a mestizo Andean group incorporating two *kenas* (bamboo flutes), mandolins, guitars, violin and accordion, with hand-clapped rhythms and solo and chorus vocalizations, who interpret *takiraris* and other Carnival dances. The joyful character of this music concludes the final days of Carnival.

The celebrations which take place in each Aymara village in honour of respective patron saints share the same basic organization and communal content as the official Catholic Church model, although with some regional and local variation. The syncretic ritual encompasses Christian and Amerindian beliefs. Led by the

Alférez or Mayordomo, the ritual Aymara leader, the event falls into three parts: the *antevispera*, *vispera* and patron saint's day itself. The *antevispera* contains Amerindian elements, while in the *vispera* and patron saint's day rituals syncretic Christian patterns are re-enacted.

The traditional music of the patron saint celebrations are the responsibility of four musical groups. The *sikuras* are a group playing large bamboo panpipes and double-headed drums. The *lakitas* are a group playing small panpipes made of bamboo or plastic, with a small *caja* and large *bombo* drum, while the *lichiguayos* are a group playing large *kena* flutes, and the *banda* play brass instruments. The *sikuras* and *lakitas* are the most emblematic indigenous groups, the other wind groups, such as the *lichiguayos*, and the brass band, enjoy only restricted local use and have become less common in certain areas.

The music of the *sikuras* group, whose patterns, processions and farewells possess a solemn ceremonial character, has a polyphonic texture, created by pentatonic melodies in 5ths or octaves, punctuated by isochronic drum beats. In contrast the texture of *lakitas* music is more simple, doubling the basic melody in parallel octaves, to the accompaniment of the pulse of the *bombo* and *caja*. The *lakitas* repertory uses penta-, hexa- and heptatonic melodies, and includes popular dances such as the *huayño*, *takirari*, *cumbia*, *vals* and *cueca*, and religious music such as the *diana*, *marcha*, *procesión* and *bendito*.

Rural–urban migration in northern Chile has resulted in a diminution of *sikuras* groups. By contrast, the *lakitas* enjoy great popularity, with numerous groups mostly composed of young Aymara men. In urban Iquique and Arica, *lakas* are usually made from readily available plastic pipes, used for plumbing, due to the scarcity of bamboo in urban areas and its fragility. This adaptation and acculturation of Aymara organology is inseparable from the growing influence of contemporary genres of Latin American popular music on the *lakitas* repertory.

The Aymara rite of *pachallampe*, which takes place during the sowing of potatoes, is an integral part of patron saint festivals. In the most recent past this consisted of songs accompanied by guitar. Although it has been of relative importance in the mountain villages neighbouring the northern port of Arica, the practice has almost disappeared. The Aymara dance repertory is characterized by its rich variety. Choreography includes circular and linear forms, close- or free-dancing couples, whose *mundanzas* (choreographic steps) exhibit both fantasy and creativity. Spanish influence is present in the frequent inclusion of *zapateo*. Dances fall into two groups: traditional Andean genres and cultural borrowings from popular Latin American and international musics. The latter have adapted popular models to Andean style through an integration of distinctive features as much choreographic as musical. Traditional dances include the *huayño*, or *trote*, the *takirari* or *kollawada*, a variety of *takirari* called the *waka-waka*, the *huacha-torito* and the *cachimbo*. Most of these dances come from the altiplano or mountain villages, except for *huachi-torito* and *cachimbo* which come from the desert villages. Dances regarded as not fully traditional include popular forms such as the *cumbia*, *cueca*, *vals*, BOLERO and cha cha cha. With *lakita* and *brass* groups broadening their repertories by adapting new dance genres to their instrumentation within Andean idiomatic styles, a range of future developments are possible.

According to Aymara mythology, the origin of music is in the *manqha-pacha* or underworld inhabited by *seren-mallku*, the male spirit of music and *seren-t'all*, his female partner. They are accompanied by eight sacred animals including the *tite* and the *chulllumpe* which have descriptive onomatopoeic songs dedicated to them as part of animal fertility rites. *Seren-mallku* and *seren-t'all* are the patron saints of music and are associated with the natural sound of water and with moving water. A *sirena* (mermaid in an underground spring) is believed to create the sounds of music from those of springs, waterfalls, streams, brooks and rivers. The *sirena* has both human and extra-human qualities. The *seren-mallku*, invoked as the mythological creator of music, is concerned with melodies and the melodic inspiration of musicians, as well as the tuning and timbre of instruments and the ability to synchronize them while playing. On the eve of a ritual festival, musicians go to listen to music at springs or waterfalls, taking their musical instruments with them.

The vibrations of nature, associated by musicians with water, wind, mountains, hills and shrubs, are thought to make the instruments sound. Musicians remain silent as they hear the melodies of *seren-mallku* through their instruments, and experience deep emotions which generate a state of mystical participation. *Seren-mallku* symbolizes music as melody generated by nature, the source of the musical repertory of a traditional instrumental group, a powerful means of communication and a necessary condition for ritual.

In the *sikuras* and *lakitas* panpipe groups the panpipes are divided into two types, the *ira* (first or male) and the *arka* (second or female). In groups of *sikus* (old cane pipes of differing sizes) there is an interconnected scheme of pulse and metre driven by a group of drums over which the panpipes play. The *siku ira* (male panpipe) interprets the 'leading' sounds in the first 'strong' position and its subdivisions, the *siku arka* (female panpipe) interprets the sounds which 'follow' and their subdivisions, which are defined as 'weak'. They also produce alternations and analogous relationships, with sounds of longer duration in the introductory and cadential passages of the *sikuras* group. In the *lakitas*, of smaller size, there are interconnected tonal schemes of 13 sounds ordered according to a descending diatonic scale. Six descending sounds correspond to the male panpipe (*ira*) (d–b–g–e–c–A) while the female pipe (*arka*) has seven dovetailing sounds (e–C–a–f–d–B)

While the male panpipes are indigenously defined by 'virile' connotations ('first', 'strong', 'macho'), the female panpipes are given what are culturally considered feminine attributes ('second', 'following', 'weak' and 'female'). As a result *lakas* have been conceived of anthropomorphically as interdependent 'pairs' of instruments. According to the musicians and their indigenous public, the male–female pairs of *lakas* interact as a human couple through an interconnected tonal dialogue which symbolically represents the Aymara couple.

Through these symbolic constructions, the Aymara have tried to legitimize patterns of male leadership and female subordination found in traditional society. However that society now faces a number of challenges. Recent decades have witnessed increased migration of Aymaras from the altiplano (high plateau) and mountain foothills

of northern Chile towards major urban areas on the coast and into neighbouring countries, with migratory movement towards the south, particularly gravitating to the capital Santiago. This has brought about various sociocultural transformations within communities and extended families, inevitably affecting their ethnic identity and traditional culture as much as their aesthetic taste and musical activities.

2. ATACAMEÑAN MUSIC. The culture of the Atacameñan people comes from pre-Columbian agrarian pastoralists who lived around the oasies, valleys and ravines of the Atacama desert, considered the most arid on earth. Both the pre-Hispanic peoples, referred to as Atacamas or Likan-antai, and their contemporaries, have lived in *ayllus*. These extended families, still found today in the Salar de Atacama and at the basin of the river Loa, maintain broad links with the local cultures of Jujuy and Salta in Argentina and with neighbouring people in Bolivia. Atacameñan traditional music forms an integral part of the annual ritual cycle, whose central events are the cleaning of *acequias* irrigation channels, the marking and decoration of animals to ensure thier identity and fertility, the sowing of crops, village patron saint festivals and Carnival.

Two essential styles co-exist. The first, of ancient Atacameñan origin is associated with the original indigenous *kunza* language which is no longer used. The second, of post-Hispanic origin, is associated with the Spanish language. The first style, characterized by tritonic melodies, reappears in the sung dance-songs and accompanying instrumentals for the *talatur* cleaning of the irrigation channels, the sowing of crops, the treading in of the seed and in rituals surrounding animal fertility (ex.1). The second style, characterized by diatonic melodies, is found in the genre used for patronage festivals. Genres of the first style are ceremonial, consisting of mixed circular sung dances accompanied on traditional Atacameñan instruments, with elaborate footwork and rhythmic clapping. Such ancient ceremonial genres use typical three-toned Atacameñan melodies based on the major arpeggio, their tonal centre coinciding with the fundamental. Some sounds appear to be transposed to the higher or lower octave, and in this way amplify the melodic range.

Vocal interpretation comes from either solo or choral songs, the latter characterized by a use of relative or heterophonic unison proper to ancient, ritual *kunza* styles. Vocal music using an extremely high-pitched register, with a distinctive timbre created by an intense open-throat style, is syllabic with little ornamentation. The accompanying instrumental style is differentiated according to its original repertory. If, for example, it is according

Ex.1 *Talatur*, Atacameño fertility ritual song; transcr. C. Alvarez and M. E. Grebe (Alvarez and Grebe, 1974)

to ancient *kunza* styles, the accompanying instruments – the *clarín* (trumpet), *putu-putu* (animal horn) and *chorromón* (a rattle made of clusters of bells) – freely improvise rather than intervene in the fixed scheme of the music. In contrast to the post-Hispanic musics of Carnival and the patron saint festivals, the accompaniment of guitar and *caja chayera* (double-skinned/double-ended drum) is fixed and regular, offering necessary support for the poetic couplets while reinforcing metric schemes.

The music of the *kunza* has a great capacity to be extended. The formal organization of pieces is simple, generally based on the varied repetition of a single unique phrase with any extension of musical parts dependent on function and cultural context. In contrast Carnival couplets are of more restricted duration. In both *kunza* and *carnaval* couplets metric organization tends to be additive, changing in response to a need to maintain the regular pulse which affects the time units of preferred groups of prosodic accents. In the post-Hispanic Carnival repertory, couplets which tend to be in ternary metre are affected by the accompaniment which marks the strong beat or even the first and third metrical beats. Rhythmic schemes are simple or subordinate to metric organization. The tempo of the parts in old *kunza* style is unhurried, with a moderately slow speed the general tendency. In contrast the tempo of post-Hispanic styles tends to be faster and more lively. For the Atacameñans, the triphonic music of *kunza* is 'the song of the water', born in nature and communicating its spirits. Water is the most significant element and its magical power and potency is symbolically represented in the song of the water deity, *tata-putarajni*.

Water – necessary for desert survival – is granted to the Atacameñans through performance of the ritual song *talatur*. According to the testimony of a singer from the village of Socaire, the *talatur* is created and taught by the water:

> Listening at night, I heard the water sing and I survived the shock. Later I returned to the village, while the water's voice followed me. It taught me the melody, even the words. In one night I learnt all there was to know . . . this song originated in the fume of the water. The water sang it, one has to learn it from the water.

In indigenous testimonies, the presence of an anthropomorphic image of water recurs. Conversations and drum patterns are heard to come from inside water, whose free flow is compared to the joyous human voice. All this enables the *cantal* to hear and understand the message of the *canto del agua*. This latter is characterized by tritonic tonal organization, composed of sequences based on the major arpeggio which personify both the water and its song. The melody is accompanied by three ancient ritual instruments, the *clarín*, *putu* and *chorromón*, which improvise and elaborate a free texture.

The *clarín* is a natural, straight, tubular trumpet with a mouthpiece, played laterally. Its cane tube measures between 1·3 and 1·5 metres in length and it is decorated with multicoloured pieces of wool. It plays tritonic arpeggios, which accompany vocal music, and it shares some characteristics with the Argentine *erke* and the Mapuche *trutuka*. The *putu* is a natural, tubular vertical or lateral trumpet, which is curved and can be with or without mouthpiece. Decorated with a cow's horn, ornamented with balls of multicoloured wool, it emits sustained notes, and is related to the Argentine *erkencho*, the altiplano *pututo* (shell trumpet) and the Mapuche

küll-küll. The *chorromón* is a rattle of pre-Columbian Atacameñan origin, made of pyramids of suspended metal bell which are struck indirectly. The top part of each is perforated to allow them to be strung together in threes or as a group of 12, divided into six slim 'female' ones and six thicker 'masculine' ones.

3. The music of the Rapa-Nui (Easter Island). The Rapa-Nui are the original inhabitants of Easter Island (also called Rapa-Nui), part of Chile since 1886. The culture of the Rapa-Nui is linked to that of greater Polynesia, particularly to the people of Mangareva, Tahiti and the Maori of New Zealand. Although some traditional Rapa-Nui are inheritors of oral tradition, mostly relating to dance, the process of acculturation has been intense and complex, with influences coming not only from Chile but from many other areas. The resulting mestizo culture has also been influenced by island people travelling to study and work in mainland Chile and elsewhere.

Music of remote origin, with ritual community functions, acts as a menas of communication for the ceremonial re-enactment of mythical belief systems. Presided over by the *hatu* (who directs) it is interpreted by both male and female performers who sit opposite each other on the floor, accompanying their songs with rhythmic body movements, reinforced by sounds from one or two traditional instruments including the shell trumpet.

Songs are generally choral, predominantly using consonant or dissonant irregular, parallel intervals. Each song is habitually preceded by the *hatu* indicating tuning and intonation. Final cadences, which come after a signal to conclude, depend on specific formulae for the completion of each type of song. Central distinguishing characteristics lie in the relationship between melody, text and dance gestures with dance gestures involving the face and eyes describing the content of the text through metaphor and mimed metonym. As a result older dances are not regarded as autonomous forms of expression. First recognized by missionaries who arrived in 1884, there was gradual influence on such music by music brought by the Catholic Church, particularly through *himene* (hymns) which have been adapted in distinctive ways on most Polynesian islands.

Nine types of song are commonly found: (1) *aku-aku*, which are mostly performed on festive occasions, are dedicated to the spirits which iconically represent the giant sculpted *Moai kava-kava* figures found all over the island. (2) *Riu* are polyphonic choral songs characterized by their diversity, richness and expressive power and the fantasy embodied in their texts, which commonly allude to wars, triumph and legend. From these *riu-tangi* evolved, recited funeral laments which are accompanied by cries and vocal expressions of pain. (3) Two types of love song are common: *ate*, songs of unhappy love, fraternal sentiment, praise and the glorification of particular people or important deeds and events; and *uté*, songs of requited love. (4) *Kai-kai* are rhythmically recited with string accompaniment, with the most recent versions adding melodies on top of a rhythmic base. (5) *Ei* are songs of a burlesque or insulting nature, which play a key part in song competitions. (6) *Hakakio* are songs of thanks for received favours while (7) *ha ipo-ipo* are wedding songs. (8) *Himene* are hymns which refer to the history or legend of the ancient *arikis* (kings) or other figures. (9) *Kohau rongo-rongo* is a recited genre, possibly derived from inscribed tablets of the same name.

Most of the ancient dances of the Rapa-Nui are performed to the accompaniment of musical instruments, hand-clapping, shouts, cries and other vocal sounds. Their poetic texts boast of the exploits and heroic deeds of people in earlier times during war, fishing trips and when in love, the content commented upon by mimicry or mimed gestures. In women's dances a fundamental expressive role is played by undulating arm movements and their measured style. Masculine dances are characterized by broad, agile, energetic movements with displays of physical virtuosity as demanded by the text.

Understanding of the music of the Rapa-Nui has been severely hindered by the impact of key historical events which dramatically affected the population of the island. During the 18th and 19th centuries the island community faced an extensive period of crisis involving piracy and enslavery. Following an attempt by Spain to possess the territory in 1770, a catastrophic episode occurred in 1862–3 when a squadron of ships from various countries, under the flags of North America and Europe, arrived in search of indentured labour to work in Peruvian agriculture, capturing at least 800 men (perhaps double that number) as slaves. In 1863 approximately 12 managed to escape, returning to the island but bringing with them tuberculosis, measles, *kokonga* and other contagious diseases and subsequently infecting their families. The resulting epidemic of 1877 reduced the population of the island to 110 people, the lowest in its history.

Those who died in Peru and on the island were mostly men, the legitimate bearers of the island's ancient oral history and traditional culture. With the intention of safeguarding the transmission of their heritage, the islanders created at least 67 *rongo-rongo* hieroglyphic tablets which recorded this cultural legacy. However, due to the deaths between 1863 and 1877 of those who could decipher them, decoding the tablets has proved impossible. From 1864 the Catholic evangelization of the population, coupled with the assimilation of new cultural influences mostly from Tahiti introduced a new cultural phase. Because of the lack of continuity of original musical traditions and the impossibility of deciphering the *rongo-rongo* tablets, anthropological understanding of the ancient music of the island in its cultural context has proved extremely difficult.

Modern music of Polynesian origin was brought by the people of Rapa-Nui who had emigrated to Tahiti and other Polynesian islands and who returned home following Chile's annexation of the island in 1888. From 1914 onwards the *sau-sau*, *tamuré*, *hula* and *vals tahitiano* were adopted. The island's youth were attracted by the rhythmic dance music and absorbed elements of it in their own music. The influence of popular music of international origin expanded following World War II when the island started to open up to tourism. Young island men who travelled to the Chilean mainland to do military service brought back many influences, including material recordings and a new commercial cassette culture. The period when the island was used as a base for the North American military saw the introduction of radio, television and film as well as other aspects of north American culture. Hybrid genres developed such as the *tango pascuense*, followed by the *vals*, *corrido*, *foxtrot*, *twist*, *rock* and others. This music in turn influenced the traditional musical repertory. While 'feminine' styles are characterized by a high register and smoothness, the

'masculine' is emphasized by falsetto styles, sharp sounds and special vibrato, as well as abrupt and rough, deep, low sounds which often include glottal stops.

4. MAPUCHE MUSIC. Following cultural contact with first the Incas and later the Spanish, the Mapuche defended and preserved their original territory and cultural heritage over a long period of wars which lasted over 400 years (16th to 19th centuries). The *machi* is the principal carrier and transmitter of Mapuche culture, with diverse sacred ritual and shamanic roles within the community. According to Mapuche myth the cosmos is divided into seven square earths, each taking the form of stratified platforms superimposed on each other in a descending order of cosmic space.

Such earths represent domains controlled by supernatural powers which are beneficial and constructive as well as malign and destructive. The four superior earths belong to *wenu-mapu* (the high lands), the supreme space of the forces of good, where beneficient spirits, deities, ancestors, *machi* (female shamans) and deceased *cacique* leaders reside. In contrast malign spirits live in the *rangiñ-mapu* (fifth earth); while in the *minche-mapu* (seventh earth) the evil agents of *weküfes* and *kalkus* (witches) interact, bringing illness and death. Mapuche women and men live in the *mapu* (sixth earth).

According to Mapuche ritual leaders the musical universe is structured by the two essential domains of the sacred and profane. It is believed that sacred music is generated by deities and spirits belonging to the *meli-ñom-wenu* (the four platforms of the Mapuche sky); while profane music exists as a means of communication between earthly Mapuches. The *tayíl*, a sacred song of great power which comes from the divine domain of deities and spirits, is given to certain *machi* called *tayíltufes* (interpreters of the *tayíl*) or Mapuches with shamanic vocation received through a dream, vision or state of trance.

Three basic categories of *tayíl* are distinguished: the *puel-tayíl* or *tayíl* of the east; the *wenu-tayíl* or *tayíl* of the platforms of the *wenu-Mapu* (the sky); and the *kompa-pulli-tayíl* or *tayíl* of the ecstatic trance of the *machi*. The first two categories are interpreted in successive form in the *ngillatún*, the main community fertility ritual associated with the *choike-purrún* (the dance of the ostrich). The third category, which includes ecstatic trance, forms part of shamanic initiation, post-initiation, therapeutic and diagnostic rites.

In the *ngillatún*, the great community fertility ritual, as well as in medicinal rites, the *machi* symbolically reactualizes cosmological beliefs and their significance. In such contexts the role of ritual music is paramount, constituting a transcendent means of communication directed to both the deities and the ritual community. It is the medium which permits communication and interaction between the Mapuche and their mythical pantheon, reinforcing a system of beliefs inseparable from their ethnic identity.

The drawing out and the subdivision into squares of ritual space, the actions of the principal ritual actors, the organization, number and repetition of each episode of the rite, regulated always by paired numbers, reproduces the regulating principle of a world view based on the pair and its multiples, dominated by the number four. In this rite music symbolically re-creates the order of the cosmos, thus ensuring the cultural continuity necessary for the regeneration of sustaining vital energies.

Two categories of music co-exist in the second domain of humans. The *machi-ül-kantún*, which includes varieties of non-ritual, profane song, considered the oldest, most fixed genre, is interpreted at informal meetings or family celebrations. The more recent *mapuche-ül-kantún*, considered freer in structure, and more entertaining in content, serves as an escape valve for the externalization of emotions and conflict but is considered of lesser importance. Both musical categories are created through improvisation or poetic improvisation based on the adaptation, transformation and re-creation of pre-existing melodic patterns and schemes. It is expected that a good singer will also be a good poet.

The *rewe*, the sacred totem pole, iconically represents the cosmos and is the ritual focal point of the *machi*, while the *kultrún* (shamanic drum) represents the earth. The membrane of the drum is painted with a cross which is polysemic in its symbolism, representing on the one hand the division of Mapuche land into four areas, four regional families with one centre, and, on the other, the four cardinal points, the four astral stars and planets. communication between spirits and the Mapuche people takes place through the ritual activity of the *machi* because the inner meanings and workings of the cosmos have been revealed to her. Thus the *machi* generates the vital energy, health and well-being necessary for the survival and positive destiny of the people, defending them against potential harm from *kalkus* and *weküfes*, who bring suffering, failure, illness and death.

The Mapuche attribute the power and success of the *machi*'s song to her role as the carrier of the unlimited spiritual powers of the *wenu-mapu*, mediating between these beneficial powers and the people. Ritual shamanic music is believed capable of linking and communicating between these supernatural world of deities and spirits and the world of humans, of accessing divine help, of facilitating the diagnosis and cure of illness and with the possibility of extracting malign spirits from the body of a sick person. The *machi*'s powerful intervention through song draws the attention of deities and spirits to the supplications of the sick person. As a shaman, the *machi* is not only transcendent, but also the means of bringing about both life and good health. While Mapuches do not take their *mapuche-ül-kantún* ('profane songs') as seriously, they are considered significant ways of communicating emotions and human tensions, shedding light on important aspects of social dynamics. At social gatherings they are used to pass the time, stimulating interaction and the emotional response of listeners.

Mapuche musicians have imposed order and coherence on their sound universe, categorizing genres, principal musical types and inter-relationships. In the *machi-ül-kantún* certain shamanic songs are designated as part of the *ngillatún* fertility rites; the *machi-elwún*, shamanic funeral rites, the *machilwún* initiation and *ngeikurrewén* post-initiation rites; while the *ülutún* (simple), *datún* (complex) and *pewetún* are diagnostic healing therapies. The songs of the *pallantún*, or of the *pichi-pillantún*, are used by the *machi* to communicate with her spirit aids.

Diverse sub-categories are recognized which vary according to thematic and functional content. Songs are classified as 'old' and 'new' according their relative age or

youth; while in performance they are classified by gender, according to the age of the respective singer. These include narrative songs about journeys, farewell, return, previous generations of a family, lineage, history, all of which are popular at family gatherings; lyrical songs, of love, nostalgia, welcome, happiness, sadness, and of weddings which are favoured at social encounters, get-togethers and parties; work songs about the search for work, collective work, the construction of the *ruka* (the traditional thatched Mapuche home, made of dried mud); of the sowing of crops, the reaping and grinding of corn and wheat; and of the spinner and the weaver; drinking songs, for wine, for *chicha* (cider), the bar, all of which are performed by men; lullabies, performed by women; playful songs for games of *palín* (pranks and jokes), dice, masks and bird catchers.

Mapuche dances have a ritual function. Their choreographic patterns are circular in movement and they are danced either in mixed- or single-gender groups, or by a couple. Among the most important are: the *ngillatún* fertility rite, represented by the *choike-purrún*, a dance with stylized movements which mimic the mountain ostrich; the *lonko-meo*, a collective dance with semicircular lines; and the *machilwün* and *ngeikurrewén*, the dances of shamanic rites of initiation and post-initiation. In each, beliefs are symbolically re-enacted, particularly those representing the circular movement of the sun and spatial associations with cardinal points.

Mapuche musical instruments include the following aerophones: the *trutruka*, a natural trumpet with a mouthpiece made of a horn; the *pifüllka*, a vertical wooden flute with finger-holes and without a mouthpiece, which has one or two tubes with one tube closed at the interior end; the *nolkiñ*, a natural, vertical trumpet, with or without mouthpiece; the *corneta*, a small *trutruka*. Membranophones include the *kultrúng*, a small round shamanic drum, hollowed out of wood, which has a slightly conical shaped bottom, its stretched skin usually divided by drawn lines into four segments, and which has a few sacred stones placed inside it so that it also functions as a rattle.

Idiophones include the *wada*, a shell rattle; the *kadkawilla* or *yüullu*, bell rattles; the *trompe*, a small mouth harp ('jew's harp', *birimbau*), as a plucked idiophone; and the *chueca* or *wiño*, variety of rattle. The ritual orchestra includes a variety of instruments (mostly depending on their availability), among them the *kultrúng*, the *pifüllka* (for rhythm) and the *trutruka* (for melodic improvisation).

5. Kawéskar music. Both the Kawéskar and Yámanas form part of the *fuegina* culture, whose descendants live in the extreme southern Austral area of Chile and Argentina. In the 1970s it was found that while Kawéskar ritual music and children's games were no longer common, secular music had survived albeit with a reduction in the number and variety of characteristic imitative zoomorphic songs. Younger people have shifted their interest away from solo and collective group traditions and are relatively unfamiliar with songs in their native language.

The growing acculturation of Kawéskar music has reduced its broad thematic scope; the only thriving music is profane and is linked to the family, the expression of emotion, experience or work. The original ancient religious music associated with shamanism, supernatural beliefs and concepts, the mythical pantheon of deities, legend and vital annual rituals has been lost as the Kawéskar have adapted to survive. Educated in Spanish they are now integrated into mestizo culture alongside the fishermen of Chiloé and other residents of the Austral region.

6. Spanish and mestizo musics. Chilean Hispanic and mestizo music are influenced by three cultures: the Hispanic, the Amerindian and the African. Chilean traditional music of Hispanic origin derives primarily from music brought at the time of the conquest and during the colonial period (16th to late 18th centuries). The interaction between Spanish and Amerindian cultures led either to the retention of Hispanic features or to the generation of mestizo musical forms which, once integrated, became relatively fixed.

During the 19th and 20th centuries, new musical elements of either European or Latin American origin (particularly from Argentina, Peru and Bolivia) have been incorporated and adapted. Chronologically, there are two categories: the older colonial music of Spanish origin and the later modern republican music. The former, which dates from the formative period (16th to 18th centuries) is found in an area between Coquimbo, the Bío-Bío and the island of Chiloé. The latter evolved through the transformation of old colonial repertories with the introduction of new genres and styles from both European or Latin American sources, a process favoured by independence from Spain and the subsequent colonization and cultural integration of the new northern and southern regions. Although both older and modern music and dance categories are distinguished by genres, styles, structures, instruments and the festivities of the annual ritual cycle, they share features and have imprecise borderlines, particularly in southern Chile.

Colonial musics from the 16th century to the 18th century fall into three main types: the Romance (ballad) and related forms, ceremonial dances and songs, and some miscellaneous forms and genres. The *romance* or ballad and its related forms – the *copla* and *glosa* – the contemporary *verso*, *tonada* and Corrido – were originally based on Spanish medieval and Renaissance sung poetry of secular character and popular folk origin. The *romance* consisted of various narrative stanzas of four lines sung to the same brief melody, frequently employing the major mode, either solo, or accompanied on *vihuela*, guitar or other instruments.

Although the term *romance* is now little known among Chilean folk musicians, this genre survives in other narrative songs such as the *tonada*, *canción*, *corrido* and *verso* and in certain children's game songs, such as the *ronda*. In all these cases, the old *romance* may be recognized easily by its textual content, poetic structure and specific melodic features.

Ceremonial ritual dances of Spanish origin were also introduced in the early colonial period for civil and religious occasions performed by *hermandades* or *bailes* (dance groups) sponsored by guilds and the Catholic Church. One of the oldest surviving and most widely known *hermandades* of ceremonial dances are the *bailes de chinos* (Dance of the Chinese men); other well-known groups are the *morenos*, *cuyacas*, *danzantes* and various other *bailes*. Their main traditional elements are characteristic fancy costumes, ornaments, special emblems; the survivals or adaptations of ancient Amerindian dances

Ex.5 *Danza*, Fiesta de Andacollo; transcr. M. E. Grebe

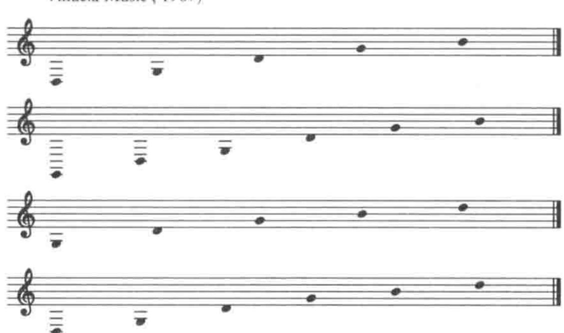
Ex.6 *Tonada al Niño*, Christmas song; transcr. M. E. Grebe (Grebe, 1969)

performed alongside dance movements originally of European origin; instrumental and vocal melodies with a simple strophic structure, employing either major or minor diatonic or minor pentatonic melody types. Performances of such groups are an integral part of the main annual religious festivities of northern and central Chile, such as La Tirana (July), Las Penas (October), Andacollo (24–8 December) and the Cruz de Mayo (3 May).

The Fiesta de Andacollo is the oldest (1585–90). Its religious ceremonies start with a midnight mass and include solemn processions when the musicians and dancers present their songs as gifts to the Virgin. The traditional music and dances are performed by three main *hermandades* or *bailes*; the *chinos*, *danzantes* and *turbantes* (ex.2). Religious songs and dances are performed by these groups with their song-texts, derived from the *romance*, mainly consisting of the *tonada al Niño* or *aguinaldo* (Christmas carol) and the *verso* or DÉCIMA. At the end of the 20th century, participating pilgrims introduced popular components inspired by contemporary TV and radio programmes, a new trend promoting a generation of new *bailes* following the changing subjects and preferences of the mass media. Such practice would suggest a process of incorporation of cultural elements from different popular but no less significant sources in the past.

The *tonada al Niño* is a lively Christmas carol related to the Spanish *cantiga*. The ancient term villancico has now practically disappeared, replaced by the terms '*tonada*' or '*tonada al Niño*' (*tonada* for the child Jesus). The musical characteristics of these songs are similar to those of the *tonada* (ex.3). It consists of a repeated quatrain which usually alternates with a refrain, with major-mode melodies with conjunt movement generally accompanied by guitar, and occasionally by harp. Traditionally it is performed on Christmas Eve in farms or village churches. Imitations of animal cries or the symbolic striking of the churches. Imitations of animal cries or the symbolic striking of the church door are customarily added between stanzas. In the second half of the 20th century it became a feature in urban popular and folk repertories.

The *verso* or *canto a lo pueta* ('sung in the manner of the poet') is a genre of sung poetry based on the *décima* form. There are two types of *verso*, the secular, *a lo humano* (of the human) and the sacred, *a lo divino* (of the divine). *Versos a lo divino* are usually sung at *velorios* (wakes). The textual form is based on an initial quatrain (which may be omitted in performance) which states the subject, followed by five stanzas of ten octosyllabic lines or *décimas*, four of which quote one line of the quatrain in their tenth line, the last of which is a *despedida* (farewell). The music is based on various recitative-like patterns with characteristic descending cadences, organized in simple binary form. Other musical characteristics are tonal (major–minor), modal or mixed melodies of conjunct movement; triadic harmonies, modal or tonal chord progressions and parallelisms; unmeasured or fixed rhythm; moderate tempos; high, loud and plaintive solo voices; and strummed or plucked accompaniments on either guitar or *guitarrón*. Some of these features are shown in ex.4. The traditional *verso* survives today in the repertories of representative performers, called *payadores*, who are mostly based in rural areas. A number of well-known professional performers improvise their sung poetry for large urban audiences, either live in public or on television thus ensuring the tradition survives among an urban public, most of whom have rural roots.



Children's game songs include the *ronda*, the *pregón* (street cry) and *arrurrupatas* (lullabies), inspired by their function and brought from Spain during the colonial period. Musical instruments of colonial Spanish origin include the guitar, played with various scordatura tunings (ex.5); the *guitarrón*, a large guitar with 25 strings (fig.1); the *rabel*, a three-string fiddle (fig.2); the harp and the *bandola*, a flat-backed lute.

Republican music of the 19th and 20th centuries includes the *cueca*, *tonada*, *corrido* and *valse*. The *cueca* is Chile's national dance. Widely diffused throughout the country, it has regional variants. According to Chilean musician Zapiola (1802–85), the *cueca* or *zamacueca*

Ex.7 *Verso* (Grebe, 'Modality in Spanish Renaissance Vihuela Music', 1967)

Ex.5 Chilean guitar tunings (Grebe, 'Modality in Spanish Renaissance Vihuela Music', 1967)

came to Chile from Peru in approximately 1823. The dance developed in both countries under the same name until following the War of the Pacific the Peruvians changed its name to the *marinera* to honour those marines who had died in battle against the victorious Chileans. Of black American origin, and sung to guitar and pandereta accompaniment, it is a dance of mixed, independent couples with characteristic use of a swirled handkerchief. It consists of three parts called *pies*, each of which correspond to divisions of the poetic text: a *remate*, consisting of a concluding pair of verses. In between these parts brief and expressive refrains are inserted.

The choreography of the *cueca* can be schematically resumed as following: the coming together of the couple, woman on the arm of the man, with a first initial turn to the turn to the right in a circle following a figure of eight; advance and retreating movements between partners following semicircles; a second turn with a circle and change of side; a continuation of advancing and retreating figures; a third turn again with a circle and change of side; a continuation of further advancing and retreating figures; and a turn and finishing figure with the couple close together. The dance steps combine those of the *valseado* (waltz steps), the *escobillado* (sliding, skipping steps across the floor), with *zapateado* (tap-dance) footwork from the male dancer. (Compare with *bambuco* and *marinera*.)

Melodies, usually in the major mode, are composed in two phrases, which freely alternate and vary, allowing the insertion of expressive refrains. Such melodies are based on melodic formulas characterized by *sesquiattera* rhythms and metric alternation between 6/8, 3/4 and 2/4. The vocal melody is interpreted by a singer, usually with a doubling in 3rds or 6ths by a second voice. Both voices are characterized by high-pitched tone and intense volume, probably developing from the need for the voice to carry in a natural manner.

The principal singer accompanies himself on a guitar, the body of which is used percussively (*tanada*) by the second singer. The main rhythm is underscored by the percussive clapping of those present, often reinforced by a *cacharaina* (a scraped percussive idiophone made out of a donkey's jawbone); and a *pandera* (a particularly robust tambourine). The harp is also sometimes added as an instrument of accompaniment.

Other song and dance forms include the *tonada*, another traditional song which also enjoys wide presence and diffusion. Its name is derived from the *tono*, meaning melody or song. During the colonial period, it was sung to the poetic texts of *romances* and VILLANCICOS *en el tono de* ('to the tune of'). The great majority now performed are of recent origin. A profane song of lyric character, in slow time, with or without a chorus, the *tonada*'s final verse is called the *cogollo* or coda. Vocal melodies are interpreted either by a soloist or duos who

1. Guitarrón (25-string guitar)

2. *Rabel (three-string fiddle)*

duplicate the principal melody in 3rds or parallel 6ths. Vocal styles of singers are characterized by nasal timbres and high-pitched tessitura. Strummed guitar accompaniment uses alternating chords I and V on a 6/8 metric base, with hemiola marked in a maintained tempo. Occasionally, accompaniment is augmented by an additional guitar or harp to which is added percussion knocked out on the instrument's body. If slow and fast tempos are alternated, the *tonada* becomes a *tonada-canción*.

Generally melodies are in the major mode using similar melodic intervals to the *cueca* with frequent repetitions of phrases. The term *tonada* is also applied to a group of musical genres which share common features. Among them are the *corrido* (narrative dance-song), the *tonada al Niño* (Christmas song), the *esquinazo* (evening or dawn serenade in honour of a person or saint) and *parabienes* (wedding songs).

Related to the *romance* and *tonada*, the *corrido* is very popular in central and southern Chile. A narrative dance-song, its text is composed of octosyllabic lines. In certain cases the first pair of verses rhyme, while the second are left free. The verse can be hexa- or hepta-syllabic with a single rhyme. It is based on a basic, single melody, which is repeated successively adapting itself to each new poetic line. The choreography corresponds to a dance in binary metre, with the body movements of participating couples following the movements of the feet. Such characteristics are also present in the contemporary Mexican *corrido*, which seems to have been influenced by the Chilean model.

Several typical regional folkdances of recent origin but which have almost disappeared are the northern *cachimbo*, *trote*, *torito*, *chaya-chaya*, *zonzo-ternero*, *las lanchas*, *la danza*; the central southern *refalosa*, *sajuriana*, *sombrerito*, *chapecao*, *mazamorra*, *aire*, *cuando*, *cielito*, *peuqen*, *aguilucho*, *jote*, *chincolito*; the Chiloé islands *sirilla*, *pericona*, *trastasera*, *nave*, *costillar*, *pavo*, *cielito*, *rin* and *zamba*.

Apart form the musical instruments described above, instruments used include the *matraca* and *cacharaina* (scraped idiophones); the *tormeno* and *pandero* (respectively struck and shaken idiophones); the *tambor* and *bombo* (small and large double-headed drums) the *charango* and *chillador* (small Andean guitars); *bandola* (flat-backed lute) and *chanango* (board zither).

Many of the characteristics of Chilean Hispanic music are shared by similar traditions found in other Latin American countries, particularly neighbouring Argentina, Bolivia and Peru. These characteristics include: the predominance of fixed, strophic forms corresponding to the text, and of improvised free forms modelled on melodic patterns; simplified functional harmony employing I, IV, V and VIII♭ cadences; frequent parallel motion in either 3rds or 6ths; the use of hemiola and other compound rhythmic structures; the predominance of a regular and fixed tempo; and an alternation between slow and fast sections. Vocal characteristics include lack of vibrato, nasality, tension, high intensity and pitch; frequent use of slides, glissandos, portamentos and appoggiatura; solo or duo performances and singing contests called *desafíos* in which singers improvise alternately. Instrumental accompaniment is mainly provided by chordophones, in particular the five- or six-string guitar, used either solo or in ensembles, with a variety of *afinaciones transpuestas* (scordatura tunings) and occasional double courses. Accompaniments are either strummed or plucked, with duplications of the vocal melody in the instrumental interludes; the most traditional instrumental ensemble comprises guitar, harp and idiophone.

JUAN A. ORREGO-SALAS/R (I), MARÍA ESTER GREBE (II)

Chilese, Bastian (*fl* 1608). Italian composer. He was probably related to a family of instrumentalists active in Venice about 1610–20, and in Vienna about 1620–40. Three pieces, one for five and two for eight instruments, published in Alessandro Raverii's *Canzoni per sonare* (Venice, 1608, ed. R.P. Block, *Canzon 22 à 5*, London, 1970), employ echo effects and ornamental passages.

ELEANOR SELFRIDGE-FIELD

Chilesotti, Oscar (*b* Bassano del Grappa, nr Vicenza, 12 July 1848; *d* Bassano del Grappa, 23 June 1916). Italian writer on music. After graduating in law from the University of Padua (1871), he studied the cello, flute and guitar; he also became an outstanding performer on the lute, which led him to investigate the structure, tuning and repertory of that instrument.

Chilesotti owned a large collection of 16th- and 17th-century tablatures, both printed and manuscript, and was a pioneer in transcribing lute music. His methods were interpretative, in that he picked out the implied polyphony in the tablature and retained the single staff in transcription, using a treble clef. In order for the music to be performed on the guitar he employed a false tuning in E rather than the original tuning in G or A. Many scholars were critical of these choices, finding the transcriptions too guitar-like. Chilesotti's two principal publications, the *Codice Lauten-Buch* (1890) and *Lautenspieler des XVI. Jahrhunderts* (1891), are collections in which dance music predominates. Chilesotti took an active role in making early music better known, to which end he initiated the series Biblioteca di Rarità Musicali, in which he made transcriptions for piano. Composers such as Leoncavallo and Respighi drew on these transcriptions. Chilesotti also contributed to many periodicals, including (in addition to those named in the list of writings) *Santa Cecilia* in Turin, *Orfeo* and *Musica* in Rome and the *Gazzetta di Venezia*. From 1884 to 1891 he was curator of the Museo Civico at Bassano del Grappa.

Together with Francesco Caffi and Pietro Canal Chilesotti was responsible for introducing modern methods of historical musicology, on a positivist basis, into Italy. Although somewhat naive in his application of positivist evolutionary principles to music, he was one of the first Italian scholars to approach historical research based on accurate reading of the sources with methodological rigour, and he was underestimated by the next generation of critics, which had adopted a position of philosophical idealism. His manuscripts are held in the Fondazione Giorgio Cini in Venice.

CARLIDA STEFFAN

Chilingirian Quartet. English string quartet. It was founded in 1971 by Levon Chilingirian (*b* Nicosia, 28 May 1948), Mark Butler, Simon Rowland-Jones and Philip De Groote, all former students of the RCM. Rowland-Jones left in 1978 and was replaced successively by Csaba Erdélyi, Nicholas Logie and Louise Williams; he returned from 1992 to 1995. Since 1992 the second violinist has been Charles Sewart and since 1995 the viola player has been Asdis Valdimarsdottir. From 1973 to 1976 the group was quartet-in-residence at Liverpool University, from 1977 to 1993 it held a similar position at Sussex University and since 1986 it has been resident at the RCM. The Chilingirian's early promise was soon diluted by an over-reliance on flair and a lack of attention to technical details; but its enthusiasm and the musicianship of individual members, notably the cellist, have won it a large following for its concerts and recordings, which include Panufnik's chamber music for strings and the mature quartets of Mozart and Schubert. It has given the premières of works by Jacques Castérède, Alain Daniel, Bruno Ducol, Frédéric Martin, John Tavener, Hugh Wood, Robert Saxton, Peter Klatzow and Tigran Mansuryan.

TULLY POTTER

Chilmead, Edmund (*b* Stow-on-the-Wold, Glos., 1610; *d* London, 19 Feb 1654). English music theorist and man of letters. He has sometimes been referred to incorrectly as 'Edward Chilmead'. In 1625 he became a clerk in the choir of Magdalen College, Oxford, taking the BA at the university in 1628 and the MA in 1632. About this time he copied out several music books for the use of the choir. In 1632 he was appointed one of the chaplains of Christ Church and began his catalogue, completed in 1636, of Greek manuscripts in the Bodleian Library. He was an able mathematician and an excellent linguist. A work which must have been useful to the young men in his pastoral care was *A Treatise of the Essence, Causes, Symptoms, Prognosticks, and Cures of Love or Erotique Melancholy* (Oxford, 1640) from Dr James Ferrand's *Erotomania*, the first of Chilmead's translations from several languages.

At Oxford Chilmead is likely to have taken part in the music meetings which were a feature of university life. His royalist and Anglican persuasions, however, led to his ejection from the university probably in the mid-1640s (not, as Wood suggests, in 1648) by the Parliamentary Visitors. He went to London, where according to Wood he 'earned his living by that, which before was only a diversion to him . . . a weekly Musick-meeting'. These meetings lasted until his death in 1654 and were held in a large room at the Black Horse in Aldersgate, formerly the music printer Thomas East's house, where Chilmead lodged.

Chilmead's *De musica antiqua graeca* was printed as an appendix to Aratus's *Phoenomena* (Oxford, 1672) together with his annotations to and transcriptions into modern notation of the three odes attributed to Dionysius referred to by Burney. According to Wood Chilmead wrote another unpublished treatise entitled *De sonis*. This is probably Chilmead's commentary on Francis Bacon's acoustical observations in the *Sylva sylvarum* recently discovered in the Bodleian Library, Oxford (*GB-Ob* Tanner 204). Of his compositions a dialogue, a duet and a piece for strings in three parts survive (in *Lbl*).

MICHAEL TILMOUTH/PENELOPE GOUK

Chilò, Gian Carlo. *See* CAILÒ, GIAN CARLO.

Chilston (*fl* early 15th century). English theorist. His name is found in connection with a treatise in *GB-Lbl* Lansdowne 763, which dates, on palaeographical evidence, from *c*1450. (The date of 1460 given by the catalogue of Lansdowne MSS has no apparent evidence to support it.)

Of the 20 treatises preserved in this manuscript, nos.17–20 (ff.117–122*v*, ed. in Meech) form a coherent unit. No.17 opens with 'Here beginneth tretises diverse of musical proporcions ... secundum Chilston'. This sentence is perhaps an addition by the compiler of the manuscript, John Wylde (who was preceptor of the Abbey of the Holy Cross, Waltham) rather than an inherent part of the treatises.

The other treatises in the collection are by writers ranging from Guido of Arezzo to Leonel Power. The term

secundum is conventionally used for copies or paraphrases of earlier authors by later ones; thus the date of the manuscript alone cannot be used as certain evidence of Chilston's dates and only the content of his three treatises suggests the 15th century. They describe very conventionally the various kinds of mathematical proportions that were beginning to concern 15th-century composers and theorists. Although their technical terms are in Latin they probably constitute the first treatise on proportions to be written in English.

Preceding these short works by Chilston is no.16 (ff.113*v*–116*v*, ed. in Bukofzer and in Georgiades), beginning 'Here folwith a litil tretise ... of the sight of descant and also for the sight of counter and for the sight of the countirtenor and of faburdon'. Hawkins and Burney, in their histories of music (1776 and 1776–89), attributed this work also to Chilston, and Riemann perpetuated the error in his *Geschichte der Musiktheorie* (1898). There is no evidence to substantiate Chilston's authorship and the citation of his name in connection with discant and faburden is therefore erroneous: modern practice cites the treatise by the name Pseudo-Chilston.

Pseudo-Chilston described the sights, or transposition, of mene, treble, quatreble voices, and the consonances which belong to them, and then proceeded to countertenor, counter and faburden: all are basically voices extemporizing above, around or below the tenor (*see* DISCANT, §II). When the cantus firmus is high, Pseudo-Chilston said that the contratenor may be low; when it is low, the contratenor becomes the mene. This appears to be a theoretical recognition of a practice thought to be of later 15th-century origin: the contratenor, moving around the tenor, divides into two voices, the higher of which is the mene (or in continental terms, *altus*), the lower the counter (*bassus*). *See also* FABURDEN.

ANDREW HUGHES

Chilton, John (James) (*b* London, 16 July 1932). English writer on jazz and trumpeter. He formed his own band in 1954, was a member of Bruce Turner's Jump Band (1958–63), and entered a permanent affiliation with George Melly in 1971. Although a performer of only minor importance, he came into contact with many notable players, about whom he has written. His writings demonstrate a rare ability (within the realm of jazz literature) to combine access to first-hand information with meticulous research into published sources and memorabilia. His strength is in detailing biographical activities rather than in offering musical description and analysis, although his more recent books (notably those on Bechet, Hawkins and Jordan) have ventured into this area. His reference works are clearly intended to be read in conjunction with discographies, as he has restricted the discussion almost exclusively to performance, with only occasional references to recordings. His *Who's Who of Jazz* has gone through several editions and remains the standard reference source on American jazz musicians born before 1920. He has written a parallel book covering the widely neglected British jazz scene.

BARRY KERNFELD

Chime-bells. *See* BELL (i).

Chimènes, Myriam (*b* Paris, 6 Jan 1952). French musicologist. She studied musicology at the University of Paris IV (MA 1972) and then at the Ecole Pratique des Hautes Etudes with François Lesure, gaining the doctorat de 3ème cycle in 1980 with a dissertation on Debussy's ballet *Khamma*. Concurrently, she studied the piano at the Ecole Normale de Musique and gained the teaching diploma in 1975. In 1988 she became a researcher at the CNRS in Paris.

Chimènes' primary concern is to unite musicology and history. Her research activities are concerned with three main areas. The first of these is the social history of music in France between 1870 and 1940. In 1997 she qualified as a research supervisor at the Ecole des Hautes Etudes en Sciences Sociales with a dissertation entitled *Elites sociales et vie musicale parisienne sous la IIIe République*. The second is Debussy; since 1984 she has been curator at the Centre de Documentation Claude Debussy, and in 1985 she became a member of the editorial committees for the critical edition of Debussy's complete works and for the journal *Cahiers Debussy*. Her third area of interest is musical life in France during World War II. In 1994 she established and became director of a multidisciplinary research group on this subject, involving collaboration between musicologists and historians; in 1999 she organized a colloquium on this theme at the Paris Conservatoire.

JEAN GRIBENSKI

Chimenti [Chementi], **Margherita** ['La Droghierina'] (*b* Rome; *fl* 1733–46). Italian soprano. She sang at Camerino (in Vinci's *Artaserse*) and Viterbo in 1733, and sang male parts in operas by Pergolesi and Leo in Naples (1734–5), and at Venice (1736). She spent two seasons at the King's Theatre in London (1736–8), first with the Opera of the Nobility, then with Heidegger and Handel, again generally in male roles, making her début in Hasse's *Siroe* and appearing in operas by Broschi, Pescetti, Veracini and Duni. She created the parts of Adolfo in Handel's *Faramondo* and Atalanta in *Serse*, and appeared in two pasticcios, one of them Handel's *Alessandro Severo*. She sang in Handel's benefit oratorio on 28 March 1738. Mrs Pendarves called her 'a tolerable good woman with a pretty voice'. Her Handel parts indicate a limited technique and the compass (*c*♯*'* to *d''*) of a mezzo-soprano. After leaving London she sang at Livorno (1739–40), Florence (1741 and 1743–4, when Horace Mann considered her 'not worth hearing'), in two operas in Turin in 1741, three in Venice in 1741–2, two in Bologna in 1742, and in Duni's *Catone in Utica* in Naples in 1746.

WINTON DEAN

Chimes. A generic term for a set of idiophones consisting of hollow, open tubes which, when struck at one end, emit a sound of definite pitch (the GONG-CHIME and DRUM-CHIME do not belong to this category; for the modern Western type, as used in symphony orchestras, *see* TUBULAR BELLS). The term more specifically denotes a set of tuned, stationary bells, less extensive than a CARILLON, as well as the music on such bells.

The word 'chimes' is derived from the Latin *cymbala* (plural of *cymbalum*, 'bell'). 'Chimes' may now refer to a set of bells large or small, hung indoors or out, provided they are of limited range, are fastened stationary and are struck to sound (*see also* WIND CHIME). Such an instrument, older than the carillon, may have as few as two bells, as on many clock chimes, or a sequence – predominantly diatonic – of up to two octaves. It is used primarily for performing unaccompanied melodies (except in the Russian tradition, where the rhythmic and harmonic properties are more important than the melodic dimension).

1. Historical development. 2. Clock chimes.

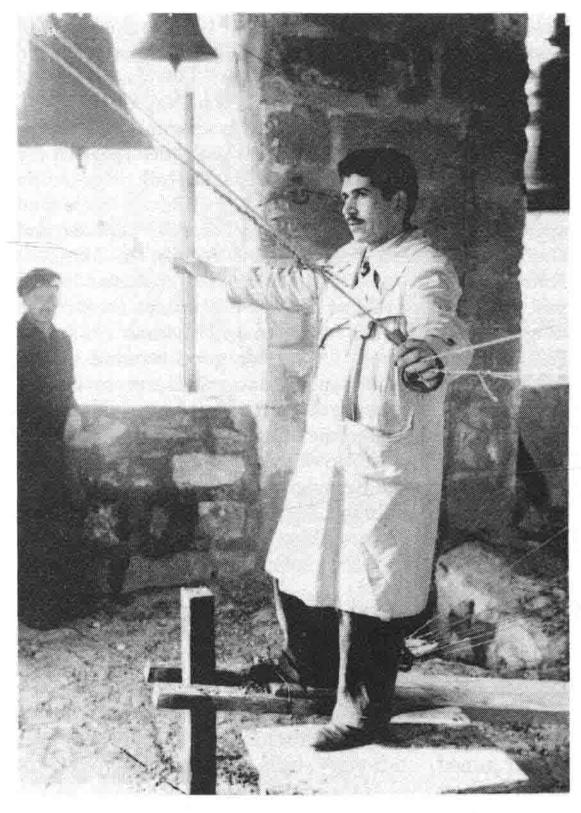
1. HISTORICAL DEVELOPMENT. Around the 5th century BCE in China chimes of nine to 16 bells, called *bianzhong* (*see* ZHONG), were taken into the instrumental ensemble used in Confucian rites. At first the bells were hung on a low cross-bar, and the player sat on the floor and tapped them with a light hammer; later they were hung higher on several cross-bars and the player stood in front of them. The instrument was adopted in Korea and Japan. At the end of the 18th century it went out of use except in Korea, where it is still played in religious and classical court music (fig.1).

In western Europe the first use of the word chime referred to a clockwork mechanism on which chant melodies could be sounded (see §2 below; for a discussion of medieval *cymbala*, *see* CYMBALA, §2).

From the 17th century some Russian chimes, *trezvon*, have exceeded in number and size of bells any western European installations of swinging bells (possible because chiming does not put a lateral thrust on the tower as does the swinging of heavy bells). The largest *trezvon* comprised over 20 bells, the heaviest weighing 30 or 40 tons. Ringing the whole range of bells was reserved for the most important occasions, with fewer and smaller bells used on less important ones. The largest *trezvon* would require half a dozen ringers in the bellchamber, some manipulating ropes attached to the clappers of small bells, others pulling a single rope to the clapper of a large bell, and two men standing facing each other under the largest bell, pushing its clapper back and forth. Before the days of electrical amplification no musical instrument produced so loud a sound. The ordinary church would of course have fewer and lighter bells, on most occasions sounding only four or five rung by one man (two with each hand and one with a foot; fig.2).

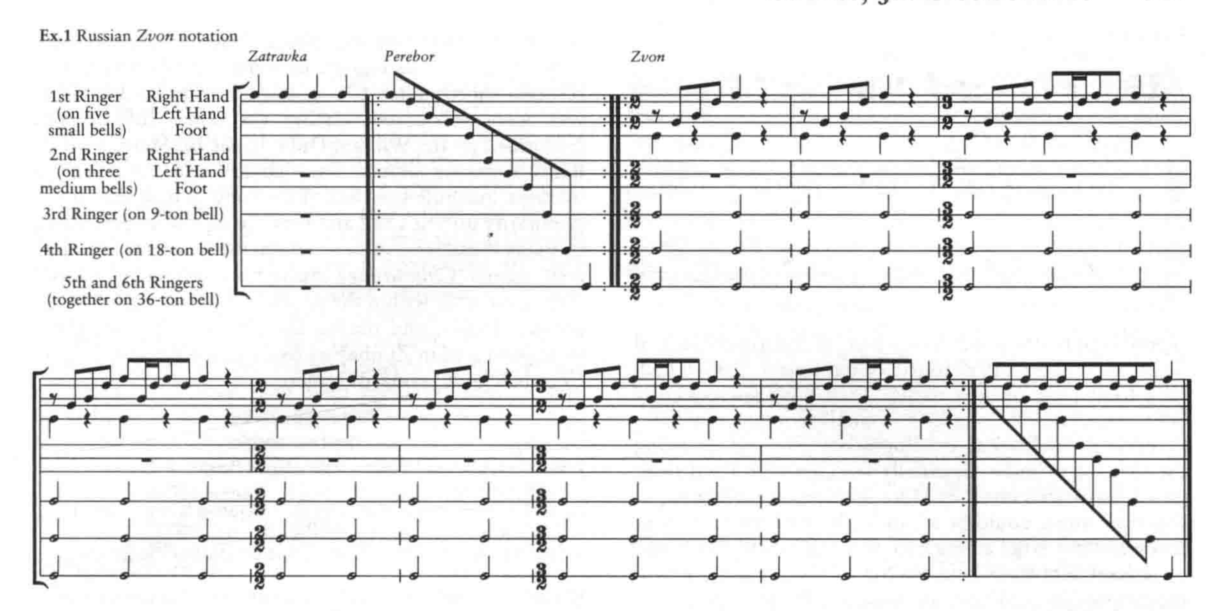
Before the end of the 19th century Russian bells were not tuned to a scale. The resulting dissonances, particularly of tritones, were highly prized and individual bells were given such folk names as 'The Swan', 'The Goat' or 'Red Bell'. The true delight of Russian chiming was the interplay of high and low sounds of indefinite pitch, some mellow, some cacophonous, rendered in carefully executed rhythmic patterns. To obtain this effect in *Boris Godunov* Musorgsky, in his original score, called for a *trezvon* on stage with the heaviest bell weighing 15 tons. This use of real bells is in addition to the simulation of bells in the orchestra score, in the Coronation scene (Prologue, scene ii). In the latter, the music accurately depicts the rhythmically controlled striking/chiming of the *trezvon*. Other composers inspired by Russian chiming include Rachmaninoff and Stravinsky. Ex.1 shows the scoring of a rhythmic pattern for a heavy 11-bell *trezvon*.

The other Eastern Churches have not developed any comparable bell music, for they seldom chime more than one bell. But in the upper Rhône valley in Switzerland,



1. P'yŏnjong (chimes) at a Confucian ceremony in Seoul, South Korea

chiming on five or six bells is rendered with considerable expression by a solo chimer in the bellchamber. In some European towers with swinging bells the ringers occasionally attach their bell ropes to move the clappers instead of the bells, enabling them to play tunes that could not be played by swinging the bells. In the 19th century some English peals were equipped with hammers to strike the bells when they hung still; these were operated by ropes leading to a lower part of the tower, so that when ringers were unavailable the bells could be sounded from below by one person such as the sexton. This was called the 'Ellacombe' system.

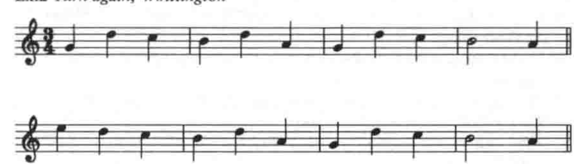


In the USA and Canada there was a unique development of chiming, partly because there was no established church to set one method of ringing, and partly because many towers, although outwardly copies of sturdy European structures, were not strong enough to support more than one or two bells in swinging motion. Consequently, chimes of eight to 14 fairly heavy bells were installed; their hammers were connected to a 'chimestand' on the floor below the bellchamber, where they were connected to levers like large pump-handles which the player pushed down.

Hymn tunes and other airs that could be adapted to the range, with an occasional 'alto' harmony note added, were played on these chimes. Most of these tower instruments were made between 1870 and 1940 by the McShane foundry in Baltimore, Maryland, the two Meneely foundries in Troy, New York, and the Van Dusen foundry in Cincinnati, Ohio. The music played on them was simple, but it had a captive audience both in churchgoers and in students at colleges and universities, where hymn tunes would float out over the campus every morning from a central bell tower. At other times the chimes aroused school spirit by playing college songs. This chime music paved the way for the later proliferation of carillon music across the continent, and set early standards for judging it. As a prestigious adornment of American campuses, the chimes created an opening for the establishment of the carillon and the development of its music in American universities.

2. Chimes controlled by a single ringer in the Church of the Holy Sepulchre, Jerusalem

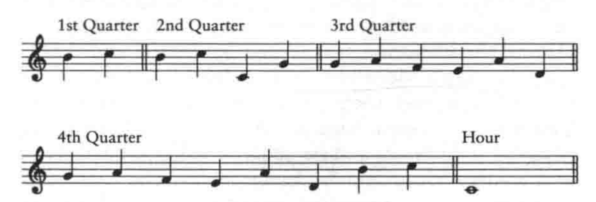
Ex.1 Russian *Zvon* notation



2. Clock chimes. From the 2nd century BCE automatic timepieces were used by Mediterranean peoples. Before bells were put to this purpose the sound for marking elapsed periods of time was made by dropping metal balls into a bronze pan similar to the metal frame of a Roman drum or *tympanum*. Later this device became a type of doorbell for Roman houses and was the progenitor of the French and Spanish *timbre*, a shallow hemispherical bell widely used on clocks, and at the end of the 19th century adopted for the telephone. By the 8th century CE bells of more conventional shape were also used on timepieces in China as well as Europe. In both regions they were first struck by puppets, known in English as 'clock jacks'; these served both a mechanical function and the talismanic one of keeping unseen forces from sounding the bells. Older than dials on clocks, they were essential to an illiterate population unable to read figures on a dial.

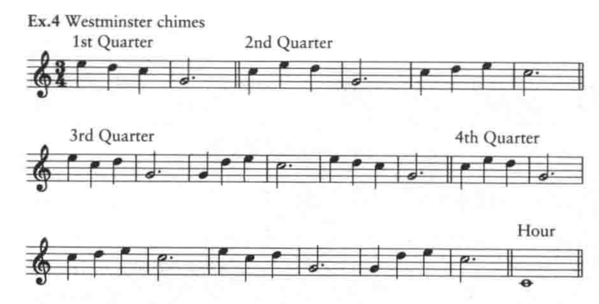
From the single jack there evolved the use of two jacks striking two bells in succession. This gave the first chime tune, and one still in universal use for indicating the quarter-hours, called 'ting-tang quarters'. The interval between the two notes was not fixed. (The Chinese combination was a bell and a drum to symbolize the Confucian balance of Yin and Yang.) Gradually more bells were added, at first no idea of scale relationship; the singularity of their sound had value rather as an audible identification of the tower and the town at night or in a fog.

In the early 14th century a weight-driven rotating cylinder with pegs to move the bell hammers was introduced (*see* Musical clock). This allowed more bells to be sounded, and more rapid playing. Jacks went out of use, the bells were increased in number and tuned to a scale, and chimes came to be heard as music. On some indoor clocks this music was made quite elaborate, and the most luxurious examples incorporated various instruments and also visual effects.



The chime bells of public tower clocks had a far-reaching sound, and before small clocks were in general use these instruments were important in regulating daily urban life. Some of these constantly repeated bell sequences – with a whole city as a captive audience – were given words and became folksongs, as did *Frère Jacques*, expanded from a three-bell chime, and *Turn again, Whittington* (ex.2) out of one for six bells.

Ex.2 *Turn again, Whittington*



Strains of religious music were also used as hourly chimes on some buildings, both religious and secular, for example the first notes of *Veni Creator* on the city hall clock of Caen from 1597. The earliest known example is from the Park Abbey (Abdij van 't Park) in Leuven, where the Marian hymn *Inviolata casta et integra es Maria* sounded every hour from 1479. The English habit of 'quarter chimes', not much followed on the Continent, is to increase the length of the chime as the hour proceeds, as in the Magdalen Chimes (Oxford, 1713; ex.3), Carfax

Ex.3 Magdalen chimes

Chimes (Oxford, but first used at Freshwater in 1895), Guildford Chimes (1843), Beverley Minster Chimes (1902), the various forms of the Whittington Chimes, etc. The best known of all clock chimes, the Westminster Quarters (ex.4), was derived from a quatrain in Handel's *Messiah*. In 1794 William Crotch wrote four variations on the fifth and sixth bars of 'I know that my Redeemer liveth' and proposed them as chimes for the new Cambridge University clock in Great St Mary's Church. They were accepted, and in 1845 were copied on the Royal Exchange clock, London. In 1859–60 they were

Ex.4 Westminster chimes

reproduced on the much larger bells of the tower clock of the new Houses of Parliament, Westminster, from which they took their present name. They have subsequently been copied on clocks large and small around the world.

Further mechanical developments involved changing the chiming cylinder, originally wooden with fixed pegs, into a perforated metal cylinder with replaceable pegs, so that new music could be set on it. In the Low Countries this was built large enough to play full CARILLON music on several octaves of bells for five or six minutes without repetition. The cylinder is now usually replaced by a variety of electrical devices, most of which operate magnets to control the striking of the hammers.

Chimurenga. Zimbabwean urban popular music style. In the Shona language of the Republic of Zimbabwe *chimurenga* means 'fighting in which everyone joins' but has also been used to mean 'liberation war'. After UDI (1965), the liberation war waged by ZANU and ZAPU guerrillas from Mozambique and Zambia intensified. In the 1970s a new form of urban music developed in Zimbabwe, drawing together the traditional harmonic patterns of the *mbira* and elements of earlier Zimbabwean and South African popular guitar styles. The song texts in Shona often transmitted secret messages about the liberation war (*chimurenga*) and the new music became associated with the struggle for liberation from the regime of Ian Smith and the Rhodesian settlers. Thomas Mapfumo was important in the early development of *chimurenga* music, and during the late 1970s and early 1980s many other performers became involved in the new music, notably Oliver Mutukudzi.

After Zimbabwe gained independence in 1980, *chimurenga* music became 'common currency' and its popularity spread into Zambia, Malawi and Mozambique. Thomas Mapfumo's style began to be termed 'traditional', while others such as Oliver Mutukudzi assimilated contemporary trends such as reggae. In some records which were released shortly after 1980, episodes from the liberation war were recounted; during the song *Take Cover*, performed by the William Dube Jairos Jiri Sunrise Kwela Band, someone shouts 'Take cover!' and the drummer imitates machine-gun fire. This song gained enormous popularity during 1982 and versions of it were performed by many musicians, some of whom used more 'traditional' instruments. *Chimurenga* music became recognized as a distinctive style within the panorama of southern African popular music, and during the 1990s many recordings were produced in Zimbabwe by Leonard Zhebata, Simon Chimbetu and Leonard Dembo.

MOYA ALIYA MALAMUSI

Ch'in. A Chinese long zither, one of the family of east Asian zithers that includes the Japanese KOTO, the Korean *kŏmun'go* and the Vietnamese *dan tranh*. The *ch'in* has long been associated with Confucianism and Chinese scholarship, and traditionally was the symbol of 'correct' music, a means of purification and education, and an essential feature in ceremonies and rites. It is one of the oldest Chinese chordophones, with a history of over 3000 years: by the time of the Chou dynasty (*c*1050–255 BCE) it was already important in the official music of the courts, and in art and entertainment music.

The *ch'in* has seven strings of equal length and varying thicknesses, each being twisted from a fixed number of silk strands. Unlike other Chinese and east Asian zithers, the *ch'in* has no bridges. Finger positions are marked along the soundboard by 13 inlaid ivory or mother-of-pearl discs. The instrument is placed horizontally on the ground or on a table, or held across the player's knees. A plectrum is not used, as it is thought to detract from the execution of slides, harmonics and special strokes which contribute to the characteristic expressive quality. With the Cultural Revolution of the mid-1960s, many aspects of *ch'in* playing and *ch'in* ideology were considered decadent, but historical research on the instrument continues in China and in the West.

Chin, Unsuk (*b* Seoul, 14 July 1961). Korean composer. After studies in Korea she was awarded a German government scholarship, and moved to Europe in 1985. She had lessons in Hamburg with Ligeti, an important influence on her music, after which she settled in Berlin, composing and working in the electronic studio of the Technische Universität.

Her early works, including *Gestalten* (selected for the ISCM World Music Days in Canada in 1984), *Troerrinnen* (1986) for women's voices and orchestra and the tape piece *Gradus ad infinitum* (1989), laid the foundations for a style which tends as naturally towards the monumental as towards the intimate, and which can deal — both seriously and playfully — with dramatic archetypes and rituals. Several of her later compositions are on a relatively large scale, and explore radically contrasted expressive states, from the processional solemnity of *santika Ekatala* (1993) and the expansive, exuberant pattern-making of the Piano Concerto (1997) to the refined and allusive play with medieval sources and procedures in *Miroirs des Temps* (1999). Nevertheless, her most strongly characterized, effectively organized works build on her Ligeti-like delight in surreal texts (*Akrostichon-Wortspiel*, 1991–3), and also deploy a subtle blending of instrumental sonorities, sometimes with an electro-acoustic component (*Fantasie mécanique*, 1994; *ParaMetaString*, 1995–6).

The ongoing collection of piano studies, brilliantly conceived for the instrument, have obvious textural associations with Ligeti's. But Chin's music of the 1990s also displays positive signs of contact with 'spectralist' composers like Murail, Grisey and Lindberg, who have worked at IRCAM — and also with Xenakis. That these influences are well-digested is especially evident in *Xi* (1998), her most extended electro-acoustic work to date, written to an IRCAM commission. Though its material can be seen as consolidating the types of gestures explored in earlier scores, the expansiveness of its single-movement form makes possible a stronger feeling for the interplay and even opposition of contrasting moods and textures than the more discrete formal and expressive units of her earlier works had allowed for. Chin's fundamental approach is essentially organicist, however, and her well-nigh classical concern for explicit continuity is evident in the clear, if not literal recapitulation with which *Xi*, like *Fantaisie mécanique*, ends, as well as in the insistent patterning of the Piano Concerto and *Miroirs des temps*. 'Xi' is a Korean word meaning core, nucleus, the smallest source of unity in things, and this image is clearly of defining importance for Chin's compositional aesthetic.

ARNOLD WHITTALL

China, People's Republic of (Chin. Zhonghua renmin gonghe guo).Country in East Asia.China is composed of 23 contiguous provinces, five autonomous regions originally inhabited largely by minority groups (Inner Mongolia, Xinjiang-Uighur, Guangxi-Zhuang, Ningxia-Hui and Xizang-Tibetan), four centrally-controlled municipalities (the capital Beijing, Shanghai, Tianjin and Chongqing) and the two special administration regions of Hong Kong and Macau. Its total area of about 9,600,000 km^2 is inhabited by 1,370 million people (mainland China, 2010). The 55 'minority nationalities', ethnically distinct from the Han Chinese majority, comprise about 8.5%.

Outside of mainland China and Taiwan, the largest groups of Chinese include about 10 million in South-east Asia, (mostly in Thailand, Malaysia, Singapore, the Philippines and Indonesia), and over 2 million in the USA (including Hawaii) and Canada. The music of these groups is discussed, as far as possible, in the articles on the countries in which they went to live.

I. Introduction: historical, regional and study perspectives. II. History and theory. III. Musical instruments. IV. Living traditions.

I. Introduction: historical, regional and study perspectives

Chinese music, owing to its depth of historical development and breadth of regional diversity, constitutes an uneasy alliance of many traditions. Some traditions, such as court ritual music and *qin* zither, maintain observable lines of continuity between ancient periods and the present; in others, such as the common-practice vocal and instrumental genres, their histories are more recent, and regional differences among similar types often quite pronounced. Thus a balanced view of traditions called 'Chinese' must be based not only on a knowledge of written history and related iconography but also on the distinctive cultural patterns and musical tastes of the various regions.

1. Han Chinese regions and genres. 2. Minority regions and genres. 3. Sources and perspectives.

1. HAN CHINESE REGIONS AND GENRES. China today occupies a vast land mass extending from the Mongolian steppe southwards to the borders of present-day Vietnam and Myanmar (Burma), and from the East China Sea westwards to the borders of India and Afghanistan. The ancient centre of Chinese civilization, however, was a very much smaller area on the 'Central Plain' of north China (present-day Henan, Hebei, Shanxi and Shandong provinces). Following the emergence of a number of contending kingdoms such as Qin, Wei and Chu, Qin ascended to power in the 3rd century BCE, expanding its influence to the South China Sea and unifying the political system throughout its newly acquired empire. Further expansion in these and other directions occurred during the Han dynasty (206BCE–220CE), bringing with it the dissemination of many cultural elements, such as the written language and Confucian philosophy and its rituals. As a result, most Chinese today refer to themselves as 'Han people' in acknowledgement of this consolidation.

The notion of a monolithic Chinese culture has penetrated deeply into popular thinking, both Chinese and Western. But unification touched the many regions of China unevenly, and over the last 2000 years, diverse regional subcultures, dialects and musical traditions have grown and thrived. These subcultures have gravitated for the most part towards the drainage areas of the Huanghe

('Yellow river') in north China, the lower Yangzi (Yangtze) river in central-eastern China, and the Zhujiang ('Pearl river') delta in south China. Their various musical traditions commonly share some structural similarities, although they are valued by local practitioners for their distinctive regional qualities. Among the many non-Han peoples, ethnic minorities who have been pushed into the mountains, deserts and other less desirable space, the more usual response to Han unification has been resistance and often bloody rebellion. Their various musical traditions share few roots with the 'great tradition' of the Han.

The Han Chinese comprise roughly 94% of the population of China. While the common-practice traditions retain close associations with specific regions, several Han music genres have achieved national prominence over the centuries, such as the Confucian ritual music of the court, the traditions of *qin* zither, *Kunqu* opera and Beijing opera, and other genres supported by the emperor or Han Chinese literati. Since the mid-20th century, the concert-hall tradition of 'national music' (*guoyue*) has also achieved a particularly strong pan-Chinese presence and is often the only tradition known among young conservatory-trained musicians of recent decades.

Popular Chinese thinking divides Han China into two broad geographic regions: the North, with its lively traditions of Beijing opera and wind-and-percussion music, and the South, with its more refined literary traditions of *Kunqu* opera and silk-and-bamboo music. Qiao Jianzhong, approaching this question from a more empirical orientation, divides the country into as many as 12 music culture areas, based upon historic regional nomenclature and distinctive performance characteristics. The divisions given below, which largely coincide with his music areas, are based on geographic and sociolinguistic factors, resulting in what some sinologists call 'macroregions' (fig.1).

(i) Central Plain (ii) The north-west and central interior (iii) Jiangnan (iv) Sichuan basin (v) The south-east coast (vi) Cantonese region.

(i) Central Plain. Bordering the Yellow river as it flows through and often over the floodplain of northern Henan and western Shandong provinces is the region known as the Central Plain (*Zhongyuan*). This broad area is the acknowledged birthplace of Han Chinese civilization and subsequent location of political centres (especially at Luoyang and Anyang) from the Shang through Tang periods (*c*16th century BCE to 10th century CE). The northern province of Hebei, together with the cities of Beijing and Tianjin, may also be included in this macroregion, though cultural development here occurred later. Artefacts of musical significance unearthed on the Central Plain include bone and clay flutes dating to between 6000 and 5000 BCE, together with later finds of Shang bronze bells and stone chimes. Oracle bones dating from between the 14th and 12th centuries BCE, on which are inscribed many references to musical instruments, ceremony and dance, were also found in this region. Much later, imperial ceremonies such as Confucian rituals, with their magnificent instrumental ensembles were established in the Shandong city of Qufu (legendary home of Confucius), in Beijing and in other urban centres.

Instrumental ensembles in common practice today are mostly of the wind-and-percussion variety, notably the processional *suona*-and-percussion bands and the ritually more significant ensembles utilizing *guan* (reed pipe), *sheng* (mouth organ), *di* (flute), *yunluo* (frame of pitched gongs) and percussion. Both types are common throughout northern China, the latter currently most famed in central Hebei province. The most significant instrumental solo tradition to emerge on the Central Plain is the 'northern school' of *zheng* zither, centred in eastern Henan and south-western Shandong. BEIJING OPERA and the other opera traditions of this are more recent in origin and related to those opera types of the north-west and other areas of central China. Narrative song is represented by varieties of *dagu* ('large drum', accompanied by large *sanxian* and drum), as well as Henan *zhuizi* and Shandong *qinshu*, which are unique to their areas. Folksong genres include *shan'ge* ('mountain songs') and the call-and-response type *tiange* ('field songs') of Henan, and the colourful Fengyang *huagu* ('flower drum') songs, which originated in Anhui province and spread into Shandong and other areas. The music culture of the Central Plain exerted considerable influence on surrounding regions, most immediately in the north-west and central interior.

(ii) The north-west and central interior. The north-west (*Xibei*), centred on present-day Shaanxi and western Shanxi provinces and extending into the more western provinces of Gansu and Ningxia, is a highland plateau surrounding the upper reaches of the Yellow river. This region, centre of political activity during the Western Zhou dynasty (*c*11th–8th centuries BCE), saw the rise of the 3rd-century BCE state of Qin, whose founder, Qin Shihuang, boldly declared himself the first emperor of China and instigated massive and effective measures of political unification. His capital was established near the city of Xi'an, an area that retained its importance for the next millennium. Present-day wind-and-percussion music, such as the ceremonial *guyue* ('drum music') of the Xi'an area and other variants, have been thought to retain some Tang (618–907CE) characteristics, though they have naturally undergone subsequent change. Like related wind-and-percussion traditions on the Central Plain, these genres are still performed in conjunction with funerals, calendrical rites and other celebrations. Among the regional opera traditions, the lively *bangzi* (which appeared in the Ming period, 1368–1644) is the most famous and influential; the style was absorbed into many local opera traditions elsewhere in China. Most distinctive of the folksong types are the high-tessitura, rhythmically flexible *xintianyou* of northern Shaanxi and nearby areas, and *yangge*, a very old type of dance-song that spread widely across northern China. Located in the central interior provinces of Hubei and Hunan (historically dominated by the state of Chu) are the ancient tomb sites of Zenghou Yi (5th century BCE) and Mawangdui (2nd century BCE), the former containing a spectacular collection of musical instruments, most likely a ritual ensemble. During subsequent centuries, as this interior region lost its political and cultural prominence, it absorbed many other traditions from the Central Plain, such as the wind-and-percussion ensembles.

Owing to constant pressure from the nomadic and warlike horsemen of the Mongolian steppe, the centre of Chinese culture shifted after the Tang period from the north-west, south-eastwards to the Jiangnan area.

(iii) Jiangnan. The fertile rice-growing region of the Yangzi river basin of central-eastern China is most commonly known as Jiangnan (literally, 'south of the

river'), a region centred in present-day southern Jiangsu and northern Zhejiang provinces and populated by speakers of Wu dialects. Jiangnan emerged as the dominant economic and cultural centre of China after the 12th century, engendering an enormous range of creativity by poets, artists and musicians active in such newly cosmopolitan cities as Hangzhou and Suzhou. Today, the city of Shanghai has taken over the role of cultural capital. Most distinctive of the Jiangnan vocal genres is the 'classical' opera *Kunqu*, which emerged in the 16th century and in which the *qudi* flute is the principal instrument of accompaniment. More recent opera variants include Shanghai opera (*Huju*) and Shaoxing opera (*Yueju*). Other vocal genres prevalent in southern Jiangsu include the *pingtan* narrative song, accompanied by *pipa* and *sanxian*, and various folksong types.

Predominant among the instrumental ensemble traditions is *sizhu* ('silk-and-bamboo'), a type of instrumental chamber music dominated by strings and flutes, derived during the 19th century from existing string music and local ceremonial traditions. The Jiangnan region is also the centre of two instrumental solo genres of great importance: the revered *pipa* tradition, with no fewer than four traditional 'schools' (see §IV, 4(ii)(c) below), and the more ancient *qin* tradition (see §IV, 4(ii)(a) below), emblematic of the highest of literati ideals, also represented by several 'schools'. From the 1930s the city of Shanghai became an important centre for the growth of *guoyue* ('national music'), 20th-century concert-hall music comprised of ensemble compositions, instrumental concertos and solo pieces. Musical influences from the Jiangnan region have been strong on the poorer nearby areas of Anhui and northern Jiangsu (which also absorbed influences from Shandong province) and on the Han population up-river in Sichuan province.

(iv) Sichuan basin. The vast south-western province of Sichuan was in imperial times a prosperous region. Emerging under the kingdom of Shu in the 3rd century CE, the fertile agricultural basin of eastern Sichuan was able to sustain a very large population of farming peoples from the Tang dynasty onwards, by which time there had been a sizable migration from north-west China and the Central Plain. Sichuan was also strongly influenced by the more distant region of Jiangnan. This shared influence is especially evident in the make-up of Sichuan opera (*Chuanju*), which during the Ming dynasty absorbed diverse elements of North-west opera (such as *bangzi*) and Jiangnan opera (especially *Kunqu*), together with other influences. The narrative song genre *yangqin* (named after its principal instrument of accompaniment) most likely emerged after the Ming period and is still performed in traditional teahouses. While instrumental music in Sichuan has as yet been little studied, a regional style of *qin* is preserved. Among folksong types, *shan'ge*, especially the minority-influenced antiphonal courtship songs, became popular in rural areas, and along the upper stretches of the Yangzi river, workers and boatmen sang strongly rhythmic worksongs (*haozi*).

(v) The south-east coast. The south-eastern coastal region of present-day southern Fujian and eastern Guangdong provinces, historically isolated from the rest of China by rugged mountainous terrain, is home to a complex of subcultures that are clearly less homogeneous than in other regions of China. This region is dominated by Minnan (Hokkien) and Chaozhou peoples on the coast, together with the more insular (but nevertheless highly influential) Hakka subculture of inland areas. While the Minnan and Chaozhou subcultures share many close cultural and linguistic relationships, their musical traditions appear to be based on different systems. The Minnan area is centred in southern Fujian province, the urban areas of Quanzhou and Xiamen being the largest. Since the Minnan were capable sea travellers, many migrated to TAIWAN (where they dominate the population), the Philippines, other Pacific areas and South-east Asia. Their vocal and instrumental genre *nanguan* (or *nanyue*) is distinctive for its usage of very old instrument variants (such as the southern *pipa* and *dongxiao* flute) and its melodic refinement and introspection, which some scholars have traced to Tang or Song court traditions. Among their opera traditions, the flamboyant *gezaixi* is most popular.

To the south, on the coastal plain of eastern Guangdong, lies the centre of the Chaozhou subculture. Chaozhou and Shantou are the largest urban areas, though many Chaozhou people have settled in Hong Kong and as far away as Bangkok, Singapore and Malaysia. Chaozhou opera (*Chaoju*) is still very popular throughout these areas of settlement. Chaozhou instrumental chamber music, known as *xianshi* ('string-poem'), is strikingly different from the neighbouring Minnan music in its use of distinctive instrument variants (such as the high-pitched fiddle *erxian* and 16-string *zheng*) and a different melodic repertory, shared in part with Hakka musicians. Chaozhou *da luogu* ('great gong-and-drum' music) is the best known of the ritual wind-and-percussion traditions along the south-east coast.

The Hakka (*Kejia*) subculture is centred in the mountainous Meixian district of north-eastern Guangdong province, though with a diaspora stretching across to Sichuan province and into Hong Kong, Taiwan and throughout South-east Asia. The very conservative Hakka people, having migrated south from the Central Plain in several waves over the last 1500 years, think of themselves as the preservers of the true Han spirit, exemplified by a strong sense of filial piety and other Confucian virtues. Indeed, the Hakka *zheng* tradition (see §IV, 4(ii)(b) below), which local musicians consider to be reflective of ancient Confucian ideals, maintains a social position analogous to the *qin* of the Jiangnan region (an instrument rarely played on the south-east coast). In vocal music, the Hakka maintain their own opera tradition (*hanju*) and a wealthy heritage of folksong (*shan'ge*).

(vi) Cantonese region. Finally, centring on the Pearl river delta in the far south of China is the Cantonese subculture. The Cantonese occupy most of southern Guangdong province (the cities of Guangzhou and Hong Kong containing the largest urban populations), with substantial settlements in Guangxi province, Macau, Vietnam, Singapore and the Western world. While preserving old elements of language and social behaviour, in their expressive culture the Cantonese have demonstrated over the last century a unique openness to Western ideas, especially in their lively and eclectic music. Most significant is the Cantonese opera (*Yueju*), arguably the newest of all Chinese opera traditions, which during the 1930s blended northern operatic styles with local songs (and some Western influence) in the creation of a highly syncretic form. Instrumental ensemble music (dominated by the two-stringed fiddle *gaohu* and dulcimer *yangqin*)

emerged at the same time, based on traditional local genres as well as the Jiangnan *pipa* repertory, and prompting unprecedented creativity from several dozen composers. Traditional folk and narrative songs such as *longzhou* and *nanyin* have mostly been absorbed into the opera tradition. The unique repertory of *xianshui ge* ('salt water songs'), however, is still known among the older generation of 'boat people', a subculture not well assimilated into the Cantonese mainstream.

2. Minority regions and genres. Reflecting even greater cultural diversity than the Han Chinese are China's ethnic minorities. Known as 'national minorities', more than 50 non-Han cultures live in various 'autonomous' regions, prefectures and counties at the margins of Han China; taken as a whole, they comprise roughly 6% of the total population. They will be outlined here in three geographic categories (see §IV, 5 below; *see also* Mongol music; Tibetan music; and Taiwan, §2).

(i) The north-east and Inner Mongolia (ii) The far-west (iii) The south-west and Tibet.

(i) The north-east and Inner Mongolia. The north-east, including the provinces of Liaoning, Jilin and Heilongjiang, has been subject to considerable Han migration since the 17th century and industrialization in the 20th century, but its several minority cultures retain at least some of their traditional ways. The largest groups are Manchu (over 4 million) and Korean (about 3 million). The Manchu, who ruled China during the Qing dynasty (1644–1911), have become largely assimilated, but traditions such as shamanism remain strong. The Koreans, living mostly in eastern Jilin, bordering North Korea, have also modified their traditional culture under Han influence.

In the grassland area of Inner Mongolia, south of the Chinese-Mongolian border, live more than 3 million Mongols of different ethnicities, many of whom still practise transhumant pastoralism. Because of the intertwined histories of China and Mongolia (the founder of the Yuan dynasty was Genghis Khan's grandson Khubilai, who transferred the centre of the Mongol Empire from Karakorum to today's Beijing in the 13th century), Mongols also inhabit other provinces, such as Gansu, Qinghai, Xinjiang and Yunnan. They have become renowned for their long-songs accompanied by the two-string 'horse-head' fiddle, and narrative tales accompanied by the four-string fiddle.

(ii) The far west. The far west of China, dominated by present-day Xinjiang province, is one of the largest geographic regions in China. Through its desert corridor ran the legendary Silk Road, along which Buddhist and other material culture and music were introduced into China over the last two millennia. Occupying this area today are a dozen tribal peoples with close ethno-linguistic ties to Central Asia. Largest among them are the Uighurs (about 6 million), Turkic speakers with Muslim-influenced religious practices, who today dominate the Xinjiang Uighur Autonomous Region. Smaller in numbers are the Kazakh, Kyrgyz and others. Arab and Persian musical influences have been strong here. Especially characteristic of the region's music-making are the full ensembles of Central Asian instruments, including *dutar* and *tanbur* lutes, *daf* frame drum and many others, employed in the performance of *muqam* suites (see §IV, 5(ii) below; *see also* Central Asia, §4). Living in isolated pockets throughout the area and elsewhere in China are the Hui (about 7 million), who are also Muslim in belief but otherwise closely related to the Han.

(iii) The south-west and Tibet. South-west China has at its core the mountainous provinces of Yunnan and Guizhou, though areas of southern Sichuan, western Guangxi and the vast Xizang plateau (Tibet) are often included as well. Closely related tribal peoples also live in neighbouring northern Guangdong and western Hunan provinces, and across the borders in Vietnam and other areas of South-east Asia. As a region of early kingdoms, such as Dian and Nanzhao, the south-west was known to the Han Chinese since the Tang dynasty and earlier. Today it is a region of great heterogeneity, including roughly two dozen tribal cultures speaking dialects of several broad language families. Lolo speakers (a Sino-Tibetan branch) include the Yi (about 5.5 million), Tibetans (about 5 million), Bai (about a million) and many smaller cultures of Yunnan province, most of which absorbed a variety of Han influences over the ages. Whereas Tibetan music is well documented, the Yunnan genres, such as unaccompanied courtship songs (*duige*) sung between male and female, and circle dance-songs (*dage*) accompanied by lutes, mouth organs or other instruments, are less well known.

Tai speakers, related to the Thai in Thailand, though dominated in China by the huge Zhuang population (about 13 million, mostly in Guangxi), are lowland farmers who have been exposed to strong sinicization over recent centuries. Miao-Yao speakers, notably the high-mountain dwelling Miao (about 5 million, mostly in Guizhou) and Yao (about 1·5 million), have remained more isolated from mainstream Chinese developments. One distinctive Miao genre is the *lusheng* dance, for which the large mouth organ Lusheng is used to accompany group dances associated with calendrical festivals, courtship and other functions.

3. Sources and perspectives. This section seeks to identify major trends in the study of Chinese music during the imperial and modern periods.

(i) The imperial period. Written sources for music are voluminous for the imperial period (until 1912). These include not only official writings, such as sections on music in dynastic histories, imperially commissioned encyclopedias and music treatises, but also musical references in novels, poetry and anecdotal 'notebook' literature. Some are valuable in giving alternative views to the Confucian ethic propounded in official sources. For instance, the 3rd-century musician and philosopher Ji Kang (or Xi Kang) advanced a well-articulated anti-Confucian aesthetic reflecting Daoist philosophies.

But the primary motivation for the growth of Chinese musical scholarship resides in the ancient association made between music and government theory. With the emergence of the Confucian texts (*c*3rd and 2nd centuries BCE), comprehensive theories of music philosophy and pitch systems evolved. These theories served to establish the principles of a 'refined music' (*yayue*), believed to reinforce state-sanctioned norms of behaviour and, through regulation of pitch systems, reconcile the empire with the cosmological order. So important was the effort to bring all things into harmony that, in both Zhou and early Han dynasties (before the 1st century BCE), offices of music (*yuefu*) were attached to the governments to

oversee and coordinate this activity. Thus the Confucian orientation was a powerful motivational force in early scholarship. A remarkably large number of imperial compilations from the period of Confucian classics onwards have extended sections on music, the most recent and largest being the monumental 18th-century encyclopedia *Gujin tushu jicheng*. In this source, the music section is included not within the category of 'Arts and sciences', but under 'Political economy', together with sections on the civil service examination system, court ceremonies and military administration.

While scholarship of the imperial period touches upon many aspects, it focusses primarily upon six areas:

Ethos of music. The ethos or philosophy of music (*yuelun*), an area close to the centre of Confucian orthodoxy, is the dominant theme of the earliest writers. Music (*yue*) is treated primarily as a medium to promote essential values of the Confucian state (such as moderate behaviour). While this philosophy is advanced in several of the Confucian classics, it is most cogently presented in the *Yueji* (Record of music) section of the *Liji* (Record of rites; *c*1st century BCE). This Confucian view is repeated and interpreted in works throughout the imperial period, including Chen Yang's early 12th-century music treatise *Yueshu* (nearly half of whose 200 chapters contain commentary on the Confucian classics), and in the various encyclopedic compilations and dynastic histories.

Pitch systems and modes. Scholarly interest in pitch systems and modes (*lülü*) arose from governmental attempts to establish cosmologically the root pitch (*huangzhong*, 'yellow bell') of each empire and bring the 12 chromatic pitches (*lülü*) into correspondence with the cyclic nature of the calendar. Among the earliest textual accounts to detail these theories is the *Lüshi chunqiu* (*c*239 BCE). As an essential part of this inquiry, it became known early in China that the circle of pure 5ths taken 12 times produced an interval sharper than the octave taken seven times. Initial attempts to shrink the size of the 5th and thus correct the discrepancy were made as early as the 2nd century BCE and documented in the *Huai Nanzi* (*c*120 BCE). With the publication of ZHU ZAIYU's music treatises *Lüxue xinshuo* (1584) and *Lülü jingyi* (1596), this endeavour was finally given a sophisticated formulation resulting in a type of equal temperament. The concept of 'mode' (*diao*), which in Chinese theory exists in five-note and seven-note forms, is well documented in the 3rd-century BCE dictionary *Erya* and other early sources. Summaries and interpretations of these theories of pitch and mode are found in most later treatises, including the 12th-century *Lülü xinshu* and 18th-century *Lülü zhengyi*.

Confucian ritual music. While historic documentation of Buddhist and Daoist musical traditions has been minimal (most accounts dating from the Qing dynasty), Confucian court ritual music, embodying the musical ideals of Confucian philosophy and the ancient pitch system, has been well documented over the last millennium. Coverage of all aspects of the ritual is found in most of the above-named music treatises and in encyclopedias and dynastic histories as well.

Musical instruments. Documentation of the history, construction and symbolic associations of musical instruments is so abundant in historic sources that the field of Chinese organology is treated by many scholars as a separate area of inquiry. The earliest descriptions, after citations in the *Shijing* (Classic of odes; *c*7th century BCE) appear in Confucian texts such as *Zhouli* (Rites of Zhou; *c*3rd century BCE) and *Erya* (*c*3rd century BCE), and in the dictionary *Shuowen jiezi* (CE *c*121). More comprehensive accounts of both indigenous and introduced instruments appear in the Tang-dynasty encyclopedia *Tongdian* (801), the 9th-century general music treatise *Yuefu zalu* and Chen Yang's widely quoted treatise *Yueshu* (*c*1100; see §III below).

Instrumental music. Documentation of instrumental music in imperial times focusses upon the scholars' traditions, not surprisingly. While some transcriptions of music (in *gongche* or other notation) for *di* and *xiao*, *pipa*, *zheng* and instrumental ensembles appear in Qing sources (rarely earlier), it is the *qin* zither tradition that is most thoroughly documented, with many essays and treatises dating from the 2nd century onwards, and over 200 collections of *qin* music in notation from the 6th century onwards (see §IV, 4 below).

Vocal music. Most historic documentation of vocal music focusses on songs from the *Shijing*, songs composed by the 12th-century Jiang Kui and other art songs. Although folksongs were widespread throughout China, they were ignored by imperial scholars. Coverage of opera is dominated by *Kunqu*, for which numerous treatises and notations appear from the 16th century onwards. Repertory collections for Beijing opera and some other regional traditions date mostly from the early 20th century (see §IV, 1(i) below).

(ii) The modern period. Research orientations during the 20th century shifted away from some of the areas outlined above because of the disintegration of the Confucian institution early in the century and the growth of a new social order and new political imperatives. Interest in the ethos of music (i.e. music for promotion of Confucian values) and in Confucian ritual music itself waned among scholars, especially those on the Chinese mainland, although more recently aesthetics have once again become a popular topic. Research into the ancient pitch systems and modes however, continued without interruption, in large part because this body of theory could more easily be disconnected from the Confucian institution that it formerly served. A number of useful analytical accounts have been published since the 1950s (see Bibliography).

Several research orientations gained strength from the mid-20th century onwards. Most significant is the documentation of Chinese music history, which took root in the 1930s with the publications of WANG GUANGQI and matured during and following the 1950s with the superb scholarship of YANG YINLIU and others. Yang's now standard survey of Chinese music history (1981) documents the numerous historical traditions, instruments and theories for each dynasty. With the formation of the Music Research Institute (Yinyue yanjiusuo) in Beijing, many essential research tools pertinent to Chinese music history have been assembled (see bibliography and §II below). Simultaneously, documentation of musical instruments has drawn new interest, aided by extraordinary discoveries of buried instruments and the growth of Chinese archaeology (see §III below).

Most important of the late 20th-century trends was a new interest in the systematic documentation of regional common-practice traditions, notably folksong, opera, narrative song, instrumental music and dance. Beginning in the 1980s, a massive project was organized by the

Chinese Musicians' Association and the Ministry of Culture to assemble an *Anthology of Folk Music of the Chinese Peoples* (*Zhongguo minzu minjian yinyue jicheng*) based on fieldwork and including numerous early notations and contemporary transcriptions of the music genres in common practice (see §IV Introduction below). As a result of this work, new insights are emerging into actual local practice. Study of the music of the 'national minorities' is also receiving greater attention (see §IV, 5 below).

Many useful analytic accounts of the local comon-practice traditions are found in Chinese-language journals such as *Yinyue yanjiu*, *Zhongguo yinyuexue* and those of the many regional conservatories. Most notable among Western-language journals that focus on these and other topics are the American *ACMR Reports* (journal of the Association for Chinese Music Research), *CHIME* (journal of the European Foundation for Chinese Music Research), *Chinoperl*, *Asian Music* and *Musica asiatica*. Among the best of the archives containing Chinese music materials are the Music Research Institute (Beijing), the Library of the Shanghai Conservatory of Music, the Chinese Music Archive at the University of Hong Kong, the Harvard-Yenching Library (Cambridge, MA) and the CHIME Library at the European Foundation for Chinese Music Research (Leiden).

BIBLIOGRAPHY

For a comprehensive list of Chinese journals see Yung, 1990, and *Zhongguo*, 1990. General bibliographies can be found in *Zhongguo*, 1984; Thrasher, 1993; *GEWM*, iii ('China'). For historical sources, see §II. For instruments, see §III. For the *Anthology of Folk Music of the Chinese Peoples* and common-practice traditions, see §IV.

II. History and theory

1. General. 2. Antiquity to Warring States period (to 221 BCE). 3. Qin to Tang dynasties (221 BCE–907 CE). 4. Song to Yuan dynasties (960–1368). 5. Ming to Qing dynasties (1368–1911). 6. Since 1911.

1. GENERAL. The continuously documented history of Chinese music reflects both the vast size of the country and ethnic and cultural interactions; constant change has nevertheless been based on long traditions. For its variety and dynamism in both time and space, Huang Xiangpeng has compared Chinese music to a river, which carries in its present current rich historical material on aspects such as aesthetics, practices, repertories, song texts, instruments and musicians.

The broad view of Chinese music history is clear. Despite historical and regional variation, it is unified not only by a degree of geographical, political and cultural homogeneity but also by many distinctively Chinese pairs of *yin* and *yang* dynamics. These include 'proper' versus 'vernacular' musics; national versus regional developments; ethnically Han Chinese genres and practices versus non-Han ones; commoners' creation of repertories and styles versus the élite's appropriation and remoulding of them; and retrospective understanding and faithful transmission of inherited musics versus innovatory interpretations of them.

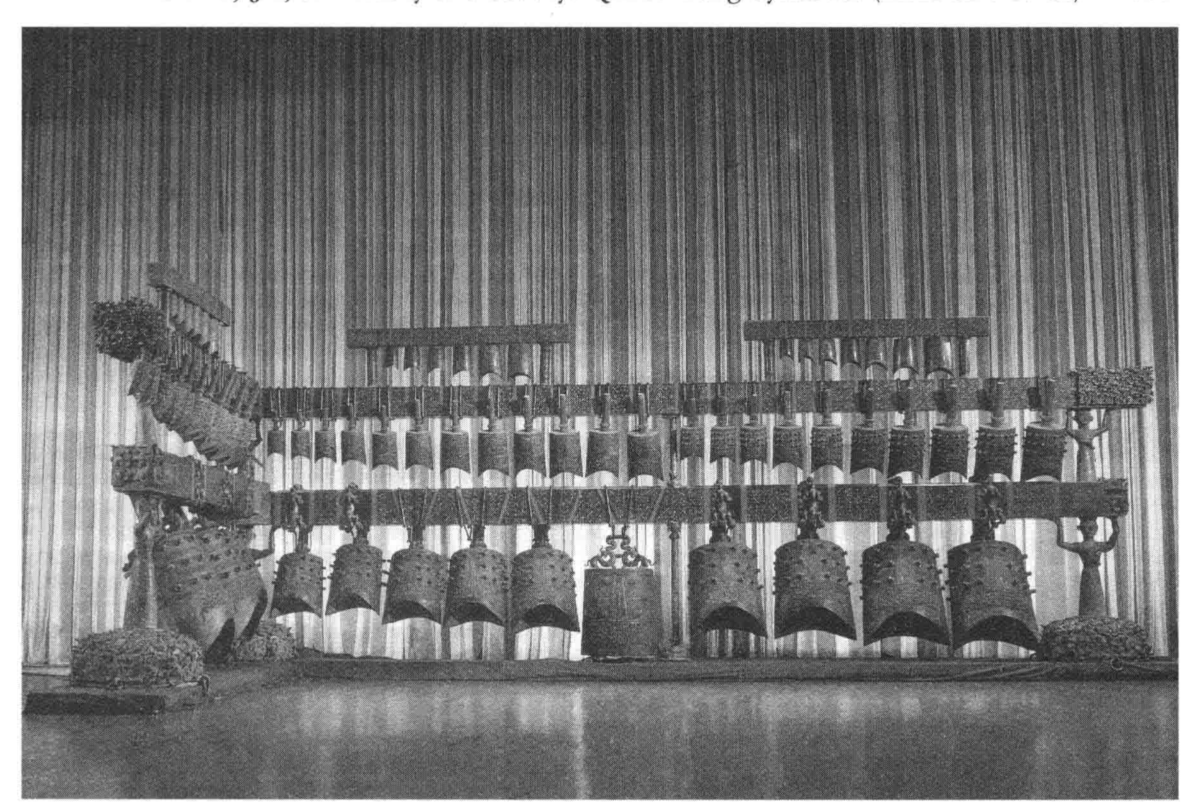
Nevertheless, much about Chinese music history and theory remains unclear. In addition to mysteries about structural features of historical works, there are numerous unanswered questions about aspects such as performing practices, venues and interrelationships between repertories. The filling of these lacunae depends on future research and discovery of new evidence that will overcome a relative lack of notated sources and balance the Confucian and élitist biases that permeate available sources. The prognosis is promising. Recent studies have discovered musical traditions (such as the so-called 'drum music' of Xi'an and the operas of Putian and Xianyou in Fujian) that, having resisted the forces of 20th-century

modernization and Westernization, may have preserved residues of music that disappeared centuries ago. Since the end of two millennia of imperial rule in 1911 (Table 1), and even since the revolution of 1949, while the towns have been increasingly affected by forces such as Maoism and transnational capitalism, rural areas have persisted in keeping their regional traditions.

Stimulated by studies of historical sources and living traditions, and propelled by an economy growing rapidly since the 1980s, contemporary China is heading towards uncharted music frontiers, rediscovering its musical roots and reconstructing historical repertories while creating new Chinese music. Indeed, the new ways in which China responds to the forces of the contemporary world are reminiscent of earlier periods, such as the fundamental shifts of the social and political order in the Qin-Han and Song eras, which conveniently serve as dividing points in the following sketch of Chinese music history.

2. ANTIQUITY TO THE WARRING STATES PERIOD (TO 221 BCE). From the earliest times, Chinese people sang, danced and played such instruments as bone flutes and clay vessel flutes to request rain and other survival needs from supernatural forces. By the Shang and Zhou dynasties, the Chinese court had already established traditions legitimizing imperial ancestors as military, political and moral leaders with elaborate works of song, dance and music played on stone-chimes, bell-chimes, drums and other instruments; the *Shao* and *Wu*, two much discussed musical works from Chinese antiquity, are representative. At the same time, both the élite and the common people sang and danced as a means of self-expression, influencing one another. Lü Buwei (*d* 235 BCE), for example, in his *Lüshi chunqiu* (Springs and autumns of Master Lü), describes a maid composing a song to describe her waiting for her master Yu, founder of the Xia dynasty, south of Mount Tu. This song is said to have become the earliest example of the southern folksongs that were subsequently collected by Zhou dynasty officials, rearranged and sung as the *Zhounan* and *Zhaonan* songs, 25 lyrics of which are preserved in the *Shijing* (Classic of odes). By the 5th century BCE, a diverse and sophisticated music culture was in place, laying the foundations for Chinese music theory and practices for the next two and a half millennia.

TABLE 1: Chinese dynasties and periods



Xia dynasty	*c*2205–*c*1766 BCE
Shang dynasty	*c*1766–1122 BCE
Zhou dynasty	1122–256 BCE
Springs and Autumns period	722–481 BCE
Warring States period	403–221 BCE
Qin dynasty	221–206 BCE

A central figure in the laying of these foundations is CONFUCIUS (551–479 BCE), who taught a humanist and functional approach to music. Reasoning that music is an expression of the human heart or mind and a counterpart of ritual, Confucius promoted music as a means of governance and self-cultivation and denounced the use of music as entertainment. By praising the *Shao* as the most perfect and beautiful music, and by denouncing the 'licentious' tunes of the Zheng and Wei states as music that dissipated people's time and energy, Confucius established the paradigms of 'proper music' (*yayue*) and 'vernacular music' (*suyue*). People who aspire to become benevolent and cultivated should practise the moderate and harmonious (*he*) sounds of the former and avoid the excessive and vain sounds of the latter. By compiling the *Shijing*, Confucius bequeathed an exemplary collection of 305 song texts, diverse in content, literary structure and musical style. Studied by all Chinese students, the collection has inspired them to create many literary and musical works until the present day.

The musical diversity projected by the *Shijing* is echoed by other ancient texts: the *Jiuge* (Nine songs) of Qu Yuan (*c*340–*c*278 BCE), the patriotic poet of the Chu state, for example, vividly portrays the songs and dances of the region. Archaeological evidence substantiates these descriptions. Musical artefacts excavated from the tomb of Marquis Yi of the Zeng state (*c*433 BCE) reveal not only the gigantic scale of court music and dance but also a most advanced technology for making musical instruments, most clearly evidenced by a set of 64 bronze bell-chimes, each of whose bells can produce two pitches either a major or minor 3rd apart (fig.2). Inscribed on the bells are more than 2800 words describing theories and practices of music pitches of the time. The sophistication of the musical culture of this early regional court is clear from the variety, size and manufacture of the instruments and from the conceptual detail of the inscriptions.

The mature state of ancient Chinese music theory, as revealed by archaeological and literary evidence, may account for its lasting relevance. The *Guoyu* (Conversations from the states) and *Lüshi chunqiu*, for example, describe the 12 standard fixed pitches (*lülü*) produced through the cycles of 5ths (*sanfen sunyi*), constituting a complete octave, and the five and seven relative tones (*wusheng*, *qisheng*) that can be used to form different scales and keys. Identified by 12 bisyllabic terms (see Table 2 below; *see also* NOTATION, §II), the 12 standard fixed pitches embody the Chinese pursuit of absolute and accurate pitch standards, serving not only musical needs but also those of practical and theoretical measurements and calculations. Throughout Chinese history, Chinese courts initiated numerous changes of pitch standards: during the Northern Song dynasty, for example, no less than five extensive revisions were introduced at court.

The five and seven relative tones represent Chinese understanding of relative pitches, intervals and their use in actual musical pieces. Together, the fixed and relative pitches constitute a complex modal system (known as *gong*, *yun* or *diao*) also associated with non-musical entities. For example, the five relative tones are respectively correlated socially with king, ministers, people,

2. Set of bells (bianzhong) from the tomb of the Marquis Yi of Zeng, 433 BCE

affairs and objects, and with the colours of yellow, white, blue, red and black. The modes, which are traditionally defined by the pitch levels of the constituent notes, their assigned roles as the five or seven relative tones and as initials and finals in melodies, are employed not only by musical principles but also by cosmological considerations: music honouring Heaven, for example, should use the *jiazhong gong* mode, which can be interpreted as a set of pitches adopting the fixed pitch of *jiazhong* as the *gong* degree.

Apart from technical and structural aspects, ancient Chinese music theory also discusses topics such as the nature and functions of music. The *Yueji* (Record of music, *c*1st and 2nd centuries BCE), for example, manifests Confucian moral theories of understanding music in its social context. Studied and implemented by Confucian scholar-officials, who dominated formal learning in imperial China and controlled textual representation of it, these theories helped form a musical Confucianism that overshadowed but did not erase rival approaches. These include the assertion of Mozi (*c*468–*c*376 BCE) that music wasted human and material resources, and Laozi's claim that the greatest music had no sounds. Indeed, Daoist influence on Chinese music and music culture has remained substantial. Even the music of the *qin* zither, a genre closely affiliated with Confucian scholar-officials, includes many works with Daoist references, such as *Tianfeng huanpei* ('Heavenly Breeze and Sounds of Jade Pendants').

3. QIN TO TANG DYNASTIES (221 BCE–907 CE). Though the Qin dynasty (221–206 BCE) unified China for only 15 years, its policy of standardization and control of knowledge directly and indirectly exerted a lasting influence on Chinese culture. The first Qin emperor (Qin Shihuang), who is said to have burnt numerous books in an intellectual purge, thus destroyed much musical literature, inadvertently generating an insatiable need to reconstruct ancient music, now idealized as perfect. The Han dynasty, which overthrew the Qin, developed its distinctive musical culture within this context. Adopting Confucianism as the official ideology, the Han court (206 BCE–220 CE) implemented Confucian theories of ritual and music by instituting an elaborate system of state sacrifices and music. Following a Qin model, the Han court also established the Yuefu (Office of Music). It collected folksongs to learn about the experiences of common people, and it transformed them, musically and textually, into works that served the political as well as the expressive needs of the court. The office employed many musicians to perform a variety of music: in 7 BCE, at a time when the Han court had to downsize because of financial constraints, the office cut 441 out of a total of 829 employees. One of the directors of this office was Li Yannian (*d c*90 BCE), a musician who came from a family of entertainers and was noted for his singing and compositional skills. He once rearranged a piece brought back from Central Asia by the famous Han emissary Zhang Qian (*d* 114 BCE).

If the Yuefu symbolized Chinese courts' continual appropriation of folk music, the rise of 'drum-and-wind' music (*guchui*) at the Han court shows how musical exchanges between Han Chinese living within China proper and non-Han peoples living at its borders might lead to new genres and practices. Drum-and-wind music is said to have evolved from two sources: the music of

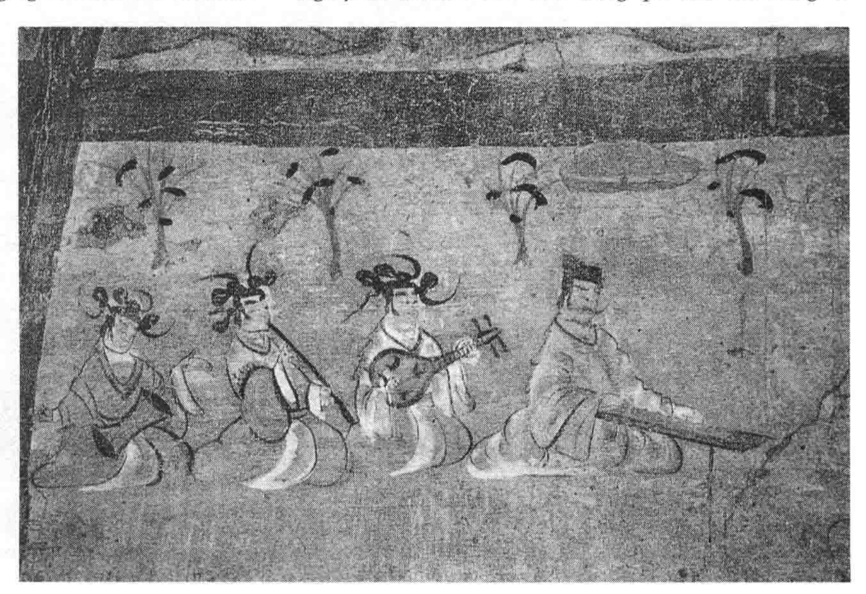
This chart compares five Chinese systems of pitch names/notation with their Western counterparts. All those systems which specify fixed pitches are marked with *, while those referring to relative pitches are marked with **. The correspondences among the Chinese and Western systems are theoretical and relative, as the Chinese list represents only some of the numerous arrangements of pitches/pitch names which have been theorized/realized as different scales and modes in historical and comtemporary China. Even though the traditional Chinese *lülü* system always refers to 12 fixed pitches, their actual pitch levels have changed, for musical and cosmological reasons, many times throughout Chinese history. For example, with the publication of *Lülü zhengyi* (Accurate meanings in pitches) in 1713, the Kangzi emperor introduced an official pitch system, in which the *huangzhong* approximates to the contemporary F, a pitch a minor third higher than the *huangzhong* favoured by many commoners. See also §IV, 4(i).

non-Han peoples living in the north-west of China proper, and the music Zhang Qian brought back from Central Asia. Drum-and-wind music soon became an integral part of Chinese music culture; traditionally, Han Chinese believe that once accepted and absorbed into Han culture, the ethnic musics of non-Han peoples will eventually become totally sinicized. Used in regional courts, drum-and-wind music largely accompanied military rituals and processionals; in folk form, the genre included songs and instrumental pieces performed for calendrical and life-cycle occasions, a practice still common in rural China today.

No notated Han dynasty music has survived, but musical practices and products are clearly described in many documents. The *xianghe* genre consisted not only of short, separate songs but also multi-movement suites (*daqu*), with solo and choral singing, playing of various musical instruments and dancing. Their structure is indicated by the terms *qu*, *yan* and *luan*, which have been interpreted as music played accelerando, with ornaments and as refrains and codas. Such structures were to become fundamental strategies of Chinese music composition and can still be found in many traditional genres today. These include *qin* music, a repertory of instrumental solos and accompanied songs, some of which had already emerged by the end of the Han dynasty, and music theatre, such as the *nanxi* (southern operas) of the Song dynasty, which feature suites of arias – indeed, the roots of Chinese music theatre can be traced to the Han dynasty variety plays (*baixi*) performed by actors or puppets.

After the collapse of the Han dynasty in 220 CE, China experienced four centuries of social and cultural unrest, during which a succession of dynasties rose and fell. Musically, it was a time of drastic changes and tenacious continuities. The tradition of multi-movement suites of songs, instrumental music and dance continued; further musical exchanges took place between Han and various non-Han peoples; and Confucian theorists such as Jing Fang (77–3 BCE), He Chengtian (370–447 CE) and Xun Xu (*d* 289 CE) pushed their technical and cosmological explanations of music to theoretical limits. Meanwhile Chinese music culture was transformed by the universal acceptance of Buddhism, which originated in India, and by music and musical instruments imported from Central



and West Asia. By the time of the Northern and Southern dynasties 420–589 CE), Buddhism had totally merged with indigenous ways of life. As demonstrated by numerous documents, paintings and sculptures, Buddhism introduced new genres and practices, notably a form of vocal liturgy (*fanbei*) that featured melismatic melodies for multi-syllabic words that specify no linguistic tones – Chinese words are monosyllabic and tone-specific. Buddhism also transformed musical practices by appropriating indigenous tunes and venues to chant sutras, perform rituals and teach religious doctrine.

As this musical and cultural transformation unfolded, China embraced instruments imported from various cultures located in the west of China proper (fig.3). Four of these later became important components of the entertainment music of the Sui (581–618) and Tang (618–907) courts and are prominently featured in visual representations of the genre: the bent-neck *pipa* (*quxiang pipa*), a pear-shaped lute with four strings and four frets, which originated in Persia; the *bili*, a short, double-reed pipe with eight finger-holes brought to China proper by musicians from what is now Kuqa in Xinjiang province; the *konghou*, a vertical harp, perhaps also from Persia; and the *jiegu*, an hourglass drum. The acceptance of these imported instruments generated not only new repertories and performing practices but also new music theories. The *pipa*, for example, carried with it a theory of musical modes that subsequently led to the Sui and Tang theory of 84 musical modes.

Against this backdrop of imported music and musical instruments, indigenous traditions continued to develop both at court and among the general populace. By the Jin dynasty (266–420 CE), the Han multi-movement suites had evolved into a music called *Qingshang yue*. Considered to represent Han Chinese music, it stood in contrast to repertories that were wholly or partially imported. These repertories eventually led to the rise of the entertainment music performed at the Sui and Tang courts. Like the *Qingshang yue*, *qin* music was also maturing into a creative and sophisticated tradition of instrumental music. Ji Kang's *Qin fu* (Essay on *qin* music) describes performing techniques such as double-stops and ornamental notes. Challenging orthodox Confucian aesthetics that music should not be used to indulge visual and auditory senses, such techniques represented attempts to manipulate sounds as creative expressions, not mechanical reflections of human emotions or mental states. Theoretical underpinning for these departures can be found in Ji Kang's argument that musical sounds have no inherent sadness or happiness.

After four centuries of social and cultural turbulence, China enjoyed peace and prosperity in the early part of the Tang dynasty, and Chinese music achieved a high point that has had few parallels. Almost 600 folk and popular song texts are still preserved in anthologies. New genres also evolved from folk and religious contexts. Buddhist monks played a significant role in the early development of the 'transformation text' (*bianwen*), a narrative genre, a branch of which tells Buddhist stories; it foreshadowed the blossoming of narrative singing in the Song and subsequent dynasties. During the Tang, theatrical dances such as the 'adjutant plays' (*canjun xi*) and the 'stepping and singing woman' (*tayao niang*) became popular. The former is a comical dance ridiculing disgraced officials, while the latter features a drunkard and his complaining wife; they are often seen as prototypes of Chinese opera. At the same time, literati produced numerous *shi* poems that could be sung as art songs; traces of the singing style of Tang poetry can still be found today in the *qin* songs.

Written to express diverse emotions and to celebrate various social occasions and interactions, many Tang *shi* poems are also informative historical records, describing musicians, musical activities and practices. The *Pipa xing* (Pipa journey) of the great Tang poet Bai Juyi (772–846) vividly describes a female musician playing the *pipa*, evoking the artistic sophistication of Tang music. Similarly, a poem by Li Ye, a Tang courtesan, projects vivid images of *qin* music, with metaphors of sharp cliffs and gushing streams, echoing the complex performing techniques described by Zhao Yeli (563–639) and other professional performers of the time, and showing that music brought together people of different social status. Such a flourishing of *qin* music also demanded well-made instruments. *Qin* made by the Lei family of Sichuan were highly acclaimed. The few Tang *qin* still surviving in

leading museums, such as the Shōsōin in Nara (Japan) and the Palace Museum in Beijing, reveal both organological and decorative mastery; besides their role as musical instruments, *qin* were also valued by the élite as *objets d'art*.

As one of the most powerful governments in Chinese history, monopolizing tremendous human and material resources, the Tang court created several musical institutions. The Dayueshu (Office of Grand Music) and Guchuishu (Office of Drum-and-Wind Music) oversaw elaborate systems of state sacrificial music and military music. Documented in the *Kaiyuan li* (Rites of the Kaiyuan period) of 732 and other sources, the Tang system of state sacrificial music was so exhaustive that it became a model for subsequent dynasties.

Achievements in ritual music, however, paled beside those in entertainment music. In the mid-7th century the Tang court featured ten kinds of ethnic banquet music (*yanyue*): indigenous Chinese music, music that combined Chinese and non-Chinese elements, and musics from Bukhara, Cambodia, India, Kashgar, Korea, Kuqa, Samarkand and Turfan. Moreover, through the Jiaofang (Office of Entertainment Music) and the Liyuan (Pear Garden), the Tang court trained numerous musicians, many of whom were female, to perform a variety of songs, instrumental music and dances (fig.4). Dance was a prominent component of Tang entertainment music; many Tang pieces are labelled as dances, such as the celebrated 'twirling dance' (*huxuan wu*). Only the best of the trained musicians would be allowed to perform for the emperor after passing many levels of musical examinations.

Music flourished under the reign of the great artistic patron Xuanzong (712–56), and the Kaiyuan period (713–41) of his reign is traditionally considered one of the golden ages of Chinese arts. A repertory of 14 large-scale works emerged and was classified as sitting and standing music (*libuji*, *zuobuji*). A refined genre called *faqu* thrived, incorporating Buddhist and Daoist elements into multi-movement suites; Xuanzong actually participated in the teaching and performance of it. In 754, Xuanzong issued an edict to sinicize titles of musical works that included foreign elements. For example, the title *Boluomen*, clearly of Indian Buddhist origin, was changed to *Nishang yuyi qu* ('Music of the Rainbow Feather Dress'), a title that subsequently became a metaphor for exquisite music. Though only a fragment of this piece has been preserved in notation, early literary sources describe it as an extensive work exemplifying the tripartite structure of the Tang dynasty suite (*daqu*). It began with six movements of instrumental music in free rhythm (*sanxu*), continued with 18 movements of lyrical songs and dances accompanied by instrumental music (*zhongxu*), and concluded with 12 movements of gradually accelerating music and dances.

In later periods Xuanzong was well remembered for his musical patronage. His Liyuan academy has become a symbol of music, professional musicians and their

4. institutions, and numerous stories and dramas have been written and performed to describe his love for the imperial concubine Yang Guifei and their music. The day Yang was invested, *Nishang yuyi qu* was performed inside the palace.

Tang dynasty music culture is copiously described in Chinese sources. Apart from official records such as the *Yueshu yaolu* (Essential records of music documents), a treatise of music theory compiled during the reign of Empress Wu (684–704), and the 'Old' (945) and 'New' (1061) official histories of the Tang, many informal sources of the time describe musicians and their careers. A Kaiyuan period document, the *Jiaofang ji* (Record of the Office of Entertainment Music), for instance, describes Cao Miaoda and Duan Shanben as master *pipa* players of the time, and Li Guinian as a virtuoso of the *bili* pipe and *jiegu* drum. Similarly, the *Yuefu zalu* (Miscellaneous records of the Office of Music), compiled at the end of the Tang dynasty, reports competitions between *pipa* masters such as Kang Kunlun and Duan Shanben, revealing how audiences knew leading performers and championed their talents. Such descriptions also show the contacts between folk and élite musicians, contexts and repertories. Thus Tang entertainment music (*yanyue*), described in most early sources as courtly, was not unknown among common people. Court musicians who were commoners before being drafted into court service, and who later retired back to ordinary life, must have stimulated exchanges between court and populace. Individual musicians naturally contributed to the spread of Tang entertainment music. A story about Yongxin, a female singer, is revealing: even after she was drafted into court service, people remembered her, and once the emperor Xuanzong had to ask her to sing to appease a boisterous audience of commoners at a festive event.

Further evidence of the appeal of Tang entertainment music is its export to Japan. There, it led to the rise of *gagaku* (*see* JAPAN, §V), a tradition of court music and dance that still lives on in Japan today, providing a precious means for scholars to probe the mysteries of Tang entertainment music. For example, through his pioneering studies, Hayashi Kenzō established musical relationships between *gagaku* and Tang music; similarly, by transcribing notated music preserved in medieval Japanese sources, LAURENCE PICKEN and his colleagues have produced anthologies of 'Music from the Tang Court'.

The only substantial and verifiable notated source of Tang music to have survived in China itself is a set of 25 pieces from 933 discovered at Dunhuang. These have been much studied, both in China (by scholars such as YE DONG, Chen Yingshi and He Changlin) and in Japan and the West; though the transcriptions are still controversial, the source has stimulated the study of Tang music and dance. Tang performing practice and modal theory have become major topics for scholarly debates, while 'reconstructed' and 'imitation' Tang music and dance have become widely known through performances and audio and video recordings and have influenced new compositions.

4. SONG TO YUAN DYNASTIES (960–1368). Chinese music culture followed a path that was open and international in nature during the Tang, but it changed direction during the Song dynasty (960–1279); as new forces emerged, China turned inwards. Non-Han empires arose along China's northern and western borders; neo-Confucianism and new civil values were propounded; a powerful and privileged class of scholar-officials emerged; and commoners in urban centres gained economic empowerment. The result of the change in direction, however, was a selectively retrospective and creative music culture, with an intensifying conflict between 'proper' and 'vernacular' music. It is to this period that the direct roots of traditional Chinese music today can be traced.

Indicative of the retrospective elements in Song music culture are state sacrificial music and formal discourses on 'proper' music. For example, the *Zhongxing lishu* (a compilation of ritual and music of the Southern Song) of the 1180s shows that state sacrificial music of the time emulated ancient models. The ritual pieces notated in the document follow prescriptions for musical modes listed in the ancient text of the *Zhouli*; its melodies were sung in a syllabic style, reflecting scholar-officials' interpretations of ancient music as having been sung syllabically. From Chen Yang's *Yueshu* of 1104, a musical encyclopedia that comprehensively collates ancient texts about music, it is also clear that music discourse had become dependent on classical descriptions and historical models. Even the great neo-Confucianist Zhu Xi (1130–1200) cited historical sources to illustrate his doubts about whether the syllabic style of singing was an authentic feature of ancient music: in his *Yili jingchuan tongjie* (General survey of ritual) he presented the notated music of Zhao Yanshu's 12 ritual songs, attributed to the Kaiyuan period (713–41) of the Tang dynasty.

This interest in ancient music and dependency on historical data were instrumental in widening the gap between theory and practice. A case in point is the solution devised by Cai Yuanding (1135–98) for the problem of 'going without return' (*wang' er bufan*), a theory clearly explicated in his *Lülü xinshu* (New treatise of music theory). The pitches produced with the traditional circle of 5ths method contradict the technical and cosmological understanding that the 12 standard pitches (*lülü*) are equidistant and cyclical, and that they would form complete octaves and scales that allow unrestricted transpositions; to resolve the contradiction, Cai proposed the use of six supplementary notes, but they never found their way into actual music-making.

Many innovations also reveal the creative aspect of Song dynasty music culture. Rooted in the *shi* poetry of the literati and in more popular songs, a new wave of *ci* lyrics and compositional techniques appeared. Repeated use of pre-existing melodies and established textual structure led to innovatory ways of creating variety. To generate rhythmic interest, for example, additional words could be inserted into a pre-existing textual and melodic phrase, such as one with seven words, entailing rhythmic and melodic changes. Alternatively, the number of words in standardized phrases might be decreased; to delete or fill the vacated space, the melody could either be truncated or some of its notes lengthened. More drastic transformations were also possible: melodic phrases from different songs could be arbitrarily assembled to make new songs, while complete tunes could be recast into different music modes. These variational and compositional techniques were probably rooted in the tradition of multi-movement suites. Unlike their Tang predecessors with 30 or more

movements, Song dynasty suites became more compact, most having no more than ten movements.

Ci poetry is so inherently musical that one of its greatest authors is also one of the few documented composers in Chinese music history. JIANG KUI (1155–1221) did not have a career as a scholar-official, although in 1197 he submitted to the court a proposal for 'proper music'. Supported by friends and patrons, Jiang created *ci* songs such as *Yangzhou man* (Song of Yangzhou), popular ever since its creation. Besides authoring poetic texts, Jiang also composed and notated the melodies of his lyrics, which are valuable evidence for Song dynasty music. The notation Jiang used is a forerunner of the *gongche* notation that began to appear in many notated sources by at least the 17th century and is still used by many traditional musicians today. Reflecting its probable origin in tablatures for wind instruments, Jiang used 18 symbols precisely indicating pitches, and other signs to suggest rhythm; the version of *gongche* notation that later became common uses nine characters to specify pitches and three symbols to mark cyclical structure of beats and rhythmic divisions. Table 2 compares five Chinese systems of pitch names/notation with their Western counterparts.

In addition to *ci* songs, Song dynasty Chinese also sang a variety of art songs, including the *changzhuan*, sung to the accompaniment of drum, flute and clappers. This genre is significant because it displays Song attempts to organize individual songs into extended structures: typically a *changzhuan* includes a prelude, a modally unified sequence of several songs (or an alternation between two individual songs) and a coda. It foreshadows a basic structural principle of Chinese music (*qupai ti*): by arranging a number of labelled and pre-existent tunes into modally and structurally unified sequences, they can be used as building blocks to create very extensive works, such as a music drama of more than 50 scenes. The individual and pre-existent tunes are called labelled melodies (*qupai*), whose melodic, rhythmic, rhyme, phrasal and other structure can be adapted to match different texts and expressive needs.

With the establishment of entertainment quarters in urban centres, Song China saw the rise of a whole class of music masters, most of whom were professionals vying to create various genres to satisfy the expressive and entertainment demands of an increasingly affluent urban class. One such genre that deeply affected subsequent musical history is narrative singing (see §IV, 1(ii) below), in which one or two performers tell long stories, often over a series of performances, by singing and speaking in the first and third persons. One major form in the Song dynasty was the *zhugongdiao* ('medley'), the creation of which was attributed to a professional entertainer called Kong Sanchuan (*fl* 1080s). Mature samples of the genre could be structurally very extensive: the *Xixiangji zhugongdiao* ('Medley of the Romance of the West Chamber'), attributed to Dong Jieyuan (*fl* 1190s), for example, employs 14 different musical modes and more than 150 labelled melodies.

Mature samples of narrative singing can easily become theatrical; if musicians of narrative singing put on make-up and wear costumes, sing, recite, dance and act on stage and in the first person, the result is understood as music theatre or opera (*xi*, *ju*, *xiju*). Song dynasty China had several forms of musical theatre, including the *zaju* (variety plays) and *nanxi* (southern opera), which developed in northern and southern China respectively. Whereas little is known about the *zaju*, the rise of *nanxi* is better documented. It first appeared in Wenzhou, Hangzhou and other coastal cities of central-eastern China and then spread nationally. Its music, which involved vocal solos and duets, ensemble singing as well as instrumental playing, originated from folksong and is thus noted for a flexibility and creativity that are not harnessed by theoretical prescriptions. The *Zhangxie zhuangyuan* ('Zhangxie, First Imperial Candidate'), one of the three earliest known samples of *nanxi*, shows its maturity. Actors took specified male and female roles, venues included stages with promotional signs, and audiences often paid admission fees.

Song dynasty China also made significant advances in instruments and instrumental music. A free-reed mouth organ (*sheng*) was developed with 19 pipes, tuned to allow octave doublings and modal transpositions; marking a range of two octaves and a 3rd, the pipes played 12 regular pitches (*zhengsheng*) that constituted a central and complete octave, three low pitches (*zhuosheng*) chosen from the octave below and four clear pitches (*qingsheng*) from the octave above. Though the 19-pipe *sheng* did not become popular, it reminds us not only of the organological innovations of the time but also of the general importance of the *sheng* in later history: as the only traditional Chinese instrument that can produce sustained sounds of more than one pitch, it is still indispensable in many traditional ensembles today.

Another revealing case is the *xiqin*, a two-string fiddle of the Xi people of northern China that became widely used by commoners in the Song dynasty. As described and illustrated in Chen Yang's *Yueshu*, the *xiqin*, which was played not with a bow but with a thin strip of bamboo, is a rather distant prototype of the two-string fiddles in use today, but the enduring tradition of using two-string fiddles to accompany narrative singing and opera may be traced to the Song dynasty.

While folk instruments and music developed, *qin* music was favoured by professionals and élite amateurs. Zhu Changwen's *Qinshi* (*Qin* history) of 1084 records some of the distinctive *qin* schools (*pai*) then being founded, with genealogies of teachers and disciples. Apart from composing and performing, the musicians promoted their schools and aesthetics by producing anthologies of *qin* tablatures. For instance, Yang Zuan's *Zixiadong pu* [*Qin* score of Purple Cloud Cave], an influential collection of 468 melodies, established Yang's 'Zhe school' as a leader in Song dynasty *qin* music; though the collection is now lost, traces of its contents and influences can still be found in Ming sources. The rise of *qin* schools, with their genealogies and notated anthologies, illustrates the importance of master-pupil transmission in schools with distinctive musical and aesthetic styles and in communities held together by geographical and social bonds.

Song dynasty music culture was so tailored to the needs of the populace that its course of development survived the powerful, non-Han impact of the brief Mongol Yuan dynasty (1279–1368). Nevertheless, the Yuan too left a permanent mark on Chinese literature and music theatre. Many Han literati and artists who, voluntarily or involuntarily, did not serve the Mongolian court poured their creative energy into the new drama (*zaju*) of the time. Indeed, the surviving repertory of over 150 Yuan dramas shows musical as much as literary mastery. Each

of the four acts in a typical drama, such as *Dou'e yuan* ('Injustice Done to Dou'e'), is a sequence of arias unified by a common mode and structure and sung by either a male or female performer accompanied by flute, drums, clappers and other instruments. As described in Zi An's *Changlun* (Treatise on singing), Yuan drama arias, called *beiqu* (northern arias), used 17 modes, each of which was said to have distinctive musical and expressive qualities. For example, arias in the *xianlü gong* mode were considered pure, fresh, continuous and far-reaching, while those of the *nanlü gong* modes were described as emotive and melancholic. What these poetic and emotive descriptions meant in musical terms remains to be examined, but they attest to Yuan people's concern for musical and dramatic expression.

Yuan drama arias were also sung with a sophisticated vocal technique, as Zi An's descriptions again show. Judging from notated samples preserved in Qing dynasty sources, melodies from Yuan drama featured heptatonic scales, energetic rhythm and melodic contours that are generally compatible with the rise and fall of linguistic tones in Mandarin, the official language of contemporary China, not unrelated to what was spoken in Yuan China. Judging from historical evidence and titles of the arias, the pre-existent labelled melodies came from a variety of sources, including Tang and Song suites, *ci* lyrics and *changzhuan*. Yuan drama marked a momentous advance in the expressive culture of China, and it still remains an integral part of literary and musical China.

While Yuan drama dominated the music culture of its time, it was only one of many old and new types of music practised then (fig.5). The Yuan court, for example, performed not only orthodox state sacrificial music but also elaborate banquet music that included non-Han songs and dances such as the *Weiwuer* preserved in the *Da Ming jili* (Collected ceremonials of the Great Ming) of 1370. Non-Han influences were also heard outside the

5. Daoist ensemble with di transverse flute, yunluo frame of gongs, sheng mouth organ, paiban clappers and yaogu hourglass drum, from a mural in the Yongle gong temple, Shanxi province, 1358 CE

Mongolian court. The famous *pipa* piece *Haiqing na tian'e* ('Eagle Captures the Swan') was created in Yuan China; a vivid portrayal of falconry, the piece was widely performed at the time and still remains in the repertory today. Folk traditions of songs, narrative singing, instrumental music and dances were often interrelated. For example, *Huolang'er* ('Peddler's Ditty'), a type of folksong originating from peddlers' musical calls, became a form of narrative singing and a type of Yuan drama melody noted for its melodic variations.

5. Ming to Qing dynasties (1368–1911). When the Ming dynasty (1368–1644) came to power, China was once again ruled by Han Chinese, and indigenous culture regained centre stage. The creativity of Ming musicians was again based on tradition. As demonstrated by the *Taichang xukao* (Expanded monograph of the Court of State Sacrifices), Ming state sacrificial music of the 1530s employed orthodox elements, such as the use of bell-chimes, but used pentatonic and flowing vocal melodies that reflect mid- and late-Ming preferences. In the same way, though Lü Nan (1479–1542), Zhu Zaiyu (1536–1610) and other theorist-composers followed Song dynasty models of composing antiquarian melodies to sing lyrics from the *Shijing*, their melodies reflected their creativity and aesthetic ideals.

A monument to the change and continuity between Ming and earlier times is Zhu Zaiyu's late 16th-century *Yuelü quanshu* (Collected works of music theory). While this encyclopedia presents what is probably the earliest theory of 12 tempered pitches in world history, it also preserves Zhu's critique of the theoretical works of many leading Song and Ming predecessors, including Cai Yuanding, Li Wenli (*jinshi* degree 1480) and Li Wencha (*fl* 1540s). Another seminal Ming work is the 1425 *qin* score *Shenqi mipu* (Wondrous and secret notation) by Zhu Quan; a notated anthology of 64 *qin* pieces, it not only preserves music from the Song dynasty and earlier but also demonstrates Ming *qin* musicianship and scholarship. Besides notated music, many Ming *qin* anthologies include descriptive programme notes on individual works, detailed instructions for performance techniques and penetrating discussions on historical and theoretical issues. Yan Cheng's (1547–1625) *Songxian guan qinpu* (*Qin* score of the Pines and Silk Studio), for example, preserves the repertory of the Yushan school, promoting an aesthetic pursuit of music that is 'clear, subtle, light and broad' (*qing*, *wei*, *dan*, *yuan*), and revealing artistic tensions between the instrumental and vocal branches of the genre.

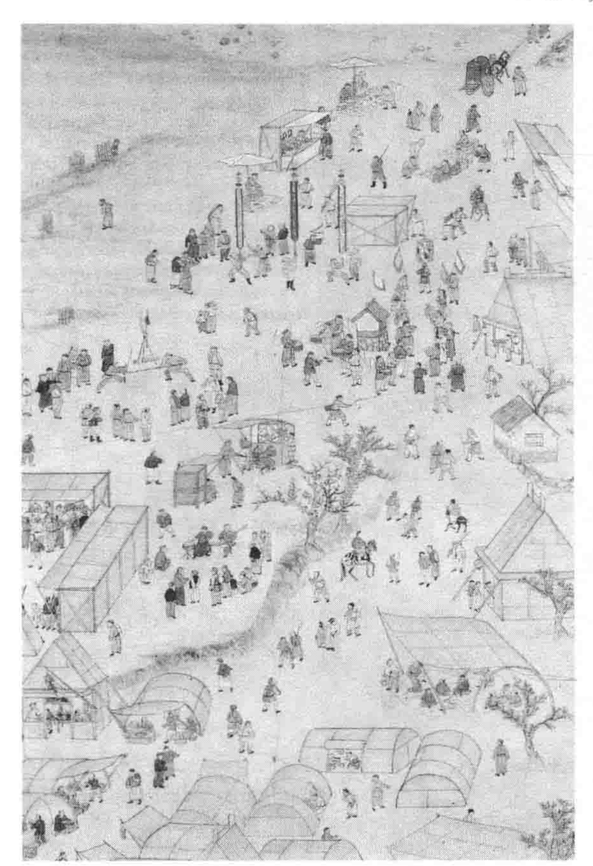
That Ming music culture was not a simple continuation of inherited music is most evident in its music theatre. This form blossomed with the rise of *chuanqi* drama, a genre that grew out of *nanxi* but generated new regional vocal styles, known as *qiang* or *shengqiang* and traditionally classified as *nanqu* (southern arias). By the middle of the Ming dynasty, four major regional styles had appeared: *Haiyan qiang*, *Yiyang qiang*, *Yuyao qiang* and *Kunqiang*. *Kunqiang* (or *Kunqu*) originated in the Kunshan area of Jiangsu and is noted for its florid and slow melodies that perfectly match lyrics enunciated in the Wu dialect. As a lyrical style of singing that was often performed with elegant dances, *Kunqiang* was popular among the élite and was performed wherever they lived. It was a major factor in the development of *chuanqi*, many late Ming examples of which were performed as

Kunqiang operas. *Wanshaji* ('Washing Silk') by Liang Zhenyu (1519–*c*1591) and *Mudan ting* ('Peony Pavilion') by Tang Xianzu (1550–1616), for example, were both musical and literary milestones. As reported by Wang Qide (*d* 1623), a Ming scholar and critic of music theatre, the success of *Wanshaji* made performers and audiences ignore the old northern arias. Similarly, the *Yiyang qiang* style first appeared during the Yuan dynasty in the Yiyang area of Jiangxi. Its robust style features solo singing punctuated by choral refrains and loud percussion accompaniment. As it spread all over China, *Yiyang qiang* acquired different local characters, generating many regional genres by the mid- and late Qing, including what is now known as Beijing Opera.

While operatic and professional music flourished in Ming China, trends were also evident in folk and popular songs. Shen Defu (1578–1642) reported that around the turn of the 17th century the urban ditties *Dazaogan* and *Guazhi'er* were so popular that they were sung by all, regardless of gender, age, social status and geographical location. As clear from the song texts collected and edited by Feng Menglong (1574–1646), late Ming folk and popular songs are emotive and candid; some are even bawdy. Such songs challenged Confucian notions of 'proper' music and of using music as a means of governance and self-cultivation, though at the same time reflecting the Confucian theory that music is a sincere expression of hearts and minds. Indeed, this is one reason why the Ming élite collected commoners' songs and emulated them as authentic (*zhen*) expressions, comparing them to the regional airs (*guofeng*) preserved in the *Shijing* of antiquity.

While late Ming songs display increasingly populist sentiments and urban settings, fictional sources such as the *Jinping mei* (Golden lotus), a late Ming novel, portray China, notably the Jiangnan (lower Yangtze) area, as a society of lavish lifestyles in which music was a constant part of daily life. It was performed inside rich households by familial, often female, musicians, many of whom were highly gifted. Outside familial quarters, many professionals, from itinerant operatic troupes to individual courtesans, also performed a large variety of music (fig.6). This blooming of music culture was temporarily interrupted by the turbulent events during the transition from Ming to Qing but soon recovered during the peaceful and prosperous times of the early Qing.

The Qing rulers (1644–1911) were Manchurians, but far from marginalizing Han culture they appropriated and promoted it alongside their own. As a result, Chinese music continued to develop along a course that had been set since the Song dynasty, while collecting distinctively Qing characteristics. Like its predecessors, the Qing court performed Confucian state sacrificial music, sang songs from the *Shijing* and instituted elaborate programmes of banquet music. Similarly, the élite continued its love of *Kunqu* operas, *qin* music and other 'refined' genres, while the common people continued to produce folk and popular songs, narrating stories with a fixed sequence of melodies (fig.7), and celebrating ritual as well as daily activities with music of gongs, wind instruments and drums.



What separates the musical worlds of Ming and Qing China is neither a marked shift of genres nor a fundamental change in aesthetics, but modifications in repertories, styles and structures. For instance, during the Qing, the

6. Early Qing dynasty (c1700) painting illustrating chapter 63 of the novel Jinping mei. A dramatic performance for a wealthy household is accompanied by an ensemble of tiqin bowed fiddle, sanxian lute, sheng mouth organ, di transverse flute and yunluo frame of gongs

Kunqiang and *Yiyang qiang* styles competed to dominate music theatre. With the tremendous success of *Changsheng dian* ('Palace of Eternal Youth') by Hong Sheng (1645–1704) and *Daohuashan* ('Peach Flower Fan') by Kong Shangren (1648–1718), *Kunqiang* dominated the literary and musical world of the early Qing. Nevertheless, by the mid-Qing, *Kunqiang* was deemed too refined by the general audience, and a variety of regional operatic styles emerged to claim leadership. Yangzhou, a city famous for its entertainment quarters, became a site where refined and vernacular musics competed for audiences' attention. Nevertheless, it was in the capital, Beijing, that artistic prominence could be definitively established: no genre could become nationally successful without the patronage of the court and the scholar-officials. Beijing opera originated in the local theatre of Anhui province, an indirect descendant of *Yiyang qiang*; a prototype of the genre reached Beijing in 1790, featuring a form known as *banqiang ti*, music that is constructed with a limited number of melodies and rhythmic procedures that are set to lyrics of fixed phrase structure and diverse verbal meanings. Beijing opera soon evolved into a sophisticated performance art and dominated music theatre: the *banqiang ti* form appeals with its straightforward music intelligibility, in which a maximum of expressiveness is achieved with a minimum of musical material.

What also separates Ming and Qing is the amount of notated music they have bequeathed to posterity. Musical notation was known and used in Ming China; documents

7. Detail from 'The Pilgrimage to Miaofengshan' (Miaofengshan jinxiang tu) Qing dynasty, showing folk narrative singing for the temple fair on the mountain, with singer accompanying himself on drum and clappers, with sanxian lute player

such as the *Wenlin jubao wanquan xinluo* (Comprehensive collection of scattered treasures for scholars) of 1600 leaves no doubt that the late Ming used *gongche* notation, the predominant form found in Qing sources. Little Ming notation has been preserved, however. The wealth of Qing notation is easily explained by factors such as its temporal proximity with contemporary China, the Qing tradition of empirical scholarship, imperial efforts to collect and organize many different types of documents and knowledge, and changing perceptions of musical works. After the mid-Qing, notation also seems to have begun to assume a more significant role in the transmission of music, especially that of the upper classes; much of commoners' music was transmitted orally until recent decades.

Given the tenacious continuity found in the histories of many genres of traditional Chinese music, and given that most historical scores were produced by musicians who performed the music they notated, Qing notated sources evidently involve much more than music of their own times. Indeed, most seem to include traces of pre-Qing music that is otherwise lost, preserving genres that had been orally transmitted long before the Qing. Most extensive of such scores is the *Jiugong dacheng nanbeici gongpu* (Comprehensive anthology of texts and notation of Southern and Northern arias in nine modes) of 1746, a gigantic collection in 81 fascicles. Preserving the notated music of 2094 labelled melodies and their variants from numerous operas, it is now the largest single source of operatic arias once sung in Yuan, Ming and Qing China (fig.8*a*). The *Taigu quanzong* (Arias from ancient times) of 1749 preserves not only operatic music of the early Qing but also *pipa* arias from the late Ming. Ye Tang's 1792 collection of *Kunqu* arias, the *Nashuying qupu*, preserves the melodies he composed for singing many Ming and Qing dramatic texts, including the four 'dream' operas of Tang Xianzu, one of the most influential playwrights in Chinese history. Ye Tang's collection is also valuable because his compositions and style of singing *Kunqu* arias have been indirectly but continuously transmitted to the present; the *Kunqu* music of YU ZHENFEI, one of the most respected singer-actors of 20th-century China, can trace its lineage to Ye Tang's music. Xie Yuanhuai's *Cuijin cipu* (Notated register of *ci* songs) of 1847 represents Qing scholar-musicians' historical understanding of *ci* music of Song dynasty China and attempts to reconstruct and perform it.

As to instrumental scores, Rong Zhai's unique *Xiansuo beikao* of 1814 notates the heterophonic music of a string ensemble. Rong Zhai confirmed that his score notates traditional music that he learnt orally, affirming that music notated often predates the time when the notation is produced. Hua Qiuping's *pipa* score of 1818 includes a repertory of 58 pieces, some of which, such as the *Shimian maifu* ('Ambush from All Sides') and *Yue'er gao* ('The Moon on High'), had long been traditional favourites and remain so today. The maturity of the notation used in the anthology attests to the historical roots of the music and its transmission.

As the Qing dynasty collapsed in 1911, two millennia of imperial rule came to an end. Nevertheless, the traditions bequeathed from imperial times did not cease. Many operatic and instrumental genres flourished with new aesthetics and innovatory practices, while some more conservative genres such as ritual music and the *qin* were authentically maintained by intellectual and regional communities. Even state sacrificial music survived: Confucian ceremonial music, which originated as ritual music performed during state sacrifices honouring Confucius, a tradition that began soon after the philosopher's death in 479 BCE, is now performed during public worship of Confucius in Taipei, Qufu and other Chinese communities inside and outside mainland China.

6. SINCE 1911. The history of music in 20th-century China is inseparable from broader national and intercultural trends. While many traditional performance styles have been sustained, others have been adapted or completely reformed. Some ancient genres have been reconstructed from historical records, and certain entirely new Chinese genres have been created. Modern China has also become a fertile site for the composition, performance and reception of musical styles from the West and Japan. In urban centres particularly, a substantial spectrum of foreign musical theory and practice has been adopted, from equal temperament and staff notation to choral singing, symphonic concerts, rock music and *kala-OK* (karaoke). Stimulated by the advent of new institutions and technologies, most obviously sound broadcasting, and impinged upon by broader social and political developments, there has been a reformation of the ways in which music – including older traditional forms – is envisaged by large segments of Chinese society. Nonetheless, cultural exchange has not been a one-way

8. Vocal and instrumental gongche notations: (a) from Jiugong dacheng nanbeici gongpu (1746), a vast manual containing lyrics and gongche notation for 4466 arias; the text occupies the main vertical columns (read top to bottom, from left to right), with gongche notation in smaller characters to the right; (b) pieces from the Shifan gu instrumental ensemble repertory, from the Juntian miaoyue score of 1781; circles to right of main columns denote beats

process: certain styles of Chinese music have acquired an international reputation during this period.

A brief chronological outline of the main political events of this period will orientate the musical discussion that follows. In 1911, the Manchu Qing dynasty was overthrown by an alliance of Chinese reformists. The Republic of China was established one year later, although large parts of the nation were controlled by warlords and foreign powers. The Nationalist Party, led by Jiang Jieshi (Chiang Kai-shek), partially reunified the country by the early 1930s, repressing the nascent Communist party, but the country was torn apart by the 'War of Resistance' to invasion from Japan (1937–45). After the defeat of Japan, the Communists, whose support had grown significantly in rural China, were victorious in a civil war against the Nationalists; while Mao Zedong proclaimed the founding of the People's Republic of China in 1949, the Nationalists perpetuated the Republic of China on the island of Taiwan. In the 1950s agricultural production was collectivized into a large-scale commune system, and in the cities, industries and shops were nationalized.

9. 'Brother and Sister Clear Wasteland', a new yangge drama performed for a mass audience by the Luyi Propaganda Troupe in Yan'an, 1943

Much musical change in 20th-century China results from the encounter of Chinese society with facets of Western political, economic and cultural life. Late 19th-century Chinese reformers saw the greater military and economic might of foreign nations as a result of their modern patterns of culture, and sought to replicate such patterns in China. The political revolution culminating in the overthrow of the Qing dynasty was thus paralleled – at least in urban society – by a simultaneous but longer-lasting movement for cultural reform (later called the May Fourth Movement) summed up in the slogan 'Chinese essence, Western means'. Music reformers took part in this cultural movement, attempting to reinvent existing traditions along Western-influenced lines.

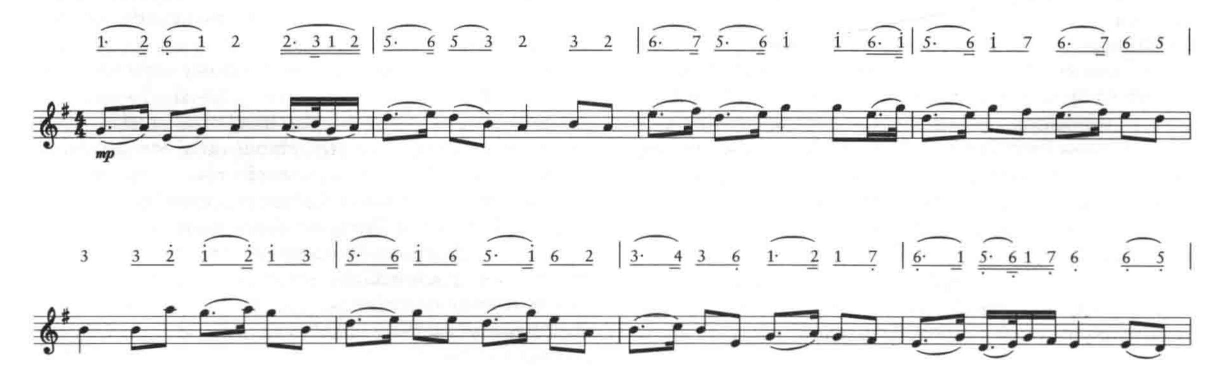
Western music itself had been introduced to China by musicians employed to add pomp to early Western diplomatic, religious and military expeditions. During the 17th and 18th centuries, for instance, Jesuit priests used music to interest the Qing emperors in European culture and ideas. However, it was only in the second half of the 19th century that significant impact occurred. A new wave of missionaries imported Western instruments and encouraged collective singing, uncommon in Chinese religious practices, as a means of instructing converts. The Christian-influenced rebel Hong Xiuquan (1814–68) borrowed hymn tunes (including 'Old Hundred') and the idea of cementing group identity through communal singing when founding the Taiping Heavenly Kingdom (1851). Missionaries also produced and disseminated hymn books using a form of cipher notation (*jianpu*) based on the system of Emile J.M. Chevé. This notation remains widely used today.

Military and educational reformers also adopted Western-style mass singing. Illiterate army recruits memorized regulations through singing, and school curricula from the early years of the 20th century provided for the performance of new songs. Songs were also composed by activists in many of China's new social and political movements. Singing mobilized mass boycotts of imported goods and broadcast news of foreign encroachments upon Chinese sovereignty. The creators of these songs were often foreign-trained intellectuals, such as the linguist Zhao Yuanren (Yuen Ren Chao, 1892–1982) and musicologist-composer Huang Zi (1904–38). Important composers of political songs include XIAN XINGHAI and NIE ER, who contributed numerous songs to Communist efforts to overthrow the Republic of China. Some basic aspects of later Communist cultural policy were formulated during the war against Japan from the Communist headquarters at Yan'an in Shaanxi province, where new works such as *yangge* operas (fig.9) and folksong were adapted from traditional models to reflect the political struggle. More often new diatonic or pentatonic melodies were composed, along with harmonic accompaniments written for piano, accordion or other instruments. The composition and performance of these songs continued throughout the 20th century, although it reached a peak during the Cultural Revolution and subsequently declined in importance.

The import of Western entertainment technology to Chinese cities in the 1920s was also significant. For example, a new genre of film song was created, with singing stars drawing on jazz, among other foreign styles, in the 1930s. The introduction of radio stimulated the spread of the new genre of Cantonese ensemble music.

A third strand of Western-influenced musical activity was the establishment in China of a network of teacher training colleges, music conservatories, research institutes and university departments. Initiated during the 1920s, the curriculum at these institutions today includes Chinese

traditional instruments (*erhu*, *pipa* etc.) and instruction in Chinese musical history. However, students of Western-style art music remain in the majority, and courses on Chinese music have been closely modelled on Western methods. Those who studied indigenous traditions tended to combine a broadly nationalist outlook with a progressive attitude towards existing Chinese musical traditions, their intent being to develop a new musical language from the synthesis of Western and Chinese ingredients, the former providing a 'scientific' and 'modern' basis and the latter national colour and identity. Beijing-based music scholar LIU TIANHUA, for instance, composed a series of ten solos for the two-string fiddle *erhu*, which typify this aesthetic (ex.1). Indeed, the very idea of treating the *erhu* as a solo recital instrument was itself a new one. Liu's solos combine traditional Chinese elements, such as descriptive titles, with Western ingredients, including aspects of violin technique and equal temperament. From the start, they were disseminated in fixed form in notation, and the performer was expected to perform this music as written, not develop a personal realization, as in traditional music. Gradually, this performance aesthetic was applied to older traditional pieces also. The establishment of the conservatory system thus led not only to the rise of new musical styles in China but also to transformations of performing practice and expectations.



The music composed and performed by the new conservatory-based musicians falls into two broad categories: music for Western instruments, and Western-style voices and that for Chinese instruments and voices (commonly called *guoyue*, 'national music'). Some crossover pieces also exist. The former category includes many pieces in nationalistic and social realist styles, testimony to the profound impact of Russian and then Soviet teachers on several generations of Chinese composers. These pieces rely mostly on indigenous folk-tune melodies (or original imitations of these) and the conventions of the late-romantic tonal system. In some, pentatonic note-sets are used as a harmonic basis. Intended to appeal widely to Chinese listeners, almost every mainland Chinese composition written between 1949 and about 1980 has a socialist programme or theme. A typical example is DING SHANDE'S 'Long March' symphony (1959–62), commemorating the Communist army's journey in 1934–5 from Jiangxi province to a new headquarters at Yan'an. Music for Chinese instruments and voices includes solos such as those of Liu Tianhua, harmonized arrangements of folk pieces and many new compositions for ensembles and orchestras of redesigned Chinese instruments. In the main, these pieces share the programmatic nature, sectional structure and musical language of those for Western instruments.

In parallel to the growth of the education network after 1949, numerous state-supported professional performance ensembles (from symphony orchestras to song-and-dance troupes) were established, and large factories were set up in principal cities to produce reformed and standardized musical instruments, in some cases developing Western style SATB families for use in the new orchestra of Chinese instruments. Pre-existing ensembles, such as privately run traditional opera troupes, were nationalized and sent forth to educate the people at large. These troupes were expanded, gaining full-time resident composers, directors, script-writers and other support personnel. Extemporization on the part of singers was discouraged, with scripts now requiring the approval of a Communist Party official prior to their performance. The performers of one local tradition were also encouraged to learn from those of another (many opera troupes adopted percussion music based on that of Beijing opera, for instance). Accordingly, the 1950s and early 1960s can be viewed as an innovatory period in Chinese cultural life (fig.10).

The music conservatories and many urban professional performance units were closed down during the Cultural Revolution, and much of their repertory, whether for Western or Chinese instruments, was banned. Nonetheless, some composition and performance was allowed at this time, including the combination of Western instruments and Beijing opera singing first assayed in 1968 with an arrangement of songs from the revolutionary model opera *Hongdeng ji* ('The Red Lantern') by pianist Yin Chengzong (*b* 1941) (ex.2). This was one of the few so-called 'model operas' (*yangbanxi*) passed for performance by the cultural authorities. These operas have been criticized for reducing drama to a moralistic triumph of good over evil, yet the music was regarded by many as very well crafted. Furthermore, in recent years there has been a resurgence of enthusiasm for several of these compositions.

In the meantime, prospective music students were dispersed across the Chinese interior. Hitherto mainly exposed to conservatory-mediated representations of national music, young composers such as TAN DUN (*b*

Ex.1 A passage from Liu Tianhua's solo for *erhu, 'Bingzhong yin'* ('Groaning in Sickness'), in parallel cipher and staff notations.
Note: in cipher notation '1' represents *do*, '2' *re*, etc.; '0' symbolizes a rest. The key of the piece is identified at the top of the score. Higher and lower octave notes are shown by a dot above or below the note, one dot per octave displacement.
Rhythmic subdivisions are similar to those in staff notation, while sustained notes are shown by a dash (–) for each additional beat.

10. Professional troupe in Beijing, 1961, with (left to right) suona (shawm), sanxian (three-string lute), yangqin (dulcimer), two yueqin (moon lutes), large yunluo (frame of pitched gongs), da gu (barrel drum) and xing'er (cymbals)

1957) returned to the cities in the late 1970s with a real sense of the vibrancy of rural musical styles. In the conservatories they now encountered a diverse range of contemporary Western compositions, which political liberalization was finally allowing into China. Several of the most successful members of the Chinese avant garde are now resident abroad, but even middle-generation composers within China have moved away from the composition of programmatic nationalist pieces to combine techniques from Chinese folk and historical traditions and the whole range of 20th-century Western styles.

Since about 1980, foreign popular music has been broadcast within China, and recordings sold in music shops. Hong Kong and Taiwanese pop have been most successful, although Beijing also has a small rock scene (see §IV, 6(ii) below). The national media industries have also produced immense amounts of light music, which is disseminated on radio and television. Although political and cultural freedom of expression have increased during the past two decades, the freezing of many government subsidies since the 1980s has hit the large state-supported ensembles and educational institutions particularly hard, and many have had to make redundancies. Many other staff have resigned as inflation erodes their earnings and economic development allows greater financial rewards to be reaped in the commercial sector. The general retreat of politicians from cultural matters has meant that most musicians have lost the important social position they held from the 1950s.

In the countryside, where the majority of the Chinese population still resides, the picture is somewhat different (see also §IV below). In some areas, older traditions were maintained throughout much of the 20th century, and elsewhere traditions stamped out (or introduced) by the political leadership have reasserted themselves (or disappeared) once the political tide has turned – even in the Cultural Revolution, some villages ignored governmental cultural dictates. Radio and television broadcasts and, as in previous centuries, occasional visits by professional urban ensembles may supplement the musical lives of the peasantry without much influencing the music they choose to make themselves.

Rural traditions, however, have not remained static. For instance, partial mechanization in some agricultural regions has reduced the need for the singing of work songs, while some village bands now include cover versions of the latest pop songs together with older music in their wedding repertory. Old rituals may be shortened in the face of social pressure to limit wedding or funeral expenses, and the gradually increasing availability of electricity has offered villagers new forms of musical entertainment – people may watch television instead of joining a musical group. Political campaigns have also had a decided impact. Early Communist movements against village landlords not only redistributed land but also destroyed the social class who organized and sponsored many rural cultural events. Likewise, campaigns against religious bodies caused the up of certain traditional performance groups and, until recently, curtailed opportunities for the performance of musics – temple fairs, it should be noted, formed the focus of a wide variety of musical events, including secular instrumental and operatic music performed to entertain both mortals and gods. More recently, the opening of China to the tourist trade has provided new contexts for musical performance, a case in point being the Naxi minority's *dongjing* ensemble

Ex.2 *Hunshenshidan xiongjiujiu* ('I am filled with courage and strength') from *The Red Lantern* (China Pictorial Supplement, Beijing, 1968). The Chinese characters above the second bar in the second line stand for the metrical pattern *xipi erliu* used in Beijing opera. The symbol directly following *forte* is *kang*, meaning a simultaneous beating of the large gong, small gong and cymbals.

music from Yunnan province (see §IV, 5(i) below). Here, an old ritual form of music, once performed partly to assert cultural unity with the majority Han Chinese, has now become an activity aimed at tourists and marked by ethnic difference, secularism and commercial gain.

Our picture of musical life in 20th-century China is still more detailed for the cities than for the villages. It is easier to document the impact of rural styles on urban music, for example the rise in the 1980s of 'Northwest wind' (*xibei feng*)-style rock music, than *vice versa*. Nonetheless, political liberalization since 1980 has allowed growing numbers of Chinese and foreign scholars to carry out research into local musical traditions, and improved relations with the outside world have permitted a greater number of Chinese musicians to perform abroad. We now have at least some sense of the musical lives of ordinary Chinese people.

BIBLIOGRAPHY

Priority is given to recent work in Western languages, most of which refers extensively to Chinese studies. A selection of Chinese scholarship is also given; see also §I, Bibliography, and Thrasher, 1993 (which also includes selected imperial sources).

III. Musical instruments

This section surveys the development of Chinese instruments. Those in common practice today, whose history is briefly introduced here, are further discussed in separate entries. For instruments of China's ethnic minorities see §IV, 5 below.

1. Ancient instruments: the archaeological finds. 2. *Bayin* instruments. 3. Common-practice instruments.

1. ANCIENT INSTRUMENTS: THE ARCHAEOLOGICAL FINDS. When ancient Chinese rulers died, part of their estate was routinely buried with them, including ritual vessels, weapons, musical instruments and sometimes even servants and dancers. Within the last few decades, numerous tombs in north and central China have been found yielding treasure troves of instruments – clay flutes, stone chimes and bronze bells in particular, but also instruments made from more perishable materials, such as zithers with silk strings and flutes of bamboo. The oldest instruments found to date are flutes made from bird or animal bones, with two or three finger-holes, unearthed at various sites across north China and dating to between about 6000 and 5000 BCE. The most remarkable specimens of these bone flutes, the 'Jiahu flutes' (named after the Henan village where they were discovered), have unnotched blowing ends and between five and eight carefully spaced and meticulously drilled finger-holes. Appearing in Shanxi province (and other) sites dating to *c*4000 BCE and later are numerous irregular clay vessel flutes (later known as XUN), ball-shaped, egg-shaped and fish-shaped, each with one or two finger-holes. Most of these are kept at the Shanxi and Gansu Provincial Museums. Stone chimes (later known as QING), chipped from limestone or other resonant rock, date from about 2000 BCE.

The most significant finds of Shang instruments (*c*16th–11th centuries BCE) have been unearthed in northern Henan province, especially at sites near the town of Anyang. The following instruments, most dating to about the 12th century BCE, reflect a very conscious attention to form, design and acoustics: (a) *xun*, small globular flutes of baked clay, with three finger-holes in front plus two thumb-holes, some decorated with the highly stylized mythical animal face (*taotie*) typical of the period; (b) *qing*, stone chimes made from highly polished

slabs in various shapes, both single and in sets of three, some carved with beautifully stylized motifs of tigers and fish; (c) *nao*, bronze bells, short and broad in profile, designed to be hand-held and struck with beaters (*see* ZHONG); (d) the ancient Shang bronze barrel drum (*tong gu*, not to be confused with the large gong of the same name still played by ethnic minorities, for which *see* BRONZE DRUM), made entirely of bronze and resting horizontally on four legs, with a raised saddle-shaped decoration on top; its two heads (about 39 cm in diameter) are also of bronze. These musical instruments (and others), which were in ritual usage during the Shang dynasty, are cited in the ancient oracle bone inscriptions. They are held at the Chinese Historical Museum and the Palace Museum in Beijing, and at other museums in north China. (For a thorough English-language examination of Shang instruments, see Tong, 1983.)

Instruments uncovered from several Zhou sites (*c*11th century BCE–256 BCE) are of even greater abundance and diversity. Most significant are those found in the tomb of the Marquis Yi of the Zeng state (Zenghou Yi), Hubei province, a site in central China dating to about 433 BCE. Found together with ritual vessels, weapons, gold, jade and lacquer-ware (about 7000 artefacts in all) was a magnificent ensemble of well-preserved musical instruments, including (a) the visually stunning set of 65 bells (*bianzhong*) arranged on an ornate, three-tiered frame and reflecting different suspension methods and construction types (*see* ZHONG); (b) the complementary set of 32 L-shaped stone chimes (*bianqing*), arranged on a two-tiered frame (*see* QING); (c) a ten-string QIN zither with a short soundboard; (d) a five-string zither (possibly a *zhu*) with a long, narrow soundboard; (e) twelve 25-string *se* zithers with broad soundboard; (f) two transverse flutes of the *chi* type, lacquered black with red designs; (g) two panpipes (*paixiao*), each with 13 tubes of bamboo, lacquered black and arranged in 'single-wing' form (*see* PANPIPE); (h) six mouth organs (SHENG or *he*), with varying numbers of bamboo pipes inserted into wind-chests of gourd, all lacquered black; (i) a large wooden barrel drum (*jian' gu*) mounted on a thick vertical pole held upright in an ornate bronze base; (j) three small barrel drums of different types. These instruments are housed at the Hubei Provincial Museum in Wuhan.

Other instruments unearthed from sites in central China include a surprisingly early *zhang* zither with positions for 13 strips (*c*6th century BCE) and many relatively thin drums now known as *niujiao gu* ('bird-frame drum', *c*5th century BCE), each suspended by cords between two carved wooden figures of large birds (probably egrets) standing on the backs of crouching tigers.

Among Han sites (206 BCE–220 CE) containing musical instruments, most significant is the tomb of Mawangdui in Hunan province, dating to the 2nd century BCE. Unearthed from tombs 1 and 3 are instruments similar to the earlier finds but including several important discoveries: (a) two 25-string *se* zithers, each with four top-mounted string-holding pegs (similar to the Zenghou Yi *se*) and, remarkably, with silk strings and bridges intact; (b) one seven-string *qin* zither, similar in shape to the older Zenghou Yi *qin* but with a longer soundboard and the now-standard seven strings; (c) one *zhu* zither, with very narrow soundboard and positions for five strings; (d) two long *yu* mouth organs, one consisting of 23 pipes mounted in a wooden windchest, with many of its metal reeds intact; (e) one set of 12 bamboo pitchpipes (*yulü*), tuned chromatically within a one-octave range; (f) two transverse flutes of the *chi* type, with finger-holes on one side rather than on the top. These instruments are held by the Hunan Provincial Museum in Changsha.

2. 'BAYIN' INSTRUMENTS. The *bayin* ('eight tone') system was devised by Zhou court scholars in an attempt to classify the musical instruments of the period. While most instruments were mentioned in the *Shijing* (Classic of poetry, *c*7th century BCE), the eight-tone system was most clearly articulated in the *Zhouli* (Rites of Zhou, *c*3rd century BCE). Eight distinct resonating media and/or materials used in construction are identified: metal, stone, earth, skin, silk, wood, gourd and bamboo. The system is based on the ancient lexigraphic practice of classifying language and material culture according to meaning-suggestive radicals (e.g. 'earth', 'bamboo'), thus forming word categories. But the prime motivation behind the eight-part system was to establish a system of cosmological correspondences between these important ritual instruments and the eight trigrams (*bagua*), eight compass points and other meaningful eight-part systems. Today, the *bayin* instruments are usually housed at the larger Confucion shrines, notably in Beijing, Qufu and Taipei, where they are occasionally employed in ritual ceremones.

Metal (Jin). Bronze casting, one of the great technological achievements of the Shang and Zhou dynasties, was employed especially for construction of ritual implements such as vessels and bells. The most ancient bell types, the *nao*, *zheng*, *duo* and *chun*, have declined in usage over the centuries and are now found in museums only. Since the Zhou dynasty, the two most common surviving bell types have been the *zhong* and *bo*, both struck externally. The *zhong*, in its most common form, has a leaf-shaped cross-section and concave mouth, with an elongated handle and a small ring at its base for suspension; the *bo* has a flat mouth and is suspended by an elaborate loop-shaped hanger on its crown (*see* ZHONG).

Stone (Shi). Historically, stone was thought to be symbolic of longevity and stability, which helps explain its usage in ancestral rituals. Only one instrument type is found in this category, the QING stone chime, an L-shaped lithophone constructed of resonant limestone or jade, each tuned to a specific pitch.

Earth (Tu). Use of clay in instrument construction is suggestive of the significance of earth (*di*) as a generative force, complementary to the cosmological dominance of heaven (*tian*). While the *Shijing* cites the existence of a musical bowl made of clay (*fou*), it is the XUN globular flute, an egg-shaped clay flute with between five and eight finger-holes distributed in various patterns, that best exemplifies this category.

Skin (Ge). The skin category is comprised entirely of drums, the historic significance of which is found in the signalling nature of the drums themselves. More than 20 drum types are cited in the *Zhouli*, *Liji* and other ancient texts, of which the *jian gu*, *jin gu*, *tao gu* and *bofu* have shown the most enduring legacy. All have barrel-shaped shells of wood, their two open ends covered with animal skin tacked around the circumference. Most significant is the elaborately decorated *jian gu* ('mounted drum'), a large drum mounted horizontally on a post and covered with a richly ornamented canopy. The *jin gu* ('Jin [kingdom] drum') is the largest drum in the Chinese instrumentarium (over 1 metre in diameter), resting

vertically in a frame. Both are struck with wooden beaters. More unusual is the twirling drum *tao gu*, a small drum mounted on a long round handle, with two short, beaded cords attached to the side of the shell. It is sounded by rotating the handle, causing the beads to strike the two drum heads alternately. The *bofu* (literally 'strike-slap') is a drum of moderate size, resting horizontally on a low rectangular frame and struck with the hands.

Silk (Si). Use of silk in the construction of instruments is unique to China. The *Liji* suggests that silk strings represent 'purity' (*lian*) and 'determination' (*zhi*), an indication of the high value assigned to string instruments. By the time of the late Zhou dynasty, four zither types were differentiated: *qin*, *se*, *zheng* and *zhu*. The seven-string QIN is the most venerated of instruments among Chinese scholars (see also §IV, 4(ii)(a) below). It differs from the other zithers in its irregular shape, absence of bridges and multitude of symbolic associations with Confucian cosmology and ideology. The *se* is a larger zither, with rectangular soundbox and 25 (or more) strings, each with a movable bridge. Metaphorically associated with the *qin* in ancient literature, its usage today is confined to the Confucian ritual. Related to the *se* (possibly derived from it), the ZHENG is a medium-sized zither, with 16 (or more) strings and movable bridges (see also §IV, 4(ii)(b) below). Unlike the *se*, this zither has won popular acceptance as both a solo and small ensemble instrument. The *zhu*, a small zither with narrow soundboard and five strings, was reportedly struck with bamboo beaters. This zither is mentioned in ancient texts and old specimens have been found, but it has long been obsolete.

Wood (Mu). The classic texts describe several ancient and very unusual wooden idiophones in this category, of which the *zhu* and *yu* are predominant. The *zhu* idiophone (not to be confused with the *zhu* zither) is shaped like a wooden box, open at the top, with four outward sloping sides and (on later instruments) a round hole in the wall of one side; it is struck on the inside with a beater. Commentary in the *Shijing* notes that the *zhu* is like 'a lacquered grain container', suggesting possible historic usage in agricultural rites. The *yu* idiophone is essentially a carved wooden image of a crouching tiger, with a row of ridges along its back. In performance, a switch of wood or bamboo is drawn across the ridges, producing a rasping sound. The symbolic implications of this act are powerful, though never explicated in the ancient texts. The tiger, lord of all Chinese animals, symbolized many qualities, such as courage and military prowess. Common-practice sayings recognize the importance of subjugating tigers and remaining alert to danger. While some *zhu* and *yu* survive from the recent Qing dynasty, no ancient specimens have been unearthed.

Gourd (Pao). This category is unusual in that its primary instrument, the *sheng* mouth organ, bears closer affinities to 'bamboo' than to 'gourd' (owing in part to the significant presence of the 'bamboo' radical in its character). It is so classified, however, because gourd was formerly used in the construction of windchests. The *sheng* is comprised of bamboo pipes inserted into a windchest, with a blowpipe on one side; attached to the bottoms of the pipes are free-beating reeds. Several historically related mouth organs include the SHENG, *he*, *yu* and *chao*, most bearing strong symbolic associations with the mythic phoenix.

Bamboo (Zhu). Chinese scholars and poets have assigned deep cultural significance to the use of bamboo in the construction of flute-type instruments. Bamboo's naturally hollow interior was thought to be symbolic of the Confucian values of humility and modesty; its hardiness in winter was symbolic of human endurance and longevity. Various associations with the legendary dragon and poenix are commonly found as well. Over a dozen flute names appear in Zhou texts, though most of these are size variants (and related instruments) for three basic types: transverse flutes, vertical flutes and panpipes. The names of these flutes, however, have undergone confusing changes over the last 2000 years. The *chi* is a transverse flute of several different styles, constructed from a bamboo variety of relatively large internal diameter (about 3 cm). Scholars now believe that the name *chi* is etymologically related to the name DI (the more recent transverse flute) and that the two flute types themselves may be related. The vertical flute (formerly known as *di*, now as XIAO) is constructed with a notch at the blowing end (to facilitate tone production) and five frontal finger-holes plus one thumb-hole. The Chinese *paixiao* PANPIPE is constructed of graded bamboo pipes, bound in one rank with horizontal bracing strips. Historically known by the name *xiao*, it has been called *paixiao* only within the last millennium.

3. COMMON-PRACTICE INSTRUMENTS. Musical instruments in popular usage today emerged, for the most part, soon after the end of the Zhou dynasty. With the founding of the Han dynasty (206 BCE–220 CE), continuing through to the eclectic Tang (618–907) and beyond, numerous ideas and artefacts from India and Central Asia were introduced into China with the flow of Buddhism. Imported instruments arrived in several waves. Among the first to be introduced were the *pipa* lute, *konghou* harp, *di* transverse flute, *bili* reedpipe, *tongjiao* metal horn, *tongbo* small cymbals and *xiyao gu* hourglass drum. These instruments are well described in the *Tongdian* (801), *Yueshu* (*c*1100) and other sources, and are pictured in artwork left in the earlier Dunhuang and Yungang caves (and others) from the 4th century CE onwards, and again in the important Wang Jian reliefs of the early 10th century. (For a comprehensive English-language review of instruments pictured at Dunhuang, see Zheng, 1993.)

The principal repository of instruments surviving from this period is the Shōsōin in Nara, Japan, where numerous specimens of Tang lutes, harps, zithers, flutes and other instruments are preserved (see Hayashi, 1967). Tang and post-Tang instruments surviving in China are kept in various provincial museums. The most comprehensive collection of instruments dated from the late imperial period is housed at the Music Research Institute in Beijing.

The following is a summary of only the most significant common-practice Han Chinese instruments. For instruments of the many ethnic minorities, see §IV, 5 below.

(i) Early plucked string instruments. The indigenous plucked string instruments most probably were all zithers, used primarily in ritual performances. The *zheng* (see §2 above), however, appears to have been a common-practice instrument from the beginning. It has retained its popularity in and out of the court to the present day.

Most important among the new string instruments to emerge during the Han period are the PIPA and *ruan* lutes and related variants (*see* YUEQIN).

The *pipa* lute is well documented from the Han dynasty onwards. Widely believed to have been introduced from India or Central Asia, its name may be a transliteration of the Sanskrit term *vina* or other Central Asian lute name. *Pipa* was initially a generic name for different varieties of plucked lutes: the bent-necked *pipa* with pear-shaped body and four strings; the straight-necked *pipa* with slightly smaller pear-shaped body and five strings (*wuxian*); and the straight-necked lute with round body and four strings (*ruanxian*). Within a few centuries of its appearance, the bent-necked *pipa* (which at that time was held in a horizontal position and plucked with a large plectrum) came to dominate the other varieties and became fashionable in court entertainment ensembles. It was readily embraced by musicians during the Tang and Song periods and has continued its popularity to the present day (see §IV, 4(ii)(c) below), remaining one of the indispensable instruments employed in 'silk-and-bamboo' ensembles.

The *ruanxian*, with large, round resonating chamber and long, fretted neck, also emerged during the Han period, though most likely on Chinese soil. While the *ruanxian* (or *ruan*) itself declined in common-practice music performance (rthough revised for 20th-century concert-hall music), its two derived variants, *yueqin* and *qinqin*, became more prevalent within the recent centuries. The short-necked YUEQIN ('moon lute') is used primarily in Beijing Opera accompaniment. The *qinqin* ('Qin [kingdom] lute'), with its long neck and distinctively scalloped soundbox, is used in both Cantonese and Chaozhou music.

Other historic lutes related to the *pipa* include the *hulei* and *liuye qin*. The *hulei* (literally 'sudden thunder'), a small *pipa*-shaped lute with only two strings and snake-skin-covered sound chamber, was documented during the Tang dynasty. Although large and small specimens survive from this period, the instrument is no longer employed in Han Chinese music. The *liuye qin* ('willow leaf' *qin*, or simply *liuqin*), a *pipa* miniature with (usually) three strings, is also believed to have emerged during the Tang. It is still employed in local opera traditions of eastern China and in concert-hall ensembles.

Finally, several types of harps, known in China as *konghou*, are mentioned in the literature of the 2nd century BCE onwards. Introduced from India or possibly West Asia, harps are described in Chinese sources as being of three sub-types: 'vertical' *konghou* (with lower string-holding arm at right angle to the body), 'phoenix head' *konghou* (with a single long, arching body) and 'horizontal' *konghou* (zither-like in shape, with frets). The 'vertical' *konghou*, which became the most common variant, is clearly described in the *Tongdian* (801) and other literature and is pictured in the artwork of these periods. An essential element of court entertainment ensembles during the Sui and Tang dynasties, the *konghou* declined in popularity after the Tang and it eventually disappeared.

(ii) Wind instruments. While most wind instruments employed in ancient ritual contexts retained their exclusive status as court instruments (i.e. the *bayin* instruments), the XIAO vertical flute and SHENG mouth organ were also accepted into common-practice music-making. Both are still used in ensemble music, the *xiao* mostly in southern ensembles and with *qin*, the *sheng* in northern ensembles. Principal among the new wind instruments to emerge during the Han period are transverse flutes, reedpipes and horns.

The DI transverse flute, initially known as *hengdi* and by other names, is believed to have been introduced early in the Han period (although it may have been related to the ancient *chi*). Initially employed in military ensembles and court entertainment ensembles, by the 16th century a new variant of *di* (with an extra hole to be covered by a vibrating membrane) became a lead instrument in *Kunqu* classical opera and other entertainment genres. By the 20th century, it had also become an important solo instrument within the context of the concert hall.

Double-reed instruments are of two types. The *bili* reedpipe (with large double reed) is thought to be of Central Asian origin. Emerging soon after the Han period, the reedpipe became important in court entertainment ensembles of the Sui and Tang. Subsequently known by the names GUAN or *guanzi*, the instrument is today used mainly in ensembles of north China with the *sheng* mouth organ and percussion. The SUONA shawm type (with small double reed) is one of many worldwide adaptations of related Arab or Persian instruments (e.g. *zurna*). It is performed in outdoor processional ensembles throughout China.

Traditional horns are of several types. Long, valveless, metal horns (*tongjiao*) made from copper (or an alloy), with broad-rimmed cup mouthpieces and straight or curved bells, are depicted in Han reliefs (along with drums) as military instruments. Probably introduced from India or Persia, they are described in the *Tongdian* (801) and *Yueshu* (*c*1100) as being like water buffalo horns of metal. Actual animal horns (*niujiaohao*) with cup mouth-pieces are rare today, although they are played occasionally by Daoist or other priests. Straight and curved metal horns, known as *laba*, *haotong* and other local names, are still used in outdoor village ceremonies. The very long straight horns used in Tibetan Buddhist ensembles are related instruments.

Another horn type is the conch (*hailuo*) or 'Buddhist shell' (*faluo*), a shell in which a blow-hole has been cut at or near the small spiral tip (forming a cup mouthpiece). Historically known as *bei* ('shell'), the shell horn is well documented in Tang art and literature as being part of court ensembles. It is still used today in Tibetan Buddhist ensembles and some Han Chinese ritual ensembles.

(iii) Drums. The oldest drums documented in China had barrel-shaped shells, with drumheads tacked to the shell at both ends. Drums introduced from India and/or Central Asia to the Sui and Tang courts (7th to early 10th centuries) were mostly hourglass- or tubular-shaped, with laced drumheads, notably the *xiyao gu* ('narrow-waist drum', or *yao gu*) and *jie gu* ('Jie [tribe] drum'). Most have clear affinities with Indian instruments. While some of these drum types were passed on to Japan and Korea during this period of cultural contact, their importance in Han Chinese ensembles diminished after the Tang, and they eventually disappeared in China, with the exception of some preservations among ethnic minorities.

Drums employed in the accompaniment of opera, narrative singing and instrumental ensembles mostly appeared after the Tang period, including *shu gu* ('narrative drum'), a flat wooden drum about 30 cm in diameter, suspended in a three-legged stand, which is used to

accompany northern *dagu* narrative singing; *dian gu* ('point drum'), a smaller drum with a thick wooden shell tapered towards the outer perimeter, used in *Kunqu* and *sizhu* in central-eastern China; *danpi gu* ('single-skin drum') or *ban gu*, a frame constructed of thick wedges of hardwood glued together in a circle about 25 cm in diameter, covered on the top end only with pighide or cowhide and wrapped with a metal band, used in opera accompaniment; *tang gu* ('hall drum') and other large barrel drums, of variable size, suspended in a stand, widely used in opera and instrumental music. Flat drums are usually struck with one or two slender sticks of wood or bamboo; the larger barrel drums are struck with thicker beaters.

Numerous other types of drum are found in China, including those employed in dance accompaniment such as *bajiao gu* ('octagonal drum'), *shi gu* ('lion drum') and *yao gu* ('waist drum', not to be confused with the historic *xiyao gu*). Employed in 20th-century concert-hall ensembles are new variants such as *pai gu* ('row drums'), *bian da gu* ('flat large drum') and *huapen gu* ('flowerpot drum').

(iv) Clappers and woodblocks. Clappers and woodblocks are primarily time-marking instruments. The oldest type of clapper in contemporary usage, the *paiban* (or *ban*), is constructed of five or six strips of resonant hardwood, bound together with a connecting cord through their top ends. In performance, this instrument is held in both hands and 'clapped' together on regular beats. Mentioned in the *Tongdian* (801) and *Yueshu* (*c*1100), and pictured in 10th century art, the multi-strip *paiban* is still employed in *nanguan* (*nanyin*) music in Fujian. A later variant is the three-strip *paiban*, employed in Beijing opera and other northern genres. This clapper is held in the left hand only (suspended over the thumb), leaving the right hand free to strike a small drum (*ban gu*) in alternation.

Woodblocks of several types have emerged over recent centuries. The *muyu* ('wooden fish'), described in the Ming dynasty *Sancai tuhui* (1619), is one of the oldest. It is most commonly constructed of mulberry or camphor wood, with a hollow interior resonating chamber, the exterior elaborately carved in a rounded abstraction of a fish (although some older *muyu* are in fact fish-shaped). The *muyu* is struck with a beater in accompaniment of Buddhist chant. The woodblock known as *nanbangzi* ('southern *bangzi*'), essentially a *muyu* in rectangular form, similarly has a lateral slit on one side and an internal resonating cavity. It is struck with a thin beater in accompaniment of Cantonese opera (in place of the older *ban gu* drum) and other genres. Cantonese musicians identify several sizes, named *gok* (large), *duk* (medium) and *dik* (small), in imitation of their different tonal effects. *Bangzi*, on the other hand, are concussion sticks, similar to Western claves though of unequal lengths and shapes. They are struck together in accompaniment of the northern *bangzi* opera. Among the many other local variants of clappers and woodblocks, an especially distinctive instrument is the *sibao* employed in *nanguan* music, four short strips of bamboo which are held (two in each hand) and shaken. Other clappers, woodblocks and metal idiophones known to Moule during the early 20th century are examined in his study of 1908 (pp.12ff).

(v) Small bells and cymbals. Small bells (*ling*) and cymbals (*bo*), while morphologically different idiophones, are not always clearly differentiated in historic Chinese sources or by artists in cave reliefs. Pairs of small bells, variously known by the onomatopoeic names *pengling*, *xing*, *shuangling*, *lingbo* etc., are described in Tang literature and depicted in cave art of the 5th and 6th centuries. Resembling Indian bells, these small, hand-held, clapperless bells (about 5 or 6 cm in diameter) are hemispheric in shape, made of a brass alloy and attached together with a cord through holes in their crowns. Their pitches are tuned, but exact pitches vary from one pair to another. In performance, they are struck together to punctuate Buddhist chant and occasionally instrumental ensemble music. A related bell is the *yinqing* (or *xingzi*), a single hemispheric bell mounted on a wooden handle and struck with a thin metal beater.

A larger type of bell is a resonating bowl of hammered bronze, which rests on a cushion and is struck with a padded beater. Commonly known today as *zuoqing* ('seated' *qing*) or simply *qing* (not to be confused with the ancient stone chime of the same name), this very resonant bell has been used in Buddhist temples to accompany chant since the Tang dynasty. The largest bell found in Buddhist temples is the clapperless *zhong*, round in cross-section and flat or scalloped at the bottom, suspended under the eaves of temples and struck to mark periods of worship.

Another idiophone which (unlike the *zuoqing*) *was* closely related to the stone chime is the *fangxiang* ('square [resonant] sound'), a Sui-Tang substitution for the ancient *qing*, constructed in sets of 16 rectangular iron bars of varying thickness, suspended in frames. Used primarily in the court 'banquet music' of the period, *fangxiang* idiophones disappeared after the Tang.

Pairs of small cymbals (*bo*), historically known as *tongbo* ('copper [alloy] cymbals'), are described in pre-Tang literature and depicted in earlier cave art. Probably introduced from West or Central Asia, small CYMBALS were regularly employed in court ensembles during the Tang dynasty. Cymbals in use today are of various sizes and shapes, including medium-sized *jingbo* ('capital cymbals', used in Beijing opera), and the large ritual cymbals *nao* and *bo*. *Jingbo* and related cymbals are generally between 15 and 20 cm in diameter, with a large raised central bulb through which a strip of cloth or cord is tied for holding. Most cymbals today are employed in opera and ceremonial ensembles.

(vi) Gongs. Gongs (*luo*) differ from bells and cymbals in that their area of greatest resonance is at their centres, not at their rims. Chinese gongs are made from 'resonant bronze' (*xiangtong*, an alloy of copper and tin), hammered into various dish-shaped or basin-shaped structures, with shoulders turned back at about 90 degrees. Gong-type instruments may have originated in what is now south-central China, a region heavily populated by non-Han tribal peoples, and in northern areas of South-east Asia. A bronze gong unearthed in Guangxi province, dating to the Han dynasty, measures approximately 32 cm in diameter, with a large, flat, central striking area, rounded shoulders and three metal rings around its edge for suspension. The so-called 'bronze drums', which are actually gong types, appeared several hundred years earlier (*see* BRONZE DRUM, §2). Gong types 'like large copper plates' (known as *zheng gu*) are described in the *Tongdian* of 801, and possibly related gongs (*guchui zheng*) are pictured in the treatise *Yueshu* (*c*1100). The

Japanese *shoko* (Chin. *zheng gu*) used in *gagaku*, with narrow shoulders at 90 degrees, through which cords are inserted for suspension in a frame, may be a survival from this period. Other gongs are pictured and described in Chinese sources, such as the knobbed gong called *tong gu* in the 1713 treatise *Lülü zhengyi*.

Chinese gongs today exist in a very wide variety. Small, basin-shaped gongs suspended in frames, struck with thin unpadded beaters, include *xiangzhan* ('resonating cup'), a small, flat gong resting in a basket (about 6 cm in diameter), employed in *nanguan* of Fujian province; *zhengluo*, a slightly larger gong (about 10 cm in diameter) suspended by three cords in an individual frame; YUNLUO ('cloud gongs'), a set of ten or more similar sized pitched gongs common in northern China. Knobbed gongs are larger (about 25–45 cm in diameter), with a raised boss at the centre and sharply turned-back shoulders. They are suspended by two cords in standing frames, hung from poles (when used in processions) or hand-held, and struck with padded beaters. Most commonly found in south-central China, especially among minority peoples, and in south-eastern China and Taiwan, notably among the Chaozhou people, knobbed gongs bear local onomatopoeic names such as *gongluo* or *mangluo*.

Gongs used in the operatic traditions of north and central-eastern China are different in that their surface shapes are convex, with a flattened central striking area and relatively narrow shoulders. Their most distinctive acoustical feature is that their pitches change after being struck. For large gongs (about 30 cm in diameter), known as *daluo* ('large gong') and other local names, the pitch descends; for small gongs (about 22 cm in diameter), known as *xiaoluo* ('small gong') and other names, the pitch ascends. Such gongs are employed in ensembles accompanying northern opera and other instrumental ensembles. They are also used in southern China, together with very large basin-shaped gongs with flat surfaces and wide shoulders, such as the Chaozhou *shenbo* (literally 'deep slope', about 60–80 cm in diameter) and the smaller *douluo* ('container gong').

(vii) Later string instruments. Beginning with the Song dynasty (960–1279), changes in Chinese taste associated with neo-Confucianism forced many 'foreign' instruments out of fashion. While the *konghou*, *wuxian* and *xiyaogu* appear less frequently in period paintings, the *hengdi*, *bili* and *pipa* are regularly pictured in ensembles, often together with *zheng*, *xiao*, *sheng* and *paiban*. Most significant and widespread of the instruments imported during the late Tang and early Song periods are the bowed two-string fiddles.

HUQIN (literally 'barbarian *qin*') is the term applied to the broad family of bowed instruments. All have a thin, round, fretless neck mounted in a relatively small resonating chamber of varying shapes, with (usually) two strings between which the hair of the bow passes. Historic *huqin* types include the post-Tang *xiqin* (activated by a thin strip of bamboo), the later *mawei huqin* (activated with a horsehair bow), and the *tiqin* ('hand-held' *qin*) of about the 17th century. Among the dozens of more recent *huqin* varieties still played in regional opera and instrumental ensembles are *erxian*, *erhu*, *gaohu* and *banhu*.

Another instrument imported into China after the Tang dynasty was the SANXIAN, a lute with long, fretless neck and snakeskin-covered resonator. The *sanxian* (literally 'three string'), most likely an adaptation of some other three string lute of Central Asia (such as *setar*), was first mentioned in Chinese sources during the Mongol-dominated Yuan dynasty (1279–1368), though some scholars believe it was in common usage before this. It is still employed in the accompaniment of the narrative arts and other genres throughout China. Distantly related is the *huobusi*, one of several historic transliterations for the Central Asian lute *qobuz*, an instrument not well documented until the Yuan period. A specimen preserved in Beijing from about the 15th century has a long neck, narrow sound chamber covered with snakeskin, and four strings – very similar to instruments still played among the Naxi people of Yunnan and non-Han peoples of Xinjiang. (For a useful English-language review of this and other Tang and Song string instruments, see Picken, 1965, pp.82–9.)

One of the last of the string instruments to be introduced before the 20th century was the YANGQIN ('foreign *qin*'), a trapezoidal dulcimer with seven or more courses of metal strings, struck with two slender beaters. An adaptation of the Persian *santur*, the *yangqin* was introduced into south China during the late Ming dynasty (1368–1644), ultimately becoming widely accepted into Chinese ensemble music, both north and south.

(viii) 20th-century developments. During the first half of the 20th century, many Euro-American jazz and popular instruments were introduced into the coastal cities of Shanghai and Hong Kong, such as banjo, double bass, violin, xylophone, saxophone and piano. Some instruments, notably the banjo and C-melody saxophone, were accepted into the Cantonese tradition; others enjoyed only short-term popularity. But the Euro-American influence was far greater in terms of construction ideals. During the 1950s, the new state-operated instrument factories, with the aim of projecting a progressive worldview and prosperous national image, implemented numerous 'reforms': instrument volumes were increased, equal temperament adopted (making modulation to distant keys possible), and many instruments were constructed in families (soprano, alto, tenor, bass). Some of these experiments, such as the *jiajian sheng* ('keyed [soprano] *sheng*'), tenor *suona*, and *daruan* ('large *ruan*'), now maintain essential roles in contemporary concert-hall ensembles. However, traditionally constructed instruments remain in common use for regional genres.

BIBLIOGRAPHY

Most comprehensive among Chinese-language sources are the encyclopedic guides by Liu (1987, 1992) and Li (1996), and the multi-volume province-by-province 'Compendium of Chinese musical relics' (*Zhongguo yinyui wenwu daxi*, 1996–). For an English-language index to relevant studies appearing in Chinese archaeology journals, see DeWoskin (1989).

IV. Living traditions

Although Chinese scholars have studied living regional traditions since the 1940s and earlier, with much research in the 1950s, wider awareness of the riches of folk music in China has come only since the dismantling of the Maoist commune system in the 1980s. This period saw not only the revival of many forms of traditional culture but also an intensification of collection and research. The main stimulus for this work was the vast project *Zhongguo minzu minjian yinyue jicheng* (Anthology of Folk Music of the Chinese Peoples), a series including volumes for every province on opera, narrative singing, folksong, instrumental music and dance. Largely based on fieldwork in the early 1980s, volumes began to appear in the late 1980s. For all its flaws, the series, consisting largely of transcriptions into cipher notation, with brief documentation of history and social background of genres, is an indispensable starting-point for fieldwork.

Also useful is the *Zhongguo yinyue nianjian* (Chinese music yearbook), which lists Chinese research on different genres. Major archives include the Music Research Institute of the Chinese Academy of Arts, Beijing, and the CHIME Foundation, Leiden. Regional performance troupes for opera, narrative singing and instrumental music may also preserve valuable unpublished documentary and recorded material.

Traditional genres adapted with difficulty to communist power and were virtually silenced in the 1960s and 70s during the Cultural Revolution. After the dismantling of Maoism in the late 70s, traditions revived. At the same time, many genres that had hitherto resisted political pressure were subject to the new influence of modern popular culture. Nonetheless, traditions have proved more resilient in rural areas than in the towns.

§§1–4 below discuss Han Chinese genres, §5 'minority' traditions, and §6 Western-influenced styles.

1. Musical drama and narrative. 2. Folksong and dance. 3. Religious music. 4. Instrumental music. 5. Minority traditions. 6. Western-influenced styles.

1. MUSICAL DRAMA AND NARRATIVE. Vocal dramatic music has dominated Chinese taste since at least the Yuan dynasty (1279–1368). As song adds dramatic elements, incorporating speech and recitation with extended narrative content, costume and instrumental accompaniment, the Chinese classification moves from folksong to narrative singing and opera.

Chinese research on regional genres was extensive in the 1950s and has thrived again since around 1980. Apart from the major work of the *Anthology of Folk Music*, journals include *Zhongguo xiju* (formerly *Xiju bao*), *Quyi* and many others published in Beijing or in regional centres, and in the West, *Asian Theatre Journal* and *CHINOPERL Papers*. Many more recordings of regional opera than of narrative-singing are available in China, most collections being held privately by research institutes and performing troupes. Archives include the Xiqu yanjiusuo and Quyi yanjiusuo in Beijing; provincial conservatories and troupes also often have research departments.

(i) Opera (ii) Narrative.

(i) Opera.

(a) History and styles. The Chinese *xi*, *xiqu* or *xiju*, variously rendered in English as opera, drama or theatre,

denotes a multi-media performance in which a dramatic story is enacted in costume and make-up, a synthesis of speech, song, dance, acting and acrobatics. Stage props are sparse, and action is highly stylized (fig.11).

A major dictionary of Chinese regional opera, published in 1995, lists and explains the history, features and music of 335 different styles, including Beijing opera. These vary according to music, instrumentation and the dialect or language of the librettos. Apart from the operas of ethnic 'minorities', especially Tibetan opera, the stories tend to be consistent from one place to another, though some are particular to one region. Some styles are popular in large areas of the country, others in single provinces, and most in still smaller districts. Whereas in the West an opera is generally identifiable by its composer, in China it is known by its region of origin.

Chinese sung drama originated during the 12th century under the Southern Song dynasty (1127–1279), but the regional operas performed today developed mainly during the Ming and Qing dynasties (1368–1911). The largest in scale among the styles belong to several main 'systems' of opera, notably *gaoqiang*, *Kunqu*, *bangzi qiang* and *pihuang*.

The great majority of regional opera styles were for the masses; the educated élite looked down on these plays. The oldest of the surviving systems of popular opera is *gaoqiang*, also known as *Yiyang qiang* after its place of origin, Yiyang in Jiangxi province. Characteristics include fast metres and the use of a small chorus, which in some cases entirely replaces wind and string instruments. Major examples are Sichuan opera (*Chuanju*) and Chaozhou opera (*Chaoju*), both of which still use the small chorus.

The more sophisticated style of *Kunqu* evolved in the Suzhou area of east-central China during the 16th century. It influenced the later development of Beijing opera but was losing popularity by the 20th century. It is an aristocratic style characterized by a slow and regular 4/4 rhythm with much melisma, accompanied by *di* transverse flute and *sanxian* three-string lute.

A third system common in northern China is clapper opera (*bangzi qiang*), which was originally accompanied by a date-wood clapper. All clapper opera styles use string instruments, especially a two-string bowed fiddle (*see* HUQIN). Like the *Yiyang qiang*, their librettos are based mainly on colloquial language. Major examples of this system are the operas of Shaanxi (*Qinqiang*) and Shanxi (*Jinju*).

The fourth main system is *pihuang*, a combination of *erhuang* and *xipi*, modes with their different affects. The main example of this system is BEIJING OPERA; another is Cantonese opera (*Yueju*), with its mellifluous and slightly sensuous tonalities; the saxophone and other Western instruments were introduced into this opera in the first half of the 20th century.

Apart from styles belonging to these four systems, there is a plethora of small-scale folk regional styles. Their plays have small casts, with very few instruments accompanying the singers and simple and repetitious melodies. The stories are comic, many revolving around a flirtatious couple and clearly designed for entertainment. Both imperial and modern authorities frequently castigated the operas as lewd, with frequent bans and edicts against them. A major example of a style that began as folk theatre but expanded in scale after becoming urbanized early in the 20th century is Shaoxing opera (*Yueju*, written differently from the characters for Cantonese opera). The music is softer, more lyrical and less percussive than that heard in most of China's main regional styles, although of course the orchestra includes percussion.

Apart from its function as entertainment, opera is also part of folk ritual in many parts of China. Buddhist plays using a regional style in their musical accompaniment were incorporated into these rituals. Plays such as *Mulian jiumu* ('Mulian Saves his Mother'), about the virtuous Mulian who seeks, finds and saves his sinful mother from hell, became extremely popular, forming the basis of religious rituals. David Johnson has suggested that the main reason for the close connection of ritual and opera is because both were scripted performances in a culture where doctrine was always of slighter significance than behaviour.

11. A scene in The Story of the White Snake (Baishe zhuan) in the Hubei Opera (Hanju) style, Wuhan, 1998

12. Traditional characters in Chinese opera: (left to right) old man (secondary character), old woman, young heroine and scholar lover: drawings from Zhuibaiqiu, i (1908)

Standard role types are *sheng* (male), *dan* (female), *jing* (painted face, male) and *chou* (clown) (fig.12). Although Shaoxing opera began the practice of all-female casts in the first half of the 20th century, until the mid-20th century most actors were male, including those who performed female roles; thereafter the tradition of males playing female roles largely died out. Actors were very low in class, despite the extraordinary skills their art demanded, and enjoyed no protection at all under the law. Even the performers of *Kunqu* were low in status and included the slaves of the aristocracy.

Musically, Chinese regional operas have been classified as 'metrical melody' (*banqiang*) and 'labelled melody' (*qupai*) forms. In the former, skeletal musical phrases (often in pairs) are varied and elaborated to fit the text, metre etc. In the latter, by contrast, the unit of variation is the 'labelled melody', a large repertory of pre-existing tunes, to which the text is adapted or composed. The styles belonging to the clapper opera and *pihuang* systems follow the first pattern, while the great majority of other styles accord with the second.

The instrumental accompaniment is often divided into 'civil' and 'martial' arenas (*wenchang*, *wuchang*). Apart from bowed and plucked fiddles and flute, a shawm plays overtures and codas and marks the entrance of imposing characters such as emperors or generals. The percussion section is led by a drum-master playing a high-pitched 'single-skin' drum (*danpi gu*) and clappers, with punctuation from gongs and cymbals.

(b) Opera under Mao. The policy of the Chinese Communist Party (CCP) on regional drama has moved through different phases. Before the Cultural Revolution (1966–76), regional theatre was encouraged as a popular art form loved by the masses. The government invested money in establishing professional troupes that would maintain and enhance the various regional forms. It set up and paid for training schools to foster a new generation of performers. It persuaded 'old artists' to use their talents to reconstruct arts that were dying out and to work in the training schools. The social status of actors of the regional opera was even lower than in Beijing opera, and the CCP tried to improve their position, lionizing such stars as the *Kunqu* actor Yu Zhenfei, the Shaoxing opera actress Yuan Xuefen (*b* 1922) and the Cantonese opera performer Ma Shizeng (1900–64). In the 1950s, the CCP also undertook extensive reforms of the regional theatre in order to eliminate politically untoward content that could be construed as anti-socialist. At the same time folk opera troupes, though also affected by reform, showed themselves remarkably resistant to modernized styles of music or content. At all times, they have preferred their own traditions.

A new form of traditional opera was inherited from the northern Shaanxi zones that the CCP had held in the 1930s and 40s. Called 'newly arranged historical drama' (*xinbian lishi xi*), this form had several characteristics. The music was composed especially for each new play but followed the style of the original traditional regional opera, with only inessential changes such as increasing the size of the accompanying orchestra. Scenery was made more spectacular and complicated than in any traditional regional opera. Librettos were especially written to suit the music of the regional opera style and for a story set in the dynastic period. Instead of short episodic scenes, such as characterize traditional opera, the newly arranged plays feature dramatic tension, rising to a climax and dénouement. The themes had to accord with socialist demands and express what CCP Chairman Mao Zedong (1893–1976) described as 'the democratic essence' of the Chinese people. So operas about rebels against the feudal society or women asserting their right to play a part in public life were especially favoured.

The Cultural Revolution saw the banning of all traditional regional operas. Even the most politically correct of the 'newly arranged historical dramas' were banned. The most rigid censorship replaced them with adaptations of the model Beijing operas favoured by Mao's wife Jiang Qing. Actors associated with the traditional theatre found themselves harassed, humiliated and persecuted.

Early in 1978, following a major political turnabout in Chinese politics, the new power-holder Deng Xiaoping (1904–97) effected a change in policy on regional theatre. An avid supporter and lover of Sichuan opera, he had seen at that time a private performance of some traditional

items in the provincial capital Chengdu. With Deng's explicit approval, Sichuan opera became the first of the major regional styles to reintroduce traditional plays.

(c) The revival. Since 1978, two trends have been obvious. The state-subsidized regional theatre troupes at first revived significantly but then fell off. According to figures in the annual State Statistical Yearbook, the total number of state-subsidized troupes of all regional opera styles in 1986 was 2013, giving 397,000 performances of which 286,000 were in the countryside. By 1997, these figures had fallen, respectively, to 1472, 254,000, and 195,000. Audiences had fallen by about a quarter. Government subsidies had about halved over the same period and although performance takings had nearly trebled, this was because of much higher ticket or entrance prices, at least in part through performances for tourists. Some of the surviving troupes exist more in name than reality. Although many items performed belong to the category 'newly arranged historical drama', the majority are on traditional themes, with very few indeed on modern or contemporary topics.

The second trend is the revival of regional opera that is entirely independent of the state financially and often purely folk (*minjian*). These types of opera can be performed by amateur folk troupes. There are also professionals who make part of their living from their performances, working as ordinary peasants or at some other job for some of the year, and in opera for some of it. Entry into these troupes, even the folk companies, can be quite competitive, members being trained in their arts. Those in the countryside perform only on special occasions, such as at festivals or for a wedding or funeral. They do not usually perform in a theatre but in a covered enclosure built specially for the purpose or in the open air, often opposite a temple. The audience may pay for tea or tip the singers by throwing them money during the performance, but there is seldom a system of entrance payment. Sometimes if a regional opera company cannot make money in its own home, it will simply uproot and go elsewhere for a spell in the hope of finding better remuneration. The operas that such troupes perform are mainly classical, with traditional singing style and few accompanying musicians (fig.13).

One striking revival is that of ritual opera performed by lay clergy as part of an extended funeral or other ceremony. In southern Fujian province there are several ancient styles of regional opera, including the opera of Putian and Xianyou (*Pu-Xian xi*). Operas about Mulian are again performed as part of funeral and other rituals in this style, mainly by Buddhist priests. In some areas Daoist funeral ceremonies include ritual opera.

Another common form of regional opera found in various styles is known as *nuo* (fig.14). The name means 'to cleanse or exorcize', suggesting a strong ritual emphasis. Indeed, *nuo* is usually performed either at the spring festival to welcome the (lunar) new year, or at the autumn harvest festival to pray for a good harvest. However, provided they can pay, anybody can request a performance to alleviate a disaster such as drought, infertility or illness, to accompany a funeral or other special occasion or, increasingly in the 1990s, just for entertainment. *Nuo* opera is very ancient; like many ritual traditions thought to have died out under the People's Republic, it re-emerged as a living tradition during the

13. Qinqiang opera, Baozixiang, Minxian, Gansu province, June 1997

1980s, attracting considerable interest both in China and abroad.

Nuo opera has been studied in Shanxi, Anhui and Guizhou. In Guizhou, a province with many minority nationalities, it is found among both the dominant Han and eight of the minority nationalities of the region – Miao, Yao, Yi, Bouyei, Dong, Shui, Gelao and Yao. One distinctive feature of all *nuo* styles is the use of masks, although not all *nuo* performances include masked characters. The masks vary enormously from region to region and even within a particular style. Masks are not usual in Chinese opera, the infinitely varied patterns of the painted face appearing to make them unnecessary. Some scholars have suggested a link between the *nuo* styles and Tibetan opera, which also uses masks. The music of the *nuo* styles is generally similar to other regional opera and folksong of its particular area in melody, instrumentation and rhythm. Although a few of the stories deal with topics such as the origin of the people among whom they are popular, the majority are traditional love stories, military tales of the 3rd-century Three Kingdoms period etc., rather similar to most other regional operas.

The actors of the *nuo* operas are members of the community, mostly male, and serve to reinforce community spirit. There are also folk amateur troupes that will perform on demand at a price. An informant stated in 1990 that the total number of troupes was very substantial, with at least one in every county in Guizhou and three or more in many. Scornful of the professional

14. A performance of a traditional regional nuo drama on an old stage in a former mansion in Fenghuang, western Hunan, 1992

troupes, he added that the folk troupes provided much the best opera to be found in Guizhou province. The actors and administrators are mostly peasants and are thus mainly active during the slack agricultural seasons. The usual site for a *nuo* opera is in any large space in the open air, but they can also be found in formal theatres.

A province especially noted for its traditional theatre is Sichuan. The main style, known as Sichuan opera (*Chuanju*), combines musical elements from the main systems noted above with local melodies and instrumentation. Of these elements the most prominent, termed *gaoqiang*, derives from the *Yiyang qiang* system; the vocal texture has an identifiable high-pitched quality, with accompaniment restricted to a very small chorus and percussion instruments.

From 1982 there was a major officially sponsored movement aimed at 'reviving Sichuan opera' (*zhenxing Chuanju*), with the number of state troupes reaching about 100. By the mid-1990s this number had fallen to 80, of which nearly half were inactive, existing in name only. There are still formal schools for Sichuan opera, notably the Sichuan Provincial Opera School in the capital Chengdu, which is very active. Although audiences in the cities are mainly small and fairly to very old, there is still a following in the villages, including among the young. Many villages still have their own folk troupes, with ordinary people able to sing Sichuan opera. They perform not only on the major festivals but on any special occasion, such as a wedding, or during the slack agricultural season.

Two other features of the Sichuan opera scene are worth noting. One is that this style has produced the writer who has created what are perhaps the most interesting – and certainly most controversial – new operas in China since the 1980s: Wei Minglun (*b* 1941). His most noted opera is *Pan Jinlian* (1986), described as 'a Sichuan opera of the absurd'. It takes the form of a contemporary trial, presided over by a female judge. The title character is a woman traditionally castigated as evil, being noted for debauchery and for murdering one of her husbands. The judge's verdict is that blame rests not with Pan herself but with Chinese patriarchal society and its oppression of women.

The second feature concerns the revival of the Mulian dramas, which was part of the movement to 'revive Sichuan opera'. Although very ancient in Sichuan (the first documented performance being in 829), the Sichuan opera Mulian dramas were moribund by the late 1950s and were totally suppressed during the Cultural Revolution. However, a revived performance took place in the first five days of September 1993, with the focus on the temple stage of the Fuleshan park in Mianyang, not far north-east of Chengdu. The significance of the dates is, first, the length of the performances and, second, that they corresponded, in the traditional way, with the Avalambana Festival on the 15th day of the seventh lunar month, marking the Buddha's advice to Mulian to offer food, incense and paper money to rescue his mother from hell. The performance adopted a highly traditional style, including the religious ritual so central in the past. The distinction between performers and audiences was blurred, with action both on the stage and among the audience and inside and outside the temple.

Puppetry (*kuilei*) is another ancient art form that contributed to and benefited from the thriving urban culture of the Song dynasty. Although puppetry exists all over the country, regions famous for this art are eastern Hebei, Shaanxi and southern Fujian. In general, the music, dialect and themes of puppet styles accord with those of the local human opera. Under the CCP, professional troupes have been set up to foster puppetry. However, folk performers still operate in many regions and, at least in the countryside, it is they who provide their art's main contact with ordinary people. Puppetry also has a ritual background, often being associated with Daoism.

There are several surviving forms, as opposed to musical styles, of puppetry, including marionettes, string puppets and cloth puppets. The marionettes are about a metre high and manipulated from behind with three rods attached to the head and hands. String puppets are about two-thirds the size of the marionettes and are controlled from above with strings. The much smaller cloth puppets are manipulated by inserting the fingers. The marionette theatre of southern Fujian still preserves full versions of the Mulian story, which can be performed in association with religious rituals. Other than the fact that marionettes replace people on stage, these performances are musically similar to counterpart regional opera styles; for example, the marionette version of the Mulian story as performed in Putian, central Fujian coast, is the same musically and in other ways as that of the Pu-Xian opera.

(ii) Narrative. The Chinese narrative arts, known as *quyi* or *shuochang*, comprise a body of orally performed genres in which linguistic communication and musical delivery are complementary. Compared to Chinese operatic forms, the narrative arts use simpler costuming, props and instrumentation. Attention is focussed primarily on a single performer's ability to assume all the roles of the various characters in the story, including that of narrator. As a transportable, cost-effective form of entertainment that has appealed to a broad cross-section of patrons, the narrative arts have served several important traditional functions: as a communication technology for illiterate patrons, as an outlet for veiled social protest and as a source of aesthetic pleasure for the connoisseur who delights in the beauty of the marriage between text and tune.

(a) Stories. The narrative arts are commonly believed to have descended from the Tang dynasty (618–907) *bianwen* ('transformation texts'), which were Buddhist-inspired stories performed by professional storytellers who sometimes used large paintings to illustrate various points of the text. This multi-media form attracted large audiences from a number of social strata and became a popular form of entertainment during the Tang period.

Bianwen was prohibited by governmental decree at the beginning of the Song dynasty (960–1279), but secular narratives continued to gain in popularity. Stories told by professional storytellers in urban commercial centres were often written down in the vernacular of the day in storytellers' scripts, which also served as source materials for other narrative performers.

The interrelationship between oral and literary traditions was particularly evident in the prose fiction from the Ming (1368–1644) and Qing (1644–1911) periods. Examples such as *Shuihu zhuan* ('Water Margin') and *Honglou meng* ('Story of the Stone') were not only written episodically, as if each chapter were being told as part of an instalment within a longer saga, but these and other novels have also provided a wealth of source materials for orally performed stories up to the present

day. The stories that have been 'borrowed' from novels are often favourite episodes that lend themselves particularly well to being told orally: episodes with a lot of action, emotional turmoil or descriptive interest.

In addition to borrowing stories from prose fiction, the narrative arts have traditionally used other sources for stories as well, such as current topical themes or romanticized historical subjects. Stories may be tragic, comedic, satirical or descriptive, and different genres tend to specialize in a particular type of story and feature a particular kind of 'literary' style that corresponds to its characteristic delivery style.

(b) Delivery styles. In addition to their value as entertaining stories, Chinese narrative forms exhibit the greatest variety of delivery styles of any performed narrative in the world. The approximately 150 types of modern narrative genres have been divided into the following four categories: *pinghua* (spoken storytelling); *xiangsheng* (comic routines); *kuaiban* (clappertales); and *guqu* (sung genres). *Guqu* is by far the largest category, representing over 100 of the 150 genres.

The sung genres have been grouped generally into eight broad categories according to regional variation, instrumentation, musical form and choreographic features. *Guci* are genres from north China that feature the accompaniment of drum, clapper and stringed instruments; *tanci* are from central China and feature plucked lute accompaniment; *shidiao xiaoqu* feature popular tunes that are used as models for writing new texts; *daoqing* are accompanied by percussion instruments; *paiziqu* are similar to *shidiao xiaoqu* but use more than one melody per piece; *qinshu* feature the struck dulcimer *yangqin*; *zouchang* are dance narratives; and *zaqu* are miscellaneous vocal genres (fig.15).

In addition to their variety in musical form, instrumentation and performance style, the sung genres also differ broadly in length, featuring either extended tales or the shorter vocal narrative. The extended tales are told by a performer in two-hour instalments over a period of several months as continuous entertainment for both rural and urban audiences. The shorter, vocal narrative, sung in its entirety in about 20 minutes, has become the preferred length in modern urban China. Extended tales may still be heard in rural settings, however.

(c) Musical settings. Despite differences in the length of a performance, accompaniment or delivery style, one of the most striking characteristics of all sung genres is the careful way in which stories are set to music. Because these are narrative genres, communicating the story is of paramount importance. The setting of lyrics to music is a process in which the textual message must penetrate the musical treatment, and performers often say that they must 'first convey text, then sing the tune' (*xian nianzi hou changqiang*). The two basic ways in which melodic and linguistic parameters are balanced are the text-setting processes known as *banqiang* and *qupai* forms. Although each of these processes includes a number of variants, the following discussion introduces each system in simplest terms.

Banqiang form is a system for setting texts in which the music functions as a subsidiary element to the text. This is accomplished by means of recurrent melodic and rhythmic formulae used at appropriate points in the text. In other words, the melodic formulae in a *banqiang* genre emerge differently in each line according to the tonal and rhythmic requirements of the text and the aesthetic preferences of the singer. At the same time, however, the musical rendition of every textual line preserves the essential pitch structure, characteristic melodic movements and cadential patterns of the system. Consequently, no two pieces composed according to the same *banqiang* will sound alike to the uninitiated listener, since different texts demand individual settings; only the seasoned connoisseur can discern and fully appreciate the way in which the *banqiang* form is used. This process of setting texts is flexible and is used to accommodate virtually any text written according to the basic literary conventions of the genre.

The qupai genres are more melody-centred. Drawing from a repertory of pre-existing tunes, the creator of a piece using the *qupai*text-setting process selects one or more tunes as models for composing new texts. These models, known as *qupai* ('labelled melodies') or *paizi* ('standards'), then become part of the standard repertory of a genre, and despite some changes over the years, they often retain their original names. The most popular tunes that are also the most easily adaptable for setting new lyrics have been selectively retained by performers, and

15. Lianyungang paiziqu, a form of narrative singing found in northern Jiangsu province

new texts are written according to rules implied by the original, prototypical text in a process referred to as *tianci* or 'filling in the lyrics'. Pieces written to the same *qupai* will sound similar musically, even though there will be slight variations from piece to piece in the form of different grace notes added to textual syllables with a different tonemic contour than the corresponding syllables of the prototypical text.

(d) Current centres and prospects. Two urban areas have emerged as particularly important regional centres because of the local emphasis placed on narrative performance: Tianjin in the north and Suzhou in central China. As the centre for the performance of northern styles, the city of Tianjin boasts some of the finest performers in north China, the regional training school for all northern genres and one of the largest troupes of professional narrative performers in the country.

Genres are performed in either standard Beijing Mandarin or in local Tianjin dialect. Because of the close relationship between language and music, the dialects used determine the way the melodies are rendered. The primary instruments of choice in Tianjin are the *sanxian* (three-string plucked banjo), *sihu* (four-string bowed fiddle) and *pipa* (four-string plucked lute). Narrative genres performed in Tianjin are generally representative of the performance traditions in Beijing, Jilin, Shandong and other areas in north China where narrative-singing flourishes.

As the centre for performance styles in central China, the *pingtan* traditions that flourish in the Shanghai-Suzhou area are also locally and nationally recognized for their musical and artistic beauty. The major distinctions between this and narrative traditions in other areas are the following: the use of local dialect, which determines not only the semantic intelligibility of the genres to local people but also the nature of the melodic rendition, since melody must conform to the idiosyncracies of the dialect; a different instrumentarium, which features the *pipa* and a smaller *sanxian* as the main accompanying instruments; and *banqiang* and *qupai* forms peculiar to the region. On one level there are popular stories derived from sources that are beloved throughout China. In addition, however, there are also stories of local interest. As with similarities and differences in cuisine throughout China, local areas share certain general musical preferences for the telling of stories to musical accompaniment with other areas in China, and yet each region displays certain unique characteristics with regard to dialect, its melodic accommodation, accompaniment and popular stories. (*See also* JIANG YUEQUAN, XU LIXIAN and ZHANG JIANTING.)

Despite the revival since the 1980s, narrative traditions have suffered, especially in urban areas, first under the extreme period of socialism in the Cultural Revolution, and then as advances in modern telecommunications challenged the narrative arts as a communication technology and as a source for inexpensive entertainment. The state of the narrative arts in rural China is still little known, although the narrative volumes of the *Anthology of Folk Music* (see §IV Introduction above) now offer several leads. Some genres that have attracted the attention of Chinese scholars include *erren tai*, *erren zhuan* and *Yulin xiaoqu* in northern China, *kuaishu* in Shandong and *wenchang* in Guangxi; Sichuan also has several styles.

2. Folksong and dance.

(i) Folksong (ii) Dance.

(i) Folksong. People throughout rural Chinese society participate in folksinging. There is evidence of traditionally distinct repertories for peasants, cowherds, fishermen, women doing indoor work, itinerant beggars, pedlars, house-builders and numerous other groups. The spread of literacy in China has deeply influenced folksong repertories. Booklets of lyrics circulated among literate folksingers in the 19th century, and the constant interplay between oral and written forms appears to have roots going back to the late 16th century or earlier. In the 20th century, folksinging waned in many areas, owing to industrialization, changing agricultural patterns and political censorship.

There is an abundance of local genres and local terms for folksongs. Chinese folksong theorists tend to distinguish three major categories: *haozi*, *xiaodiao* and *shan'ge*. *Haozi* ('cries') is a fairly general word for rhythmic working cries, often sung in antiphonal form by two groups of singers, or by a lead singer and a chorus. These cries support repetitive physical movements during work.

Xiaodiao ('lesser tunes') are described as lyrical, mellifluous songs (usually solo songs) in a regular rhythm, often sung indoors in a soft voice and accompanied by instruments like *erhu* (bowed fiddle) and clappers or other small percussion instruments. Some *xiaodiao* have a musical refrain. Some scholars view *xiaodiao* mainly as an urban genre, and some describe it as a (professional) artists' genre, a type of music suited for stage production or for adaptation by instrumental ensembles. Others associate it primarily with popular festivals, notably in the New Year period. More likely, *xiaodiao* is a generic term for a number of functionally and artistically different genres. To a lesser extent, this may also be true for songs of the third category, *shan'ge*.

Shan'ge ('mountain songs') are generally defined as improvised songs in free rhythm, sung loudly during work outdoors (specifically during the work of weeding and harvesting). *Shan'ge* are more explicitly associated with peasant life than the other two genres. A typical *shan'ge* may include a loud and piercing falsetto passage, as in ex.3, in which the singer boasts he has so many songs in his belly that he could make the whole lake overflow by singing them. The dividing lines between *shan'ge*, *xiaodiao* and other generic folksong terms should not be drawn too sharply. Numerous intermediate forms occur, and many genres are not covered by the theoretical division in three major genres. Local terms used by folksingers deserve more attention and lead to a more differentiated picture of song genres and performance contexts (Schimmelpenninck, 1997).

Solo songs are the most common type of folksongs in China, but homophonic part-singing, with various performers singing a solo part in turn, is also quite common. The most familiar genre of this kind is *duige* (dialogue songs). More complicated song forms involve three to eight (or even more) singers who sing in alternation and may partly overlap one another. True polyphony (in the sense of simultaneous parts with elaborate chordal effects)

Ex.3 Verse of a *shan'ge* sung by Zhao Yongming, Luxu, southern Jiangsu, 1988

Ex.4 Fragment of a funeral lament, Shaxi zhen, 1992

is rare, except in minority areas (Fan Zuyin, 1994). Most outdoor songs sung during work in the fields are unaccompanied, although exceptions occur, such as the many varieties of 'gong-and-drum weeding songs' (collectively known as *haocao luogu*) of Hubei province.

Most folksingers in China apply the middle and high ranges of their voices. Falsetto parts may be sung by both men and women. Solo songs and *duige* are usually stanzaic, with stanzas of two or four lines of text, linked in performance with an equal number of melodic phrases. But many alternative structures exist. The music of bridal laments and funeral songs is often a one-phrase melody ending in a sob (ex.4). Folksongs in regular rhythm usually have either two- or four-beat patterns, though three-beat structures and other patterns may also be found. Most melodies rely essentially on an anhemitonic pentatonic framework, in which semitones may occur as 'passing notes'. The tonal make-up of a regional folktune repertory usually depends more on overall melodic contours and shared formulae of progression and cadence than on any specific mode.

Little is known about folksong traditions in the past. Some ancient text collections, such as the *Shijing* (Classic of odes) of the Zhou dynasty (1122–256 BCE), the Tang period (618–907) manuscripts from Dunhuang, and Guo Maoqian's *Yuefu shiji* of the 12th century include what are believed to be folksong texts. But no written music for these repertories has survived, and the original performance traditions of the songs remain a matter for conjecture. Feng Menglong's *Shan'ge*, an anthology of mainly erotic folksongs from early 17th-century Jiangsu, is of interest because many of the texts resemble lyrics sung in southern Jiangsu today. Some early musical notations of Chinese folksongs have survived from the 19th century (Yang Yinliu, 1981, pp.749–811).

Modern textual studies of folksong were initiated in the early 1920s, partly inspired by previous folklore movements in Russia and in the West and partly by a search for new cultural and social values. Musicological study of folksongs was introduced on a small scale in the 1930s. The first substantial collection of folk melodies took place in the 1940s and 50s, mainly for political purposes; tunes were borrowed to set propaganda texts to music. However, some substantial fieldwork was also made in the 1950s in regions such as Hunan and north-western Shanxi. In-depth ethnomusicological research started in the early 1980s, with the appearance of numerous articles in music journals and the publication of the first folksong volumes of the *Anthology of Folk Music* (see §IV, Introduction above). Song Daneng (1979) and Jiang Mingdun (1982) wrote the first extensive monographs on Chinese folksong. Recently Chinese scholars have paid much attention to the existence of so-called 'colour areas', referring to important stylistic differences between the folksongs of various regions within China (Miao Jing and Qiao Jianzhong, 1987). Most sound recordings of rural folksongs date from the period since 1978. Commercial recordings of folksongs in China are usually modern arrangements sung by radio and TV artists.

(ii) Dance. Dance traditions in China are numerous, and many dances are related to specific musical, theatrical or religious repertories. There is dancing in rural areas purely for amusement, for example in combination with drumming or accompanied by folksongs (as in the traditionally popular *yangge*, 'rice-planting songs'). During the New Year festival, a vast variety of dances are performed with the help of attributes such as lanterns, paper boats or stilts. Buddhist and Daoist practices and numerous local religious cults and exorcist rites, such as the *nuo* theatre of southern China (see §1(i) above), all have their own dance traditions. In *nuo* performances the dancers wear masks. Lion dances (*shiwu*) and dragon dances (*longwu*) are known all over China and, like many other types of dances with masks, are believed to originate in exorcist practices and old totemistic beliefs. In contemporary contexts, lion and dragon dances are often danced primarily for amusement. 'Flower drum' (*huagu*) and 'tea-picking' (*caicha*) dances have evolved in similar fashion in central and southern China.

The steps and movements of many folkdances are relatively free and improvised, except in staged and choreographed performances that frequently incorporate elements of Western ballet and modern dance. Both men and women participate in the dancing. Dancers often use small props such as fans, sticks, swords and shields. In their movements, performers may try to convey the images of phoenix, crane, butterfly or other animals that symbolize notions such as longevity or loyalty in traditional Chinese culture. Unlike most folkdances, dance genres incorporated in the martial arts or in traditional theatre often require a high degree of technical skill and many years of training, and can only be witnessed in stage performances by (semi-)professional dancers.

The dance volumes of the *Anthology of Folk Music* provide information about regional genres and performance contexts and include detailed descriptions and illustrations of dance-steps, dance formations, costumes and musical instruments used.

3. Religious music.

(i) Introduction (ii) Rituals and venues (iii) Music (iv) Current research.

(i) Introduction. The definition of religious music of the Han Chinese is still somewhat ambiguous. The vocal liturgy of Buddhist and Daoist temples is discussed below, but a more complete discussion of music for folk ritual and ceremonial should also include para-liturgical melodic instrumental music and the substantial ritual components of opera, folksong and narrative-singing, as well as the kinetic aspects of ritual. The music of other religious practitioners, including Christian communities and folk shamans, also requires further study.

Buddhist and Daoist liturgy has a history of nearly 2000 years and is still widely practised in China today. Large, official 'institutional' temples, in towns and on the great religious mountains, transmit orthodox versions and have been the main focus of research; but since Chinese religion had a long history of vernacularization even before the 20th century, current research also often extends wisely to 'diffused' observances among lay ritual specialists in rural areas, whose practice may be derived from the temples. Strict traditions in the major temples, both Buddhist and Daoist, recognize only vocal liturgy and ritual percussion. The texts are written, but the music is largely orally transmitted.

Buddhism was introduced from India in the early years of the first millennium (*see also* Buddhist music). Contact with Indian monks was frequent until the Tang dynasty (618–907); early Indian influence on vocal liturgy and gradual sinicization have been posited. Buddhist vocal liturgy is known as *fanbei*. Daoist liturgy developed in competition with the new religion. The Tang dynasty was the often-cited 'golden age' of religion, but much of the liturgy practised today is based on texts revised in the Ming dynasty (1368–1644), and the mutual influence between Buddhism and Daoism goes back long before then. Han Chinese ritual traditions have also been considerably influenced by Tibeto-Mongolian Tantric Buddhism. Many rituals, such as the Releasing Flaming Mouth (*Fang Yankou*) ceremony, and melodies such as hymns and incantations are shared by Buddhists and Daoists, and the two often co-exist, indeed compete, within a region. *Zhengyi* folk Daoists are now more common than priests of the *Quanzhen* monastic sect.

Despite the impoverishment of religious practice through the 20th century, and especially during the Cultural Revolution, a substantial revival has occurred since the 1980s. Both temple and folk traditions are perhaps more lively in southern China; Buddhist and Daoist music-ritual in Taiwan (*see* Taiwan, §3) and elsewhere in South-east Asia are also related. But mainland groups now maintain a lesser part of the repertory that was performed before the 1940s, as social demand has been constricted.

(ii) Rituals and venues. Morning and evening services are the basic duties of the temples. The practice of more complex and lengthy calendrical or occasional rituals has been simplified in many temples since the 1940s, although ritual manuals such as the Buddhist *Chanmen risong* are still standard. Apart from calendrical rituals, funerary services (*pudu*, *daochang* etc.) are most commonly observed, often including Water-and-Land (*shuilu*) and Releasing Flaming Mouth rituals. The lengthy Daoist Offering (*jiao*) ritual is performed in some areas for the peace of the community.

Of the major Buddhist temples today, the Tianning si in Changzhou has been most influential in modern times. Others include the Tiantong si in Ningbo, the Luohan si in Chongqing, the Kaiyuan si in Chaozhou and the Guanghua si in Putian. Northern liturgy is less well known, but Beijing still has major temples (the Guangji si, Guanghua si and Fayuan si), and the Wutaishan mountain temple complex remains an important centre for both Han and Tibeto-Mongolian practice. In recent centuries the southern influence on northern temples has been substantial. The vocal liturgy of all the major religious mountains, including Emeishan, Putuoshan, Jiuhuashan, Tiantaishan and Huangshan, deserves study.

For Daoism, the vocal liturgy of the Baiyun guan temple in Beijing is more authentic than its instrumental music. Temple and folk practice are lively in Zhejiang, Fujian and Shandong (Taishan, Laoshan). Studies have been made of the music of the Wudangshan, Qingchengshan, Longhushan, Taiqing gong (Shenyang) and Qingyang gong (Chengdu) temples. Around Shanghai, areas such as Maoshan, Changshu and Suzhou (Xuanmiao guan) have major traditions.

(iii) Music. Various forms of recitation as well as singing are employed in both Buddhist and Daoist vocal liturgy. Sung genres include hymns (*zan*), as well as some incantations (Sanskrit *dhāraṇī*; Chinese *zhou*) and sung poems (Sanskrit *gāthā*; Chinese *ji*). The liturgy includes both solo and choral sections, and melisma is common. While many transcriptions have been made, melodic analysis of these still substantial repertories is much to be desired (for some preliminary clues see Hu Yao, 1986); comparison with Western, and indeed other Eastern, liturgical chants is suggested.

16. Buddhist priests of the Longhua si temple, Shanghai, 1998, showing faqi ritual percussion including drum and bell, qing bowl, yinqing bowl on stick and muyu woodblock, while priests perform mudra hand gestures.

The ritual percussion section (*faqi*) consists of large drum and bell, small cymbals, 'wooden fish' woodblock (*muyu*), metal bowl (*qing*), small bowl on stick (*yinqing*), gong in frame (*dangzi*) and often large *nao* and *bo* cymbals (fig.16). These instruments accompany the vocal liturgy and punctuate it with independent interludes.

(iv) Current research. Some major temples now have training academies for ritual and music, part of a long tradition seeking to standardize liturgy nationally, although regional traditions have remained distinctive.

The coverage of religious music in the *Anthology of Folk Music* is unsatisfactory: traditions are covered in passing and often divided between the volumes on folksong and instrumental music. However, the project has stimulated much research and debate, often published in the journals of regional conservatories such as *Huangzhong* and *Yinyue tansuo*. The ritual opera projects of C.K. Wang (Xinzhu, Taiwan), for example the series *Minsu quyi congshu*, are also relevant. For Daoist music, the Wuhan Conservatory has led research; see also volumes from the major project led by Tsao Pen-yeh (Chinese University, Hong Kong). For Buddhist music, Tian Qing has been prominent in publishing articles and recordings. For fuller bibliographies, see Tsao and Shi, 1992, Tian Qing, 1994, Gan Shaocheng, 1995, Jones, 1995, pp.14–32, and *Zhongguo yinyue nianjian* annually.

Many audio and video recordings, not yet widely available, have been made and may be sought in conservatories, music research institutes and temples in China. Many commercial recordings purporting to represent Buddhist or Daoist meditational music use urban professional arrangements.

4. Instrumental music. Han Chinese instrumental music is traditionally played mainly in ensemble. Although some genres may feature a leading instrument such as a *di* or shawm, 'solo' or concerto-type pieces are largely a product of the 20th-century urban repertory (see §IV, 6 (i) below). Major exceptions are the three plucked instruments, *qin*, *zheng* and *pipa*.

(i) Ensemble traditions (ii) Solo traditions.

(i) Ensemble traditions. Living folk traditions of instrumental music among rural Han Chinese are largely for ensemble. Many groups perform for ceremonial occasions, including weddings, funerals and gods' days; the Chinese New Year is the most lively period for folk arts. Amateur ensembles also perform for self-cultivation, mainly along the south-eastern coast.

Though mostly now practised in folk contexts, many of these genres may be considered 'classical' traditions, on the basis of both their articulated theory and notation (often derived from imperial courtly, literati and temple genres) and their local prestige. While some scholars have attempted to trace links with the Tang dynasty (618–907), and aspects of 'ancient music' doubtless survive in individual genres, these traditions have continued to adapt, incorporating instruments and repertory, and they belong largely to the period since the Ming dynasty, from the 14th century. Despite a certain impoverishment of old contextual repertories under the secularizing movements of the 20th century, instrumental traditions survive over a wide area of rural China today.

Chinese scholars, led by Yang Yinliu, have studied these genres since the 1950s, interrupted only by the Cultural Revolution. Local studies are important, such as Li Shigen's work on the ceremonial music of Xi'an. Since 1979, the vast national *Anthology of Folk Music* project (see §IV Introduction above), though consisting largely of transcriptions, has been a major stimulus to fieldwork and is a valuable starting-point to discover regional riches. Southern coastal genres display a more natural continuum between folk and urban styles and until recently have been the object of more research and recordings; northern and inland genres are more isolated. Apart from the genres introduced below, others (such as groups in Sichuan and Hunan, and Han ensembles in Yunnan) may soon become more accessible through the *Anthology*.

The focus below is mainly on rural ceremonial and entertainment ensembles. Instrumental ensembles accompany vocal and dramatic music, including opera and narrative-singing, in which they may also play independent instrumental pieces as overtures or at transitional points. Percussion ensembles, sometimes with shawms, also accompany dance genres such as *yangge* and *huagu*. But it is the ceremonial and entertainment genres that have been considered the basis of folk instrumental traditions.

Modern Chinese sources often distinguish *chuida* ('blowing-and-beating') and *sizhu* ('silk-and-bamboo') ensembles, said to belong mainly to north and south respectively. Some further distinguish *guchui* ('drumming-and-blowing') and *chuida*. *Guchui* has been applied mainly to northern wind-and-percussion ensembles, led mainly by shawm or double-reed pipe *guan*; *chuida* generally denotes a larger instrumentation including strings, with a large and important percussion section, found mainly in the south. Silk-and-bamboo denotes chamber ensembles using plucked and bowed strings as well as aerophones such as flutes, rather than double reeds. But such a simple classification cannot encompass local conditions. More marginal parts of the modern Chinese classification are *luogu* (gong-and-drum) percussion ensembles and *xiansuo* string ensembles; the latter tends to overlap with silk-and-bamboo.

Chordophones are by now rare in northern instrumental music, but they are still important as accompaniment to vocal-dramatic genres. String chamber ensembles are found in Shandong and Henan; other genres such as *erren tai* and the 'lesser melodies' of Yulin in northern Shaanxi mainly accompany narrative-singing. Solo traditions, both literati and folk, for *pipa* plucked lute and *zheng* plucked zither still survive in some parts of northern China. The repertory performed by Manchu and Mongol literati around Beijing in the Qing dynasty before 1911, known as *xiansuo shisan tao* ('13 suites for strings'), now survives mainly in the *Xiansuo beikao* score of 1814.

The most common type of instrumental ensemble in China is the shawm (*suona*)-and-percussion band. These bands are often called *guyue ban* 'drum music band' or *gufang* 'drum household', the musicians *chuigushou* 'blowers-and-drummers'. In northern China, *sheng-guan* ritual ensembles led by *sheng* (free-reed mouth organ) and *guanzi* (double-reed pipe) are also common; such ritual associations may go by the name *hui* (often *xianghui* 'incense association'). Amateur entertainment groups are often called *she*, 'society'. Folk names commonly used to denote instrumental ensembles over much of rural China include *shifan*, 'multiple variations', and *bayin*, 'eight tones', terms with a long historical pedigree. The term *tuan* ('troupe') generally denotes an officially supported urban ensemble performing modernized arrangements for the concert stage.

(a) Social background. Musicians of most ensembles are male. Many shawm bands consist of members of the same family. Ritual specialists, too, are often related, with hereditary transmission the norm. The musicians of shawm bands have traditionally been of low social status and still are today; they may be blind. Shawm bands play outside the gateway of the house or temple, while the more prestigious *sheng-guan* ensemble occupies the central space at the ritual arena.

Shawm bands are hired to perform. Ritual specialists are also generally paid, but some groups, such as the music associations in Hebei province or the ritual groups around Xi'an, are strictly amateur, performing mainly within and on behalf of the village, as a religious or social duty. Some south-eastern amateur ensembles perform as a social pastime.

The aesthetics of southern entertainment ensembles often derive from refined Confucian literati culture and *Kunqu* vocal-dramatic music. The ethos of northern and inland ceremonial groups is quite remote from this world. *Sheng-guan* music inhabits a world of religious devotion, appealing to the gods for assistance in survival. The ethos of shawm bands is highly macho, and it is a matter of

pride that many shawm players breathe their last while playing. Although village shawm players perform with virtuosity for some parts of their repertory, the affected stage-gestures of urban professionals remain quite foreign to traditional music-making.

Both ritual and entertainment musicians often sit around a table to perform; the music is for the gods, or for their own self-cultivation, rather than for any mortal audience. They are often versatile at most of the instruments, both melodic and percussion, and may play different instruments during the course of a performance.

Much folk ensemble music throughout China is performed in conjunction with three main types of ritual, all of which may require instrumental music: (a) calendrical (birthdays of gods, temple fairs, New Year, the 'Ghost festival' in the 7th moon etc.); (b) life-cycle, especially weddings and funerals, the latter retaining more of their traditional observances; (c) occasional (exorcism, rain-prayers, the blessing of a new house or the opening of a new shop etc.). All of these persist today, despite the intensification of campaigns against 'feudal superstition' from imperial times and since the founding of the People's Republic in 1949. The Cultural Revolution was a severe blow, but with the greater economic freedoms of the 1980s, traditional customs have revived significantly in many areas.

Instrumental music in ritual is one part of a complex whole: vocal liturgy is important, and opera may also be performed. Vocal liturgy is accompanied by the ritual percussion. Melodic instrumental music is para-liturgical, accompanying ritual but lacking specific ritual content; it is more closely related to local folk traditions. Melodic instruments sometimes also accompany the melodies of vocal liturgy.

The more exalted traditions of both Buddhism and Daoism reject melodic instruments in theory, taking the view that vocal liturgy should be accompanied only by the ritual percussion. But in practice, melodic instrumental music has long been a part of village, and even temple, ritual in both northern and southern China. Folk Daoists of the *Zhengyi* sect, living among people, are important practitioners of instrumental music in Chinese society; some of the most outstanding musicians of modern times, such as AN LAIXU in Xi'an, or ZHU QINFU in Wuxi, have been Daoists.

(b) Shawm-and-percussion bands. The shawm-and-percussion band is the most popular form of instrumental music in China (fig.17). Northern genres have been most studied by Chinese scholars, but shawm bands are found throughout the country. The neutral term 'shawm' is adopted here since *suona* is little used by folk musicians; a common folk term is *laba* ('horn'). The word SUONA, common in historical sources, is used mainly by urban educated people. As the name suggests, the instrument spread from Central Asia by around the 15th century. Its use soon expanded from the Chinese court and armies to opera and folk ceremonial. The shawm has a conical bore, a small reed (not lipped) with pirouette and a loose-fitting brass bell; it has seven finger-holes and one thumb-hole. Shawm players often make their own instruments.

The north-east (the provinces of Liaoning, Jilin and Heilongjiang, as well as eastern Hebei) has a remarkable funerary style for large shawms, including solemn and lengthy *hanchui* suites. Shandong, notably the south-west around Heze, is famed for a more popular and rather

17. Shawm band outside gate of funeral home, Yanggao, Shanxi, 1991

mellifluous style, much influenced by the local operas, mixing the styles of shawm band and *sheng-guan*; many pieces are variants of the two standards *Kaimen* and *Dadi jiao*. In Shanxi and northern Shaanxi, the shawm style is harsh and macho: a taste may be gained from Chen Kaige's 1984 film *Yellow Earth*. Shawm bands commonly perform for ceremonial throughout southern China.

Percussion ensembles without melodic instruments are also common in north and south. In the north, drum ensembles accompanying *yangge* dance in Shaanxi and elsewhere, and other ritual percussion ensembles such as the Dharma-drumming associations (*Fagu hui*) of the Tianjin area, may comprise several dozen musicians. Melodic genres with substantial independent percussion components include the ceremonial ensembles of Xi'an, Chaozhou and *shifan* of southern Jiangsu.

Shawms are often a supplement to the pure percussion ensemble. The percussion generally consists of a double-headed barrel drum, small cymbals and gong and/or knobbed gong. A woodblock (*bangzi*) may be added in fast sections. A long natural trumpet (called by names such as *hao*) may 'open the way' on procession. There are usually two shawms in a band. Large shawms are used for funerals, small shawms (sometimes called *haidi*) for weddings. In recent years small shawms have become more popular than the large shawms used for solemn funerary suites.

(c) Sheng-guan ensembles. The *sheng-guan* ensemble spread from temples and courts, along with ritual and vocal liturgy, to folk ritual specialists, absorbing folk influence in differing degrees. This instrumentation, and its core repertory, can also be traced to around the 14th century. *Sheng-guan* ensembles, again performing for ceremonial, are found mainly in the north. Although they revived in the 1980s, the *sheng-guan* ensembles are surviving less well than the shawm bands.

The classic *sheng-guan* ensembles derive from northern Buddhist and Daoist temples, such as those of Beijing (notably the Zhihua si Buddhist temple), Tianjin, Wutaishan, Xi'an and Qianshan. But since melodic instrumental music is now rare in temples, *sheng-guan* music survives best in folk ritual ensembles. In Hebei province just south of Beijing, music associations (*Yinyue hui*) serving village ritual are related to the temple music of imperial Beijing and Tianjin. Just further south in Hebei, the 'songs-for winds' (*chuige*) style (traditionally known as 'southern

music', *nanyue*) has added large *guan*, small shawm and other instruments to the basic instrumentation since at least the 1920s. This style was adopted ephemerally by cadres in the 1950s, around the time of collectivization and the Great Leap Forward, but the traditional style persists today in many areas of Hebei.

In Shanxi, *sheng-guan* music is often played by folk Daoists. Apart from the Buddhist temples of Wutaishan, whose instrumental music is in decline, the 'eight great suites' of the Dongye region at the foot of the mountain are well known and still performed for folk ceremonial. In Shaanxi, the ceremonial music of Xi'an (commonly known as *Xi'an guyue*, Xi'an 'drum music' or 'ancient music') often uses an expanded percussion section lead by four different types of drum (of which the *zuogu* drum is rare in China for being played with its face vertical); as the *guan* double-reed pipe has become less common, the *di* flute often leads. There are folk Buddhist and Daoist ritual *sheng-guan* ensembles throughout Shaanxi province. There are also traces of *sheng-guan* music in temples much further south, such as Wudangshan and Fuzhou.

The melodic instruments are often considered 'civil', the percussion 'martial'. The classic temple instrumentation consists of pairs of the four types of melodic instrument, but folk groups are often large and more flexible, using many *sheng*. The instruments include GUAN, SHENG, DI, YUNLUO and percussion. *Guan*, a small, slender, cylindrical pipe with large double reed has seven finger-holes and one thumb-hole. Large and small *guan* sometimes play in the same ensemble. Some pieces use a 'double *guan*', two pipes joined together, played simultaneously by the same player. *Guan* are usually locally made. *Sheng*, a free-reed mouth organ, generally with ten to 14 sounding reeds, is often bought from urban shops. *Di*, or *mei*, a transverse flute with kazoo membrane, is now becoming rarer. *Yunluo* is a frame of pitched gongs, traditionally ten, arranged in three rows of three with one on top. They are difficult to replace when damaged, and some areas now have frames of only two or three gongs. They are traditionally considered a member of the melodic section. Percussion instruments include a large barrel drum (or, for procession, smaller 'hand-drum'), small cymbals, gong-in-frame (*dangzi*); *nao* and *bo*, two pairs of large cymbals, playing in hocket; and other ritual percussion (bowl, bell, *muyu* woodblock etc.). A conch may also be blown during ritual.

(d) Southern Jiangsu ensembles. While urban silk-and-bamboo is accessible in places such as Shanghai, Nanjing and Hangzhou, there are also many fine rural traditions in eastern central China. The classic silk-and-bamboo ensemble, derived from the *Kunqu* vocal accompaniment, is based on drum (or woodblock) and clappers, *di* flute and plucked lute *sanxian*. Fretted plucked lute *pipa* and bowed lute *erhu* are thought to have been added more recently. Urban silk-and-bamboo has further incorporated a struck dulcimer *yangqin* since early in the 20th century. Other instruments may include plucked lutes such as *qinqin* and *ruan*, as well as end-blown flute (*xiao*) and free-reed mouth organ (*sheng*). A simple percussion accompaniment is provided by small drum or woodblock and clappers.

Such music derives from rural ceremonial ensembles and *tangming* groups performing for Daoist ritual and *Kunqu* vocal dramatic music. These groups often add a substantial percussion section to the silk-and-bamboo melodic section. Southern Jiangsu also has two celebrated styles called *shifan gu* and *shifan luogu*, both played mainly by folk ritual specialists. The former plays 'classic' labelled melodies (see fig.8(b) above) interspersed by solo sections, while in the latter, vocally derived melodies compete on unequal terms with a percussion ensemble of which the instruments (drums, gongs and cymbals) alternate, playing recurring patterns in additive rhythms. Two types of drum are used, the *tang gu* large barrel drum and the small 'single-skin' drum *danpi gu*. Such music may still be found in the Suzhou-Wuxi, Changshu and Yixing areas.

Just to the south-east in Zhejiang province, percussion ensembles are also renowned, again often performed by folk Daoists. Pitched gongs become more common as one goes further south. Such groups often have separate melodic repertories for shawms and for silk-and-bamboo instruments.

(e) Fujian and Guangdong ensembles. Nanguan (or *nanyin*), distinctive to southern Fujian, Taiwan (*see* TAIWAN, §3) and other Hokkien communities in South-east Asia, is largely a vocal genre, in which a singer marking the main beats with clappers is accompanied by four melodic instruments: *pipa* fretted plucked lute, *dongxiao* end-blown flute, *erxian* bowed lute and *sanxian* plucked lute. There are some suites for the instrumental ensemble alone, and a transverse flute or small shawm may lead an augmented ensemble with a distinctive percussion section. Elsewhere in Fujian, other mainly vocal ceremonial genres often incorporate instrumental music (fig.18), including the mixed ensemble called *shiyin*or *shiban*, the *shiyin bayue* of Putian, and shawm bands.

In Guangdong, the most renowned genres are in the eastern area of Chaozhou-Shantou and the Hakka region of Meixian and Dabu inland. Amateur string ensembles (sometimes known as *xianshi yue*) are led by the high-pitched bowed lute *erxian*. Bass bowed lutes (*dahu*, *pahu* etc.) have been introduced to some ensembles during the 20th century. The plucked zither *zheng* (whose strings have individual tuning bridges) is also used in smaller-scale chamber music. There are large-scale processional gong-and-drum ensembles, which may use melodic instruments such as flutes and plucked lutes. Distinctive percussion instruments are the large gongs *suluo*, *douluo* and the deep-rimmed *shenbo*, and the knobbed gong *qinzi*.

18. Procession for goddess Mazu showing large and small bowed fiddles and plucked lutes, Quanzhou, Fujian, 1990

Ex.5 Jiangnan silk-and-bamboo, from *Sanliu*, two excerpts

The style known as 'Cantonese music', as developed in Guangzhou, Hong Kong and Shanghai since the early 20th century, marks the transition to new urban music but has its roots in the rural ceremonial ensembles of the Pearl river delta. Under the colonial influence of Western jazz, dance-hall music and the silent movie industry, composer-performers such as LÜ WENCHENG created a lively hybrid of Chinese and Western music in the 1920s and 30s. Although it was stultified by institutionalization by the 1950s and has long lost its popularity to newer styles of pop music, aspects of its style were taken over by urban professional troupes, and it remains a popular commercial image of Chinese instrumental music.

(f) Musical principles. A basic device is the interplay of melody and percussion. Indeed, musicians are often versatile on many melodic and percussion instruments. Melodies are based on anhemitonic pentatonic scales, with the fourth and seventh degrees used as passing notes or as part of a temporary new pentatonic scale a 5th above or below the main tonic. In the second excerpt of ex.5*b*, ambiguity is explored between a *la* mode on B and a *re* mode on B. Metres are dominantly duple, although some percussion music uses additive metre, and irregular phrase-lengths and cadences 'crossing the beat' create rhythmic variety.

Core repertories consist of 'labelled melodies' (*qupai*) or 'standards' (*pai*), many dating back to the vocal 'Northern and Southern arias' of the Yuan and Ming dynasties (1279–1644) and often having spread by way of opera. There is a finite number of titles for these tune families. They are rarely programmatic, except in literati solo string traditions: the titles function more like jazz standards. Different repertories are traditionally performed according to ceremonial context, with strict sequences.

Since the 19th century, popular melodies from local folksong and opera have entered some local repertories: four-square question-and-answer phrases are often a characteristic of such pieces. Semi-improvised ostinato phrases stressing pivotal notes, sometimes called 'tassels' (*suizi*), are often used towards the fast climax of a long suite (ex.6).

Many genres distinguish sitting and processional music (*zuoyue*, *xingyue*), contexts respectively for 'large pieces' (*daqu*, or suites, *tao*) and 'small pieces' (*xiaoqu*). Sitting music, performed at the ritual arena, consists of long suites, sequences of many labelled melodies, often with percussion interludes. A gradual accelerando is made throughout a sequence. A slow free-tempo prelude leads into the 'body' of the suite, which contains one or more slow pieces, often long. As the tempo accelerates, suites often climax with a sequence of fast pieces. Processional pieces are generally short, fast and popular.

Several types of variation are commonly employed. Simple technical decoration of the nuclear notes of the score is common in northern wind bands. Metrical augmentation or diminution of a basic melody is sometimes used, similar to 'metrical melody' (*banqiang*) operatic form. North-eastern shawm players may decorate a simple ground most ornately (ex.7). The ground (sometimes called 'mother piece', *muqu*) may also be performed in successive metrically augmented versions, beginning with the slowest and most ornate. This is common in music for strings, especially in the south-east: the melody *Lao liuban* (*Baban*) is most often used (ex.8). More often, however, wind-and-percussion music in both north and south uses 'labelled melody' (*qupai*) form, sequences of independent melodies, generally linked by percussion interludes.

Another variation technique to create new pieces is pitch substitution, which is important in some shawm

Ex.6 From 'tassel' section of *Bai huatang*, Shandong shawm piece, played by Wei Yongtang, *c*1980

Ex.7 *Batiao long*, Liaoning shawm melody

music, notably in the north-east, where it is called 'borrowing notes' (*jie zi*). A basic level of pitch-substitution creates the feeling of temporary modulation within a piece (see ex.5 above). More extensively, a whole new piece may be created by substituting one or more notes throughout the original melody, changing the scale and thus the mode and/or key. This process may be taken through multiple substitutions, modulating round a circle of 5ths. A similar process is used in creating the three different scales of Chaozhou and Hakka music. However, the most common keys in most genres are 'standard key' or 'basic key' (*zheng diao*, *ben diao*) and the key a 5th above or below it, often called *fan diao* or *bei diao* ('reverse key').

Traditional notation is commonly found for instrumental music but rarely for vocal liturgy. It is an aid to memory and often a prestigious artefact of the group. In northern China, many ritual associations, and some shawm bands, have scores handed down or copied for many generations. Scores were often copied from temples; the earliest known of those still in use today are from the 17th century.

For melodic music, the *gongche* system is still used. This is a heptatonic system, very like solfège (Table 3; NOTATION, §II). *He* and *liu* are thus an octave apart; so are *si* and *wu*. Many genres now use sol-fa-type system with a movable *doh*, whereby the tonic of each key is always called by the same name. But some *sheng-guan* ensembles still use the ancient fixed-pitch system, where the note-names always refer to the same pitches irrespective of key.

Unlike many coastal literati genres based on *Kunqu* vocal music, inland and temple-derived genres often use *he*, rather than *shang*, as tonic of their main key. The *gongche* symbols, too, may differ from standard *gongche*, in forms resembling notational symbols found in Song dynasty (960–1279) sources (see Table 2 above).

Metre is indicated by dots to the right of the symbol, showing the position of the main beats. Main and subsidiary beats are called *ban* (or *pai*) and *yan*. The simple melodic framework shown in the score is always decorated, each instrument using embellishments appropriate to its technique.

Scores indicate the melodic framework only, not the percussion accompaniment. Separate percussion ensemble music is also sometimes notated, with mnemonics indicating the sounds of different percussion instruments. For both melodic and percussion music, realization depends more on oral-aural transmission. Cipher notation is known by some younger musicians but is still little used outside the towns. Two southern genres use distinctive forms of notation: *nanguan* uses a form of *gongche* still basic to the study of the repertory (*see* TAIWAN, fig.8), but the *ersi* ('2–4') notation of Chaozhou string music (*see* ZHENG, fig.3) is now rare.

The musicians in a *sheng-guan* or silk-and-bamboo ensemble have unwritten rules about blending in the heterophonic realizations of the nuclear notes of the score, playing with sensitivity within a hierarchy of instruments. The texture of free-tempo sections in the *sheng-guan* ensemble is often hauntingly beautiful. The *guan* usually leads with a simple version of the melody, while the *sheng* plays supporting rhythmic patterns; the *di* may play free descending motifs, while the repeated notes of the *yunluo* create a halo of sound.

Shawm players tend to decorate the bare bones of the score quite freely and elaborately; sometimes they play almost in unison, but good bands use heterophony, the leader playing a more elaborate version of the basic melody heard on the second shawm.

(g) 20th-century changes. Both music and ritual have become simplified since the 1930s. Folk ritual practice, associated with heterodoxy, has been threatened since at least the 19th century. There was a gradual extension of state control over society until the 1980s. The republican period and the war against Japan were disruptive. The most severe destruction of temples occurred after the Communist Party came to power. Campaigns against religion continued in the 1950s; the economic disasters following the Great Leap Forward were soon followed by the chaos of the Cultural Revolution (1966–76). Since the liberalizations of 1979, and with the continuing economic relaxations of the 1980s and 90s, traditional culture, including ceremonial music, has made a substantial revival.

With the partial secularization of the 20th century, the practices of many rural groups have been impoverished, but quite a few have otherwise modified their practice substantially. Fewer keys are used: where traditional practice often had four keys, musicians can often now play in only one or two keys. Repertories are dwindling; long suites are often abbreviated, with free-tempo preludes and codas often omitted. There is a certain input from popular 'lesser melodies', from folksong, opera and pop songs heard on television or in films.

Shawm bands and *sheng-guan* ensembles have influenced each other during the 20th century. As ritual specialists have become fewer, some shawm bands have adopted a subsidiary repertory of *sheng-guan* pieces. Some *sheng-guan* ensembles have adopted a more popular style, adding small shawms and incorporating new repertory. Since early in the 20th century, shawm bands have often performed popular *yangge* (song-and-dance) melodies and opera-mimicry (*kaxi*). In the latter, they perform excerpts from popular local operas, imitating the

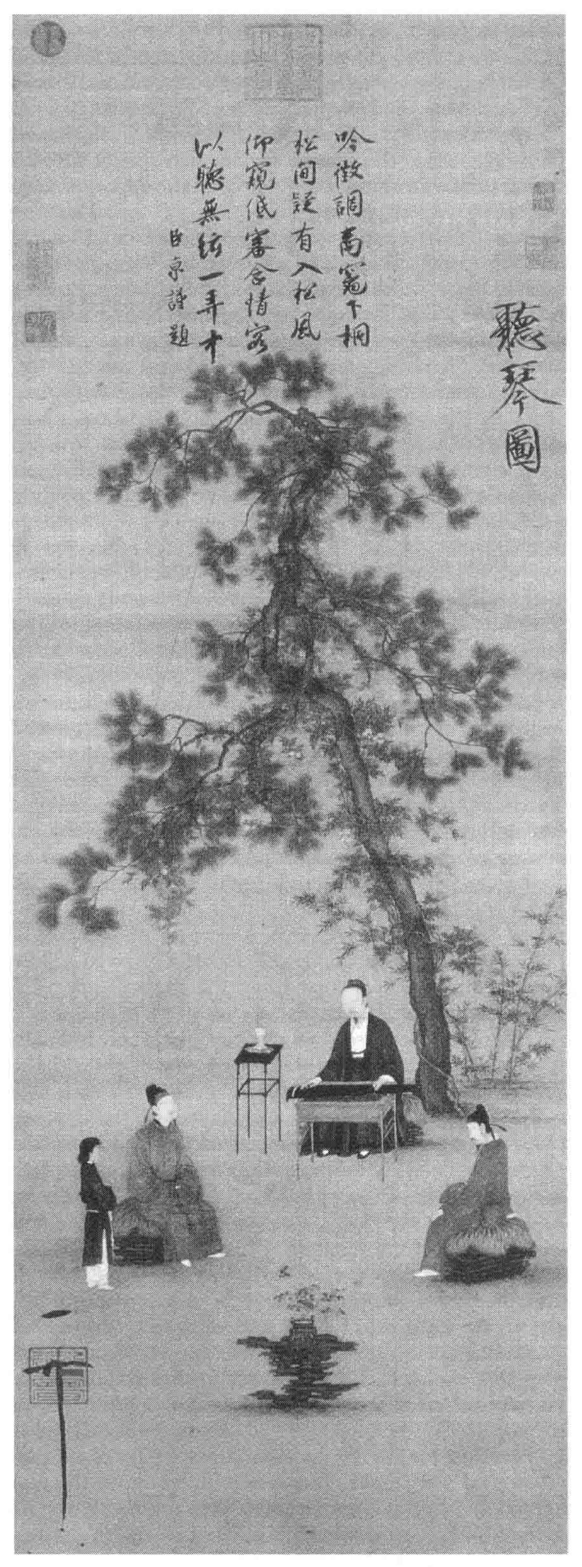
different vocal roles on their instruments. Trick instruments such as the 'Lama horn' and a small reed inserted in the mouth may be used to jocular effect.

The movement initiated by ideologues since early in the 20th century to fabricate a 'national music' (*guoyue*) style supposedly synthesizing regional characteristics has led to the establishment of urban professional troupes whose modern style is often heard in broadcasts, but its influence has been largely limited to the towns. Many virtuosos in the conservatories or professional state-supported urban troupes come from the background of hereditary village 'folk artist' families, but they have largely abandoned the traditional ethos in favour of a modernized, virtuoso and partly Westernized style, using a tempered scale, abbreviating pieces considerably and exaggerating dynamics and gestures for stage performance. This 'conservatory style' is more accessible but of less complexity than the traditional rural music-making.

Celebrated shawm players who have 'graduated' to the professional urban troupes include REN TONGXIANG from Shandong and Yin Erwen from Shanxi. YANG YUANHENG was a Daoist priest who became professor of *guan* at the Central Conservatory, Beijing; his pupil Hu Zhihou is the current professor. Many musicians from the famous Songs-for-Winds association (*Chuige hui*) of Ziwei village (Dingxian county, Hebei province), such as Wang Tiechui, have also joined urban troupes. Around Shanghai, *dizi*-players such as LU CHUNLING and ZHAO SONGTING have modified the local instrumental music. In coastal southern China, *nanguan* and Chaozhou music display a more natural continuum between traditional and urban professional styles. However, traditional instrumentalists serving folk ceremonial still deserve attention.

(ii) Solo traditions. In addition to the modern 'conservatory style' solo intrumental repertories (*see* §6(i) below), major traditions from imperial times have evolved for the plucked zithers QIN and ZHENG and the plucked lute *pìpa* (*see* PIPA, §1). Discussed below are the history and performing traditions for each instrument; for construction tunings and notation, see under the individual instrument heading.

(a) Qin. Promoted by the Chinese élite and copiously described in literary and notated sources, *qin* music is now recognized as one of the great traditions of Chinese music. Basic features of the *qin* and its history are now clear, but much historical, biographical, organological and music material has yet to be examined and integrated into *qin* histories.



The history of the *qin* and its music may be divided roughly into four stages: ancient (from antiquity to 221 BCE), medieval (221 BCE–907 CE), traditional (907–1911) and modern (since 1911). The *qin* is said to have been created by the mythical sages Fuxi (*c*2852 BCE) or Shennong (*c*2737 BCE). Shang dynasty ideographs carved on oracle bones show that a form of zither had already appeared by that time (*c*1766–1122 BCE): the ideograph for *yue* (music) consists of silk strings stretched over a piece of wood; that for *qin* (zither) graphically suggests strings and sounds of the instrument. By the Zhou dynasty (1122–256 BCE) the *qin* was frequently mentioned in connection with the 25-string zither *se*. The *Zhouli* [Rites of Zhou], for example, describes the use of *qin* and *se* as instruments in large orchestras that provided music for state sacrifices; poems in the *Shijing* [Classic of odes] describe playing the *qin* and *se* to entertain friends and to serenade ladies. By the Springs and Autumns Period (722–481 BCE) solo *qin* music was documented. The *Shiji* [Records of the historian] reports that CONFUCIUS played the instrument, and learnt the piece *Wenwang cao* from Master Xiang. By the end of the Warring States Period (475–221 BCE), the legend of Boya and Ziqi became widely known, establishing the Chinese ideal of total empathy between expressive performers and knowing listeners (*zhiyin*), and projecting *qin* music as sophisticated and communicative (fig.19). However, the ancient *qin* and its music were quite different from today. Judging from the earliest archeaological specimen, excavated in 1978 from the Zenghou Yi tomb (*c*433 BCE), the *qin* must have been played mainly with open strings.

In the Han dynasty (206 BCE–220 CE) the 13 *hui*, inlaid studs that indicate the positions where harmonics and stopped notes may be sounded, began to appear. This is a most significant development, implying the use of just intonation and recognition of a wide gamut of pitches, including those of harmonics. Specialized *qin* writings also began to appear. The *Qindao bian* [Essay on the way of *qin*] by Huan Tan (*c*23 BCE–50 CE) describes performances with Confucian principles; the *Qincao* [*Qin* compositions] by Cai Yong (133–92) lists programmatic titles and stories of 47 pieces, most of which appear to be songs.

During the Jin dynasty the *qin* evolved into an instrument essentially the same as the traditional one of 7 strings and 13 *hui* played today. Legends about several prominent musicians and compositions appeared. Cai Yan (*b* 177 CE), the daughter of Cai Yong and an esteemed female performer in later *qin* narratives, inspired the composition of *Hujia shiba pai* ('Eighteen Stanzas of Barbarian Pipe Music') and a number of related works. Ruan Ji (210–63), a scholar-official and musician, composed *Jiukuang* (Intoxicated), a version of which is a favourite of modern audiences. Huan Yi played a flute melody that was rearranged into the classical *qin* piece *Meihua sannong* ('Three Variations on Plum Blossom'); variation is a compositional strategy commonly found in tradition *qin* pieces, and ensemble playing of *qin* with the vertical flute (*xiao*) is still common.

But the towering figure in this period is Ji Kang (223–62), a scholar-official and musician who wrote the *Qinfu* [Poetic essay on the *qin*] and played a major role in the evolution of *Guangling san* (also called 'Nie Zheng Assassinates King Han'), a masterpiece of complex and extensive structure; versions of four compositions attributed to Ji are still performed today. In the *Qinfu*, Ji described titles and programmes of many compositions, classifying them into refined and vernacular pieces and explaining their structural features and aesthetic principles. His explanations, which are further elaborated in his seminal treatise *Sheng wu aile lun* [Music has no sorrow or joy], demonstrate a master musician's insights on performance and composition. Despite Ji's claim that *Guangling san* would disappear with his death (he was executed in 262 CE), the piece has been preserved, and its earliest extant version is now notated in a 15th-century score.

As complex instrumental solos and virtuoso performing techniques emerged, notation was developed as an aid. The earliest extant form of *qin* notation is called *wenzipu* ('prose notation'), a Tang dynasty sample of which preserves the earliest known notated *qin* composition,

19. 'Listening to the qin' (Tingq in tu), scroll by Zhao Ji (the emperor Huizong, reigned 1101–25). This painting exemplifies the intimacy of the rapport between player and discerning listeners in a refined natural setting. This is also the earliest known depiction of a qin played on a table

Youlan ('Lone Orchid'), attributed to Qiu Ming (493–590). As *wenzipu* explains pitches and finger movements with prose, it was cumbersome, and simplification was inevitable. By the end of the Tang dynasty, *jianzipu* ('simplified character notation') appeared. In this notation, parts of various Chinese characters are gathered into composite symbols to specify performing techniques and locations where the strings are stopped (*see* QIN). *Jianzipu* leaves many aspects of *qin* music unnotated, in particular the precise rhythm, but it exemplifies traditional aesthetics and practices: a *qin* composition is not an inflexible object, but must be 'recreated' by performers. The process of interpreting the *jianzipu* of a historical composition and recreating it is called *dapu*; since the 1950s many pieces notated in early sources have been recreated and issues of the process discussed.

During the Tang dynasty (618–907), *qin* music became a sophisticated art practised by professional performers and privileged connoisseurs alike. Poems and essays of the time record numerous *qin* activities and reveal significant advances in repertory, theory, aesthetics and production of the instrument. For example, Zhao Yeli (563–639), a vocational performer, edited *qin* compositions, compiled a treatise on performance techniques and commented on the distinctive styles of regional performers. His ideal of plucking the strings with both the nail and flesh of the fingers still guides 20th-century performers. Instruments constructed by the Lei family of Sichuan were acclaimed by both professionals and amateurs. Traditionally, *qin* are not only used as musical instruments but also appreciated as *objets d'art*.

Features of the tradition living today took shape in the Song dynasty, to which period authentic *jianzipu* scores and historical accounts still current today can be reliably traced. The *Qinshi* [*Qin* history] by Zhu Changwen (1038–98), the first formal and chronological history of the genre, highlights the rise of regional schools and records genealogies of *qin* musicians. It explains, for example, the prominence of the court musician Zhu Wenji (*fl* 976–83) and his school. One of his many acclaimed disciples was Yi Hai, a monk whose performance was described as particularly expressive by Shen Gua (1031–95), a leading scholar-official and scientist of the time. In the Southern Song dynasty (1127–1279), the Zhejiang school rose to fame, represented by Guo Chuwang (*fl* 1260–74), whose masterpiece, *Xiaoxiang shuiyun* ('Waters and Clouds of the Rivers Xiao and Xiang'), is now a frequently performed classic.

Throughout the Song dynasty, professional *qin* musicians and musical literati collaborated closely with one another. Ouyang Xiu (1007–72), a great literary figure of the time, wrote an essay that inspired a *qin* musician to create the *Zuiweng yin* ('An Intoxicated Old Man's Chant'). Jiang Kui (1155–1221), perhaps the most famous poet and composer in ancient Chinese music history, wrote both the melody and the text of *Guyuan* ('Ancient Lament'). Musicians and literati also worked together to collect ancient scores and compile multi-volume anthologies of *qin* music and texts such as Yang Zuan's *Zixia dongpu* [Notation of Purple Cloud Cave] and Xu Tianmin's *Xumen qinpu* [Notation of the Xu school]. Although these anthologies are now lost, their influence and contents can be traced to some extent in later sources. By the end of the Song dynasty, the *qin* had become inseparable from the literati. Even encyclopaedias such as

the *Shilin guangji* [Comprehensive record of the forest of affairs] would include a chapter on the genre, explaining its history and practices and providing notation for *diaoyi*, short preludes performed to test tunings and to introduce the musical affects and modes of lengthy solos. The appearance of these preludes attests to the increasing importance of tunings and modes in traditional *qin* theory and appreciation.

Qin music flourished in the Ming dynasty (1368–1644), producing many new works, notated anthologies and treatises on theory and aesthetics. While Ming *qin* musicians faithfully maintained pre-existing theories and pieces, they also produced new ideas and compositions. Comparison of different versions of pieces as preserved in scores ranging over several centuries demonstrates not only their shared components but also their structural and theoretical differences. The demand for *qin* music produced a market for *qin* anthologies. Their market value is attested by the fact that some anthologies carelessly plagiarized earlier works and were produced solely for financial gain.

Most Ming anthologies are, however, meticulously prepared, reflecting historical and musical interests. The 15th-century edition of the *Taigu yiyin* [Remnants of ancient sounds], originally compiled in the Song dynasty, preserves no notated music but surveys traditional *qin* knowledge, stating, for example, the following points. Gentlemen (*junzi*) use the instrument as a means of self-cultivation. The upper and lower soundboards of the *qin* are, respectively, made round and flat to symbolize Heaven and Earth; the seven strings represent the five elements (metal, wood, water, fire and earth), rulers and officials in the human world. The instrument produces three kinds of sounds: harmonics, open strings and stopped strings. During performance, which should only occur in appropriate venues, musicians should assume a respectful posture and use fitting techniques to accurately produce pitches and articulate phrases. While performing, musicians should devotedly listen to the sounds produced, and their minds should not wander. They should not care if there is an audience or not: *qin* musicians, however, did and still do gather to play music and socialize in 'refined meetings' (*yaji*).

ZHU QUAN's *Shenqi mipu* [Wondrous and secret notation] of 1425 is the earliest extant *jianzipu* anthology of *qin* music. Its 1st fascicle preserves 16 pieces from the Northern Song dynasty (960–1127) and earlier; its 2nd and 3rd fascicles preserve 48 pieces composed since the Southern Song. The anthology also includes an informative preface, detailed notes on the individual pieces and programmatic subtitles for their sections. Such verbal descriptions are standard features of traditional *qin* notated sources and provide essential data for recreating and performing *qin* music. Xie Lin's *Taigu yiyin* [Remnants of ancient sounds] of 1511 is an anthology of 35 *qin* songs, the melodies of which are syllabically set to poetic texts. As the volume includes not only new songs but also those transmitted from the Tang and Song dynasties, the anthology demonstrates the continued vitality of the vocal branch of the *qin* tradition. Zhu Houjue's *Fengxuan xuanpin* [Wonderful manifestations of customs] of 1539 is noted for its 154 pictograms that illustrate musical, poetic, kinetic and cosmological attributes of various performance techniques. For example, *yan*, a technique whereby the left thumb lightly taps the top soundboard of the *qin*, is compared to howling in an empty valley: the illustration for the technique depicts standing on a ridge, howling and listening to echoes.

Two anthologies from the late Ming indicate distinctive trends of their time. The historical and academic interests of the late Ming are reflected in Jiang Kelian's *Qinshu daquan* [Compendium of *qin* documents] of 1590. Encyclopedic in nature, this anthology of 22 fascicles preserved 62 pieces and a vast collection of writings selected from numerous theoretical, literary and historical sources. The refined taste of privileged literati musicians of the late Ming is reflected in Yan Cheng's (1547–1625) *Songxianguan qinpu* [*Qin* notation of the Pine and Silk Studio] of 1614. Preserving 29 pieces, Yan's anthology embodies the rise of the Yushan school in the Changshu area of Jiangsu province and perpetuates its particular repertory, style and aesthetic. *Liangxiao yin* ('Serene Evening') in this influential anthology has since become a favourite for masters to teach *qin* music structure and technique. It includes a prelude, an exposition of the main thematic materials, an introduction of additional material, a recapitulation and a coda; both the prelude and the coda feature the use of harmonics and non-metered rhythm. Though brief, the piece employs many standard techniques of plucking, stopping and vibrato.

Yan's anthology includes neither programmatic subtitles nor explanations; theorizing *qin* music as a purely instrumental genre, he argued that musical expressiveness lies in the manipulation and production of sounds. Yan's ideal was later distilled into the motto of 'clear, subtle, light and broad' that has been widely accepted as a guiding principle of *qin* performance. Emphasizing controlled refinement, it reflected the aesthetic preferences of privileged and literary musicians from a scholar-official background. It was balanced by the work of Xu Qingshan, another major figure of the Yushan school, who wrote 24 principles of *qin* music performance and aesthetics and left a legacy of more than 30 compositions that eschewed the dogmatic application of aesthetic principles.

In the Qing dynasty (1644–1911), *qin* musicians carried on their tradition, transmitting pre-existing pieces, composing new ones, compiling anthologies and launching new schools with distinctive styles and aesthetics. Dominating the scene was the Guangling school of Yangzhou. Xu Qi, a member of this school, produced the *Wuzhizhai qinpu* [Notation of the Five Learnings Studio], an anthology that became influential after its posthumous publication in 1722. The score was meticulously edited, creatively revised and comprehensively annotated. Similarly, Dai Yuan produced the popular *Chuncao tang qinpu* [*Qin* notation of the Spring Grass Studio] of 1744 and proposed eight practical and insightful principles of *qin* music-making: it should be expressive, melodious like singing, rhythmically accurate and diversified, and articulated like natural breathing; performers should play not only with the fingers but also with the energy of the whole body, producing clear and harmonious tones, showing a clear understanding of the notation and identifying differences among the various schools and music masters. Zhang Chun (*c*1779–*c*1846) experimented with the use of *gongche* notation to supplement the pitch and rhythmic indications in *jianzipu*; he also published *qin* arrangements of vernacular songs, while publicly acknowledging the non-élitist roots in *qin* music. Zhang Kongshan (*fl* 1851–1904) recreated the piece *Liushui* ('Flowing Water'),

20. Guan Pinghu interpreting the 1425 version of Guangling san, 1954

transforming it into a programmatic piece that not only demonstrates the expressive potentials of the instrument but also challenges the traditional and Confucian ideal of control and moderation. The piece includes 72 rounds of *gun* and *fu*, rapid arpeggiandos of the seven strings.

The modern era of *qin* music begins with the early 20th century, when it was meagerly sustained by an élitist and patriotic group of musicians and intellectuals under the pressures of modernization and westernization. Yang Zongji (1865–1933) laid a musical and objective foundation for contemporary *qin* scholarship with his encyclopedic *Qinxue congshu* [Collected writings of *qin* studies]. Yang taught many students, including GUAN PINGHU, a central figure in the modern history of the *qin*, who recreated a number of historical *qin* pieces and himself became an influential teacher (fig.20).

The other central figure is ZHA FUXI, a scholar-official and musician whose research and fieldwork transformed *qin* scholarship. In 1936 Zha organized a society to connect *qin* musicians; the publication that celebrated the forming of the society, the *Jinyu qinkan* [Journal of the *qin* society of contemporary Yu region], includes a wealth of historical and musical data and is a precious record of *qin* music of the time. Since the establishment of the People's Republic of China in 1949, the *qin* has been taught in the new conservatories, bringing further communication between regional styles. In 1956 Zha Fuxi led a fieldwork project to interview *qin* musicians throughout the nation, recording their music and collecting their notated sources. In the same year he published a major index of extant *qin* compositions, identifying a repertory of 646 pieces and their more than 2000 different versions.

In 1962, the Beijing *Qin* Research Society, which Zha Fuxi helped launch in 1952, published the *Guqin quji* [Collection of *qin* music], an anthology of 79 transcriptions of performances by *qin* masters. Presenting *qin* music in both Western staff notation and *jianzipu*, this anthology and its sequel facilitate modern and comparative analyses. With Zha's editorial guidance, the *Qinqu jicheng* [Anthology of *qin* music] was also launched, a major series of facsimiles of historical scores and anthologies; by 1997, 16 of the projected 24 volumes had appeared, generating much progress in *qin* music-making and research.

In addition to Guan and Zha, many other 20th-century masters strove to carry on the *qin* tradition, such as WU JINGLUE, Yu Shaoze, ZHANG ZIQIAN, Yao Bingyan, Cai Deyun and Wu Zonghan, all master musicians noted for their distinctive personal styles. Many of their students have subsequently become successful performers and scholars, including Cheng Gongliang, Gong Yi, Lau Chorwah, Li Xiangting, Liang Mingyue, Lin Youren, Lü Zhenyuan, Tong Kin-Woon, Wang Di, Wu Wenguang, Xu Jian and Bell Yung, who have performed globally and produced many recordings, articles and monographs. Stimulated by these activities, many ethnomusicologists in the West have developed interest and expertise about the genre, resulting in a substantial literature in Western languages. Several composers, such as CHOU WEN-CHUNG, Liang Mingyue and ZHOU LONG, have composed music in an avant-garde idiom inspired by the sound and aesthetic world of the *qin*. Today *qin* music thrives, with an ever increasing number of performances, recordings and publications, while gradually adjusting to the social and musical challenges of a rapidly changing China.

(b) Zheng. Throughout the imperial period the *zheng* plucked zither was used not only in ensemble music but also as a solo instrument, serving as a source of self-cultivation and entertainment. Since the solo *zheng* was played mainly by the literati, female members of the imperial family, courtesans and professional musicians serving at court, its music was often associated with romantic subjects, such as the beauty of nature or women, sentimental feelings of love and sad memories.

Since the Ming dynasty (1368–1644), solo repertories have been closely related to regional ensembles incorporating *zheng*, although since the mid-19th century solo playing has tended to gain a higher profile. In the 20th century, the influence of conservatory teaching fostered greater technical complexity, but regional styles are still cultivated, with distinctive repertories and techniques. The most common structure of *zheng* pieces in both north

and south is the *Baban* tune-family, a 68-beat structure with a fixed phrase pattern, often performed in metrical variations of increasing tempi (*see* §(i) above and §(c) below). Though many regional traditions persist, two broad styles, northern and southern, are commonly identified, the former represented by Henan and Shandong provinces, the latter by the Chaozhou and Hakka regions of eastern Guangdong.

In Henan and Shandong the *zheng* is part of ensembles accompanying vocal music and playing solo pieces: in Henan the *bantou* genre, in Shandong the string chamber ensemble genre called *peng Baban* ('knocking Eight Beats'). The Henan solo style is known for its lively action, with short descending phrases played with a quick plucking of the right thumb, accompanied by rapid and wide left-hand vibrato. The repertory has two parts: *bantou qu* and *paizi qu*. The former, which follows the *Baban* structure, may be played as prelude to *dadiao quzi* ('great melodies'), from which the *paizi qu* ('labelled melodies') also derive. Pieces such as *Tianxia datong* ('Universal Harmony') and *Bainiao chaofeng* ('Hundred Birds Honour the Phoenix') have become widely popular.

The Shandong school is noted for its 'earthy' style. Its melodies are often embellished with descending and ascending glissandos around the melodic notes. Repertory includes *Lao Baban* ('Old Eight Beat') and some minor tunes from the local narrative singing genre *qinshu*; the pieces *Gaoshan liushui* ('High Mountains and Flowing Waters') and *Hangong qiuyue* ('Autumn Moon over the Han Palace') are nationally renowned.

In the south, the Chaozhou and Hakka styles are closely related, and indeed are thought to preserve elements of the ancient music of north-central China. Although not part of larger instrumental ensembles, the *zheng* is performed both solo and in a chamber ensemble called *xianshi* ('string poem') or *xiyue* ('fine music') in Chaozhou and *sixian* ('silk string') or *qingyue* ('pure music') among the Hakka. The three main modes of Chaozhou *zheng* music, *qing sanliu*, *zhong sanliu* and *huowu*, have been much studied. Metrical variations are again common. Both Chaozhou and Hakka repertories distinguish between *Baban* variants and other melodies. The Chaozhou repertory includes *Pingsha luoyan* ('Geese Alighting on the Sandy Shore'), *Hanya xishui* ('Winter Crows Playing in the Water') and *Liuqing niang* ('Lady Liuqing'); *Jiaochuang yeyu* ('Night Rain Sprinkling the Window') and *Chushui lian* ('Lotus Blossoms Emerging from the Water') are major Hakka pieces.

In modern times the Wulin *zheng* school, centred in Hangzhou in Zhejiang province and based on the local *tanhuang* narrative singing style, has been popularized by Wang Xunzhi (1899–1972). Other regional solo and ensemble traditions invite further study, such as those in northern Shaanxi and southern Fujian and the Cantonese *nanyin* vocal tradition.

As many *zheng* masters sought to develop their music from regional identities into both personal and national styles during the first half of the 20th century, the solo *zheng* tradition grew quickly. Except for its use in court, the *zheng* was little known in Beijing before its introduction in the 1920s by Lin Yongzhi and Wei Ziyou. Their disciple Lou Shuhua rearranged a traditional *zheng* piece and named it *Yuzhou changwan* ('Fishermen Singing in the Twilight'), which subsequently became a model piece for both contemporary practice and performance. LIANG TSAI-PING not only rearranged old *zheng* melodies and composed new ones but assembled *Nizheng pu*, the first *zheng* teaching manual, published in 1938 (*see* ZHENG, fig.2).

In the 1940s, for the first time in Chinese history, a *zheng* performance course was offered at the national music conservatory at Nanjing (Nanjing Guoli Yinzhuan), and some fine *zheng* masters taught in conservatories under the People's Republic. By that time the *zheng* was also becoming common on the concert stage. Influential performers and teachers include CAO DONGFU (1898–1970) from Henan; Gao Zicheng (*b* 1918) and Zhao Yuzhai (*b* 1924) from Shandong; Su Wenxian (1907–71), Guo Ying (*b* 1914) and Lin Maogen (*b* 1929) from Chaozhou, and the Hakka LUO JIUXIANG (1902–78). CAO ZHENG (1920–98), trained in the Henan style, is also an influential pedagogue. His teacher Liang Tsai-ping has been active in performing and teaching both in Asia and the West since emigrating to Taiwan. The Beijing *Zheng* Association was founded in 1980, the first of its kind.

Since the 1950s, many new pieces have been composed. Performance techniques have developed further, especially in the use of the left hand to play harmony and counterpoint together with the right hand. *Qingfeng nian* ('Celebrating the Harvest', Zhao Yuzhai, 1955), *Zhan taifeng* ('Struggling with the Typhoon', Wang Changyuan, 1965) and the *zheng* concerto *Miluo River Fantasia* (Li Huanzhi, 1984) are hallmarks of the new style. In the 1980s, experimental pieces using atonal idioms were also composed, such as *Sandie* ('Three Sections', Ye Xiaogang, 1984), *Jiunong* ('Nine Phrases', Li Binyang, 1986), and *Shanmei* ('The Goddess of the Mountain', Xu Xiaoling, 1989).

To accommodate such requirements, the instrument itself has been modified since the 1970s. Zhang Kun of the Shenyang Music Conservatory designed and produced a *zhuandiao zheng* ('changeable key *zheng*'), with a harp-like pedal mechanism; a chromatic *die zheng* ('butterfly *zheng*') was designed by He Baoquan of the Shanghai Conservatory of Music. While the 21-stringed *zheng* is most commonly used now, the traditional 16-stringed *zheng* is still in use among some musicians.

(c) Pipa. Before the Tang dynasty (618–907), the *pipa*, a plucked lute, seems to have been used mainly in ensemble, accompanying singing and dancing for the entertainment of the imperial and noble courts. During the Tang period, it was also used as a solo instrument in both courtly and folk contexts. Later the *pipa* became a major accompanying instrument for several genres of narrative singing and opera-derived forms, such as *tanci* and *Kunqu* in Jiangsu (see §1 above). It also became part of various instrumental ensembles.

Today the *pipa* is best known as a solo instrument. The music is mainly transmitted orally, and the original composers are unknown; scores are used mainly as an aid to memory. A piece may be played in different versions by players from different regional schools, and individual musicians may add their own creative elements. Although several *pipa* scores from the late Tang and Five Dynasties periods, written in forms of tablature, were discovered in the 20th century, their interpretation is controversial,

and no further *pipa* scores have come to light from before 1819. These more recent *pipa* scores are written in *gongche* notation. Although pieces in the 1819 score had evidently been handed down from an earlier time, we can only date living traditions of *pipa* music firmly from that year; however, pieces in this score have been performed continuously since then.

Traditionally, *pipa* solo was practised by two social groups: literati and musicians of low social status. The major body of extant traditional pieces was played and preserved by literati, who used the *pipa* as a means of self-cultivation and entertainment. Apart from the controversial Ju Shilin score, said to date from the late 18th century, four early collections of *pipa* pieces are used today, compiled by Hua Qiuping (1784–1859), Li Fangyuan (*b* *c*1850), Shen Zhaozhou (1859–1930) and Shen Haochu (1889–1953). The editors of these collections were themselves *pipa* players, and their scores made an important contribution to the transmission of their performing schools.

Most traditional *pipa* pieces have titles that describe natural scenes, historical events or human emotions; there are also some pieces with non-programmatic titles, such as *Baban* ('Eight Beats'), the title relating to its musical structure. Traditional pieces are categorized in different ways. They are divided into *daqu* ('large piece' or suite) and *xiaoqu* ('small piece') based on length. About 30 'large pieces' and 150 'small pieces' are notated in extant *pipa* collections. A 'large piece' usually has several sections, whereas most 'small pieces' have only one section and a metric structure of 68 *ban* ('beats' or measures). Both 'large' and 'small' pieces are further divided into 'civil' (*wen*) and 'martial' (*wu*) pieces.

Civil pieces are often refined and elegant, and are played at a slower tempo with a soft dynamic; they are considered to be feminine in nature. The well-known *Xiyang xiaogu* ('Flute and Drum at Sunset') is a typical civil piece: it consists of several sections describing the exquisite scenery of a river during a spring night. Other popular civil pieces include *Yue'er gao* ('The Moon on High'), *Saishang qu* ('Song at the Frontier') and *Pu'an zhou* ('Incantation of Pu'an).

On the other hand, martial pieces are often very powerful and mighty, are viewed as being masculine, and are played at faster tempos and at louder dynamics. The most famous is *Shimian maifu* ('Ambush from All Directions'). It portrays the historical battle between the warlords Liu Bang and Xiang Yu in 202 BC, when Liu Bang used various ambush-strategies in this battle, routing Xiang Yu. In the piece, special *pipa* techniques are used to imitate sounds such as the frantic running and neighing of horses, the screaming of soldiers and the clashing of spears. Together these sounds combine to portray a lively sonic picture of the ancient battle. Other famous martial pieces include *Haiqing na tian'e* ('Hunting Eagles Catching Swans'), *Bawang xiejia* ('The Tyrant Takes Off his Armour') and *Jiangjun ling* ('Command of the General').

Along with the development of local performing traditions and their transmission from teacher to student, regional performing schools appeared. According to Hua Qiuping's *Pipa pu* of 1819, there were two *pipa* performing schools at that time: the 'southern' and the 'northern' schools. By the late 19th century and the early 20th, four schools had appeared in the Jiangnan (lower Yangtze river valley) area, named after the places where they developed: Wuxi, Pinghu, Chongming and Pudong. The four printed traditional *pipa* collections belonged to the four schools. During the 1920s and 30s, another school took shape represented by Wang Yuting (1872–1951) in Shanghai. These Jiangnan schools are considered to be extensions of the earlier southern school. At the same time, the earlier northern school, represented by Wang Lu (1877–1921), continued mainly in Shandong province. The major differences among these schools were different repertory and playing techniques, as well as distinct interpretations of the same pieces. But they all belonged to the literati tradition in general and shared many basic features and repertory.

Low-status musicians were another social group transmitting traditions of *pipa* solo. They played the *pipa* for their living on the streets or in teahouses. The music was transmitted orally, and their repertory was mainly adopted from folksong or local opera. *Longchuan* ('Dragon Boats') is a good example of their repertory, describing the lively scene of the dragon boat race among ordinary people at a folk festival. It is composed of several so-called 'gong-and-drum sections', which imitate the sound of a percussion ensemble, alternating with melodic sections adopted from folk tunes. The blind musician ABING (1893–1950) was an outstanding representative of this social group.

Since roughly the 1920s, another group, that of modern intellectuals, started to influence the *pipa* solo tradition. These players usually had some training in Western music, and though they learned *pipa* from traditional literati, they made changes to the music, rearranging the frets of the *pipa* based on the 12-note equal temperament and using cipher or Western staff notation. Meanwhile, they composed new pieces to describe modern events or feelings. Musically, these works illustrate Western influence in their melodic style and harmonic elements. *Gaijin cao* ('Exercise for Improvement') and *Gewu yin* ('Prelude for Song-and-Dance'), both composed in 1927 by LIU TIANHUA, are good examples of this kind of composed piece. Influential modern pedagogues include WEI ZHONGLE and LIN SHICHENG.

Since the 1950s, *pipa* solo has been best known from performances by professional urban players who learned from traditional literati or modern intellectuals and who have tended to synthesize the styles of traditional regional performing schools. They usually work in a professional performing troupe or a music conservatory, relying on notation for transmission more than before. Concerts and mass media have become their major performing arenas. When they play traditional pieces, they often arrange and condense them to appeal to modern tastes. They also play contemporary composed pieces, some of which are popular concert items, such as *Yizu wuqu* ('Dance of the Yi People') by Wang Huiran (1960), *Gan huahui* ('Going to the Fair') by Ye Xuran (1960), *Langyashan wu zhuangshi* ('Five Heroes of Langyashan') by Lü Shao'en (1960) and *Caoyuan xiao jiemei* ('Little Sisters of the Grassland') by Wu Zuqiang, Wang Yanqiao and Liu Dehai (1973).

Today, apart from the contexts of conservatories and concert halls, *pipa* traditions also survive in silk-and-bamboo ensembles in central-eastern China and in rural areas such as northern Shaanxi and Shandong, where the *pipa* may be part of a small ensemble that often accompanies narrative singing.

5. Minority traditions. The government of the People's Republic of China divides its citizens into 56 officially recognized ethnic groups or 'nationalities' (*minzu*) (fig.21). Over 90% are categorized as Han Chinese, while the remainder are divided among 55 'minority nationalities' (*shaoshu minzu*). Recognition of a nationality as a separate group is theoretically based on Stalin's concept of a nation as a historically constituted, stable community sharing common language, territory, economic life and psychological profile. In practice, grey areas, contentious classifications and scholarly debates abound. Nevertheless, the official classifications, which predominate in the literature, are adopted below.

Current government policy towards minority culture includes salvaging cultural heritage, considered threatened by both modernization and the many pre-1980s political movements; helping minorities cultivate distinct cultural forms; and promoting socialist national unity. Minorities generally are perceived by the Han Chinese as 'good at singing and dancing' (*nengge shanwu*), and their performances are frequently showcased at national festivals. Minority populations are concentrated in south-western and north-western China.

Fieldwork on minority music began before 1949 but accelerated in the 1950s, when the new Communist government dispatched teams to document minority music and dance. Apart from pure research, this provided raw material for professional composers and performing troupes. Research ceased during the iconoclastic Cultural Revolution (1966–76) but has resumed since the late 1970s and has led to the publication of many anthologies, monographs and articles. Sound and video field recordings are preserved privately or in the archives of national-, province- or county-level institutions. A few such recordings were issued commercially in the 1990s. *See also* Taiwan, §2; Tibetan music; and Mongol music.

(i) South China (ii) North and west China.

(i) South China. Four language families are represented among minorities in southern China (the provinces south of the Yangtze river and southern Sichuan): Tai (Zhuang, Buyi, Dai, Dong, Shui, Mulam, Maonan, Li); Tibeto-Burman (Tibetan, Yi, Lisu, Hani, Lahu, Jinuo, Naxi, Jingpo, Dulong, Qiang, Pumi, Nu, Achang); Miao-Yao (Miao, Yao and probably She); and Mon-Khmer (De'ang, Bulang, Wa). Unclassified or isolated languages include

21. Map showing some principal areas inhabited by China's 'minority' nationalities

those of the Gelao, Tujia, Bai and Jing. The Hui (Muslims) speak local Han dialects. Some minorities live near other groups and speak several local languages, including Han dialects; others have borrowed substantially from Han Chinese or even largely lost their own language.

Minority populations vary greatly; the 1990 census recorded over 15 million Zhuang, but under 6000 Dulong. Southern minorities are heavily concentrated in south-western provinces: non-Han constitute almost half the population in Guangxi and a third in Yunnan and Guizhou, but are numerically insignificant in the south-east. Generally, members of minorities living around urban areas adapt to mainstream Chinese culture, while those in remote regions often preserve distinctive ethnic traditions.

(a) Traditional musics and their context. Vocal music takes many forms, with folksongs (*min'ge* in Chinese) most prevalent. All 'nationalities' seem to have solo songs; many have antiphonal songs, alternating between two individual singers, between leader and chorus or between two choruses; several have multi-part songs, and many combine simultaneous singing and dancing. The Naxi of Lijiang county, Yunnan, are known for solo singing as well as for their leader-chorus antiphonal festive song-and-dance 'Alili', and for their two-part funeral song-dance 'Remeicuo', sung polyphonically by male and female choruses. The Miao of Guizhou, like many other groups, use individual male-female response singing (*duige*) in courtship. Vocal timbre often marks a particular minority or genre; for example, singing in the song-and-dance of the Yi of Mouding county, Yunnan, is characterized by free alternation between open-throated natural voice and a thin falsetto pitched an octave above. A piercing, semi-open-throated natural voice with slow, wide vibrato on long held notes is considered typical of much Naxi solo singing.

Many ethnic groups combine singing with instrumental accompaniment. A complex form of vocal polyphony among the Hani of Honghe county, Yunnan, includes eight voices, *labi* (end-blown flute) and two *lahe* (three-string plucked lutes) (ex.9). Yi song-and-dance in Mouding county involves some heterophony in group singing and heterophonic accompaniment on bowed and plucked strings. Several minorities possess genres regarded by Chinese scholars as equivalent to Han Chinese narrative-singing. A well-known form is *dabenqu* of the Bai of Dali, Yunnan, in which a singer accompanies himself on plucked lute. A few minorities, often those in more developed areas, have dramatic forms considered equivalent to Han Chinese opera. Some genres, such as Bai and Dai opera in Yunnan and Zhuang opera in Guangxi, were

Ex.9 Opening of vocal section of transplanting seedlings song, Baina branch of the Hani, Azhahe township, Honghe county, Yunnan province; transcr. Zhang Xingrong, Yunnan Art Institute, 1995. The words call on everyone to work together to ensure the rice shoots grow well.

Ex.10 Part of 'Sani tune', Sani branch of the Yi, Lunan county, Yunnan province, played on *sanxian* (three-string plucked lute) by Gao Yingfeng and *lehu* (three-string fiddle) by Zhang Renhua; transcr. Zhang Xingrong, Yunnan Art Institute, 1990.

established before the 20th century; others, including Yunnanese Yi opera, were created after 1949.

China's minorities are renowned for their diverse instrumentarium, which has largely escaped the homogenization imposed in recent decades on Han Chinese instruments through factory manufacture. Individual ethnic groups often use a limited array of instruments, which helps give their music its distinctive flavour. The Li of Hainan Island traditionally lacked chordophones; they had a few membranophones, some distinctive idiophones, including jew's harp, rhythmic wooden poles and a two- or three-bar xylophone, and a range of aerophones, including one unique in mainland China, the nose flute. Certain instruments have achieved wide currency among southern minorities and are closely associated with them: the free-reed mouth organs LUSHENG and *hulusheng* are played by many ethinic groups, as are bronze drums (*see* BRONZE DRUM, §2) and tree-leaves; the JEW'S HARP is also widespread and is well known as a speech surrogate used in courtship among Yi, Naxi and other groups.

Sharing of instruments and musical genres among ethnic groups occurs frequently. Commonality of religious beliefs in Guangxi leads all ethnic groups, Han and minority, to perform similar ritual theatre (*shigongxi*). The origins of certain Naxi dances in Lijiang are attributed to neighbouring Yi, Lisu and Tibetans; and Naxi Dongjing music is clearly adapted from the Han Chinese Dongjing ritual societies found throughout Yunnan (fig.22). In some places, Yi musicians have adopted Han Chinese *suona* (shawms) and melodies, while Han Chinese in Yi areas sometimes participate in Yi dances; and national film and pop hit tunes occasionally reappear in minority 'folk' genres. There is also increasing interest in cross-border musical comparison with South-east Asia.

It is difficult to generalize about musical characteristics among so many disparate groups, although obviously distinctive combinations of instruments, vocal quality, texture, rhythm, scales and tuning characterize individual minorities (and sub-groups). Much music of the Sani (considered an Yi sub-group) from Lunan county, Yunnan, emphasizes what sounds to Western ears like an arpeggiated major triad (ex.10); this contrasts with anhemitonic pentatonic dance-tunes of other Yi peoples, or of the Naxi (ex.11), and is even more sharply

Ex.11 Dance-tune played on the Naxi fipple-flute *leizi bili* by Wang Chaoxin, Baisha township, Lijiang county, Yunnan province; transcr. Helen Rees, 1994. The tune is repeated many times with minor variations, usually accelerating.

f = fluttertongue

differentiated from the semitones and microtones of some multi-part Hani singing (see ex.9).

Within a single minority, different genres may have different musical characteristics. The Naxi flute dance-tune (fig.23) in ex.11 is in seven beats (4+3) and belongs to a body of similar monophonic tunes whose metrical units are very varied; but Naxi Dongjing instrumental music, borrowed from the Han, displays typical Han-style ensemble heterophony and a simple duple beat. In addition, absolute and relative tuning of instruments made by local craftsmen may vary considerably within accepted parameters. Most southern minorities traditionally have not used musical notation; a frequent exception is the use of *gongche* notation for Han Chinese-derived musics.

Music is traditionally employed in a huge variety of social contexts. Folksongs typically include love songs, wedding songs, funeral laments, work songs, children's songs, drinking songs and narrative or descriptive songs. Another category since the 1940s has been political songs: the Communist Party has long used folksong and opera in spreading patriotic, pro-Party and policy messages.

Many forms of music are still tied to certain occasions. The song-and-dance of the Yi in Mouding is performed today at the Torch Festival, at weddings, birthdays, village holidays and often in leisure hours. Life-cycle and religious rituals are particularly important occasions for musical activity. Dai and Tibetan Buddhist liturgical music flourishes in southern and northern Yunnan respectively; Christian Lisu, Miao and others converted by foreign missionaries in the late 19th and early 20th centuries still sing Christian hymns, some in four-part harmony, others adapted from local folksongs; and priests and shamans of many indigenous belief-systems still perform rituals involving traditional music.

(b) Music in the 1990s. Much traditional minority music, particularly that associated with religious ritual, suffered suppression during the sporadic political movements between 1949 and 1979, especially during the Cultural Revolution. Despite an impressive cultural revival since the political and economic reforms of the late 1970s, a whole generation missed out on the transmission of local culture. This, coupled with improved communications, extension of Han-language schooling, changes in work patterns and the advent since the 1970s of television and cassette culture, has led to a decline in much traditional minority music. Many older people and scholars regret this development and are trying to revive the transmission process. Naxi Dongjing musicians opened an academy in Lijiang in 1996 to train children, and the Yunnan Ethnic Culture Institute in Anning county

23. Wang Chaoxin plays the Naxi fipple-flute leizi bili at a village dance to celebrate the Beginning of Summer festival, Huangshan township, Lijiang county, Yunnan province, May 1992

hosts mentors and students studying minority cultural traditions. There are also calls for more minority music to be included in school and college curricula, which even in heavily minority areas favour mainstream Han Chinese and Western classical music.

However, many minority youngsters, like their Han Chinese counterparts, are captivated by pop music from Hong Kong, Taiwan, North America and China itself, and by the concomitant discos and karaoke gatherings popular even in the smallest towns. One or two minority pop groups have joined the trend: combining well-crafted songs with minority exoticism, synthesizers with 'ethnic' instruments, Yi or Han Chinese lyrics on the tape with mysterious Yi graphs on the cover, the Yi group Shanying ('Mountain Eagle') from Sichuan Province sold vigorously in south-west China in 1996.

State-supported song and dance troupes, established in most minority regions since 1949, play a quixotic role in preserving and disseminating minority music and dance. They certainly lend visibility and demonstrate government support for folk arts, and they are sometimes the last arena for colourful customs that have otherwise died out. However, their often conservatory-trained composers and performers frequently introduce Han and Western instruments, equal temperament and simple functional harmony to arrangements of local music. The results cleave to a national conservatory-inspired 'professionalized' style, often criticized by local folk musicians as 'flavourless'. The full gamut, from 'authentic' to 'professionalized', is presented on the CD *A Happy Miao Family*.

Musics of China's southern minorities are encountering outside influences at an unprecedentedly rapid rate, and for a variety of reasons some are dying out. Others, whether because of geographical remoteness or a continuing relevance to people's lives, are flourishing, adapting and even reaching out to new audiences. The tourist trade has offered commercial impetus to several Naxi, Yi and Li musics since the 1980s, and some minority musicians have toured abroad. Commercial recordings, too, are reaching overseas markets and bringing overdue recognition to the wonderful variety of sounds indigenous to southern China.

(ii) North and west China. This area comprises 12 of the 23 provinces of the People's Republic of China and four of its five autonomous regions. Nine of these territorial entities, from west to east comprising Xizang, Xinjiang, Qinghai, Gansu, Ningxia, Inner Mongolia, Heilongjiang, Jilin and Liaoning, are populated by a variety of ethnic groups, since a number of them have frontiers with neighbouring countries. These people belong to some 23 of the 56 recognized by the People's Republic 'national minorities'. (The ethnic groups and sub-groups ignored by the Chinese authorities, such as the Tuvan, Oïrat, Turkmen, Dolan and Loplik, are not covered here.) As the Mongolian and Tibetan populations are dealt with elsewhere, the following account deals with some of the musical traditions of the 20 remaining groups.

These ethnic groups can also be divided into large linguistic families. The Altaic family has a Turkic branch (comprising the languages of the Uighurs, Kazakhs, Kyrgyz, Uzbeks, Tatars, Salars and western Yugu or Yellow Uighurs), a Mongolian branch (the languages of the Daur, Dongxiang, Monguor and Baoan) and a Tunguso-Manchurian branch (the languages of the Manchurians, Sibe, Nanaï, Evenk and Orochen). Ethnic groups in China belonging to the Indo-European linguistic family include Tajiks (the Iranian branch) and Russians (the Slav branch). Finally, the population includes Koreans (linguistically close to the proto-Altaic family) and Muslim Hui or Han Chinese. At the time of the 1982 census these 20 or so ethnic groups comprised over 21 million people living in a territory of over 3·5 million km².

North China can be divided into eastern and western areas. Minority culture in the eastern area is largely influenced by Mongolian and Han Chinese traditions. North-eastern China is home not only to a substantial Korean population but also to Manchu culture, the shamanism of which has been a major topic of study; the Manchu Qing dynasty (1644–1911) also imported genres such as the *Taiping gu* into Beijing and other areas of China.

The musics of the western part of the region, however, relate much more to Irano-Arabo-Turkic musical traditions. Ancient chronicles contain many references to the music of the far west of China, including a reference in the 2nd century BCE to the ambassador Zhang Qian bringing a melody from the north-west of the empire back to the imperial capital. Two musical repertories in Chinese court music that were very fashionable at this period, the *guchui* ('drumming-and-blowing') and *hengchui* ('transverse blowing'), were much influenced by the traditions of the west of the country. Dynastic histories mention Turkestani ensembles representing 'barbarian' music playing a major part in successive imperial musical institutions from the Han dynasty onwards. The main such ensembles were those of *Qiuci* [Kuqa], *Shule* [Kashgar], *Gaochang* [Turfan], *An'guo* [Bukhara] and *Kangguo* [Smarkand]. In the sui dynasty, ensembles from Kuqa, Bukhara, Kashgar and Samarkand were among seven and later nine non-Han-Chinese ensembles; the early Tang emporer Taizong further increased the number of 'barbarian' groups at the court to ten, adding an ensemble from Turfan. Under the Yuan dynasty, in 1276, *huihui* musicians are documented, indicating Muslims from Xinjiang; a group of *huihui* dancers were present at the Ming court, and a Muslim ensemble was one of seven 'barbarian' ensembles during the Qing dynasty. Besides historical chronicles, frescos near the present town of Kuqa (formerly Qiuci), chiefly painted between the 6th and 10th centuries provide information about ancient Central Asian music. They show musicians playing some 20 instruments: strings, winds and percussion. Such written and pictorial records enable us to appreciate the vast amount of traffic in skills as well as goods that passed along the Silk Road, obeying forces that were sometimes centrifugal, sometimes centripetal. Despite certain modifications, several instruments that originated in Central Asia thus became Chinese, including the *suona*, the *pipa* and *huqin* bowed fiddles. A similar process occurred with musical forms, the best example being the *daqu* ('large piece' or suite), a Chinese musical genre that reached its peak under the Tang dynasty; strongly influenced by the ancient Turkestani suites now known as *muqam*, it spread as far east as Japan in the guise of *gagaku*.

Today, all the ethnic groups populating western China, that great crossroads of Far Eastern, Central Asian, Indian, Middle Eastern and Western civilizations, maintain their own flourishing and clearly distinct musical traditions, whether they are herdsmen or farmers, Muslims, Shamanists, Lamaists or Buddhists. For the region

is a place of particularism as well as exchange, and traditions are often attached not to a whole ethnic group but to a single oasis.

Unlike the other ethnic groups inhabiting the north of China, who often live on both sides of international frontiers, the Uighurs are concentrated chiefly in the People's Republic. Slightly over 6.6 million live in the autonomous Uighur region of Xinjiang (1988 census), whereas in 1991 there were only 263,000 in the former USSR. They are a sedentary farming people. The Uighurs themselves distinguish 'classical music' (*kilassiki muzika* formerly *ilim muzika* or *ilim nagmä*) and 'folksongs' (*xälq naxsisi*). The 'classical' tradition consists of the *muqam* (fig.24), monodic and modal instrumental suites to which songs and dances are performed, are 9, 12 or 13 in number, depending on their location and historical period of origin. Each suite has its own name and modal colouring. The Uighur version of this term, which is obviously of Arabic origin (*maqām*), seems to date from the 14th or 15th century.

The 12 *muqam* of Kashgar (*on ikki muqam*) are made up of three distinct parts, each further subdivided into several linked sequences. The first part, entitled *čoŋŋäġmä* or 'great music', begins with a '*muqam* heading' (*baši muqam*), an unmeasured sung prelude determining the whole concept of the *muqam*. After this introduction, some 15 linked sequences follow each other in a progressively accelerating tempo, passages of song alternating with an instrumental 'buckle' (*märġul*) that is performed to a faster tempo. The last note of a sequence is the first note of the next sequence. Musically, this initial section of the *muqam* is very tightly constructed. The next section takes its name from the sung passages of which it consists, *dastan* or 'stories'. Three or four such movements are performed, the narratives dealing with historical events or famous love stories. Again, they are separated from each other by an instrumental 'buckle' and the tempo of the sections accelerates progressively. Each has its own distinctive text, melody and rhythm. Finally, the third section of the *muqam*, entitled *mäšräp*, is entirely danced, and unlike its predecessor it does not alternate between sung and instrumental passages. After about two hours of uninterrupted music, the repetition of the '*muqam* heading' marks the end of the suite.

This, in broad outline, is the formal tripartite structure of the 12 *muqam* peculiar to the Kashgar area. Comparative analysis of the different forms of *muqam* found in Xinjiang shows that, depending on the particular oases of the province, there are three basic forms and four other forms derived from them. The three basic forms are largely heptatonic (as in Kashgar), pentatonic (as in Qumul) and hexatonic (as performed by the Dolan). It must also be emphasized that the *muqam* and indeed Uighur music in general has a great many rhythmic formulae, with asymmetry and much use of the *aqsaq* and patterns combining duple and triple note values.

The other musical genre defined by the Uighurs, folksongs, consists of a body of work that is both extensive and diverse. Traditionally, it is arranged according to geographical criteria, with places such as Kashgar, Ili and Khotan having their own repertories. Most of the songs are heptatonic, but they may be pentatonic (especially in eastern Xinjiang), or they may combine both aspects. They are written in the modes of C, D, E and G, a preference for certain modes depending on their location of origin. Like the *muqam*, the modes are envisaged in the context of the octave rather than the tetrachord or pentachord (as in Middle Eastern traditions.) There is also much rhythmic similarity between the songs and the *muqam*, for instance in the short cycles, the quantitative importance of variations and the extensive use of asymmetry and syncopation. The organization of the textual form into two or three quatrains of heptasyllabic or octosyllabic lines naturally goes together with the melodic structure, which usually consists of four melodic phrases running A-B-C-D. Most subject-matter deals with love in all its aspects (onset of love, love injured, betrayed, unrequited, past or revived). Some of the songs are in narrative style, relating a historic incident from the life of the Uighurs or celebrating a hero of the past.

Like the music itself, Uighur instruments belong to the Irano-Arabo-Turkic world, but they resemble still more the instruments of the interior of Asia. Examples include long-necked lutes played with or without a plectrum or bow (*dutar*, *satar*, *tanbur*, *rawap*), spike fiddles deriving from the Persian *kamānche* (*ghichak*), the wooden-framed long drum with a donkey-skin head (*dap*), kettledrums (*naġha*), the dulcimer with 14 quadruple strings struck by

24. Performance of the muqam in the Dolan area, Xinjiang, 1988

small mallets (čaŋŋ), derived from the Chinese *yangqin* and/or the Middle Eastern *sanṭūr*, and less commonly aerophones (the *sunay* and *baliman*).

The musical tradition of the Uighurs has been stressed here, first because it dominates and influences the traditions of the other ethnic groups of the Turkic branch of the Altaic linguistic family, and second because the traditions of those other groups differ little (apart from their Uighur borrowings) from the traditions of members of the same groups living in the Central Asian republics of the former USSR (*see* CENTRAL ASIA). Tajiks living in the same western part of China have some distinctive musical characteristics, however. Their melodies, mostly sung, are very short and monothematic, with a rapid tempo and a clear preference for rhythms in 7-time. Note also that they still use the old kind of three-string plucked lute (*setār*), on which they play equally old non-chromatic intervals of three-quarter tones.

The People's Republic of China, a multi-ethnic state that takes pride in its wealth of diverse traditions, is also anxious to affirm the existence of a *national* musical tradition, which involves manufacturing heavily sinicized versions of the products of other cultures. Only long research in the field will enable ethnomusicologists to get past such music and claim an acquaintance with the traditional musical culture of the national minorities.

6. WESTERN-INFLUENCED STYLES. Almost the whole spectrum of Western music-making is now available to Chinese audiences in recorded or broadcast form, and live performances range from traditional Irish music to classical piano recitals and heavy metal concerts. Numerous Chinese soloists, orchestra members and singers have achieved expertise in the performance of Western music of the 'common-practice' period. This section, however, concentrates on the composition in China of new music drawing on Western idioms. The mass song tradition and the so-called 'conservatory style' of music are discussed here; §(ii) below looks at popular music genres.

(i) Mass song and conservatory style (ii) Popular music.

(i) Mass song and conservatory style. Throughout the 20th century, Chinese reformists used mass singing as a means of disseminating their messages. Typically, these songs have a simple and syllabic diatonic or pentatonic, folk-like melody. Many use march idioms, with triadic fanfare motifs. Singing normally occurred in unison, although harmonized accompaniments were also provided. A representative example is *Biye ge* ('Graduation Song'), composed in 1934 by Communist musician NIE ER (ex.12).

Aside from their work in the field of mass songs, 20th-century Chinese composers have rearranged numerous folksongs for concert performance with instrumental accompaniment. In so doing, the rough timbres, special temperaments and free rhythms of peasant performance have been replaced by a style more akin to the aesthetic of Western concert music. Much original vocal music has also been written in the standard Western idioms, including art songs, cantatas and operas.

Perhaps the first Western-influenced instrumental genre created by Chinese musicians was that known initially as 'national music' (*guoyue*). Typical of this repertory are

Ex.12 *Graduation Song* by Nie Er, bars 1-16

['Classmates, rise up! Take on responsibility for the nation! Listen! Pay heed to the pained laments of the masses, Watch! As year by year China dies!']

the ten solos for two-string fiddle *erhu* composed by LIU TIANHUA. These are small-scale, programmatic works, comprising several short, contrasting sections. Each has an evocative title that sets the mood or action of the piece. Liu drew on traditional *erhu* performance technique but extended this through recourse to that of the violin, which he also played. He also borrowed techniques from other traditional Chinese instruments. Liu's music employs aspects of Western tonality and metre, using the march features already noted in *Guangming xing* ('March of Brightness') of 1931 and compound quadruple time (not normally found in Chinese traditional music) in *Zhuying yaohong* ('The Candle's Shadow Flickers Red') of 1932 (ex.13).

Ex.13 *The Candle's Shadow Flickers Red* for *erhu* by Liu Tianhua, bars 10-13

Contemporaneous Chinese pieces for Western instruments or solo voice with piano are similar in many respects to Liu's compositions. The piano solo *Mutong duandi* ('The Cowherd's Flute'), composed by HE LUTING in 1934, for example, shares the pictorial mood, sectional structure, melodic pentatonicisms and rhythmic flow of most of Liu's works for *erhu*. Unlike the monophonic *erhu* pieces, however, He Luting interweaves two melodic lines, the lower-pitched of which provides rhythmic drive at the cadence points of the upper part (ex.14).

By the late 1930s, certain Chinese composers were beginning to write larger-scale works, for instance the stirring 'Yellow River Cantata' (1939) by XIAN XINGHAI, better known in the West in its 1969 piano concerto rearrangement. Xian Xinghai spent his last years in the Soviet Union, where a number of other Chinese composers also trained. After the establishment of the People's Republic of China in 1949, and until relations soured around 1960, it was common for the best young Chinese composers and performers to train in the Soviet Union and Eastern Europe, while scholars from the Eastern bloc held posts at the Chinese conservatories. These teachers, and the social realist style advocated by Mao Zedong's cultural officials, stimulated the composition of numerous colourful works – from overtures to song-and-dance pageants – celebrating such standard socialist topics as revolutionary heroes, bumper harvests and rural festivals. Intended to appeal widely to Chinese audiences, these pieces rely mostly on indigenous folktune melodies (or original imitations of these) and the conventions of the late-romantic tonal system. In some, pentatonic note-sets are used as the mainstay of the harmonic accompaniment, often erected on a tonal bass line. A case in point is offered by the lyrical, one-movement 'Butterfly Lovers Violin Concerto' (1959) by HE ZHANHAO and CHEN GANG (*b* 1935) (ex.15). This composition is nationalistic in that it draws melodic material and its subject from the *Yueju* traditional opera of Zhejiang Province. Yet it also satisfied Socialist cultural criteria in that it may be read as a criticism of the inequities of arranged marriage in pre-Communist China.

Ex.14 He Luting's *The Buffalo Boy's Flute,* Section 3, bar 1-6

By the mid-1960s, new repertories had been created for many traditional Chinese instruments. Some pieces were derived from folk pieces, in which the *yangqin* hammered dulcimer provided a harmonized accompaniment to the carefully arranged theme. Other pieces followed the musical lead of Liu Tianhua. As many of the instruments were themselves redesigned in factories, composers began to exploit new technical possibilities, and numerous compositions were written for mixed ensembles and the orchestra of redesigned Chinese instruments. Examples include the 'Sanmen Gorge Fantasia' for *erhu* and national orchestra (1960) by Liu Wenjin (*b* 1937) and the 'Dance of the Yi People' for solo *pipa* (1960) by Wang Huiran (*b*

Ex.15 *The Butterfly Lovers* Violin Concerto by He Zhanhao and Chen Gang, bars 12-15

1936). In the main, these pieces share the programmatic nature, sectional structure and musical language of those for Western instruments.

Almost all these categories of music were banned at the start of the Cultural Revolution (1966–76), and the music conservatories and many professional performance units were temporarily closed down. Instead, an emphasis was placed on amateur music making: rather than being performed to by experts, the masses themselves were to take full part in their own cultural lives. Gradually, however, the professionals reasserted themselves, and a small number of revolutionary model compositions was created, for instance a version of the modern-setting Beijing opera *Hongdeng ji* ('The Red Lantern') with piano accompaniment made in 1968 by pianist Yin Chengzong (*b* 1941). In terms of musical language, the model works are similar to the compositions of previous decades: sectional structures, colourful instrumentation, folk-like themes and pentatonic-flavoured tonality.

Political liberalization from about 1980 allowed the import of foreign scores and recordings, and the performance of much 20th-century Western music was now permitted. Chinese composers were quick to seize on the elements of these newly introduced styles; Wang Jianzhong (*b* 1933), for example, has engaged with serialism in his 'Five Pieces for Piano' (ex.16). As the title of this composition suggests, there has also been a movement among middle- and younger-generation composers away from the standard use of programmatic titles and revolutionary themes.

The last two decades of the 20th century saw an increasing interest among Chinese composers in the indigenous techniques and timbres of regional folk traditions and historical performance styles. Often, elements from these are combined with ideas drawn from the international avant garde. Several composers have sought to recreate the timbres of the seven-string zither *qin* in their compositions for Western instruments. In his composition *Mong Dong* for ensemble of Chinese and Western instruments (1984), QU XIAOSONG employs (among other effects) the rhythmic permutations of traditional percussion music – note the pattern of contraction and expansion of rests in the eight-quaver conga unit – while also imitating the tonal qualities of rural Chinese double-reed and percussion ensembles (ex.17).

(ii) Popular music. China's popular music industry began in the late 1920s in Shanghai, a thriving metropolis where Western powers had established their own settlements and imported Western modes of entertainment. It was also the centre of China's growing middle class, to which numerous film and record companies catered. Dance halls (with salon orchestra) became a mainstay of Shanghai's night life. The most prolific composer in the pre-1949 period was Li Jinhui, who organized his own group, the Bright Moon Song-and-Dance Troupe (*Mingyue gewutuan*). Li's song melodies are lyrical, folklike and pentatonic, set to Western harmonies and orchestrated for jazz band. Zhou Xuan (1918–57) was the most prominent singer and film actress of the 1930s, well known for her romantic ballads about urban life, such as *Ye Shanghai* ('A Night in Shanghai') and *Tianya genü* ('Wandering Songstress'), the latter sung by her in the film *Malu tianshi* ('Street Angels', 1937).

Ex.16 Five Pieces for Piano, No.1, 'Pastorale' by Wang Jianzhong

Shanghai's popular music was banned by the Communist government in 1949 as bourgeois, decadent and pornographic ('yellow'). Soviet-style revolutionary songs were used as propaganda and in mass rallies in the ensuing years. During the Cultural Revolution, the only mass music available to the people were the eight revolutionary model operas and songs quoting the words of Mao Zedong.

As China opened its door in 1978, Taiwanese singer DENG LIJUN (Teresa Teng) achieved tremendous popularity, although her music was officially banned. Her recordings were disseminated through private copies of cassettes and made their way into the black-market. Produced in Taiwan and Hong Kong, Deng's lyrical

Ex.17 Qu Xiaosong, *Mong Dong*

ballads (sung in the Mandarin dialect) followed the tradition of Zhou Xuan and were influenced by contemporary Japanese popular music. Deng's soundtracks were characterized by synthesizers, strings and soothing rhythm machines, sometimes supplemented by Chinese instruments. The Communist government also marketed its own *tongsu yinyue* (popular music), the subject-matter of which conformed with the socialist agenda, performed by government-sponsored song-and-dance troupes (*gewutuan*) and broadcast on television and radio. *Xibeifeng* ('North-west wind'), folksongs accompanied by disco beat, became a prominent *tongsu* style in the mid-1980s.

The open-door policy also brought Western rock music into China. Universities became centres where foreign students' musical tastes helped shape youth culture. Started by Western expatriates living in major cities, band-playing became a vogue. *Yaogun yinyue* (rock and roll music) belonged to an underground culture, and rock musicians performed only in privately owned bars and clubs, not in government stadiums or municipal halls. Although cut off from national television and radio networks, *yaogun yinyue* reached urban and rural youths nationwide via cassette tapes.

The first prominent Chinese rock singer, CUI JIAN, synthesized a new Chinese rock music with a coarse vocal delivery and socio-political lyrics. Cui's international fame began in 1989, when his *Yiwusuoyou* ('Nothing to my Name') was performed at the concert of International Year of Peace. Numerous bands have emulated Cui, among them Heibao ('Black Panther'), Cobra and Tangchao ('Tang Dynasty').

By the mid-1990s, popular music consumption in China manifested itself in many forms. Audio and video recordings of *yaogun* and *tongsu* music, Hong Kong's Cantopop and Taiwanese pop (in Mandarin dialect, but stylistically Cantopop), known collectively as *Gangtai* (Xiang*gang*-*Tai*wan) music, were widely available (*see* HONG KONG, §II; TAIWAN, §5). Karaoke bars also offered the entire gamut, even English and American popular songs of the 1970s and 80s. Television stations broadcast much indigenous and *Gangtai* popular music (except *yaogun*) in their daily shows. 'Yellow music', banned by the Communists since 1949, was reclaimed as part of the Chinese consumer culture of the 1990s, as the government loosened its grip in controlling the availability and accessibility of popular entertainment.

Chinelli, Giovanni Battista ['L'Occhialino'] (*b* Moletolo, nr Parma, 24 May 1610; *d* Parma, 15 June 1677). Italian composer. He was *maestro di cappella* of Novara Cathedral from October 1631 until 1634, then of Parma Cathedral until 1660 but with a long interruption from 1637 to 1652, when he seems to have been in Venice, possibly associated with S Giorgio Maggiore, whose abbot was the dedicatee of his op.7. The dedication of his op.5 to a Ferrarese organist suggests a connection with that city also. He was also absent from Parma from 1658 on and in 1660 he was briefly in Ferrara, at the Accademia della Morte, but for the rest of his life he was again at Parma Cathedral, this time as organist. His output consists mainly of sacred music in an up-to-date concertato style; it sometimes includes parts for strings and – in the first volume of masses – trombones. His one extant collection of secular music, the *Madrigali concertati* of 1637, includes several duets in a florid style, some of which include tempo indications. The set of music for the office of Compline (1639) was the first to use thoroughly up-to-date textures, and is unusual in being complete. The style is forward-looking: the violin parts dovetail with each other as well as with the voices, and the triple-time sections are well varied in melody and rhythm. In two of the masses of 1648 the violins provide ritornellos to unify the longer movements.

Ching. Large, lipped flat bronze gong of Korea. It is also variously called *taegŭm* ('large gong'), *kŭm* ('gong'), *na* ('gong') or *kŭmna* ('metal gong'). There is no fixed size for the *ching*, but it is usually about 40 cm in diameter with a rim lip of about 8 to 10 cm. It is suspended from a cloth cord looped through two holes in the rim. The player holds up the instrument with his left hand and strikes it near the centre with a large mallet, the tip of which is tightly wrapped in cloth; good quality *ching* will produce a noticeable rise in pitch if properly struck.

The *ching* is said to have been used traditionally in Korea as a military signalling instrument, the gong sounding the retreat and a drum sounding advance. The treatise Akhak kwebŏm (1493), however, describes it only in connection with dance at the Sacrifice to Royal Ancestors (*Chongmyo*). At present its use is diverse: it appears in the ritual music performed at the *Chongmyo* in Seoul, in *tae-ch'wit'a* (military processional court music), in shaman and Buddhist rites and in *nongak* (farmers' music). Typically it serves to reinforce the main beats of rhythmic patterns.

ROBERT C. PROVINE

Ching-hu. A Chinese two-string bowed lute made of bamboo; for a full discussion, *see* CHINA, §V, 3(ii). *See also* CHINA, §III.

Chin rest (Fr. *mentionnière*; Ger. *Kinnhalter*; It. *mentoniera*). A device clamped to the lower part of the violin or viola (or similar instrument played on the arm), generally at the left side of the tailpiece. The chin rest serves to separate the chin from actual contact with the instrument and at the same time gives the player a firm grip with the chin. In his *Violin-Schule* of 1832, Spohr claimed that he had invented what he called a 'fiddle holder'some ten years earlier, with the aim of helping violinists in the frequent changes of position required by the modern style of playing. Spohr argued that it enabled the violin to be held securely and unconstrainedly, thus emancipating the left hand and (by avoiding the risk of moving the instrument in shifting) ensuring 'tranquillity of bowing'. Spohr pointed out also that the chin rest removed pressure of the chin on the belly or tailpiece, and in this way no longer obstructed the vibrations of their parts, improving the quality and volume of tone. Curiously, Spohr's chin rest (see illustration) is placed directly over the middle of the instrument, and not to the left side of the tailpiece, despite the fact that most writers from L'abbé *le fils* (1761) onwards recommended that the violin should be held with the chin on the G string side of the tailpiece.

Chin-rest or 'fiddle holder' as ilustrated by Spohr in his 'Violin-Schule' (1832)

DAVID D. BOYDEN/PETER WALLS

Chinzer [Chintzer, Ghinzer, Kinzer], **Giovanni** (*b* Florence, 18 Sept 1698; *d* after 1749). Italian trumpeter, impresario and composer. The word 'corazza' (cuirassier), used in connection with his name, suggests a link between his family (of German origin) and the Swiss Guard of the Grand Duke of Tuscany. On 13 December 1719 he joined a company of Florentine musicians. His activity as an impresario and composer of dramatic music was mostly in Florence, but also in other Tuscan cities such as Lucca, Pisa and Pistoia. After 1738 he is described in some librettos as 'professor di tromba' by imperial appointment, and after 1743 as 'maestro di cappella della Real Brigata de' Carabinieri di Sua Maestà Cattolica'. A French privilege to print his instrumental music, issued to Chinzer on 11 March 1749, suggests that he was in Paris at that time.

In his operas he continued the tradition of Florentine *commedia per musica* until its popularity was supplanted by the Neapolitan variety. His sonatas often employ rounded binary form, small-scale phrase repetition, reverse dotting, echo phrasing and small, ornamental figures typical of mid-century style. Lack of imagination is notable in his motifs.

FRANCESCO GIUNTINI, JOHN WALTER HILL

Chiochiolo [Chiocchiolo, Chioccioli], **Antonio** (*b* ?Brescia, *c*1680; *d* after 1706). Italian composer. The libretto of *Gli amori di Rinaldo con Armida* calls him 'giovani', which suggests that in 1697 he was not yet of age. He was apparently in Florence about 1705 and may have taken religious orders.

WORKS

Gli amori di Rinaldo con Armida (op), Brescia, Accademia degli Erranti, 4 Feb 1697 [music lost, pubd lib in *I-Mb*; ? = L'Armida, Rovigo, 1694, pubd lib *MOe*]
S Caterina (orat), 5 characters, Florence, Compagnia di S Marco, 1705 [music lost, pubd lib in *Rn*; an orat with 4 characters perf. in Florence, Oratorio di S Filippo Neri, 1706, possibly the same work]
Il merito coronato dalla virtù per le glorie ... di ... Clemente XI (cant.), Florence, 1706 [music lost, pubd lib in *Rn*]
Ad cantus, ad gaudio, motet, 1v, vn, va, org, 1710, *Ac*
Care dulces, care letitie, motet, S, 2 vn, va, bc, *GB-Cfm* [catalogue gives date *c*1730]

THOMAS WALKER

Chiodi, Buono Giuseppe (*b* Salò, Lombardy, 20 Jan 1728; *d* Santiago, 7 Sept 1783). Italian composer, active in Spain. A priest, he was apparently *maestro di cappella* at Bergamo Cathedral when he was appointed to the equivalent post at Santiago di Compostela in 1769. Besides numerous sacred works, he wrote at least two operas, *De las glorias de España, la de Santiago es la mejor* (1773) and *La birba* (1774). Nothing survives of the first, a kind of oratorio or 'poema sacromelodramático' to a libretto by Amo y García de Lois. *La birba*, in three acts, was composed for the feast of St James the Apostle, and from surviving parts it was evidently a comic opera, possibly the first ever performed in Santiago. The many arias and eloquent duets are particularly brilliant and carry the whole action; the few recitatives that survive are unusually elaborate for the time.

WORKS

all MSS in E-SC

More than 550 sacred works, mostly 8vv and orch, incl.: 14 masses; mass sections; 27 motets; *c*90 pss; 27 hymns; 7 Lamentations for Holy Week; 6 Stabat mater; 5 Mag; 5 Dies irae; 1 Salve regina; 320 villancicos (mostly for Christmas)
Other works: De las glorias de España, la de Santiago es la mejor (poema sacromelodramático, A. y García de Lois), 1773, lost; La birba (op, 3), 1774; 3 orats

M. PILAR ALÉN

Chiodino, Giovanni Battista (*fl* 1610). Italian theorist. He was a Franciscan monk. He wrote *Arte pratica latina et volgare di far contrappunto à mente, et à penna* (Venice, 1610). This treatise, in ten sections, is one of a number of such works written in Italy whose authors continued to advocate the virtues and skills of traditional counterpoint at a time when the upsurge of monodic music must have seemed to be undermining it. Chiodino's work is mentioned by Silverio Picerli in his *Specchio primo di musica* (Naples, 1630), and J.A. Herbst translated it into German in his *Arte prattica et poëtica* (Frankfurt, 1653).

NIGEL FORTUNE

Chiozzotto. *See* CROCE, GIOVANNI.

Chipre. Designation appearing at the head of a three-voice Kyrie from the Avignon repertory (edn in CMM, xxix, 20, and in PMFC, xxiii*a*, p.64). The work, dating from the 14th century, is in simultaneous style, and is noteworthy for its use of the archaic third rhythmic mode and its fluctuations between major and minor prolation. This latter peculiarity occurs in only one of the three sources of the piece (*I-IV*). The designation may indicate the provenance of the composer or of the work itself.

GILBERT REANEY/R

Chirbury [Chyrbury], **R.** (*fl* *c*1400). English composer. Several identities have been suggested but nothing certain is known of his life. His four known works are all contained in the original layer of the Old Hall Manuscript. All are in score notation, although only one is based on plainchant. They are straightforward and rather archaic in style and include some minor notational anomalies (syllable change within a note or ligature, disregard of the *similis ante similem* rule) which are otherwise very rare in this manuscript.

MARGARET BENT

Chirescu, Ioan D(umitru) (*b* Cernavodă, 5/17 Jan 1889; *d* Bucharest, 25 March 1980). Romanian composer and conductor. At the Bucharest Conservatory (1910–14) he studied with Kiriac-Georgescu and Castaldi; later he studied with d'Indy and Lioncourt at the Schola Cantorum (1922–7), and he also graduated in theology at Bucharest University. He worked as a music master in Fălticeni and Bucharest, and then became professor of theory and solfège at the Bucharest Conservatory, where he also served as rector from 1950 to 1955. A noted choral conductor, he directed the Carmen Society (1927–50) and the choir of the Domniţa Bălaşa Church in Bucharest (1928–73). He promoted Romanian music and wrote more than 400 choral pieces, most of them based on folktunes. His educational choruses are well designed for children's voices; he also composed motets and masses (he was a professor at the Bucharest Academy of Religious Music between 1932 and 1939). The accessible style, rich melodiousness and unsophisticated polyphony of his music have ensured its wide dissemination and popular acclaim.

VIOREL COSMA

Chiriac, Mircea (*b* Bucharest, 19 May 1919; *d* Bucharest, 1 Dec 1994). Romanian composer. He studied law at Bucharest University (1943) then composition with Jora at the Bucharest Academy (1945). After working for Romanian Radio (1941–7), Chiriac founded and conducted the Romanian Railways Ensemble (1948–9), then worked as a researcher at the Institute of Folklore and as conductor of the Barbu Lăutaru Folk Music Orchestra (1949–53). He composed and arranged for a folk ensemble and taught at the Pedagogical Institute (1963–6) before gaining a place on the staff of the Academy (1966–84). Chiriac's intensely melodic works incorporate elements of Romanian folk music within a luxuriant neo-romantic context. While richly coloured modalism and asymmetrical rhythms distinguish all his compositions, they are particular features of his many symphonic works.

OCTAVIAN COSMA

Chiriac, Tudor (*b* Chuchulen', 21 March 1949). Moldovan composer. He graduated from Lobel's composition class at the Institute of Arts in Kishinyov in 1975 and is a winner of the Moldovan Youth Prize (1979) and the Moldovan State Prize (1988). He went on to teach at the Iaşi Academy of Music in Romania. His compositions are unique for their distinctive interpretation of essentially Romanian characteristics. He found new methods of synthesizing folklore with late 20th-century compositional techniques; the most prominent stylistic features of his work are a predilection for meditative but intellectualized lyricism, philosophical depth and an admixture of genres. *Mioriţa*, a poem for voice, organ, tubular bells, church bells and tape was awarded the Grand Prix at the Tribune internationale des compositeurs (1988) and garnered high praise at the Zagreb biennale (1987).

ELENA MIRONENKO

Chirico, Andrea de. *See* SAVINIO, ALBERTO.

Chirihuano. PANPIPES ensemble of Cuyupaya, Ayopaya Province, Cochabamba Department in the Bolivian altiplano. The name is also used by the Chirihuano, an Aymara-speaking ethnic group of the northern shore of lake Titicaca, Huancané Province, Peru, for an ensemble consisting of 12 or more (usually about 30) players of *siku* panpipes.

Chirimía (Sp.). (1) SHAWM (classified as an OBOE). As a folk instrument it was played in most areas of Spain and the New World but has become increasingly rare. The name was used also for the Spanish *gaita*, or *dulzaina*; the Catalan spelling is *xirimía*. The instrument used in the Catalan *cobla* exists in two sizes, *tiple* (treble) and *tenora* (tenor; *see* SHAWM, §5). The *chirimía* with ten holes is used in ceremonies at Santiago de Compostela and Salamanca, and in Galicia it joins with other instruments in ensemble music, including the *alborada* (dawn song) and preludes to dances and processional marches. The wide dispersion of the *chirimía* in Latin America probably results from the Spanish colonial church policy of promoting native *chirimía* and recorder performance as a means to promote Christianity. In Costa Rica, El Salvador, Nicaragua and Guatemala, ensembles including up to eight *chirimías* sometimes play for large festivals. In Honduras the *chirimía*, with drum accompaniment, sometimes provides music for the Moros y Cristianos (Moors and Christians) dances. In religious ceremonies in many parts of Mexico a *chirimía* is played from a church tower, in alternation with strokes on a drum played in the atrium below. Shawms are now rarely made in Mexico, but when existing instruments are replaced by flutes or some kind of trumpet the substitute instrument often retains the name 'chirimía'. In the Azuay and Cañar Provinces of highland Ecuador the Quechua people play a wooden *chirimía*, about 70 cm long, which is roughly cylindrical or conical and has a single or double reed.

(2) A term used for an instrumental ensemble in Colombia. It probably originated in the Chocó, the northern area of the Pacific coastal region. It is thought that the melody instrument in the Chocó ensemble was originally a hornpipe, but it has now been replaced by the modern clarinet. Other instruments of the *chirimía* ensemble are locally made percussion: the *tambora*, the *redoblante* or *caja* (drums) and the *platillos* (cymbals).

(3) An ORGAN STOP (*Gaitas*).

For illustration *see* GUATEMALA, §II, 2, fig.4.

JOHN M. SCHECHTER/HENRY STOBART

Chirinitana. *See* CHIARENTANA.

Chiroplast. A mechanism for training pianists' hands. *See under* LOGIER, JOHANN BERNHARD.

Chishko, Oles' [Aleksander] **Semyonovich** (*b* Dvurechnïy Kut, nr Khar'kiv, 21 June/3 July 1895; *d* Leningrad, 4 Dec 1976). Russian-Ukrainian composer, tenor and teacher. In 1914 he entered Khar'kiv University, where he attended lectures in law and sciences. He received his early music training at the Khar'kiv Music College as a pupil of Bugomelli for singing and Akimov for composition. Later he had singing lessons for several years with Kich, and he completed the singing course as an external student at the Khar'kiv Music and Drama Institute. He then worked in the Ukraine for some years as an opera and concert singer, teacher and conductor. In the 1920s he took part in the work of the All-Ukraine Association of Revolutionary Musicians; in 1928 he organized a composers' workshop at its Odessa branch, and later he joined the Association of Proletarian Musicians of the Ukraine.

Chishko completed his education at the Leningrad Conservatory (1931–4) under Ryazanov (composition), Tyulin (harmony), Kushnaryov (counterpoint) and Steinberg (orchestration), and in 1932 he joined the Composers' Union. During the 1930s he sang at the Malïy with the Leningrad PO and on radio, and he organized the song and dance ensemble of the Baltic fleet (1939–41), spending the war years in Tashkent. After his return to Leningrad in 1944 he engaged in various activities as composer, performer (he was Pierre in the first performance of Prokofiev's *War and Peace*) and teacher (in 1948 he was appointed reader at the Leningrad Conservatory and from 1957–65 was assistant professor there). His awards include the titles Honoured Art Worker of the Uzbek SSR (1944) and Honoured Art Worker of the RSFSR (1957), and the Badge of Honour. He became a member of the communist party in 1948.

Vocal works occupy a dominant place in Chishko's output; they include folksong arrangements for various ensembles and compositions that served as points of departure for his major stage works. *Bronenosets Potyomkin* ('Battleship Potyomkin') has been produced on almost all the opera stages of the USSR and was one of the first of the 'song operas', playing an important part in the development of Soviet opera. Chishko's other operas have also met with success, and his works for folk orchestras have helped to expand the repertories of these ensembles.

A. KLIMOVITSKY

Chisholm, Erik (*b* Glasgow, 4 Jan 1904; *d* Cape Town, 8 June 1965). Scottish conductor and composer. He studied with Herbert Walton and Lev Pouishnoff, and at the Scottish Academy of Music from 1918 to 1920. In the late 1920s he toured Canada and the USA as a pianist, before returning to study composition with Tovey at Edinburgh University (BMus 1931, DMus 1934). Always an ardent and energetic promoter of new music, he founded the Active Society for the Propagation of Contemporary Music (1929). As conductor of the Glasgow Grand Opera Society (1930–39) he presented many British premières (*Les Troyens*, *Béatrice et Bénédict*, *Idomeneo*), and during these years he also founded the Barony Opera Society. He spent the war years as conductor of the Carl Rosa Opera Company (1940) and was then musical director of the Entertainments National Services Association (ENSA) for South East Asia.

In 1946 Chisholm was appointed director of the South African College of Music at the University of Cape Town. There he founded the University Opera Company (1951) and the University Opera School (1954), both under the direction of the baritone Gregorio Fiasconaro. Chisholm and Fiasconaro gave great impetus to opera in South Africa: productions (usually conducted by Chisholm) included the premières of Joubert's *Silas Marner* and of Chisholm's own *Dark Sonnet*, *The Inland Woman* and *The Pardoner's Tale*, Act 2 of *Canterbury Tales*, as well as many South African premières. A tour of Britain under Chisholm (1956–7) included the British stage première of Bartók's *Bluebeard's Castle*. He also founded the South African section of the ISCM (1948) and pursued an international conducting career.

A prolific composer, Chisholm used Celtic forms and idioms in much of his earlier work; later he sometimes incorporated aspects of Hindu music into his moderately dissonant style. It was as an opera composer that he produced his best work: this is particularly evident in the trilogy *Murder in Three Keys* and in the three acts that constitute *Canterbury Tales*. The latter is arguably his best stage work and a good example of his dramatic flair. In it he used a free modification of Schoenberg's 12-note technique and ingeniously incorporated Ars Nova devices and adaptations of 14th-century tunes. He prepared his own librettos for all his operas. His writings include *The Operas of Leoš Janáček* (Oxford, 1971), music criticism and many articles.

CAROLINE MEARS, JAMES MAY

Chissell, Joan (Olive) (*b* Cromer, 22 May 1919). English music critic. She studied at the Royal College of Music from 1936 to 1942 under Kendall Taylor (piano), Herbert Howells (composition) and Frank Howes (history and criticism). Turning away from an intended career as a pianist, she became a teacher at the RCM, lecturer and critic, and from 1949 to 1979 she was on the music staff of *The Times*. 19th-century music, and particularly the piano, are her central interests, and in this area she has always been a perceptive critic and adjudicator, generous in her encouragement. She has been a frequent broadcaster, and a reviewer of records in *Gramophone*. Her writings include chapters in several symposia and articles in periodicals; she has written books on Chopin (London, 1965) and Brahms (1977) for younger readers, as well as two books on Schumann, a lucid and sympathetic study in the Master Musicians series (London, 1948, 5/1989) and a smaller volume on his piano music (London, 1972), and a sympathetic study of Clara Schumann (London,

1. Chitarrone player: detail from the 'Five Senses' by Theodoor Rombouts, c1630 (Museum voor Schone Kunsten, Ghent)

1983). She was awarded the Robert Schumann Prize of the City of Zwickau in 1991.

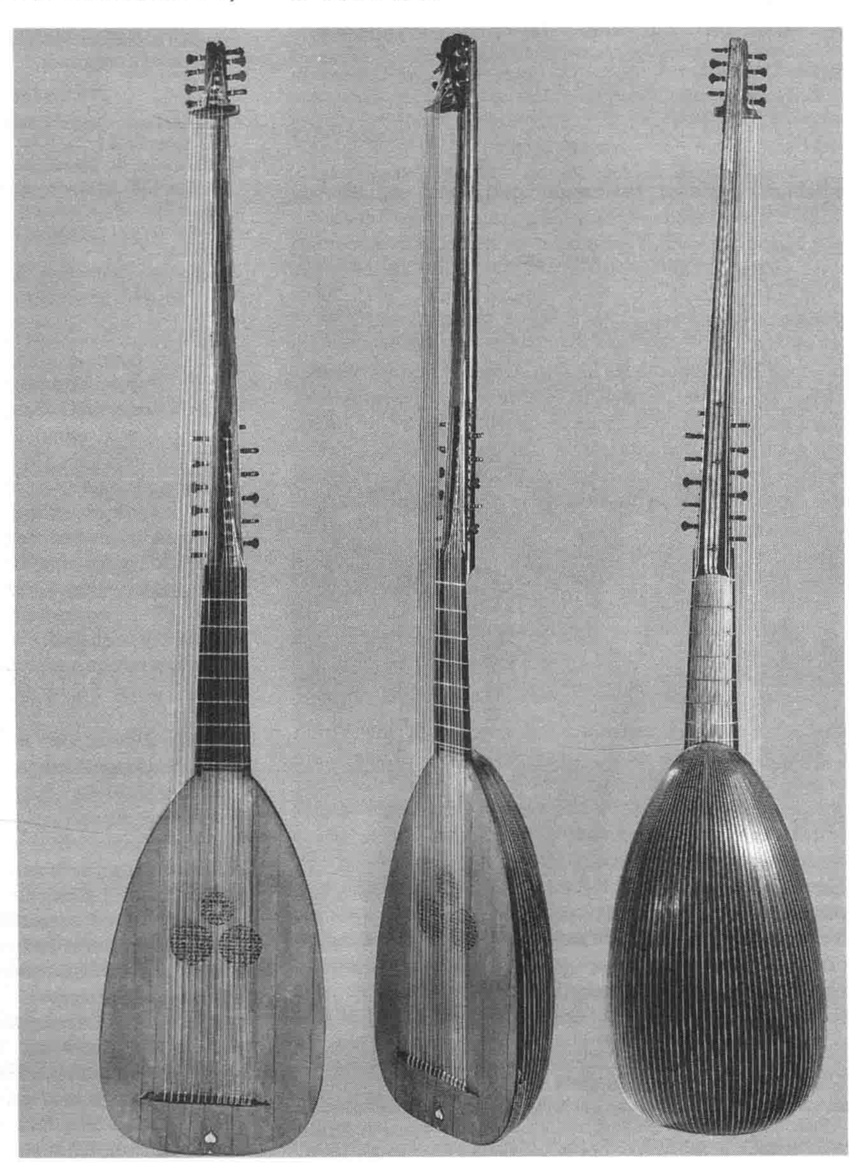
STANLEY SADIE

Chitarino (It.). *See* GITTERN. *See also* CHITARRINO.

Chitarra (It.). Term used in the 14th and 15th centuries for a GITTERN, from the mid-16th for a small guitar (*see* GUITAR, §3 and §4).

Chitarrino (It.). From the middle of the 16th century, the small four-course guitar (*see* GUITAR, §3). In the 14th and 15th centuries the term 'chitarino' was applied to the GITTERN.

Chitarrone (It.; Ger. *Chitarron, Chitaron*). A name used synonymously with *tiorba* (*see* THEORBO) in Italy during the late 16th and early 17th centuries. The type of lute denoted by this humanist, classicizing term (chitarrone means, literally, a large kithara) was associated particularly with Jacopo Peri, Giulio Caccini and the other early writers of monody from the 1590s until about 1630 (fig.1). After 1600, the alternative name *tiorba* was often used. Two contemporary references, Praetorius (1619, p.52) and Piccinini (1623, p.5), led some modern writers to conjecture that the *chitarrone* was strung with wire and the *tiorba* with gut. However, this theory has been discredited by subsequent research (see Mason, pp.10–14).



The instrument was used chiefly for vocal accompaniment, but also served as a general continuo instrument. For solo music in tablature, the following sources specifically designate *chitarrone*:

1604 G.G. Kapsberger: *Libro primo d'intavolatura di chitarone* (Venice, 1604)

1616 G.G. Kapsberger: *Libro secondo d'intavolatura di chitarrone* (Rome, 1616, lost)

1623 A. Piccinini: *Intavolatura di liuto, et di chitarrone, libro primo* (Bologna, 1623)

1626 G.G. Kapsberger: *Libro terzo d'intavolatura di chitarrone* (Rome, 1626, lost)

2. Three views of a chitarrone by Magno Tieffenbrucker, Venice, 1608 (Royal College of Music, London); stopped and unstopped string lengths are 93·3 and 170·7 cm

1640 G.G. Kapsberger: *Libro quarto d'intavolatura di chitarrone* (Rome, 1640)

Most sources for the instrument's solo repertory use the alternate name *tiorba*, or, in the case of many manuscript sources, the instrument is not named. For a listing of these sources, *see* THEORBO.

JAMES TYLER

Chitchian, Geghuni Hovannesi (*b* Leninakan, 30 Aug 1929). Armenian composer. She attended the Tchaikovsky Music School in Yerevan before studying composition with Grigor Yeghiazarian at the Komitas Conservatory (1947–53) where she has taught since 1971. After graduating, she taught at a music school and in 1955 joined the Armenian Composers' Union. She is the laureate of some 20 competitions held in Armenia and the former Soviet Union; she became an Honoured Representative of the Arts in 1980. Her links to classical Armenian music are evident in her interest in folk melodies and modal harmony, while her connections to contemporary Armenian trends manifest themselves in her alignment to neo-classicism and folkloristic neo-Romanticism. The subtle poetry and cantabile thematicism of her vocal works have been imprinted on her instrumental writing; *Bari lujs!* ('Hello Morning!') follows the example she set in the Concerto for Voice in the balancing of instrumental groups, the use of airy orchestral textures and the chromatic inflection of diatonic modes. She has developed the technique established by Khachaturian involving chains of parallel intervals and chords; in the Violin Concerto the melodic and harmonic structures which are based on the interval of a 4th impart a particular colouristic and psychological significance to the music (similar effects are employed in the Chamber Symphony, the sonatas for trumpet and for viola, and the song cycles). Her choral writing is characterized by rhythmic polyphonic writing, while her music for children – which is frequently reminiscent of Prokofiev's – combines didactic purpose with picturesque portrayal. The well-known *Haykakan khorakandakner* ('Armenian Bas-Reliefs') are remarkable for the same reasons.

SVETLANA SARKISIAN

Chiti, Girolamo (*b* Siena, 19 Jan 1679; *d* Rome, 4 Sept 1759). Italian composer and music theorist. He first studied under G.O. Cini and T. Redi in Siena. In 1713 he went to Rome, where B. Gaffi and above all G.O. Pitoni were his teachers. In 1717 he referred to himself as *Maestro eletto all'Orfanelli*, i.e. of S Maria in Aquiro. In 1726 he took over the direction of music at S Giovanni in Laterano, a position he held until his death. As a member of the Congregazione dei Musici di S Cecilia in Rome, he was several times *Guardiano della sezione dei maestri*. From 1745 onwards, he carried on an extensive correspondence with Padre Martini in Bologna.

Chiti wrote in a mixed style characteristic of the Roman school, using not only strict imitation, but also homophonic note-against-note writing and a concertato manner. His masses and psalms are primarily contrapuntal; the psalm tone emerges more strongly here. In his polychoral works Chiti included passages for few voices, combining the polychoral and concertato principles. In his duets he preferred to compose according to the more modern Affect principle, using a descriptive, expressive style. He held a somewhat special place in the Roman school because he occasionally used accompanying instruments in addition to continuo. The older masters that Chiti took as his models were principally Palestrina, Benevoli and Pitoni.

In his theoretical essays Chiti was particularly concerned with mensural notation and the problems of musical temperament. He wrote primers on the singing of Gregorian chant and essays on counterpoint and figured song. He was also Pitoni's biographer. After Pitoni and Padre Martini, Chiti was one of the leading Italian music

theorists of the time. He was also an important collector of music and copied many of Palestrina's works.

Chiufolo. *See* ZUFFOLO.

Chiuso (i) (It.: 'closed'). In horn music, an instruction that notes should be fully stopped with the hand; this is countermanded by 'aperto'. *See* BOUCHÉ and HORN, §3(ii).

Chiuso (ii) (It.: 'closed'). In medieval music, the word used to denote the second-time ending (*punctum clausum*), the first being labelled APERTO.

Chkhikvadze, Grigol (*b* Tbilisi, 15/27 April 1898; *d* Tbilisi, 27 Dec 1986). Georgian ethnomusicologist. He was the son of Zakaria Chkhikvadze, a collector of Georgian folksongs. He studied composition at the Tbilisi State Conservatory (graduated 1927) and ethnomusicology with Yevgeny Gippius at the Institute of Anthropology and Ethnography in Leningrad (graduated 1935). He took the doctorate at the Moscow Conservatory (1946) with a dissertation on Georgian musical culture from the earliest times to the 19th century. Chkhikvadze organized the folk music section of Georgian Radio (1935), taught at the Tbilisi State Conservatory (from 1935) and at the Georgian Theatrical Institute (1941–5), and was head of the ethnomusicology section of the Institute of History, Archeology and Ethnography in Tbilisi (1953–60) and leader of the State Ensemble of Georgian Singing and Dancing (1965–8). He organized and led the department of Georgian folk music at the Conservatory (1970–76), and conducted numerous fieldwork expeditions to different regions of Georgia, transcribing his first set of native Kakhetian songs from memory in 1917–20. Chkhikvadze's works created the basis for further ethnomusicological studies in Georgia, in particular those concerning studies of dialect in different ethnographic regions. His compositions, which remain in manuscript, include songs for radio broadcasts and several operas for children.

JOSEPH JORDANIA

Chladni, Ernst (Florenz Friedrich) (*b* Wittenberg, 30 Nov 1756; *d* Breslau [now Wrocław], 3 April 1827). German acoustician. He studied law at Leipzig University before turning to scientific studies. He invented two instruments, the 'euphon' and the 'klavizylinder', both of which were variants of the glass harmonica. However, he owes his fame to his celebrated experiments on the nodal patterns and corresponding frequencies of vibration plates. He showed that the vibration patterns, often called Chladni figures, could be made visible by sprinkling sand on the plate. The sand is thrown up on vibrating areas and collects around nodal lines. Chladni travelled through Europe playing on his instruments and demonstrating his experiments before many persons and institutions; he encountered Goethe, Lichtenberg, Olbers, Laplace, Napoleon and other notable men of the period. Chladni's experiments stimulated much early work on the vibration of plates and bars and indeed so impressed the Académie des Sciences, Paris, that it offered a prize for a successful explanation of his sand figures and the motion of elastic surfaces in general. His work helped to form the foundation of modern theories, capable of predicting precise vibration patterns for violin and guitar top plates and the soundboards of keyboard instruments.

C. TRUESDELL/CLIVE GREATED

Chlubna, Osvald (*b* Brno, 22 July 1893; *d* Brno, 30 Oct 1971). Czech composer. After his schooling at the Realgymnasium in Brno, where Kunc was his singing teacher, he studied at the Czech Technical College (1911–13) and at the Commercial Academy (1913–14). His only conventional composition training was at the Brno Organ School under Janáček (1914–15), and in Janáček's master classes (1923–4). Until 1953 Chlubna earned his living as a bank clerk; he also taught instrumentation and counterpoint at the Brno Organ School (1918–19), harmony and instrumentation at the Brno Conservatory (1919–35, 1953–9) and theory at the Brno Academy (JAMU, 1956–8). He was active as a committee member of the Moravian Composer's Club (later syndicate) from 1919 to 1948, and of the Czech Music Foundation (1954–61). His music is lyrical and reflective, stimulated by nature and celebrating the working life of contemporary man. He favoured larger forms and, although he did not have an outstanding dramatic gift, he strove throughout his life to compose operas. After a transitional phase influenced by the musical developments of around 1930, Chlubna developed into a romantic figure, the essence of his art lying in a calm acceptance expressed with great warmth. His finest achievements were the two orchestral cycles *Příroda a člověk* ('Nature and Man') and *To je má zem* ('This Is My Country').

An outstanding orchestrator, Chlubna was responsible, in 1918, for the scoring of the last act of Janáček's first opera Šárka, and together with Bakala he prepared *From the House of the Dead* for its world première in 1930, supplying the opera with an optimistic ending. Criticized for this arrangement, Chlubna clarified his approach in an article (1958). He also reconstructed Janáček's symphonic poem *Dunaj* ('The Danube') in 1948. A multi-volume work on Janáček's style in relation to European 20th-century music remains in MS.

Choeurs (i) (Fr.). Choirs (*see* CHOIR (ii) and CHORUS (i)).

Choeurs (ii) (Fr.). *See* COURSES.

Choir (i). The part of a church designed for the performance of the liturgical music by the singers. It is usually situated in the chancel between the nave and altar and separated from the nave by a choir screen or rail.

Choir (ii). A group of singers who perform together either in unison or, much more usually, in parts. The term is derived from the architectural name of the part of a church building where the singers traditionally perform. *See* CHOIR (i) and CHORUS (i).

Choir (iii). A homogeneous group of instruments, generally forming part of larger forces. For example, a group of brass instruments can be referred to as a brass choir, and an instrumental component of a polychoral work as an instrumental choir.

Choir organ. *See* CHAIR ORGAN.

Chojnacka, Elisabeth [Elżbieta] (*b* Warsaw, 10 Sept 1939). French harpsichordist of Polish birth. She completed her studies at the Academy of Music in Warsaw in 1962, then moved to Paris, where she studied with Aimée van de Wiele. In 1968 she won first prize at the international harpsichord competition in Vercelli. Chojnacka is one of the few 20th-century harpsichordists to explore and inspire a substantial contemporary literature for the instrument. Her technical brilliance and outstanding musicianship, combined with an enthusiasm for some of the most difficult 20th-century works, has attracted over 80 composers to write for her, including Bussotti, Donatoni, Ferrari, Górecki, Kessler, Halffter, Ligeti, Mâche, Marco, Montague, Nyman, Ohana, Penderecki and Xenakis. She has a contemporary repertory of over 300 works which she performs on an amplified modern pedal harpsichord. Her numerous recordings, embracing Renaissance and Baroque as well as contemporary works, include the complete harpsichord works of Xenakis and Ohana. In 1995 she was appointed professor of contemporary harpsichord at the Salzburg Mozarteum.

STEPHEN MONTAGUE

Choke cymbals. *See* HI-HAT.

Chollet, Jean Baptiste (Marie) (*b* Paris, 20 May 1798; *d* Nemours, 10 Jan 1892). French tenor. He studied the violin and solfège at the Paris Conservatoire, and from 1815 to 1818 was a chorus singer successively at the Opéra, Théâtre Italien and Opéra-Comique. For several years he sang the high baritone roles associated with Martin and others, appearing in Switzerland, Le Havre (1823–5), the Opéra-Comique (1825) and Brussels (1826). In 1826 he joined the Opéra-Comique as a tenor, and appeared with success in the première of Hérold's *Marie*. He remained at the Opéra-Comique until 1832, and created the title roles in Auber's *Fra Diavolo* (1830) and Hérold's *Zampa* (1831), the latter demanding a range from G to *d♭″*. From 1832 to 1834 he sang at Brussels and then at The Hague, but in 1835 he returned to the

Opéra-Comique, where he created Chapelou in Adam's *Postillon de Longjumeau*, and remained until 1847. His voice deteriorated after an illness in 1844, and the last years of his career were unsettled; he directed theatres in Bordeaux (1847–8) and The Hague (1851), and sang in opera at Toulouse (1848), St James's Theatre, London (January 1850) and the Théâtre-Lyrique, Paris (1852–4).

Chollet was largely self-taught, but was capable of both powerful and light vocalization: his virtuosity in *fioriture* reminded Bellini, who heard him in 1834, of Rubini. Like many tenors of his day, he made use of falsetto, particularly in cadenzas, but before his career was over this practice was becoming less acceptable: Chorley, in 1850, wrote 'we can hardly speak of M Chollet's organ as a voice'. He also composed some romances and nocturnes which were published in Paris and enjoyed some success.

PHILIP ROBINSON

Chołoniewski, Marek (*b* Kraków, 23 Oct 1953). Polish composer and performer. At the State Higher School for Music in Kraków (now the Academy) he studied the organ, music theory and composition (with Schäffer) between 1972 and 1979. He joined the staff of the electronic studio at Kraków in 1976, and in addition has worked at Finnish radio in Helsinki; in 1986 he established his own studio, MCH. As well as co-directing the Stuttgart–Kraków International Workshop for New Music, in 1993 he became director of an international course for composition at Schwaz, Austria. He has taught at the teachers' institute in Rzeszów, led courses in computer music in several countries and is currently artistic director of the international Audio Art Festival in Kraków. Muzyka Centrum, an organization he formed (1977) to arrange concerts of new music, have given over 400 premières and first performances in Poland.

Chołoniewski's output includes instrumental music as well as electronic and audiovisual computer compositions, among them music for radio, theatre, film and television. His concept of audio art combines different artistic disciplines and integrates elements from avant-garde performance and sound installation. In the early 1980s a mixture of diverse elements aligned the work *Rag, Rag, Rag* with jazz and rock and roll, as well as suggesting Ars Nova and the sound worlds of Indonesia; the latter is also true of *Dla wszystkich ten sam ogien* ('The Same Fire for All'). His principal interest lies with interactive processes involving sound, light and movement. In *Wysyg* (1989) the density of texture, the length of structures and the position of the sounds in space are determined by changes in light, effected by means of sensors following the performance of the conductor-composer. Movements of parts of a sound installation, with the aid of contact microphones, can also trigger MIDI events, as in *Switched On . . .* for objects and computer (1990), while several works require a specially designed light-baton to control the MIDI system.

WORKS
(*selective list*)

Assemblages, concrète musicians and tape, 1975; Citroblage, headphones only, 1975; Pizza, orch, 1976; Soprano Qt, 3 S, s sax, 1977; gmb 78, b viol, 1978; Amput, C, 3 insts, 1979; La Cumparsita (hki . . .), tape, 1980; Rag, Rag, Rag, tape, 1983; Swinging Parameters, ob, vn, synth, tape, 1984; Dla wszystkich ten sam ogień [The Same Fire for All], tape, 1985; Follow Me II, synth, cptr, 1987; Follow, Follow (Triple Con.), 4 ob, orch, cptrs, 1988; Follow Salzach, insts, ambiences, cptr, 1988; Wysyg, light, cptr, 1989; Switched On . . . , objects, cptr, 1990; Switched Off . . ., insts, cptr, 1990; 2 słońca [2 Suns], insts, cptr, 1990; Like Breathing, insts, cptr, 1991; Pikna i bestia [Beauty and the Beast], 1v, light, cptr, 1992; Doubles, 1v, light, cptr, 1993; Lighting, interactive installation–performance, 1995; River Dart, 1v, light, cptr, 1995; Hypermeable Objects, sound installation, 1996; Another Thing, perc, light, objects, 1997; All Real, audio-visual work, 1997; Passage, 8 musicians, interactive cptr systems, 1998; works in collaboration with Piotr Bikont, Krzysztof Knittel, Tomasz Stańko

MARTINA HOMMA

Chomiński, Józef Michał (*b* Ostrów, nr Przemyśl, 24 Aug 1906; *d* Warsaw, 20 Feb 1994). Polish musicologist. He studied composition with Mieczysław Sołtys and conducting with Adam Sołtys at the Lwów Conservatory (1927–9) and musicology with Adolf Chybiński and ethnography with Adam Fischer at Lwów University (1926–31). He took the MA in 1931 with a work on imitative techniques in the 13th and 14th centuries and the doctorate at Lwów in 1936 with a dissertation on Grieg's songs; in 1949 he completed the *Habilitation* at Poznań University with a work on Szymanowski's sonatas. Illness prevented him from lecturing during his appointment as a professor of music history in the music school in Poznań (1945–8). He was lecturer in music history (1947), senior lecturer (1951) and reader (1954) at Warsaw University, where in 1960 he was appointed professor of music history and theory. Between 1951 and 1968 he was chairman of the music division in the art institute of the Polish Academy of Sciences, and edited *Studia muzykologiczne* (1953–6), *Muzyka* (1956–71), *Rocznik chopinowski* (1956–71) and the series Monumenta Musicae in Polonia (1964–71).

Chomiński's musicological interests were extensive but he concentrated, in a number of comprehensive surveys, on technical and formal problems in music history. In his *Historia harmonii i kontrapunktu* (1958–90) he traced the development of compositional techniques, chiefly on the basis of music examples, but also taking account of contemporary theoretical statements. His *Formy muzyczne* (1954–84) treats form not as a static scheme but as the dynamic force of a musical work; it again presents the topic in the context of opinions and conventions of the given epoch. Chomiński's main interests in Polish music were the Renaissance, Chopin, Szymanowski and contemporary music. He initiated a branch of study called 'sonorystyka', the study of the structure and sound technique of a composition. This includes studies of sound qualities, the organization of time in performance and its influence on sound, the formation of horizontal and vertical structures, the transformation of traditional elements of a composition (e.g. harmony) into new qualities and the interdependence of the structure and sonorities of a composition. This theory has been adopted by Chomiński's numerous pupils.

ZYGMUNT M. SZWEYKOWSKI

Chopin, Fryderyk Franciszek [Frédéric François] (*b* Żelazowa Wola, nr Warsaw, 1 March 1810; *d* Paris, 17 Oct 1849). Polish composer and pianist. He combined a gift for melody, an adventurous harmonic sense, an intuitive and inventive understanding of formal design and a brilliant piano technique in composing a major corpus of piano music. One of the leading 19th-century composers who began a career as a pianist, he abandoned concert life early; but his music represents the quintessence of the Romantic piano tradition and embodies more fully than any other composer's the expressive and technical characteristics of the instrument.

1. In his homeland: 1810–30. 2. New frontiers: 1830–34. 3. The best society: 1834–9. 4. Years of refuge: 1839–45. 5. Twilight: 1845–9. 6. Formative influences. 7. Piano writing. 8. Musical style. 9. Genres. 10. Sources and editions. 11. Reception.

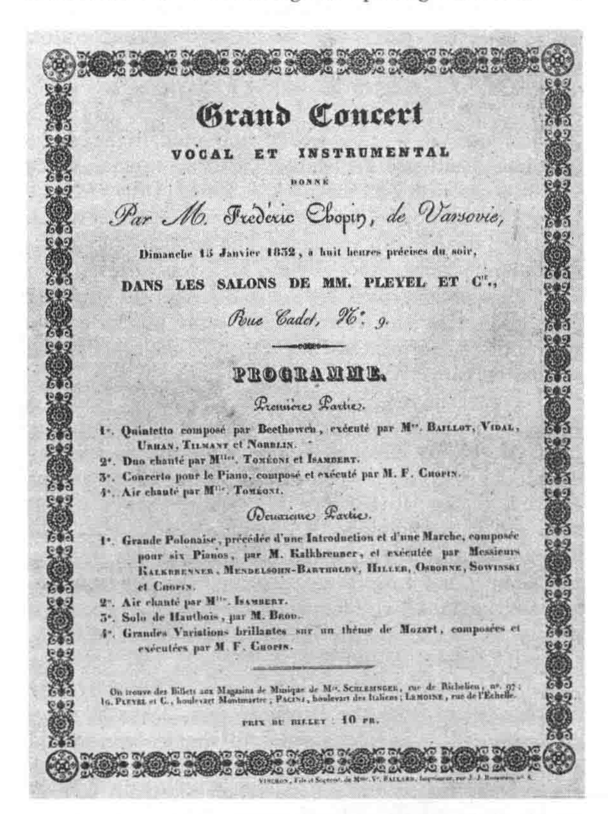
1. IN HIS HOMELAND: 1810–30. Chopin was the second of four children born to Mikołaj Chopin and Tekla Justyna Kryżanowska; according to the register of births his birth date was 22 February, but he and others always gave the date as 1 March. His parents met in 1802, when Mikołaj, a Frenchman from Lorraine, was employed by Countess Justyna Skarbek as a tutor for her son (later to be Chopin's godfather) at her estate in Żelazowa Wola, some 45 km west of Warsaw. Chopin's mother had been sent to the Skarbeks while still a girl. She was a distant relative and acted as a companion and housekeeper for Countess Justyna. The couple married in 1806 and remained with the Skarbek family until 1810, leaving for Warsaw when Chopin was seven months old. Mikołaj had secured a post at the recently established Lyceum, housed in the Saxon Palace, and for more than six years the Chopins lived in an apartment in the right wing of the palace. They were a respected family, and reasonably well

connected socially, not least because Mikołaj was shrewd enough to cultivate the right people and to avoid offending those in positions of authority. It was a staunchly middle-class household, committed to a sound education, a well-developed sense of morality and an ethos of self-improvement. All four children benefited from a lively cultural milieu in which literary and musical interests were fostered.

In early childhood Chopin mixed socially with three principal groups of Warsaw society. First there were professional people, academics in particular. In 1817 the Lyceum moved to the Kazimierzowski Palace, next to the newly established University of Warsaw, and the Chopins took rooms in the right annex of the palace, where they mixed constantly with university teachers. Mikołaj was part of a circle of Warsaw intelligentsia, whose salons had something of the character of literary or scientific gatherings, and it was through these contacts that the young Chopin was able to visit Berlin in 1828, his first glimpse of the world beyond Poland. Secondly there were the middle gentry (*szlachta*). Many of the Lyceum pupils were from this background, and several of them boarded with the Chopins. Even before he entered the Lyceum in 1823 (he was privately educated until the fourth class), Chopin became friendly with these boys, and several of the friendships were to prove enduring and important. Later, in his teenage years, he spent two summers (1824 and 1825) at the country home of one of the boarders, Dominik Dziewanowski. Much has been made of Chopin's documented contacts with folk music during these youthful visits to Szafarnia. But it is possible to overrate their significance. His contribution to musical nationalism was real and important, but it did not in the end hinge on the recovery of some notionally 'authentic' peasant music.

The third group with which Chopin mixed was the small handful of wealthy aristocratic families at the top of the social hierarchy in Poland. Here his passport was his talent, for as a gifted prodigy (a 'second Mozart') his fame rapidly spread, and he was much in demand at the salons of the best society. He was even a regular visitor to the Belvedere Palace, home of the notoriously unpopular Viceroy of Poland, Grand Duke Constantin. Aside from such salon performances, he made occasional public appearances, including a performance of a Gyrowetz concerto at the Radziwiłł Palace in February 1818. Already by then he was a published composer. Two polonaises from 1817 have survived, and one of them (in G minor) was lithographed by Canon Izydor Cybulski. The Warsaw press responded with a eulogy: 'The composer of this Polish dance, a young lad barely eight years old, is . . . a true musical genius'. Of his other early works, it is worth singling out a Polonaise in A♭ major of 1821, not least because it is the first of Chopin's surviving autographs. It was dedicated to his teacher Wojciech (Adalbert) Żywny, one of several Czech musicians then living in Warsaw. Reports on Żywny's teaching are somewhat mixed, but at the very least he did Chopin the service of introducing him to Bach and to 'Viennese' Classicism. He taught Chopin from 1816 to 1821, at which point he no doubt realized that his most gifted pupil needed to move on.

It is likely that Chopin had private lessons with Józef Elsner for several years before entering the High School of Music (lessons were held at the university and the conservatory), of which Elsner was rector, in 1826. We know that Elsner introduced him to a harmony textbook by Karol Antoni Simon in 1823, for instance, and this may have been the trigger for sporadic lessons in music theory. In the same year he began to take organ lessons from Wilhelm Würfel, an eminent pianist on Elsner's staff at the High School. Yet in all important respects he was self-taught as a performer. Neither Żywny nor Elsner had much to offer on keyboard technique, and it may well be that Chopin's highly individual approach to teaching and playing in later life resulted in part from this unorthodox background. His High School years, on the other hand, gave him a rigorous training in composition, though there is some suggestion that in the later stages of the course Elsner may have allowed him more freedom to follow his own inclinations than was usual for High School students. In any event, his final report, written in July 1829, left no doubt about Chopin's acumen: 'Chopin F., third year student, exceptional talent, musical genius'.



It was clear at this point that Poland had little further to offer Chopin, and when the Education Ministry turned down an application for funds to study abroad the composer grew increasingly restless in his native city. There were concert series in Warsaw, and regular visits from virtuosos en route to St Petersburg, as well as a tolerable opera repertory at the National Theatre. But in comparison with Europe's cultural capitals, the town had a provincial feel. That was brought home to Chopin when he paid a short visit to Vienna immediately after his graduation from the High School, especially as he managed – more by luck than planning – to secure two well-received public concerts in the Austrian capital. After the first concert, at which he played the Variations op.2, he wrote home that 'everyone clapped so loudly after each variation that I had difficulty hearing the orchestral tutti'. On his return to Poland he gave numerous salon and concert performances, but the pressure to give a big public concert in Warsaw steadily mounted. In the end he succumbed and gave the F minor Concerto to an audience of 900 people on 17 March 1830. Later in the year (11 October) he followed this with a second concert at which he played the E minor Concerto. The publicity surrounding these concerts, especially the first, was distasteful to Chopin, and may well have strengthened his growing conviction that the conventional path of the public pianist-composer was not for him. On the other hand, alternative career paths were by no means obvious.

This uncertainty about his future was no doubt a principal factor in the depression Chopin suffered during his final year in Warsaw. But he was also troubled by emotional insecurities of a kind that are by no means unusual among 19-year-olds. He decided that he was in love with a young singer Konstancja Gładkowska, but apparently did little to make her aware of his feelings. Indeed he found it much easier to communicate emotionally with men than with women in these days, and perhaps in later years too. Before his premature death in 1828, Chopin's school friend Jan Białobłocki had been his principal confidant. That role was quickly taken over by another friend from the Lyceum years, Tytus Woyciechowski, and it was in letters to Tytus that Chopin poured out his heart over Konstancja. The letters reveal him as emotionally fragile and indecisive, all too ready to lean on his more robust and self-assured friend. Fittingly, it was in the company of Tytus that he finally ventured on a much planned (and often postponed) journey to Vienna

on 1 November 1830, though at the time he had no reason to think that it would be his last contact with Poland.

2. NEW FRONTIERS: 1830–34. The intention was to embark on a European tour, with Vienna as first stop. In the end Chopin stayed for eight months in the Habsburg capital. One week after their arrival, the youths had news of the Warsaw uprising, which had been sparked off by an ill-judged attempt to assassinate the Grand Duke Constantin. Tytus immediately returned to play his part, leaving Chopin to fend for himself in a city where Poles were no longer welcome. Unsurprisingly, he now found it virtually impossible to arrange a concert of any importance and whiled away his time rather aimlessly with a small circle of new and old friends, including the Malfatti family (Dr Malfatti had been a close friend of Beethoven), one of his fellow students from Warsaw, Tomasz Nidecki, the young Czech violinist Josef Slavík and the cellist Josef Merk. His nostalgia for Poland is evident in letters to his new confidant Jan Matuszyński, then a medical student in Warsaw, and, if the language is at times excessive, the sentiments were no doubt real enough: 'I curse the moment of my departure'. It seems that he had considered returning with Tytus but had been dissuaded from doing so by his friend, partly on the grounds that his contribution to the Polish cause could best be made in other ways.

Several of Chopin's friends (including his teacher Elsner) were hopeful that he would one day create a great Polish opera, which might do justice to the national plight. He himself was aware that his talents lay elsewhere, but it does seem that following the uprising his attitude to 'Polishness' in music changed in significant ways. It was in Vienna that he wrote the first nine mazurkas that he himself released for publication, as opp.6 and 7, and it was through these that the genre was comprehensively defined. Perhaps more significantly, it was in Vienna that he stopped composing the salon polonaises of his early years, pieces barely distinguishable in style from the polonaises of Hummel, Weber and other non-Polish virtuosos. When he returned to the polonaise several years later he was able to redefine it as a genre, allowing it to take on a quite new, explicitly nationalist, significance. It goes without saying that Chopin's music cannot be confined by a nationalist aesthetic, but that it played a part in the development of cultural nationalism, and not only in Poland, is beyond question.

Grand Concert

VOCAL ET INSTRUMENTAL

DONNÉ

Par M. Frédéric Chopin, de Varsovie,

Dimanche 15 Janvier 1832, à huit heures précises du soir,

DANS LES SALONS DE MM. PLEYEL ET CIE.,

Rue Cadet, N°. 9.

PROGRAMME.

Première Partie.

1°. Quintetto composé par Beethoven, exécuté par MM. Baillot, Vidal, Urhan, Tilmant et Norblin.
2°. Duo chanté par Mlles. Toméoni et Isambert.
3°. Concerto pour le Piano, composé et exécuté par M. F. Chopin.
4°. Air chanté par Mlle. Toméoni.

Deuxième Partie.

1°. Grande Polonaise, précédée d'une Introduction et d'une Marche, composée pour six Pianos, par M. Kalkbrenner, et exécutée par Messieurs Kalkbrenner, Mendelsohn-Bartholdy, Hiller, Osborne, Sowinski et Chopin.
2°. Air chanté par Mlle. Isambert.
3°. Solo de Hautbois, par M. Brod.
4°. Grandes Variations brillantes sur un thème de Mozart, composées et exécutées par M. F. Chopin.

On trouve des Billets aux Magasins de Musique de MM. Schlesinger, rue de Richelieu, n°. 97; Ig. Pleyel et C., boulevart Montmartre; Pacini, boulevart des Italiens; Lemoine, rue de l'Echelle.

PRIX DU BILLET : 10 FR.

1. *Programme for Chopin's first Paris concert at the Salle Pleyel; it was postponed from 13 January 1832, owing to Kalkbrenner's illness, and finally held on 26 February*

On 20 July 1831 Chopin finally left Vienna, following difficulties in securing a passport from the Russian authorities. He stayed in Munich for a month and then proceeded, by way of Stuttgart, to Paris. The two weeks spent in Stuttgart were among the darkest of Chopin's life, as his diary entries reveal. Even by Chopin's standards, it was a period of agonizing indecision. He was far from friends and family, and he was painfully conscious that he was dependent still on funds from his father. As yet he had shown little evidence that he could establish a reputation beyond Warsaw, though at the same time he was all too well aware of the limitations of musical life in Poland. It was while in Stuttgart that he learnt of the failure of the uprising, and he gave vent to his feelings in an extraordinary, barely coherent outpouring of grief in his album. 'O God! You are there! You are there and yet you do not take vengeance! . . . Oh father, so this is how you are rewarded in old age! Mother, sweet suffering mother, you saw your daughter [the youngest child Emilia] die, and now you watch the Russian marching in over her grave to oppress you!' To return to Poland was now out of the question, and a few days after the 'Stuttgart diary' he was in Paris.

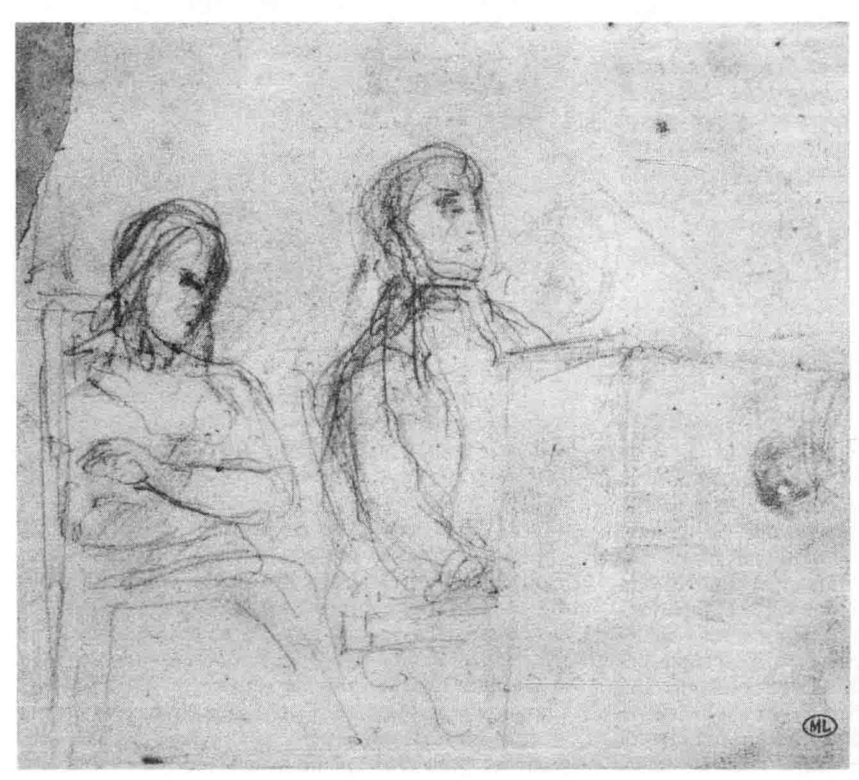
Two months later he was writing home in a very different frame of mind. From the start he felt at home in Paris, not least because sympathy for the Polish cause was distinctly fashionable there, and Polish émigrés were everywhere to be seen. He was overwhelmed by the cultural life of the capital, not only by the Opéra, naturally, but also by the 'swarm' of pianists who were launching the new season of concerts just as Chopin arrived. He even considered a course of lessons with one of the most famous of them, Frédéric Kalkbrenner. It was partly through Kaklbrenner's offices that Chopin arranged his first Parisian concert, which took place in the Salle Pleyel on 26 February 1832 (fig.1), and included the E minor Concerto. A supportive and perceptive review by Fétis clearly did Chopin no harm at all. Nor did his growing acceptance by other young artists and musicians in the city, including Hiller, Liszt, Berlioz and the cellist Auguste Franchomme. By the end of 1832 he was in constant demand socially, and it was partly due to this that an alternative career began to open up for him. His sources of income in the early days in Paris had come partly from his father, partly from private performances and partly from modest sales of his published music. From the winter season of 1832 onwards they came predominantly from teaching, and he was soon in such demand that he could charge exorbitant fees.

For the next two years his reputation as a teacher of exceptional quality, if somewhat unconventional method, grew steadily. So too did his fame as a performer. He largely avoided public concerts, but continued to grace the salons, with their air of intimacy and exclusivity, and to these occasions his technique as a performer seemed perfectly suited. Descriptions are colourful: 'The marvellous charm, the poetry and originality, the perfect freedom and absolute lucidity of Chopin's playing cannot be described. It is perfection in every sense'. 'When he embellished – which he rarely did – it was a positive miracle of refinement'. Schumann famously described Chopin, playing the A♭ Etude op.25 no.1, 'bringing out' the inner voices from the accompaniment figuration. It is noteworthy that as a composer he turned away at this time from the genres of the concert hall, the variations, rondos and concert pieces which had occupied so much of his time in Warsaw. Instead we have mazurkas, nocturnes and études, where the achievements of public and salon pianism were distilled and refined into a musical style of remarkable individuality. Moreover this music was beginning to reach the wider world. In early 1833 Chopin sold publishing rights to Maurice Schlesinger, and at the end of the year his music began to appear 'simultaneously' in France (Schlesinger), England (Wessel & Co) and Germany (Kistner, and later Breitkopf & Härtel). The music sold, and critical reception was favourable. Chopin, in short, was doing well in Paris.

3. THE BEST SOCIETY: 1834–9. By late 1834 he had settled into a stable routine of teaching, composing and performing in the salons. There were, however, some more public appearances during the season of 1834–5, and of these the most important were two concerts in April: a performance of the E minor Concerto at the Théâtre Italien under Habeneck, and an appearance under the same conductor at the prestigious Société des Concerts du Conservatoire, where he chose to play the *Grande polonaise brillante* op.22. The critical reception of these concerts was by no means unfavourable, but it is significant that following them Chopin resolutely refused invitations to appear before the wider public for several years. Increasingly he saw himself as a composer rather than a pianist-composer, and by the summer of 1835 he had consolidated the considerable achievements of his shorter genre pieces within the context of more large-scale compositions, including the two Polonaises op.26, the first Scherzo op.20 and the first Ballade op.23. The more enlightened critics were beginning to see in these works the mark of a composer of real stature – one of the most radical and penetrating musical minds of the post-Beethoven era.

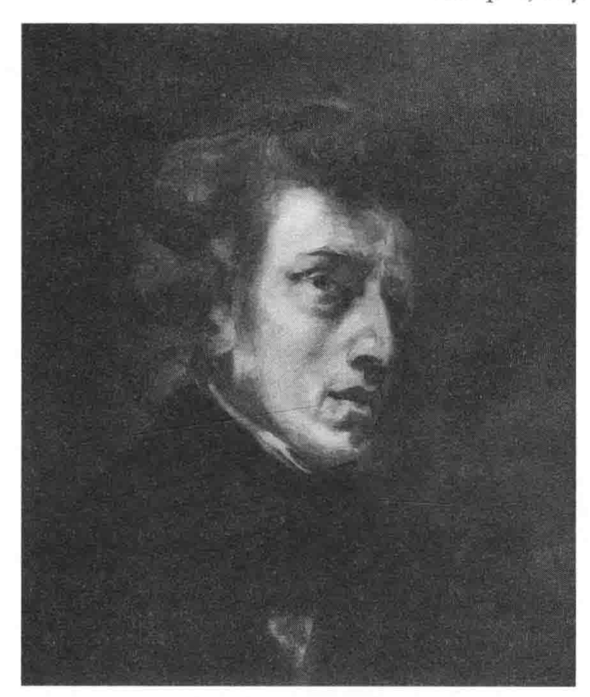
In this climate, thoughts of returning to Poland may have steadily receded from Chopin's mind. At the same time he depended heavily on the Polish community in Paris, and especially on the colourful Wojciech Grzymała, the earnest Julian Fontana (who became his general factotum and copyist), and, closest of all, Jan Matuszyński, who had moved in with Chopin when he arrived in Paris in the spring of 1834. He undoubtedly had periods of homesickness and debated returning to see his family on numerous occasions. But despite the official amnesties he was nervous of renewing his Russian passport and placing himself at the mercy of Russian officials in Warsaw. In the end he arranged to spend a month with his parents in Karlsbad in the summer of 1835. It was on his return journey from that happy occasion that he had another reminder of home, meeting in Dresden with one of his father's boarders Felix Wodziński. When he called on the rest of the Wodziński family, he was greatly taken with the 16-year-old Maria, whom he had last seen five years earlier in Warsaw. The following summer (1836) he spent the whole of August with the Wodzińskis at Marienbad, and on 9 September, his last night there, he proposed marriage to Maria 'at the twilight hour' and was given some grounds for hope by her mother ('Look after your health since everything depends on that').

The next year was a period of waiting, and it is intriguing that in the course of it Chopin's social life intersected briefly with that of George Sand. In October the novelist had installed herself at the Hôtel de France along with Liszt and his mistress Marie d'Agoult. Chopin met her at the Liszt salon and at a soirée in his own apartment, and was decidedly unimpressed. 'What an unattractive person La Sand is. Is she really a woman?' At this stage, his thoughts of love were directed only to one source, and, as the season drew to a close, he began to despair of hearing from the Wodzińskis, whom he hoped to join again for the summer months. A brief visit to London with Camille Pleyel in late July 1837 found him in 'a dreadful state of mind', and it was during that visit that a letter from Maria's mother was forwarded to London, putting paid to any hopes of marriage. Alone and depressed, he spent the rest of the summer in Paris immersed in work, preparing some of his existing pieces for publication (including the Etudes op.25 and the Impromptu op.29) and working on new compositions such as the second Scherzo, the Nocturnes op.32 and perhaps the *marche funèbre* which would later be incorporated into the B♭ minor Sonata (the precise dating of this movement is difficult to determine).



The following April (1838) Chopin met George Sand again. Both of them had come through a difficult period involving a sense of loss, and this time their love was kindled almost instantly, despite the obvious contrast in their backgrounds and personalities. It was an attraction of opposites perhaps, and Sand was probably right when she later remarked that it had been above all a strong maternal instinct which had drawn her to Chopin. Whatever the truth of that, the pair were lovers by early June, and they conducted the early stages of their affair mainly within the circle of Sand's friend, Countess Charlotte Marliani, wife of the Spanish consul in Paris. It was at the Marliani's that they hatched a plot to spend the winter months of 1838–9 in Majorca with Sand's two children, partly to escape the difficulties posed by her former lover Félicien Mallefille. It was an ill-considered venture, during which Chopin's health deteriorated rapidly. For most of the time their rooms were in an old Carthusian monastery at Valldemosa, a few hours' journey from Palma, and it was accommodation which was quite unable to withstand the harsh Majorcan winter. Sand proved herself an attentive nurse, an effective tutor (to her two children) and a resourceful provider (the locals treated the group with the utmost suspicion and were reluctant even to sell them basic provisions), while at the same time carrying on with her writing. Nor was Chopin idle in Majorca. On 22 January he was able to write to Pleyel, 'I am sending you my *Préludes*. I finished them on your little piano which arrived in the best

possible conditions in spite of the sea, the bad weather and the Palma customs'.



By late January Chopin's illness had reached a shocking state, and the party was obliged to leave the island. There followed a long period of convalescence in Marseilles under the care of Dr Cauvières, a friend of the Marlianis. Although the Majorcan doctors had clearly diagnosed consumption, Cauvières, like other French doctors who attended to Chopin, insisted that there was no major illness (it is distinctly possible that different traditions of medical opinion rather than faulty diagnoses lay behind these divergent views). In any event, Chopin was consoled. In a letter to Fontana from Marseilles, he wrote specifically, 'they no longer consider me consumptive'. Dr Cauvières was undoubtedly right about the need for rest, and by May Chopin was feeling bored, but very much healthier. He had already decided to spend the summer months at Sand's home in Berry, and on 1 June he caught his first glimpse of Nohant, the manor house which would play such an important role in his life for the next eight years.

4. Years of refuge: 1839–45. A new routine now developed for Chopin, where the summers (apart from 1840) would be spent in Nohant and given over largely to composing, while the winter season would see him in Paris, teaching and occasionally playing. Whatever may be said of Chopin's relationship with Sand, it did provide him with a stable home life – the first since his Warsaw days – and consequently with the ideal material and emotional conditions for sustained composition. Much of his greatest music was composed in Nohant, beginning with that first summer of 1839, when he wrote the Mazurkas op.41, the second of the two Nocturnes op.37, the F♯ major Impromptu op.36 and the remaining three movements of the B♭ minor Sonata op.35. Yet even during his first visit there Chopin quickly became restless and constantly needed congenial company. He found himself hankering after the city, his real milieu, and when they returned to Paris in October, he remained there for the next 18 months. He took rooms at 5 rue Tronchet and spent his days teaching there until around four, before making his way to Pigalle, where Sand had rented two twin-storey summer-houses. It was a comfortable routine, which enabled Sand and Chopin to maintain a degree of independence, which both of them clearly needed.

From the start there were tensions in the relationship. For one thing they moved uneasily in each other's social circles. Sand had little time for Chopin's 'society' friends, nor for the Polish clique, Grzymała apart. Nor did Chopin warm to Sand's artistic, often rather bohemian, milieu, though he made an exception of Delacroix and engaged in lengthy (and revealing) debates with him about art and music. He had little interest, moreover, in the literary and political projects which occupied so much of Sand's time and energies; and where he did engage with them his innate conservatism stood in sharp contrast to her own radical agenda. There were other, more personal tensions. Increasingly Chopin was prone to petty and obsessive jealousy and suspicion about Sand's friendships with others, fuelled no doubt by her colourful reputation and by the fact that physical relations between the couple lasted for a relatively short time. It seems clear that – for Sand – a maternal feeling was the dominating factor ('I look after him like a child, and he loves me like his mother'), but it is far from certain that Chopin shared this view. Unhappily much of the correspondence between them was destroyed by Sand, so our picture of the relationship remains incomplete. But it does seem that, for all the difficulties, the bond between them was powerful. As late as 1845 she was able to write, 'Love

2. Chopin and George Sand: sketch by Eugène Delacroix, pencil, 1838 (Musée du Louvre, Paris); the intended double portrait (in another version she stood behind Chopin) was later divided into two separate portraits

3. Fryderyk Chopin: portrait by Eugène Delacroix, 1838 (Musée du Louvre, Paris); for an earlier sketch see fig.2

me, dear angel, my dear happiness, as I love you', scarcely the language of detachment.

Although Chopin's critical standing as a composer grew steadily during the 18 months he spent in Paris from October 1839 to June 1841, it was in reality a far from productive period. It seems that around this time he engaged in a major re-examination of his artistic aims, and it was only when he returned to Nohant for the summer of 1841 that the results became evident. Interestingly he requested treatises on counterpoint almost as soon as he arrived, and by the end of the summer he had completed the Prelude op.45, the Nocturnes op.48, and two major works, the A♭ Ballade op.47 and the F minor Fantasy op.49. He was increasingly perfectionist about his art at this time, writing of the Ballade and Fantasy, 'I cannot give them enough polish', and his compositional process became correspondingly slow and laborious. The richness and complexity of the music of the 1840s is a testament to this, almost as though the difficulty of composition and the resistance it set up wrested from him only music of an exceptional, transcendent quality. The following summer in Nohant (1842), part of it spent in the company of Delacroix, produced some of the great works of his later years, including the Mazurkas op.50, the A♭ major Polonaise op.53, the F minor Ballade op.52 and the E major Scherzo op.54.

When Chopin and Sand returned to Paris in August 1842 they moved to new accommodation in the Square d'Orléans, close to their friends the Marlianis, and also incidentally to Kalkbrenner and Alkan. It was a satisfactory domestic arrangement. But Chopin's health was giving cause for real concern, and the relationship with Sand was deteriorating, partly due to growing tensions within the family. All of this, together with his inability to recapture his earlier fluency in composition, contributed to his low spirits in the winter of 1843–4. But the hardest blow of all came in May 1844, when he learnt of the death of his father. Sand immediately whisked him off to Nohant, but he refused to be consoled until his sister Ludwika, to whom he had always been close, announced her intention to visit France with her husband that summer. They met in Paris in July and the visitors divided their time between there and Nohant until they departed for Poland in early September. 'We are mad with happiness', Chopin wrote. But it was not to last. The winter season brought further strains in his relationship with Sand, and when they set out for Nohant in June 1845 tensions within the family circle were beginning to come to a head.

5. Twilight: 1845–9. George Sand's son, Maurice, was aged 22 in 1845, and increasingly resented Chopin's place in his mother's affections. Her daughter Solange, on the other hand, spent more and more time with Chopin. She was a fickle, not to say rebellious, teenager, a real problem for her mother, and it seems that Chopin was inclined to spoil her. The conditions were exactly right for a major family war, and the first skirmish took place in the summer of 1845. The catalyst was Augustine Brault, a distant cousin who had in effect been adopted by Sand earlier in the year. Solange, who was jealous of the girl, accused Maurice of seducing her, and Chopin sided with Solange. He was quickly told to mind his own business by Maurice, and effectively by Sand herself. Things eventually quietened down, and a temporary truce was established. But shortly the whole of literary Paris was made aware of Sand's exasperation with Chopin and of her loss of faith in the relationship. Her novel *Lucrezia Floriani*, published in instalments during 1846, was blatantly autobiographical and far from flattering to Chopin: 'He [the central character] would be supercilious, haughty, precious, and distant. He would seem to nibble lightly enough, but would wound deeply, penetrating right to the soul. Or, if he lacked the courage to argue and mock, he would withdraw in lofty silence, sulking in a pathetic manner'. With hindsight it is difficult not to read the novel as a kind of post-mortem of their relationship.

Soon the real war began. In autumn 1846 Solange became engaged to a young landowner from Berry, Fernand de Préaulx, and the match was approved by both Sand and Chopin. A few months later, on 26 February 1847, she cancelled the engagement, having succumbed to the advances of a young sculptor, Auguste Clésinger. It was apparent to Chopin (and also to Delacroix, who spent much time with the family at this point) that Clésinger was an unscrupulous character, and specifically a fortune-hunter. In April the young man pursued Solange to Nohant (while Chopin was in Paris), and scenes of considerable confusion resulted, with Solange at one point plunging herself into an icy stream because she feared pregnancy. In the end the marriage was just about forced on Sand, but she proceeded without informing Chopin. Moreover when Clésinger discovered that his financial difficulties were not going to be instantly resolved by George Sand he caused extraordinary and violent scenes at Nohant, culminating in his and Solange's expulsion from the family home. Chopin's subsequent contacts with the Clésingers were viewed by Sand as a betrayal, while he in his turn refused to 'give up' Solange. Angry letters were written, and the outcome was, as Sand put it, 'a strange conclusion to nine years of exclusive friendship'.

Chopin never really recovered from this. His teaching round continued, of course, and he was even persuaded to give a public concert at the Salle Pleyel (the last three movements of the Cello Sonata op.65, with his close friend Franchomme). But before any semblance of normality could be restored in his life politics intervened in the shape of the February revolution of 1848. The reality of these events was for Chopin something to be avoided at all costs, and the means to do so were provided by his devoted Scottish pupil Jane Stirling. By April he was in London, where he gave several concerts and made his way (as usual) into the highest strata of society. He was far from at ease there, however. His health was sinking fast, he was making very little money and, above all, he was finding the attentions of Stirling and her relatives wearing in the extreme. 'They want me to go and see all their friends, whereas it is as much as I can do to keep body and soul together'. In August he was in Scotland, where the social round was even more tiring, and his consumption tightened its grip. 'Often in the mornings I think I will cough myself to death', he wrote to Grzymała. 'I am miserable at heart, but I try to deaden my feelings'. Increasingly his thoughts turned to Poland and to absent friends, and only a brief visit from his pupil Princess Marcelina Czartoryska succeeded in leavening a gloomy Scottish autumn.

It became increasingly clear that Stirling hoped to replace George Sand in Chopin's affections, though anything less amenable to Chopin would have been hard to find. He spoke the simple truth when he remarked that he was 'closer to a coffin than a marriage bed'. When he returned to London in October he weighed less than 45 kg, and although he managed one final concert for the Friends of Poland, his doctors were well aware that he was in the terminal stages of his illness and recommended that he return to Paris as soon as possible. He was well looked after during those final months in Paris. Friends rallied round, Jane Stirling offered financial help and in August his sister Ludwika arrived with her husband and daughter, providing just the family atmosphere that Chopin craved. As the word quickly spread that he was dying, friends and acquaintances gathered constantly in his new rooms in the Place Vendôme. Pauline Viardot remarked cynically that 'all the grand Parisian ladies considered it *de rigueur* to faint in his room.' Then, on 12 October, Alexander Jelowicki, an acquaintance from Warsaw days, who had since taken orders, persuaded him to partake of the last sacrament. Five days later, in the presence of Solange and his pupil Adolphe Gutmann, Chopin died.

6. FORMATIVE INFLUENCES. Chopin's earliest compositions, especially his polonaises, variation sets and rondos, clearly register the influence of the 'brilliant style' of public pianism associated with composers such as Hummel, Weber, Moscheles and Kalkbrenner, among others. The keyboard polonaise reigned supreme in the salons of early 19th-century Poland, and it was usual for young composers to cut their teeth on it. Chopin's early 'brilliant' polonaises, which have little in common with the later 'heroic' works composed in Paris (the only ones the composer himself chose to publish), indicate that in a very short time he managed to assimilate many of the standard materials of bravura pianism. Essentially they are essays in virtuoso figuration and exuberant right-hand ornamentation, complete with hand crossings, wide leaps, trills and double trills, arpeggio-based passage-work, and other stock-in-trade devices of the pianist-composer. Excluding the two earliest, written in his eighth year, there are seven solo polonaises of this kind composed in Warsaw, and we may add the *Polonaise brillante* op.3 for cello and piano. They are pieces of considerable accomplishment. But they are hardly 'Chopinesque', and they give the lie to any notion that Chopin's unique sound world was somehow present from the start, that it appeared from nowhere, fully formed. The idiomatic figuration in these works was in fact closely modelled on an extensive repertory of post-Classical concert music, and it reached its zenith in the *Grande polonaise brillante* op.22 for piano and orchestra, which must rate as one of the peaks of the 'brilliant style'.

The variation sets, beginning with the Introduction and Variations on a German Air ('Der Schweizerbub'), belong to the same world, and again they include orchestral concert pieces, the 'Là ci darem' Variations op.2 and the Fantasy on Polish Airs op.13, in both of which we can hear pre-echoes of the mature Chopin. (The four-hand Variations on a Theme of Moore, and the *Souvenir de Paganini* are of disputed authenticity.) The final essay in this genre, the *Variations brillantes* op.12 on a theme of Hérold, was composed in Paris in 1832, but its conception and execution is very much in line with the Warsaw pieces, underlining that for Chopin the genre was inseparably linked to the virtuoso style. And this was also true of his involvement with the independent rondo. Following the Rondo op.1 he composed the *Rondo à la mazur* op.5 in 1826–7, the Rondo op.73a (later arranged for two pianos) in 1828, and the *Rondo à la krakowiak* op.14 for piano and orchestra in the same year. Again there was one final essay in the genre (op.16), composed in Paris in 1832 and belonging stylistically with the Warsaw-period music. In all these pieces, including the polonaises, we witness a young musician preparing

himself for a career as a pianist-composer, with the expectation of parading his wares in the salons and on the concert platforms of Europe's cultural capitals. Bravura figuration and ornamental melody, together with a formal process which squares the one off against the other, lie at the heart of this musical style. These were the essential ingredients of the post-Classical repertory, and they represent the starting-point for Chopin's musical thought.

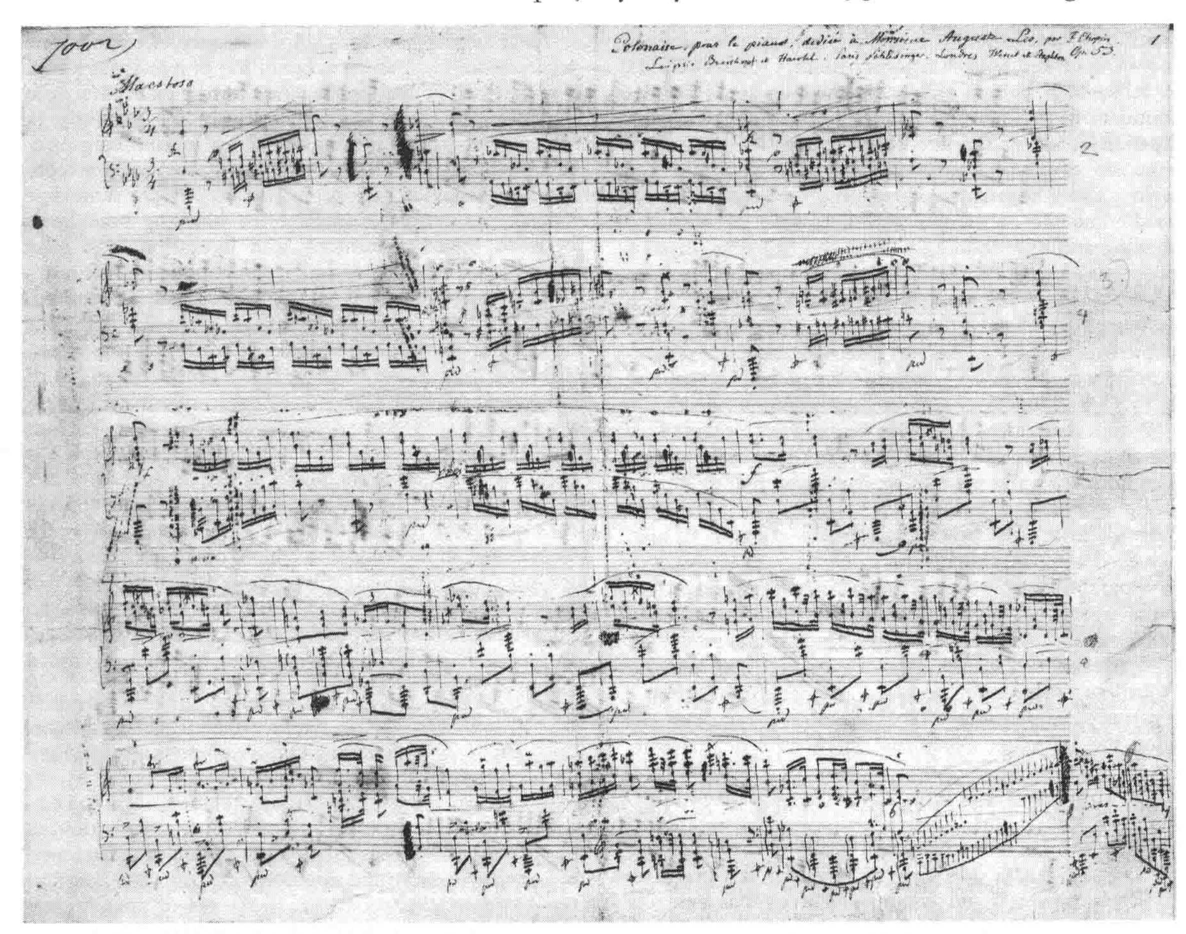
His debt to post-Classical pianist-composers in these early years represents a level of influence which might be characterized as 'direct emulation', a modelling process which is common enough in the formative stages of any composer's creative evolution. A rather different level of influence is invoked by Italian opera and Polish folk music, both of which were much loved by Chopin during the Warsaw period and beyond. Here the influence was indirect, in that it involved a transference of stylistic features from one medium to another, and thus a greater element of interpretation. Chopin was steeped in Italian (and to a lesser extent French) opera from an early age and, like many pianist-composers, saw a vital link between vocal bel canto and piano lyricism. Much of his ornamentation was transparently vocal in origin, stylizing the portamentos, *fioriture* and cadenzas which were part of the singer's art. Likewise his tendency to sweeten the melody with parallel 3rds and 6ths is strongly reminiscent of operatic duet textures. Such features were already prominent in the music of the Warsaw period, culminating in the first of the nocturnes (the E minor, published posthumously as op.72 no.1). Admittedly the operatic influence was partly mediated through existing keyboard repertories, especially that of John Field. But at a deeper level it left its mark on Chopin's whole approach to melody and melodic development. Characteristically he favoured the decoration, elaboration and variation of melodic 'arias' rather than thematic dissection and reintegration on the German model.

In his early mazurkas (and also in several of the little-known songs) Chopin turned to yet another musical background, the folk music of the Mazovian plains of central Poland, and especially to the rhythmic and modal patterns, the characteristic melodic intonations and the *duda* drones of the *mazur*, *kujawiak* and *oberek*. Here again the influence was both direct and indirect. Chopin had some personal contact with Polish folk music, but mostly it would have been mediated through salon dance pieces and songs *im Volkston* which would have been familiar to him from his earliest years in Warsaw. Either way the early mazurkas clearly evoke the world of the traditional folk ensemble of central Poland, where a melody instrument (violin or *fujarka*, a high-pitched shepherd's pipe) would often be accompanied by a drone (*duda* or *gagda*, a Polish bagpipe) and/or a rhythmic pulse (*basetla* or *basy*, a string bass). At a very early stage, Chopin made this genre his own. Even in youthful pieces, such as the 'improvised' mazurkas (the B♭ major and G major C[homiński and] T[urło] 100, 101), whose first versions were published in 1826, the unmistakable character of the mature mazurka is discernible. It is all the more marked in the three mazurkas later collected by Julian Fontana as op.68 nos.1–3, and especially in no.2, with its characteristic Lydian 4th, bourdon 5th pedal and iconoclastic harmonies (in the closing section of the trio).

There is a further level of influence, already apparent in the Warsaw-period compositions. This involved a radical reworking of forms, procedures and materials drawn from earlier masters, and especially from the Viennese Classical composers and Bach. Chopin's training at the Warsaw Conservatory involved studies in 18th-century counterpoint (Albrechtsberger and Kirnberger) as well as in the practice of sonata composition. Elsner liked to start his pupils off with polonaises and then to move through independent rondos and variation sets to sonatas, which they would usually begin at the end of the first year. Hence the Sonata op.4, completed in 1828 and dedicated to Elsner. The sonata's monothematic first movement, with its unusual (possibly Reicha-inspired) formal and tonal organization – the exposition is monotonal – is entirely characteristic of Elsner and his students. Significantly we find an equally unorthodox tonal scheme in the Piano Trio op.8 (1828–9), again a monotonal exposition and a reprise in which the second group modulates to the dominant minor. In other words, the weight of tonal activity is transferred from the early to the later stages of a work. In due course Chopin carried Elsner's formal and tonal principles through into his mature music, where it changed in radical ways the function of the reprise, and therefore the underlying shape, or 'plot', of sonatas and sonata-influenced works such as ballades. There is already a suggestion of this in the first movements of the two major works of the late Warsaw period, the piano concertos, the first extended compositions of Chopin to have an established place in the repertory. (A third concerto was left incomplete and later found its way into the *Allegro de concert* op.46.)

Although these are 'brilliant' concertos in the mould of Hummel, Field and Weber, they also represent something of a reworking of an earlier Mozartian model. Schumann went so far as to claim that 'if a genius such as Mozart were to appear today, he would write Chopin concertos rather than Mozart ones'. The concertos, in other words, mediate between the Classical and the post-Classical, between Mozart and the brilliant style. This is apparent in the formal organization of the F minor Concerto op.21, the first to be written. The relation between solo and accompaniment is closer to Hummel than to Mozart. So too is the duality of lyrical and configurative elements (poetry and display) within each tonal region, already at some remove from Mozart's delicate equilibrium between a ritornello-concertante principle and a developmental-symphonic principle. Yet right from the opening prelude, which embeds its procession of contrasted materials within an apparently seamless flow, this movement owes something to Mozart directly as well as something to Mozart by way of Hummel. And much the same is true of the slow movement. This has been described as Chopin's first 'nocturne', but the essential point is that, in its internal phrase and sentence structures, it is at least as much a transformation of Mozart as a continuation of Field.

Chopin himself paid tribute to Mozart in a famous comparison with Beethoven: 'Where [Beethoven] is obscure and seems lacking in unity . . . the reason is that he turns his back on eternal principles; Mozart never'. Elsewhere he made it plain that these eternal principles included strict counterpoint, and in this respect his teacher was Bach. The influence of Bach, already apparent in the contrapuntal surface of several of the very early works,



5. Autograph MS of the opening of Chopin's Etude in A minor op.25 no.4, composed 1832–4 (F-Pn Rés.50 [M.67])

including the Sonata op.4, came to the fore in two pieces composed right at the end of Chopin's Warsaw period, the first and second of the op.10 Etudes. Already in the *moto perpetuo* figuration of these pieces, where linear elements emerge discreetly through the surface pattern without disturbing the underlying harmonic purpose, we see indications of how Chopin would in due course reformulate Bach's legacy. Moreover in their formal organization – a unitary process of intensification and resolution (achieved through harmony and line) rather than dialectic of tonal contrast and resolution – the études reach back across the Classical era to Baroque antecedents. In the music of his full maturity this debt to Bach gained even greater significance as a direct motivator of Chopin's creativity, and it will be necessary to return to it shortly.

7. PIANO WRITING. It is worth noting that Chopin had already reached full maturity as a composer before he arrived in Paris in the autumn of 1831. Four of the familiar Chopin genres – the mazurka, nocturne, étude and waltz – were already in place, and in something like their mature formulation, before he left Warsaw. They were consolidated in Vienna and in the early Paris years by the earliest pieces in these genres released for publication by Chopin himself. These included the Mazurkas opp.6 and 7, composed in Vienna, the Nocturnes opp.9 and 15, the remainder of the op.10 Etudes, which were completed in Paris in 1832, and the E♭ major Waltz op.18, composed two years later, somewhat on Weber's formal model. By presenting his Viennese mazurkas to the publisher in conventional sets of four and five compatible pieces (opp.6 and 7), Chopin crystallized the genre and in a sense defined it, investing the salon dance piece with a complexity and sophistication which immediately transcended habitual meanings. Here, and in the early Paris sets (opp.17 and 24), he established a new model for the stylization of folk idioms, marrying elements of peasant music with the most 'advanced' techniques of contemporary art music in a cross-fertilization which would set the tone for Slavonic nationalists generally in the later 19th century. From this point onwards he carved out for the mazurka a special niche in his output, with a singular repertory of technical and expressive devices. It is fitting that his nationalism should have been expressed thus, through the renovation of a simple dance piece rather than through the more usual channels of opera and programmatic reference.

In a similar way, Chopin's engagement with an expressive aesthetic was filtered into the piano nocturne rather than made specific in the art song. When John Field published his first three nocturnes in 1812, neither the title 'nocturne' nor the 'nocturne style' were in any sense novelties, but they had not yet been drawn together to form a genre. By the 1820s, however, there was some measure of generic consistency in the nocturne, especially among composers associated with Field. Central to the genre was the idea of vocal imitation, whether of French *romance* or Italian aria, and this was facilitated by the development of the sustaining pedal, enabling those widespread arpeggiations supporting an ornamental melody which we recognize today as the archetype of the style. To some extent, then, Chopin's early E minor Nocturne already belonged to a tradition, but his op.9 set effectively formalized that tradition. If we were to speak of a normative design, it would be one which allows an ornamental aria (subject to cumulative variation) to alternate with a sequentially developing, tension-building theme. In reality, however, no two of the Chopin nocturnes are alike, and already in the op.15 set it became clear that the title 'nocturne', once its connotative values had been established, could attach itself to music of highly varied formal and generic schemes, and even – as in op.15 no.3, which effectively confronts a 'mazurka' and a 'chorale' – to pieces which seem blatantly to defy the expectations of the genre.

The major achievement of this creative period was the set of 12 Etudes op.10, whose composition spanned the Warsaw, Vienna and early Paris years. They have special

6. Autograph MS of the opening of Chopin's Polonaise in A♭ op.53, composed 1842 (US-NYpm)

significance within Chopin's output as the opus which most clearly signified his transcendence of the brilliant style, confronting virtuosity directly, but conquering it on home ground. The tradition of the étude had developed at the turn of the century as part of a much wider institutionalization of instrumental pedagogy, notably at the Paris Conservatoire; indeed there is a real sense in which the étude was a creation of the Conservatoire. By the 1830s it had already emerged as the principal channel for artistic virtuosity, joining forces with emergent 'lyric' and 'character' pieces to challenge the sonata as the archetypal keyboard genre. Unlike the virtuoso études of Liszt and Thalberg, Chopin's op.10 retains a link with the 'school étude', addressing one principal technical problem in each piece and crystallizing that problem in a single shape or figure. But it goes without saying that he achieved a balance between technical and artistic aims which was unprecedented in the earlier history of the genre. As Schumann remarked, 'imagination and technique share dominion side by side'.

The Etudes are a workshop in Chopin's piano technique, which was by common consent strikingly individual, predicated on a 'natural' hand shape (with B major as the paradigmatic scale), and on an acceptance, controversial at the time, of the imbalance and functional independence of the fingers. The third of the op.10 Etudes, a study in the control of legato melody and in its appropriate phrasing, perfectly exemplifies this, and an adequate performance of it would heed Chopin's caution that 'the goal is not to play everything with an equal sound, [but rather] it seems to me, a well-formed technique that can control and vary a beautiful sound quality'. He believed in a flexible wrist and supple hand, so that the wrist and not the arm is in movement. The first of the études, with its massive, striding arpeggios, would have been performed by him in just this way, and of course it further cultivates a capacity to use the pedal to best effect (as does the third étude in a rather different way). 'The correct employment [of the pedals] remains a study for life'. Moreover, in the interests of fluidity of movement and evenness of tone he was prepared to sanction unorthodox fingerings, as in the detailed autograph fingerings in the second étude. He was happy, for instance, to use the thumb on the black keys not only in the fifth ('black key') étude, where we would of course expect it, but also in the sixth, where it helps the performer maintain the legato of the countermelody alongside the sustained bass notes.

Chopin's mature piano style was defined above all in these works, bridging the final year in Warsaw and the early years in Paris. It remains essentially distinct from that of other bravura pianist-composers of the early 19th century, as it does from the lyrical character pieces of a Prague–Vienna axis (Tomášek, Voříšek, Schubert) and the 'symphonic' piano style of Beethoven, Schumann and Brahms. Drawing together aspects of Viennese bravura

writing (Mozart, Hummel) and a lyrical manner derived from French and English schools (Adam, Clementi, Field), it achieved a unique synthesis which in turn laid the foundations for later piano styles, notably in French and Russian music of the late 19th century. More directly than any of his predecessors, Chopin derived his piano writing from the instrument itself (its uniformity of sound, its diminuendo on every note, its capacity for dynamic shading and its sustaining pedal), and from the physical properties of the two hands (the limitations of compass within each of them, and the absence of any such limitation between them). Hence the idiomatic counterpoint which characterizes his textures, and their separation into two layers, collaborating in many different ways, but above all functioning as 'sonoristic counterweights'.

Within that global approach we can identify three very broad categories of piano texture in these early works. The mazurkas and waltzes represent the first and most straightforward category, where the basic texture is derived from the functional dance, though Chopin achieved a remarkable diversity of keyboard layout even in apparently simple textures such as these. The nocturnes form a second category, comprising an ornamental cantilena with widespread broken chord accompaniment. Characteristically there is a delicate balance here between 'vocal' substance and 'pianistic' ornament, and often a blurring of distinction between the two, as parallel extracts from the F♯ major Nocturne op.15 no.2 demonstrate (ex.1). Fundamental to this texture is a rhythmically stable accompaniment layer which promotes continuity, filling the 'gaps' in the melody and thus helping to simulate vocal legato, supporting it when it takes off in flights of ornamental fancy, and binding together its impulsive contrasts of register and dynamics. The characteristic role of the accompaniment layer is interactive rather than supportive (there is on occasion a motivic relationship between the two layers), emphasizing that the 'Chopin melody' is first and foremost a texture and not just a line.

The études make up a third category of texture, one whose main component is figuration of numerous kinds. The first two études set the terms for the main categories of figuration, generated respectively by harmony (a widespread arpeggiation) and melody (an intricate chromatic scalar movement), and these categories are replicated elsewhere in the op.10 collection. At the same time Chopin's textures in op.10 often blur the boundaries between melody, harmony and figuration, and even between principal voice and accompaniment. This interpenetration of functions tends in two opposing directions, towards a differentiated pianistic counterpoint on the one hand, and an undifferentiated sonority on the other. These tendencies can be illustrated by the sixth and third études respectively. Superficially the texture in op.10 no.6 is a 'melody' and 'accompaniment', but in reality the four 'voices' balance each other in a counterpoint which is perfectly moulded to the piano, where independent lines can be added or lost with no threat to the contrapuntal flow nor to the illusion of a homogeneous texture (ex.2). Conversely, in the middle section of op.10 no.3 the music splinters into symmetrically mirrored figurations which threaten (but only threaten) to lose touch with an underlying harmonic foundation (ex.3). In such passages we sense harmony dissolving into 'colour', to use a common metaphor.

8. Musical style. It was through these mazurkas, nocturnes and études that Chopin's piano music acquired its unmistakable sound. While that sound may be explained on one level as a transformation of early 19th-century models, it can also be viewed as a recreation, in terms entirely idiomatic for piano, of Bach's ornamental melody, figuration and counterpoint. All three textural types had receded somewhat in the era of the Classical sonata, and they were in a sense reinvented by Chopin during his early maturity. The next stage of his creative journey was to find ways of harnessing the acquisitions of the early Paris years – in melody, figuration and

Ex.1 Nocturne in F♯ major op. 15 no. 2

Ex.2 Etude in E♭ minor op. 10 no. 6

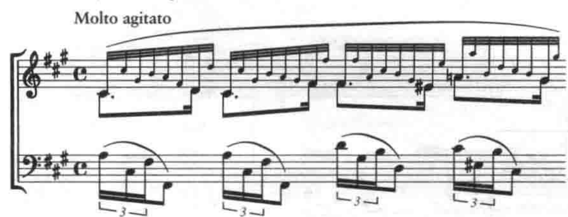
harmony – to the needs of (relatively) more extended forms, and this he achieved with the Two Polonaises op.26, the first Scherzo op.20 and the first Ballade op.23. These were all composed around the same time (1834–5), and for each of the three genres there were to be three further opuses, culminating in the A♭ major Polonaise op.53, the E major Scherzo op.54 and the F minor Ballade op.52, all composed during 1842–3. In other words the entire corpus of mature polonaises, scherzos and ballades was composed between 1834 and 1843. (Intriguingly, a similar chronology applies to the impromptus, which again consist of four opuses.) By the time of his first visit to Nohant in June 1839 Chopin was about halfway through this sequence, having completed the op.40 Polonaises, the second and third Scherzos and the second Ballade.

Paradoxically his interest in the epic during the late 1830s was matched by an interest in the epigrammatic. His 24 Preludes op.28 must count as one of his most radical conceptions, giving a quite new meaning to a genre title mainly associated in the early 19th century with the contemporary practice of 'preluding' in extempore performance. Chopin's pieces, however aphoristic, transcend such associations and demand rather to be regarded as works of substance and weight. Like each volume of Bach's '48' (which Chopin brought to Majorca, where he completed the Preludes), Chopin's pieces form a complete cycle of the major and minor keys, though the pairing is through tonal relatives (C major/A minor) rather than Bach's tonal parallels (C major/C minor). They are the first preludes to be presented as a cycle of self-contained pieces, where each can stand alone – issuing a challenge (as Jeffrey Kallberg puts it) to 'the conservative notion that small forms were artistically suspect or negligible' – while at the same time contributing to a single overriding whole, a 'cycle' enriched by the complementary generic characters of its components and integrated by the tonal logic of their ordering (Kallberg, R1992).

During these pre-Nohant years (1834–9) Chopin also consolidated some of the genres already established during the Vienna and early Paris years, including songs (four of those posthumously published as op.74), impromptus (op.29 in A♭ major, the second to be composed and first to be released for publication), nocturnes (the op.27 and op.32 sets, and the first of the two op.37 pieces), waltzes (op.34), mazurkas (opp.30 and 33) and études (the twelve of op.25). It was, in short, an immensely productive period, and the music produced during it can form the basis for useful generalizations about Chopin's musical style. We may begin by returning briefly to texture and

Ex.3 Etude in E major op. 10 no. 3 (bars 46–51)

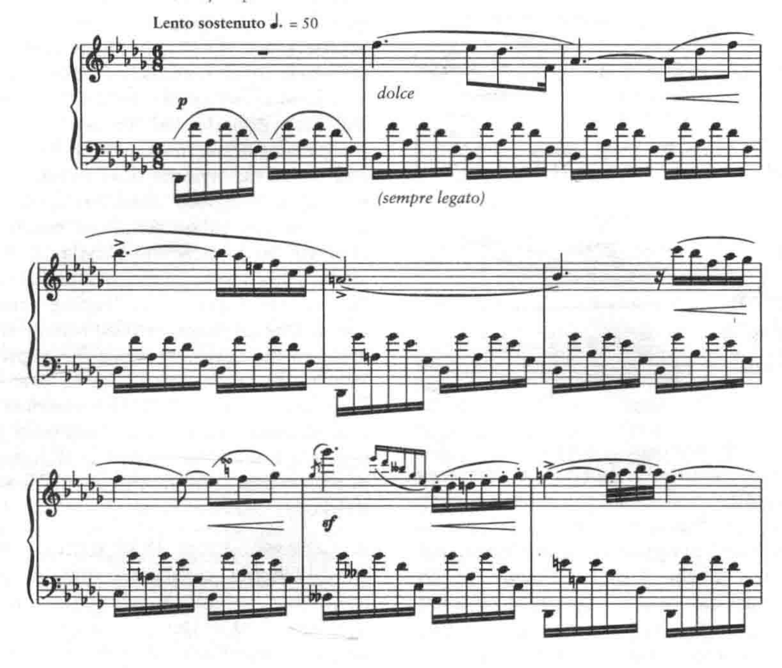
Ex.4 Etude in F minor Op. 25 no. 2



figuration. The Etudes op.25 and Preludes op.28 extend some of the subtleties of figuration already found in op.10, and especially the tendency to inject an unprecedented density of information into apparently standard melodic and harmonic figurations from the Classical and post-Classical traditions. The blurring of function between melody and figure in the right hand and between broken chord and contrapuntal line in op.25 no.2 is characteristic (ex.4). So too is the interplay of functions within a single figuration – effectively a compound of discrete though interactive particles – in op.28 nos.1 and 8 (ex.5). The potent pairing of intricate, variegated figurations and a strong underlying harmonic structure, characteristic of these examples, amounts to a basic ingredient of the style. It is by no means unique to the études and preludes, informing even the apparently transparent, but in reality highly differentiated, melody and accompaniment textures found in the nocturnes.

Chopin's melodies fall into one of two general categories. The most common is the stanzaic melody, whose

Ex.5 Prelude in C major Op. 28 no. 1



Prelude in F♯ minor Op. 28 no. 8

internal repetitions are modelled on variants of a well-established archetype, the eight-bar classical sentence (consider the second theme of op.27 no.2 (bars 10–17), with its two-bar phrase, varied repetition and four-bar liquidation). In broad stylistic terms, such melodies are often similar to, and were on occasion influenced by, those of the early 19th-century operatic aria. The second category is a freer, non-repetitive melody, unfolding continuously in the manner of operatic arioso or even recitative (as in op.25 no.7), or through a process of developing variation such as the familiar opening of op.27 no.2 (ex.6), where the expressive character of the melody results from an unpredictable placing and weighting of the kinds of appoggiaturas which were common currency for Mozart. Characteristically, the underlying regularity of the eight-bar sentence is mitigated by the internal asymmetry of its two unequal phrases, a feature often found in the morphology of Chopin's music. The treatment (as opposed to the structure) of the Chopin melody is characterized above all by a process of cumulative variation and transformation (see the restatement of ex.6), where the melody is enriched by ornamentation, textural amplification, contrapuntal intensification, or elaboration of its accompaniment layer. This supports a general tendency to end-weighted structures, involving the enlargement or apotheosis of materials (as in the climactic re-scoring of the second theme of the G minor Ballade, or the evolutionary, goal-directed melodic extensions of the C♯ minor Etude op.25).

Much of the innovatory quality of Chopin's harmonic practice amounts to either the foreground chromatic elaboration of familiar diatonic progressions or an extension (and speeding up) of the chromatic symmetries commonly found in Classical development sections. Two examples from the polonaises will serve (exx.7 and 8). In both cases the combination of an 'organic' chromaticism and the local attraction of the dominant 7th harmony poses no serious threat to the security of a stable underlying diatonic anchor. In slower pieces such organic

Ex.6 Nocturne in D♭ major op. 27 no. 2

Ex.7 Polonaise in C minor Op. 40 no. 2 (bars 56–64)

chromaticism can be powerfully expressive, as in the well-known E minor Prelude (op.28 no.4) where the opening surface chromatic succession (bars 1–13) elaborates a simple diatonic progression in the depths. In all these cases the 5th relationship is all-important on the foreground of the harmony, where it is largely without tonal significance. Intriguingly, it is used only sparingly at deeper levels of harmonic structure. The major extended works, for example, conspicuously avoid the dominant as a means of articulating larger formal divisions. Thus the first and third Scherzos, both in a minor key, move to the tonic major for their trios, while the second reverses the procedure in that the D♭ major moves to C♯ minor for the trio (the 'tandem' of B♭ minor and D♭ major in this work is another feature of style in Chopin). Likewise the polonaises of opp.26 and 40 explore tonic, subdominant and submediant relationships rather than dominant, while in the first two ballades, it is 3rd-related regions which dominate the tonal organization.

The underlying strategy in all these cases was to reserve the 5th relationship for the latest possible stage of the tonal argument, where it could function as a powerful structural dominant at the background level. And very much the same thinking informs a general tendency for

Ex.8 Polonaise in C♯ minor Op. 26 no. 1 (bars 59–64)

Chopin to begin outside the tonic. Occasionally this means no more than opening with chord IV or V rather than I (giving an impression of starting in mid-thought), but in numerous works the overall tonal scheme is e'emergent' or 'directional' in character, as in the second of the op.30 Mazurkas or the A minor Prelude op.28 no.2. Usually such pieces can be described as monotonal with a non-tonic opening. But in some extended works, notably the second Scherzo and op.49 Fantasy, the structural tension between two tonal regions (admittedly tonal 'relatives' in each case) is enough to suggest a two-key scheme. In the second Ballade Chopin went further. Here the alternation of F major and A minor refuses to permit a monotonal analysis, and as such the work represents a significant departure from early 19th-century structural norms.

We can identify two contrasted formal tendencies in Chopin's music, the one towards a continuous, strongly directional form, the other towards a sectionalized ternary design, an expansion of the classical three-part song form. In continuous forms the subtlety often lies in Chopin's control of the 'intensity curve' of the piece, which may well be counterpointed against its formal design – a counterpoint of dynamic shape and 'spatial' pattern. This is true of miniatures such as the G♯ minor Prelude op.28 no.12, but also applies to more extended works such as the first Ballade, where there is a calculated non-congruence between a strongly directional intensity curve and a 'static' symmetrical design (in both cases it is strategies of closure which bridge the gap between shape and pattern). In sectionalized ternary designs Chopin's concern is to achieve a balance between contrasted elements and to soften formal divisions through common motivic substance, voice-leading connections across the caesura, or (in larger works) transitional materials which mediate the contrast, as in the approach to the central 'hymn' of the third scherzo. In later works, such as the Polonaise-Fantasy op.61, he demonstrates incomparable skill in sustaining a level of intensity across the extended time-span of a large ternary design, not least by strategies of concealment, where the formal functions become clear to us only after the event.

9. Genres. From 1839 until the break with George Sand, Chopin composed mainly during the summer months at Nohant. Much of the music from this period was produced in the tranquility of this setting, and it is no doubt significant that for the one year he stayed in Paris (1840) his output was exiguous – really only the Waltz op.42 and the *Trois nouvelles études*, commissioned by Moscheles for the second volume of his (and Fétis's) *Méthode des méthodes*. In general Chopin worked more slowly during these years, a measure of his growing self-doubt and increasingly self-critical approach to composition. The early 1840s have often been described as a turning-point in his creative evolution, marked by a renewed interest in counterpoint, by a more sparing and structurally focussed ornamentation and by a strengthening command of structure. This is apparent in the very much more expansive and ambitious mazurkas dating

Ex.9 Nocturne in E♭ major Op. 55 no. 2

from this period (opp.50 and 56), as well as in the nocturnes (opp.48 and 55). The last of the op.50 mazurkas, for example, is a powerful rhapsody whose contrapuntal intricacy and intensity of expression are only lightly earthed by folkloristic elements. This is a very considerable distance from the tone of the early mazurkas composed in Warsaw and Vienna. Likewise the 'dissonant counterpoint' in the second of the op.55 nocturnes (ex.9) places the familiar melody and accompaniment layout of the nocturne style in a quite new light, characterized by a stratification of rhythmically differentiated lines which is far removed from the relative textural simplicity of the early nocturnes.

A similar ambition attends the major extended works composed during these Nohant years. They include two polonaises (opp.44 and 53), two ballades (opp.47 and 52) and a scherzo op.54, as well as the second and third piano sonatas (opp.35 and 58), the Fantasy (op.49) and the Berceuse (op.57). The B♭ minor Sonata op.35 was completed during that first summer in Nohant (the slow movement had been drafted at least two years earlier). Here Chopin effectively used the sonata genre as a framework within which the achievements of his earlier music – the figurative patterns of the études and preludes, the cantilenas of the nocturnes, and even the periodicity of the dance pieces – might be drawn together. In this sense the work might be seen as a kind of dialogue between the public pianism of the brilliant style and the German sonata principle, though it should be noted that, as in his earlier essays in sonata form, the first movement's reprise is distinctly unorthodox. The later B minor Sonata op.58 takes a step closer to the German tradition, achieving in its first movement in particular a process of continuous development and transformation of motifs, a close integration of melody and accompaniment, and a density of contrapuntal working which are in every way worthy of Brahms. Here Chopin tackled the historical archetype of the most celebrated and prestigious of classical forms on its own terms, so to speak, and emerged victorious.

Significantly the earlier sets of two polonaises (opp.26 and 40) were replaced at this time by single, more extended works (opp.44 and 53), in which Chopin achieved an epic quality through a kind of essentialism, an elemental reduction of the musical materials to dance archetypes – rhythmic and melodic – stripped of all 'inessentials'. The op.53 Polonaise is one of a group of three major works dating from 1842–3, all of them sharply contrasted in character. Thus the fourth scherzo (op.54) is as calm, benign and untroubled as the Polonaise is fierce and heroic. In particular it is concerned with balance and proportion, laying out spacious, relatively self-contained paragraphs which maintain interest over a lengthy time span through a delicate juxtaposition of contrasts. Different again is the fourth Ballade (op.52), by common consent one of Chopin's masterpieces, and one of the masterpieces of 19th-century piano music in general. Few of his other extended works can match it in formal sophistication and in the powerful goal-directed sweep of its musical ideas. Here Chopin brought to summation the narrative techniques associated above all with the ballades, involving an interplay of strongly characterized generic themes, a transformation of conventional (sonata-based) formal successions and a powerful drama of large-scale tonal relationships.

These were seminal, culminating compositions in Chopin's development, triumphantly confirming the essential elements of their respective genres, as he understood and (re)defined them. In each case his transformation of the existing generic associations was radical, though it still retained some contact with original meanings. At the same time the transformation resulted

in new, relatively clearly defined and consistent generic definitions. Thus at the heart of all four Chopin scherzos lies a reinterpretation of the element of contrast essential to the conventional genre, such that the central formal contrast is built into the detailed substance of the work. Likewise all four ballades transform the sonata-form archetype in such a way that the resolution of tonal tension is delayed until the latest possible moment. This in turn helps to condition the larger 'plots' of these works, which may well have been inspired by the tradition of the literary ballad. In a word, the ballades take on the character of a story by invoking and then modifying conventional schemata, and by focussing the events through a distinctive (generic) characterization of themes, the 'personae' of the drama. And in most cases the story culminates in that 'whirlwind of musical reckoning' so characteristic of the poetic ballad. Even miniatures such as the four impromptus exhibit a measure of generic stability, reinforced by obvious commonalities in their musical material.

A comparable stability might be demonstrated for the other Chopin genres, and again the connotative values of the titles echo themes in the wider repertory: improvisation in the prelude and fantasy, vocal transcription and imitation in the nocturne. In short, Chopin's achievement was to give generic authority to the free-ranging devices of an emergent, early 19th-century piano repertory, and that at a time of considerable permissiveness, when titles were used casually and interchangeably, and often emanated from the publisher rather than the composer. Where such stability exists, genre can take on a powerfully communicative role, functioning somewhat as a contract between composer and listener, a contract which may be purposefully broken. Genres 'consist of orienting frameworks, interpretive procedures, and sets of expectations', as William Hanks has argued, and as such they may be manipulated for a wide variety of communicative ends ('Discourse Genres in a Theory of Practice', *American Ethnologist*, xiv, 1987, pp.666–92). One of the ways in which Chopin commonly activated this communicative code was through allusions to genres other than the main controlling genre of a piece. Thus his music draws frequently upon vocal genres, especially from opera, and upon such popular genres as march, funeral march, waltz, mazurka, barcarolle and chorale. Of these, the most common referent is the waltz, which constantly slides in and out of more ambitious contexts, as in the first ballade (bar 138ff) or the second scherzo (bar 334ff).

There is often a similar role for the mazurka, the nocturne and even the prelude. Thus the A minor Mazurka op.17 no.4 plays host to the nocturne, while the G minor Nocturne op.15 no.3 plays host to the mazurka – and also to the chorale. Perhaps it is not far-fetched to claim that in this sense the first of the 24 Preludes plays host to the prelude. It was partly through such generic referents that 19th-century critics arrived at the descriptive and programmatic interpretations which we tend to dismiss today. A comparison between the central march of the F♯ major Impromptu op.36 and contemporary operatic choruses, for instance, would provide some rationale for Niecks's description of a 'procession' (H3/1902, ii, p.260), and even for Huneker's reference to a 'cavalcade' (H1900, p.134). Viewed in this way, genre allows us to cut across the boundaries of individual works, forging links with other moments in Chopin and beyond. The infusion of popular genres into the introduction of the Fantasy op.49, for instance, enables us to make connections with the march from op.36 as well as with the improvisatory prelude of op.28 no.3 (ex.10). These connections would in turn lead us beyond Chopin to (respectively) the choruses of *grand opéra* and the common practice of contemporary improvisation. And it is from this base that an additional layer of meaning – one which involves some reference to extra-musical designates – might be adduced in an interpretation of the Fantasy.

10. Sources and editions. During his final years Chopin reached a new plateau of creative achievement, marked by an eloquent simplicity which severely excludes the extraneous and the gratuitously ornamental. Even his late songs, *Nie ma czego trzeba* ('There is no Need') and *Melodya* ('Melody'), come within sight of a lied aesthetic, unlike those of his earlier years, which remain closer to late 18th-century popular traditions. A new-found simplicity is also discernible in the mazurkas composed during these final years, the three of op.63 (the last published during his lifetime), the second and fourth of the posthumously published op.67, and the sketched mazurka which was reconstructed and published as op.68 no.4 (this latter, for many years considered Chopin's last work, was almost certainly drafted in 1846 and abandoned in favour of op.63 no.2). The late waltzes, a single piece of relatively traditional cast (the A minor, CT 224), and a complete set, op.64, composed in 1847, continue the theme of inspired simplicity, with op.64 in particular drawing the familiar gestures of the earlier waltzes into a miniature compendium of all the grace, elegance and spontaneity we associate with the Chopin waltz. With such pieces Chopin redefined the category 'salon music'.

Like the waltzes, the late nocturnes consist of a posthumously published piece (the C minor, CT 128) and a set, the Two Nocturnes op.62. These latter, composed in 1846, represent the pinnacle of Chopin's achievement in the genre. In the B major he finds once more an inspired simplicity of utterance, where a melody of exquisite restraint conceals subtleties of phrase structure (a kind of musical prose, with metrical dislocations of the melodic repetitions) and of counterpoint (an accompaniment whose motivic fragments interact delicately with the principal melodic layer). Throughout the opening and middle sections, Chopin exercises the greatest possible restraint in the ornamentation of his basic material, so that the reprise, presented in trilled notes which open out into magnificent *fioriture*, can make its effect – truly one of the supreme achievements of Chopin's ornamental melody. In the E major Nocturne, he approaches a kind of *unendliche Melodie*, where exact repetition is kept to a minimum, in favour of a process of discreet variation. The middle section here employs a form of differentiated counterpoint of a kind commonly found in the later music, where tension–release patterns arise as much from dissonance–consonance relationships within a contrapuntal texture as from underlying harmonic progressions. It is striking that in these very late works Chopin arrived – within the constraints of his own highly individual stylistic world – at something akin to both the 'developing variation' of Brahms and Schoenberg and the 'dissonant counterpoint' of Mahler.

Three major extended works were composed during these final years, the Barcarolle op.60, Polonaise-Fantasy op.61 and Cello Sonata op.65. All three are strikingly

7. Fryderyk Chopin: daguerrotype by Louis-Auguste Bisson, Paris, 1849

original, departing significantly from Chopin's own 'tradition' to tackle novel problems of form, genre and even (in the case of op.65) medium. This is entirely symptomatic of the renovative approach to composition he adopted in his final years, and it is perhaps not surprising that the late works caused him endless difficulties. This is shown not only by his correspondence but by the manuscript sources. What few sketches we have tend to be for the later music, including illuminating worksheets for the Berceuse, the Polonaise-Fantasy and the Cello Sonata. Chopin's more usual practice was to bypass this sketching process and to proceed directly from the piano to an engraver's manuscript (*Stichvorlage*). In numerous cases, however, these would have to be abandoned, and such 'rejected public manuscripts' often form a valuable category of source. (We learn much, for instance, from abandoned manuscripts of the C minor Polonaise op.40 no.2, the F♯ Impromptu op.36, the fourth Ballade and the op.59 Mazurkas.) Even those fair copies which were sent to the publisher often contain evidence of several 'layers' of compositional process, something Saint-Saëns pointed out long ago in a path-breaking study of the autograph of the second Ballade. If we add the presentation autographs (some of them written many years after the piece had been composed), scribal copies, often with autograph glosses, and first editions with autograph corrections, we begin to sense something of the complexity of the manuscript tradition in Chopin.

Nor are things much easier when we come to the early printed sources. Most of Chopin's music was published simultaneously in France, Germany and England. While Schlesinger in Paris characteristically worked from an autograph, the German and English publishers followed several options (autograph, scribal copy or proof sheets). This, combined with the fact that Chopin could exercise little control over the publishing process outside Paris, resulted in numerous discrepancies of text between the three first editions. Moreover the print runs were usually small, and it was common for later 'impressions' (*tirages*) to appear with the same plate numbers, but with changes to the text; in the case of the French edition, this evolution of text may, at least in some cases, have been condoned or even instigated by Chopin himself. It is hardly surprising, given the multiplicity of sources and the textual discrepancies between them, that the subsequent publication history of Chopin's music has been fraught with problems. Following the posthumous publications of 1855 and 1859 (opp.66–74, prepared by Julian Fontana for Meissonier and A.M. Schlesinger), the earliest collected editions were French, the Schonenberger, edited by Fétis (1860), and the Richault, edited by Chopin's Norwegian pupil Tellefsen (also 1860). Both were permissive with the text by present-day standards, but for entirely different reasons. The first assumed an editorial licence, an implicit belief that the editor knows best, while the second attempted to recover a living Chopin performance tradition, even if this involved departing from the sources.

These two opposed philosophies continued to inform later 19th- and early 20th-century editions. Tending towards the former approach were the Stellovsky and Jürgenson (later Augener) editions, as also the Litolff and Biehl. Among those which tried to maintain a living link with Chopin were the Gebethner & Wolff, Heugel and Kistner editions, the latter produced by Chopin's pupil Karol Mikuli, based on annotated French and German first editions supplemented by copious notes made from Chopin's lessons. This approach was adopted too in the second Gebethner & Wolff edition (1882), which referred to 'variants supplied both by the author himself and as passed on by his most celebrated pupils', and it reached its culmination in Edouard Ganche's Oxford Original Edition, based almost entirely on the seven-volume annotated collection of Jane Stirling. Of the 'source' or 'Urtext' editions produced following World War II, the most popular today is the Polish Complete Edition ('Paderewski Edition'), based mainly on the work of Ludwik Bronarski. Yet whatever its pioneering significance, this is a deeply flawed text, selecting permissively from different sources, mistaking copies for autographs and basing orthography and phrasing not on legitimate sources but on unidentified recent editions and even personal judgments made in the light of particular harmonic theories.

The jury is still out on more recent collected editions. At the end of the 20th century, the Wiener Urtext had been at a standstill for several years; moreover the volumes which have been produced have no clear or consistent editorial policy. Closer to completion is the Henle Urtext, edited mainly by Ewald Zimmerman; and after many years of gestation the Polish National Edition, under Jan Ekier, also seems to be making some headway (albeit only by sacrificing for subsequent volumes the remarkably detailed commentary which accompanied the first volume, the ballades; Ekier has subsequently replaced this volume by a new edition of the ballades). Of these two, the Polish National is by far the more satisfactory, but despite its declared intention to present an edition of a single ('best')

source, it continues to import from other versions, resulting in the kind of conflation (though to a lesser degree) which has marred Chopin editions in the past. It is easy to see why this has occurred; it requires a particular kind of editorial courage to relegate a preferred reading of a passage to the status of a variant. Nevertheless, a Chopin edition which did remain faithful to a single source, presenting us with a text which did actually once exist, would be as valuable as it would be unique; that is the objective of the latest in the field, Peters Edition's *The Complete Chopin: a New Critical Edition.*

11. Reception. The afterlife of Chopin's music well illustrates the many different ways in which musical works – the products of singular creative acts – can achieve a social existence in the world. By revealing the constantly changing reception of his music, we light up the ideology concealed in the corners of music history, and in the process we expose some of the vested interests at work in the promotion, dissemination, influence and evaluation of musical works. By the late 19th century it was clear that there were several different images of Chopin, as his music responded to the particular needs of particular cultural communities. Different modes of reception serve to focus these images. Thus French critics highlighted the notion of expression. Chopin was the poet of the piano, 'disclosing his suffering' through music. Moreover his preference for intimate performance contexts, for an art of nuance, sophistication and refinement was viewed as a model to be followed, a bulwark against encroaching German influence. Chopin, in short, was portrayed as a kind of vital missing link connecting the *clavecinistes* to the great pianist-composers of the *fin-de-siècle*, Fauré, Debussy and Ravel. German publishers told a different story. The publication of the Breitkopf & Härtel collected edition (1875–80) was a landmark in Chopin reception, and not just because it enabled a wider dissemination of the music. The Breitkopf complete editions of the late 19th century played a large part in the formation of a musical canon, an exercise with strong nationalist overtones. By admitting Chopin to this (largely German) pantheon, they helped translate his music from salon compositions to 'classical music' within the German world, and that status was secured by major biographies (Weissmann and Scharlitt) and by a remarkable analytical study from Hugo Leichtentritt, subjecting virtually every work of the published music to a detailed scrutiny.

Conflicting images of Chopin were also registered through compositional influence – itself a mode of reception – in the late 19th century. Russian composers proved especially susceptible, and from Balakirev onwards their inclination was to view Chopin as a Slavonic composer first and foremost. For Balakirev, Chopin presented a fusion of nationalism and modernism, and it was just such a fusion that he himself tried to promote at the Free School of Music in St Petersburg. Not surprisingly, then, Chopin's stylistic influence on progressive tendencies in Russian music was a decisive one. But it should be noted that Russian composers selected carefully from the fused whole of Chopin's musical style, favouring those elements which appeared to offer an alternative to the forms and methods of an already established Austro-German tradition. In contrast, Chopin was largely domesticated in England. Victorian composers were happy to purloin the external features of his nocturnes and mazurkas, reducing his closely woven textures and delicately shaped phrases to a handful of easy gestures. And in due course his own music was lumped together with this progeny. We find the nocturnes published in collections called 'drawing-room trifles', the preludes described as 'pearls' and the études paraded as 'tuneful gems'. We even encounter publications of simplified and shortened versions of some of the tougher, more technically demanding works, including the G minor Ballade. Chopin's unique features, in short, were smoothed out by association with surrounding lowlands of mediocrity

In the late 19th century, then, Chopin's music was an intimate communication, an icon, an agent of cultural and even political propaganda, and a commodity. And in this respect it held a mirror to the conflicting ideologies attending a critical period in music history, right on the cusp between classical and modernist notions of art. In the 20th century there was something of a closure of meaning in Chopin reception, and this stands in a polarized relation to the perceptions of his own era. Present-day views of Chopin have been marked above all by a separation of performance and text. These had been inextricably tied together during Chopin's lifetime, and their later separation can be traced through performance histories, editions and of course a tradition of music criticism which swerved abruptly into analysis in the early years of the century. It was common practice for Chopin's contemporaries to relate his music to real or imagined contexts. The work was understood to mediate larger realities, and of several kinds: it expressed an emotion; it told a story; it exemplified a genre; it articulated a style; it confirmed an institution. In contrast, the 20th century sought to de-contextualize the music, which became rather a world in and to itself, claiming an ideal relationship of part to whole. The work became a structure, and in that lay its value.

It is worth trying to make concrete this contrast between an 'active present' and a 'recovered past'. In the reprise of the fourth Ballade we may hear a triumphant synthesis of strict canon and ornamental bel canto, Bach and Italian opera. Chopin's world might have related this sequence to a conventional succession of contemporary improvisation, and it might even have heard in the bravura coda a distant echo of the applause-seeking perorations of popular concert pieces. In the second Ballade we may hear a dramatic confrontation of contrasted materials, heightened by a two-key scheme. Chopin's world might have related this to the classic formal ingredients of the brilliant style – bravura figuration squared off against popular melody, étude against siciliano. In the introduction to the F minor Fantasy we may hear a multi-sectional upbeat to the first tonal and thematic cycle. Chopin's world might rather have heard the stylization of an operatic scena, slow march, recitative, grand chorus. Likewise, we signally fail to notice those generic features which would have struck Chopin's contemporaries: those gestures in the A minor Prelude which signal a funeral march; those features of the G minor Ballade which identify it as a lament; and of course the waltzes and barcarolles which infuse extended works such as the scherzos and ballades. It goes without saying that Chopin's music will not be confined by the vagaries and fashions of scholarship. It will always remain larger than any of our attempts to describe it. But that will not stop us trying.

WORKS

Edition: *Wydarie Narodowe Dzieł Frederyka Chopin* [Polish national edition], ed. J. Ekier (Warsaw and Kraków, 1967–)
Catalogues: M.J.E. Brown: *Chopin: an Index of his Works in Chronological Order* (London, 1960, rev. 2/1972) [B]
J.M. Chomiński and T.D. Turło: *Katalog dzieł Fryderyka Chopina* (Warsaw, 1990) [CT]
K. Kobylańska: *Rękopisy utworów Chopina: Katalog* (Kraków, 1977; Ger. trans., 1979) [KK]

Collections of photographs of MSS are in the Chopin Institute, Warsaw, and *A-Wn*. *PL-K* indicates the Kraków National Museum in cases where it is not known to which of its sections – Biblioteka Czartoryskich (*Kc*) or Biblioteka Czapskich (*Kcz*) – a MS belongs. The number in the German translation of Kobylańska's catalogue (KK), with a roman-numeral prefix, is given for works without opus number.

CI – *Chopin Institute, Warsaw*
Ferra – *collection of A.M. Ferra, Valldemosa, Mallorca*
US-NYlehman – *private collection of R.O. Lehman, New York*
US-LApiatigorsky – *private collection of G. Piatigorsky, Los Angeles*

KORNEL MICHAŁOWSKI/JIM SAMSON

Choral (Ger.). *See* PLAINCHANT.

Choralbass. *See under* ORGAN STOP.

Choralbearbeitung (Ger.). A vocal or instrumental composition based on a pre-existing sacred melody. The equivalent English terms, 'chorale setting' and 'chorale composition', are restricted to arrangements of German Protestant hymns ('chorale'; Ger. *Kirchenlied*), but the German term is also applied to compositions based on chants of the Gregorian repertory (Ger. *gregorianischer Choral*).

See CHORALE and CHORALE SETTINGS.

ROBERT L. MARSHALL

Chorale. The congregational hymn of the German Protestant church service. Typically, it possesses certain formal and stylistic traits appropriate to its lay purposes: simple language, rhymed metrical verse, a strophic musical and textual form and an easily singable melody. Since the Reformation, and particularly during the first 200 years of its existence, the chorale has provided raw material for a variety of compositional forms, including the chorale prelude, chorale motet and chorale cantata (*see* CHORALE SETTINGS and BORROWING, §§6 and 8).

1. Terminology. 2. Pre-Reformation antecedents. 3. The chorale in Luther's liturgical reform. 4. Luther's texts. 5. Luther's melodies. 6. Other Wittenberg chorales. 7. The Bohemian Brethren. 8. Calvinist influence. 9. Early hymnbooks. 10. Post-Reformation period, *c*1550–*c*1600. 11. Baroque era, *c*1600–75. 12. Pietism and Orthodoxy,

*c*1675–*c*1750. 13. The Enlightenment, *c*1750–*c*1810. 14. 19th and 20th centuries.

1. Terminology. During the first decades of the Reformation, Martin Luther and his contemporaries most commonly referred to the individual items in the newly revived genre of congregational, vernacular hymns as 'geistliche Lieder' (spiritual songs), 'Psalmen', 'christliche Lieder' and 'geistliche' (or 'christliche') 'Gesänge' or 'Kirchengesänge'. In the later 16th century the term 'Choral', which had traditionally referred to the melodies of the Latin plainchant repertory, began to be applied to the vernacular church hymn. This was presumably partly because congregational singing in Luther's time was led by the monophonic *chorus choralis* (as distinct from the polyphonic *chorus musicus* or *figuralis*), and partly because in the Protestant service the congregation and congregational hymn singing assumed the liturgical position and significance occupied in the Roman Catholic service by the chorus (*chorus choralis*) and by Latin chant (*gregorianischer Choral*). In modern German 'Choral' generally means the tune or simple setting only, while 'Kirchenlied' commonly embraces both hymn text and tune. In modern English usage 'chorale' can apply either to the hymn in its entirety (text and melody) or to the hymn tune alone. Moreover, following a German practice common in the 17th and 18th centuries, the term is often used to refer to simple harmonizations of the German hymn tune, as in 'Bach chorales' or 'four-part chorales'.

2. Pre-Reformation antecedents. The early Christian church provided a number of opportunities for congregational participation. The Ambrosian hymns were originally intended to be sung by the congregation, and congregational refrains were added to a number of liturgical chants. From the 6th century liturgical singing became the preserve of the cantor and choir. But extra-liturgical songs in the vernacular continued to be written and sung at principal festivals, some saints' days and, later, in connection with liturgical drama. Throughout the Middle Ages the refrain 'Kyrieleison' was sung as part of the litany as well as after the Latin strophes of such hymns as the *Te Deum* or after the individual verses of psalms. By the Carolingian period, the 'Kyrieleison' refrain was frequently extended with short vernacular phrases, and German translations of the Latin hymn strophes themselves began to appear. The oldest surviving example is an Old High German version of the Latin hymn *Aurea luce*, the so-called 'Freisinger Petrus-hymnus', in an early 9th-century neumed manuscript. Such vernacular hymnody was particularly strong in German-speaking regions. Between the 9th century and 1518 over 1400 German vernacular hymns are known to have been written. The hymn of Hussite Bohemia, the English medieval carol and the Italian *lauda* are comparable repertories of this period.

From the 12th century the principal forms of vernacular singing that developed into the Reformation chorale were German translations of Latin chant, the *Leise* (German spiritual song) and the *cantio* (Latin spiritual song). Of all the forms of Gregorian chant, medieval translators understandably favoured the Ambrosian hymn of the monastic Offices with its short strophes, concise and straightforward language and essentially syllabic melodic style. These qualities later made it the most significant Gregorian source for the Protestant chorale writers. Single hymns such as the 'Petrus-hymnus' and even entire hymnaries were translated; but during the later Middle Ages hymns for the principal feasts were strongly preferred. Two of the most important German translators of the period, the Monk of Salzburg and Heinrich Laufenberg, set important precedents for Reformation poets with their choice of hymns as well as their translations. Late medieval hymn translations were rarely provided with musical notation, but the fact that they kept the original metrical schemes suggests that they were meant to be sung to the original melodies; the presence of rubrics suggests that they may have been used occasionally in some forms of liturgical worship.

Apart from the hymns, the chants for the Office did not as a group stimulate many translations, but individual antiphons such as *Media vita in morte sumus*, formerly attributed to Notker Balbulus, and the 11th-century Pentecost antiphon *Veni Sancte Spiritus* existed in the German versions *Mitten wir im Leben sind* and *Komm, heiliger Geist, Herr Gott* from at least the early 15th century. The chants for the Mass having non-strophic texts and relatively intricate melodies did not encourage translation in the pre-Reformation period, particularly since they remained the exclusive province of the clergy and choir. There were isolated translations of some items, however, such as a 15th-century German metrical rendering of the Credo, *Wir glauben in einen Gott*, which served as one of several sources for Luther's *Wir glauben all an einen Gott*. Of the Propers only the sequence assumed considerable, indeed outstanding, importance for the later history of the chorale as the origin of the *Leise*.

During the late Middle Ages the practice developed of occasionally permitting the congregation to sing German versions of the sequence (itself by this time a metrical, strophic form) during the regular service at the principal feasts of the church year, immediately after the clergy and choir had performed the Latin original. These German strophes typically concluded with the refrain 'Kyrieleis' and thus suggested the name *Leise* for the genre, a name which was soon applied to other refrain songs as well. Most *Leisen* have a single strophe of four short lines, a simple melody often consisting of repeated motivic formulae and the 'Kyrieleis' refrain. Generally a *Leise* strophe retained the same melody throughout the centuries while the refrain continually received new settings, invariably of the simplest melodic material.

Since the *Leise* shares stylistic and liturgical elements with the litany, the Kyrie, the hymn, the sequence and the folksong, its origins and development have been a matter of controversy. The picture is complicated by the fact that whereas there was an outburst of production of *Leise* texts between the 12th century and the early 14th, melodies for them are extant only from the 15th century. The most important and well-known *Leisen*, those which survive in Protestant chorales, have particularly strong musical and even liturgical connections with the sequence. The chorales associated with the major feasts listed in Table 1, the opening strophes of which existed as *Leisen* in the Middle Ages, all substantially derive their melodic material from the Latin sequence for the same feast. Chorales included in the standard hymnbook of the present German Lutheran church, the *Evangelisches Gesangbuch* (*EG*), are cited by their number in that volume.

Most of these *Leisen* appear with the corresponding Latin sequence in medieval liturgical manuscripts, and

TABLE 1

Feast	*Leise*	*EG*	*Sequence*
Christmas	*Gelobet seist du, Jesu Christ* (14th century)	23	*Grates nunc omnes reddamus*
Easter	*Christ ist erstanden* (12th century)	99	*Victimae paschali laudes* (*Liber usualis*, 780)
Pentecost	*Nun bitten wir den heiligen Geist* (13th century)	124	*Veni Sancte Spiritus* (Hypolydian version)
Corpus Christi	*Gott sei gelobet und gebenedeiet* (14th century)	214	*Lauda Sion Salvatorem* (*Liber usualis*, 945)

because of that they are now thought to have developed as abbreviated forms of the Latin sequence. According to this interpretation the concluding 'Kyrieleis' refrain, with its variable melodies, assumes only secondary importance, whereas earlier views suggested that the four-line strophe was appended to the original acclamation.

In addition to these 'liturgical' *Leisen* there were others whose origins were closer to that of folksong, being associated with less formal aspects of medieval religious life such as liturgical dramas, processions and pilgrimages. The best-known is probably the 13th-century crusaders' *Leise In Gottes Namen fahren wir*, the melody of which is sung to a hymn of the same title (*EG* 498) and to Martin Luther's *Dies sind die heilgen zehn Gebot* (*EG* 231). The melodies of such 'popular' *Leisen* show some preference for the Mixolydian mode.

The *cantio*, a non-liturgical but sacred Latin unison song that was cultivated from the 14th century, largely in monastic and literary circles, is clearly related both to Latin liturgical hymnody and to the *Leise*. *Cantiones* often originated in connection with the liturgical dramas for Easter and Christmas (e.g. *In natali Domini*, *Puer natus in Bethlehem*, *Surrexit Christus hodie*) and were otherwise generally associated with Advent and Christmas. Many *cantiones* were translated into German long before the Reformation and were frequently sung antiphonally, particularly in Germany and Bohemia, with alternating Latin and German verses. A number of these mixed-language song pairs such as *Surrexit Christus hodie – Erstanden ist der heilig Christ* (*EG* 105) and the completely macaronic *In dulci jubilo – Nun singet und seid froh* (*EG* 35), with alternate Latin and German lines, were appropriated unchanged into the Reformation hymnbooks and are included in the *Evangelisches Gesangbuch* in German versions alone. With their major-mode melodies and frequently strong dance rhythms, often in triple metre, the *cantiones* show the considerable influence of medieval folksong and dance.

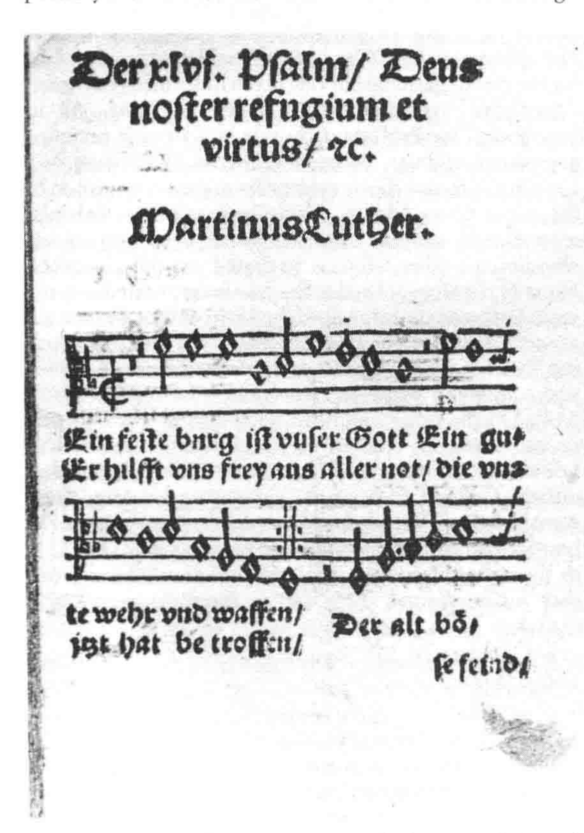
3. THE CHORALE IN LUTHER'S LITURGICAL REFORM. Only with the Reformation did the chorale become an integral, indeed central, part of the main church service. By being elevated to liturgical status, the chorale, along with the sermon, helped to effect a fundamental change in the nature of the liturgy. For Martin Luther the church service was no longer a sacramental act alone but also the occasion for the proclamation of the Word among believers: the congregation, united through the act of singing, could participate by responding to the spoken word of the pastor, proclaiming the Gospel and expressing the joy of faith and the praise of God.

Apart from his views on the congregation and vernacular singing, however, Luther's attitude towards the liturgy was basically conservative. In the *Formula missae* (1523) he indicated that German chorales could be incorporated into the traditional structure of the Latin Mass – either in addition to the Latin chants or as substitutes for them – in the positions of the gradual, Sanctus, Agnus Dei, and after communion. It was not until his *Deutsche Messe* (1526) that Luther had worked out all the details of a vernacular service which included German equivalents of the introit, gradual, Credo, and (during communion) the Sanctus, Agnus Dei or German hymns. The *Graduallied*, performed between the readings of the Epistle and Gospel, later became the principal chorale of the service. Versifications of the Kyrie, Gloria and a new German version of the Agnus Dei – Luther's *Christe, du Lamm Gottes* (*EG* 190.2) – were subsequently added to the German Mass, thus completing the translation of the Ordinary into the vernacular and its transference to the congregation.

In 1523, at the same time as he drafted the *Formula missae*, Luther evidently began to write his first chorales; 24 were written between 1523 and 1524. The active hymn singing of the German branch of the Bohemian Brethren provided Luther with a close model for the restoration of the chorale, but it is possible that his own writing of 1523 was provoked by the appearance in that year of ten German translations of Latin hymns by the mystic radical Thomas Münzer in a form Luther found unacceptable (although some, for example *EG* 3, found their way into later Lutheran use). In recommending the creation of vernacular 'spiritual songs' for the people, however, Luther cited only those of the Church Fathers and the Old Testament psalms.

4. LUTHER'S TEXTS. Luther and the other early Reformation hymn writers and compilers drew on the pre-Reformation *Leisen* and on the existing German translations of Latin hymns in the interest of maintaining a strong sense of historical continuity and in the hope of securing wide popular support. But they also used other pre-Reformation material, mainly such rarely used items of the liturgical Latin plainsong as the Mass Ordinary and the corpus of secular German folksong and art song. Hardly any early 16th-century Protestant chorale is completely original in both text and music, although the degree of dependence on an earlier source is sometimes slight. (The texts and melodies of Luther's hymns are listed in LUTHER, MARTIN.)

In the variety of their subject matter, Luther's chorales established almost all the principal literary and theological categories: *de tempore*, biblical and catechism chorales, chorales of meditation, penitence, praise, comfort, faith and supplication and chorales on death or for the times of day. But irrespective of their sources, topics or the manner of their derivation, his texts have a strongly unified poetic style. His preference for short, often monosyllabic, words, short strophes and short sentences within strophes (often only one line long), and his frequent use of alliteration and of indicative and imperative verb forms evoke an unusually forceful and personal literary presence.



5. LUTHER'S MELODIES. Like other hymn writers of the time, Luther (or whoever was responsible for the melodies of his chorales) generally adapted a complete existing

melody to his new text, usually the one associated with the text model. Luther was an unexcelled and unusually resourceful master of this craft, going beyond the simpler practices of contrafactum, whereby one text is mechanically substituted for another without changing the melody. His techniques of adapting complete Gregorian or other monophonic melodies reveal the concern for good text declamation prevalent in the early 16th century: original melismas were removed or underlaid to create syllabic settings, and melodic climaxes were adjusted to correspond with the natural accents of the new texts. A good example of Luther's procedures is his skilful adaptation of the melody of the hymn *Veni Redemptor gentium* to three different chorales, *Verleih uns Frieden gnädiglich* (*EG* 421), *Erhalt uns, Herr, bei deinem Wort* (*EG* 193) and *Nun komm, der Heiden Heiland* (*EG* 4), so that each was not only 'correct' but also had a character of its own. The prayerful and meditative character of the three texts common to most of Luther's chorales set to Gregorian melodies doubtless prompted their common derivation and justified it aesthetically.

On other occasions Luther adopted another common practice of constructing 'original' melodies from melodic formulae and melody types. For example, the melodies of two of his most famous chorales, *Vom Himmel hoch* and *Ein feste Burg* (see illustration), with their unambiguous major tonality and controlled descent through the octave from the upper to the lower tonic (melodies considered the quintessence of his personal style), share their structure and a large number of details with the melody of Hans Sachs's *Silberweise*, *Salve, ich grus dich*, which was possibly their immediate model. The same melodic design is also found in Johann Walter's melody to Johannes Zwick's *All Morgen ist ganz frisch und neu* (*EG* 440); its general outline belongs to a European archetype traceable to the art songs of the troubadours and the Minnesinger. Luther associated this melody type with the texts of his extrovert and enthusiastic *Verkündigungslieder* (hymns of faith) and normally used it in connection with brisk short-note upbeat patterns, whereas for meditative texts set to Gregorian melodies he used long-note upbeats. Apart from their distinctive upbeat patterns, however, Luther's major-mode and church-mode melodies are basically isometric in rhythm, facilitating congregational learning and singing, and perhaps betraying their monophonic or Gregorian origins. Conversely, the occasional presence of more complex rhythms within the phrases of a melody suggests a polyphonic origin, probably as the cantus firmus of the popular German Tenorlied of the late 15th and early 16th centuries.

A modal aesthetic in many of Luther's chorales – the use of Ionian mode for hymns of faith, of Dorian or Hypodorian for meditative texts and of Phrygian for texts of repentance (*Aus tiefer Not*, *Ach Gott vom Himmel*) – may reflect the practice of the Meistersinger. Their influence is certainly evident in the preference of Luther and his fellow hymn writers for casting their melodies in the traditional bar form, usually as a seven-line strophe consisting of a repeated two-line *Stollen* followed by an *Abgesang*, which is either through-composed, producing the overall design *ABABCDE*, or which concludes with a return to the end of the *Stollen ABABCDB*.

The extent of Luther's role as a composer will probably always remain unclear. Johann Walter (i), Luther's main

Luther's chorale 'Ein feste Burg' from Joseph Klug's 'Geistliche Lieder auffs new gebessert' (Wittenberg, 2/1533)

musical collaborator, appears to have been largely responsible for a number of the melodies of his chorales (*see* LUTHER, MARTIN).

6. OTHER WITTENBERG CHORALES. Luther's practice was also that of his immediate collaborators, whose chorales appeared with Luther's in the earliest printed collections, and who together formed the 'Wittenberg orbit', named after the centre of Luther's activities from 1512. Many of their chorales are still sung, notably *Wo Gott der Herr nicht bei uns hält* (*EG* 297) by Justas Jonas; *Es ist das Heil uns kommen her* (*EG* 342) by Paul Speratus; *Ich ruf zu dir, Herr Jesu Christ* (*EG* 343), sometimes attributed to Johann Agricola (*c*1494–1566); Johann Walter's *Wach auf, wach auf, du deutsches Land* (*EG* 145); Erasmus Alber's *Christe, du bist der helle Tag* (*EG* 469), based on the hymn *Christe qui lux es et dies*; *Nun lob, mein Seel, den Herren* (*EG* 289) by Johann Gramann (1487–1541) and *Herr Christ, der einig Gotts Sohn* (*EG* 67) by Elisabeth Cruciger (*c*1500–35), the first Reformation chorale to draw on the late medieval tradition of Jesus mysticism that became prominent in succeeding generations. (The melody of this chorale is derived from a mid-15th-century secular love song, *Mein Freund möcht sich wohl mehren*, in the Lochamer Liederbuch, and its text is based on the Christmas hymn of Aurelius Prudentius, *Corde natus ex parentis*.) *Allein Gott in der Höh sei Ehr* (*EG* 179) and *O Lamm Gottes, unschuldig* (*EG* 190.1) by Nikolaus Decius are important as versifications of the Gloria and Agnus Dei that are set to the original Gregorian melodies. Although Luther, for personal reasons, never included Decius's chorales in the official Wittenberg hymnbooks, they soon became part of the standard German Mass Ordinary cycle.

7. THE BOHEMIAN BRETHREN. Luther may have begun to write church hymns in the vernacular in emulation of the Bohemian Brethren, who had published hymnbooks in Czech in 1501, 1505 and 1519. Luther's most important contemporary, in fact, was Michael Weisse (*c*1488–1534), the editor of the first German hymnbook of the Bohemian Brethren, *Ein new Geseng Buchlen* (1531). This was by far the largest hymnbook to have appeared by that time (157 chorales); it was also the first whose contents were thoroughly and systematically organized by categories, beginning with the church year, followed by chorales of praise, of prayer, on the Christian faith etc. The melodies of the Bohemian Brethren are independent of the Wittenberg repertory; they make almost no use, for example, of bar form. But they are also derived from Gregorian chant and folksong, drawing even more heavily and more literally than the Lutheran chorale on older sources, and adopting a larger variety of Gregorian melodies, including more florid types.

Luther was a friend and admirer of Weisse and was presumably responsible for the inclusion of 12 chorales by Weisse in the Bapst (Babst) hymnbook (1545). Subsequently there were numerous exchanges of hymns between the Lutherans and the Bohemian Brethren. During the 16th century most Passion chorales (the only major genre entirely neglected by Luther) were taken from the Bohemian Brethren hymnbook, for example Weisse's *Christus, der uns selig macht* (*EG* 77).

8. CALVINIST INFLUENCE. The presence of Luther made Wittenberg so influential in the development of the chorale that some centres of activity such as Nuremberg, the base for Hans Sachs, Lazarus Spengler and Sebald Heyden, or Königsberg, the base for the Margrave Albrecht of Prussia (1490–1568), Paul Speratus and Johann Gramann, never attained significant independence. In both Strasbourg and Konstanz, however, the Lutheran model was tempered by Calvinist influence emanating from Zürich and Geneva. In Strasbourg for the first time the congregation constituted the sole musical participant in the service, singing not only strophic chorales but also German versions of Gregorian chants. The chorale repertory of the Strasbourg 'school', which extended north to Hesse and south to Württemberg and Basle, contained both the Lutheran hymns (sometimes set to local melodies) and its own. The latter, in contrast to those of the Wittenberg tradition, made much less use of medieval models, and, both influencing and reflecting Calvinist practice, consisted overwhelmingly of psalm settings.

While the Strasbourg melodies exploited the common stock of existing formulae, they were in general more elaborate than those of the Wittenberg repertory, perhaps because most of them were probably composed by two accomplished musicians, Wolfgang Dachstein and Matthias Greiter. Two of the most famous Lutheran melodies, those of Greiter for Sebald Heyden's *O Mensch, bewein dein Sünde gross* (*EG* 76), and for Dachstein's *An Wasserflüssen Babylon* (now sung to Paul Gerhardt's *Ein Lämmlein geht*, *EG* 83), show a characteristic Strasbourg preference for long strophes with a three-line *Stollen* and (as in *O Mensch, bewein*) for repeating the first line of the *Abgesang*: *ABCABCDDEFGH*.

Three Konstanz pastors, Johannes Zwick (*c*1496–1542) and the brothers Ambrosius and Thomas Blarer (1492–1564 and 1499–1570), were responsible for the *Nüw Gsangbüchle* (Zürich, 1536), which secured a place for the congregational chorale in the Reformed (Calvinist) Church of Switzerland and south Germany. As in Strasbourg, the Protestant chorale in Konstanz occupied a position midway between Lutheran Wittenberg and Calvinist Geneva; this is evident from the organization of the *Nüw Gsangbüchle*, which begins in the Calvinist manner with settings from the Psalter before presenting chorales on other subjects or based on other sources. None of the Konstanz chorales was incorporated into the main Lutheran tradition until the 19th century, but several are represented in the *Evangelisches Gesangbuch*, including Zwick's *All Morgen ist ganz frisch und neu* (*EG* 440) and A. Blarer's *Wach auf, wach auf, 's ist hohe Zeit* (*EG* 244). On the other hand, the verse-for-verse translation of the Genevan Psalter by the Lutheran Ambrosius Lobwasser (Leipzig, 1573) brought Calvinist melodies into the German tradition at a relatively early date. These were later transferred to other psalm or chorale texts, the best-known being *Freu dich sehr, o meine Seele* (*EG* 524) to the melody of Psalm xlii and Paul Eber's *Herr Gott, dich loben alle wir* (*EG* 300) to the melody of Psalm cxxxiv.

9. EARLY HYMNBOOKS. The rapid growth of hymnbook publication in the first half-century of the Reformation (during which over 200 were published) provided for the dissemination, continuity and development of the chorale; it also provoked such counter-developments as the production of Catholic hymns. But its most important effect was to establish the German chorale as one of the most vital literary genres of the 16th century.

Following a precedent set by the Bohemian Brethren of printing collections of congregational hymns in the vernacular, and after a number of chorales had appeared in single broadsheets, four significant collections of German chorales appeared within a single year. Their interrelationships shed light on the procedures of the early hymn writers. The so-called *Achtliederbuch* (*Etlich Cristlich Lider*), evidently the earliest, was printed in Nuremberg in 1523/4 (despite the imprint 'Wittenberg./ M.D.Xiiij' on the title-page). It included eight chorale texts and a total of four different melodies. It was followed in 1524 by two publications, both called *Eyn Enchiridion oder Handbüchlein* and known as the *Erfurter Enchiridien*, containing a total of 25 hymns and 16 melodies. Luther's *Aus tiefer Not* and *Ach Gott vom Himmel* appeared here for the first time with their melodies; the texts alone had been printed in the *Achtliederbuch* with a direction that they were to be sung, along with *Es spricht der Unweisen Mund wohl*, to the melody now reserved for Speratus's *Est ist das Heil*.

In the same year (1524) in Wittenberg Johann Walter (i) published a volume of 38 four- and five-voice settings of 35 melodies for 32 hymns, the *Geystliches Gesangk Buchleyn*, with a foreword by Luther. A monophonic version of Walther's choral hymnbook, published in Wittenberg two years later by Hans Lufft, was the first true German congregational hymnbook. These early publications established two important precedents. First, there were two basic types of German hymnbook: a monophonic edition of texts and melodies intended to be sung by the lay congregation without any organ or choral accompaniment, and a polyphonic edition intended for the church choir. Secondly, the practice of using the same tune for different texts was established, as was its converse, the association of more than one melody with the same text.

Joseph Klug's hymnbook (Wittenberg, 1529, with a new foreword by Luther) was the first to have a clear principle of internal organization, one which predominated during the rest of the 16th century and has remained influential. In Klug's definitive edition (1543, authorized by Luther) an initial section was devoted exclusively to Luther's chorales arranged in four groups: *de tempore* chorales for the principal feasts, catechism chorales, chorales based on the psalms and chorales on miscellaneous subjects. The second section included the 'Lieder der unsern' (chorales by Luther's collaborators, including Jonas, Spengler, Speratus and Cruciger). The final principal section was devoted to pre-Reformation German and Latin chorales, including *Der Tag, der ist so freudenreich* and *In dulci jubilo*.

With the publication of Valentin Bapst's hymnbook (Leipzig, 1545), the last to appear during Luther's lifetime and containing a new foreword by him, an appendix of 40 chorales was added to the central corpus of 80 Reformation chorales. The basic canon, drawn from various regions of north, central and south Germany, remained relatively constant and free of variants for the next 200 years, but the innovation of a regional appendix, which was typical of many subsequent hymnbooks, allowed for variety and for the further growth of the repertory.

10. Post-Reformation period, *c*1550–*c*1600. Luther's death was followed by a period of consolidation against the challenge of the Counter-Reformation; this was furthered by rationalizing the liturgical organization of the Reformation chorale repertory. In Johann Eichorn's regional hymnbook (Frankfurt an der Oder, 1559) the central repertory of Lutheran chorales was arranged according to the utilitarian categories of the Bohemian Brethren, instead of being arranged by author according to the early Lutheran system – a procedure which gave those of Luther great prominence and permanence and kept the others from becoming firmly established in the repertory. An orthodox tradition was further codified by a complete *de tempore* ordering of chorales for the church year in Johannes Keuchenthal's *Kirchen Gesenge latinisch und deudsch* (Wittenberg, 1573) and Nikolaus Selnecker's *Christliche Psalmen, Lieder und Kirchengesänge* (Leipzig, 1587).

The conservative tendencies of the period, combined with war, plague and famine in the second half of the 16th century, resulted in a reduction in the number of new chorales and in a shift in emphasis to themes of the Crucifixion and comfort, death and eternal life and the Second Coming, while the conflict with the Counter-Reformation generated chorale texts concerning pure Christian doctrine and the life and work of the church. Accordingly the years from about 1570 to 1648, which include the post-Reformation period and the Thirty Years War, have often been referred to as the age of the 'Bekenntnis- und Glaubenslied' (chorales of confession, or creed, and faith).

The most important hymn writer at the beginning of this period was Nicolaus Herman of Joachimsthal in Bohemia, a contemporary of Luther but a transitional figure; his chorales (for which he wrote both the texts and melodies), including *Lobt Gott, ihr Christen alle gleich* (*EG* 27) and *Erschienen ist der herrlich Tag* (*EG* 106), were not published until 1560, and then, significantly, in a one-author collection of home devotions and children's hymns for the church year. His chorales show the continuing influence of the Meistersinger traditions in their quantitative scansion and use of church modes with existing melodies and melodic formulae, but the folklike simplicity of his texts and his increased use of pure major-mode melodies reflect new tendencies. In the work of a younger generation, Nikolaus Selnecker, Paul Eber (1511–69), Ludwig Helmbold, Bartholomäus Ringwaldt (1530–99) and Martin Schalling (1532–1600), a more personal tone of Lutheran humanism is discernible, particularly in the texts of Helmbold's *Von Gott will ich nicht lassen* (*EG* 365) and Schalling's *Herzlich lieb hab ich dich, o Herr* (*EG* 397).

The imagery and poetic style used by Philipp Nicolai in *Wie schön leuchtet der Morgenstern* (*EG* 70) and *Wachet auf, ruft uns die Stimme* (*EG* 147), both published in 1599, belong to the Baroque era. These chorales are perfect expressions of the Baroque 'Brautmystik' (the allegory of the soul, church or Mary as bride and Jesus as groom) that unites a medieval mystical tradition, rooted in Psalm xlv and the *Song of Solomon*, with the tradition of secular love lyrics inherited from the Minnelied and German folksong. Nicolai's chorales are also typically Baroque in their constantly changing images, the extension of the allegory even to the verbs and adverbs, and the use of such devices as acrostics and optical verse (e.g. strophes laid out on the page in the shape of a grail in *Wie schön*). But the melodies of these chorales, despite their modern major tonalities, triadic patterns and

occasional tone-painting, are still products of the 16th century in their use of existing material: a melody from the Strasbourg Psalter (1538) is the basis of *Wie schön*; *Wachet auf*, in the manner of the Meistersinger, and indeed following the model used by Luther, appropriates elements from Hans Sachs's *Salve, ich grus dich*.

11. BAROQUE ERA, *c*1600–75. The history of the chorale in the late 16th and early 17th centuries was not marked by the creation of new melodies, which were few in number, so much as by the rise of the *Cantionalsatz*, the simple four-part harmonization of a chorale with the melody no longer in the tenor but in the discant. This innovation, first introduced by Lucas Osiander in his *Fünffzig geistliche Lieder und Psalmen* (Nuremberg, 1586), was intended to facilitate and encourage congregational singing of the tune to the accompaniment of the church choir, presumably in emulation of *falsobordone* practices and the contemporary Calvinist settings by Claude Goudimel and others. The rapid growth of CANTIONAL publications by 1600 meant that new chorale melodies were usually conceived and published not as monophonic tunes or as Tenorlieder but as the top part of four-part homophonic settings. By the early 17th century chorale texts were increasingly written by professional poets, and their melodies and harmonizations were more and more the work of professional musicians. This development, together with the prevailing historical and theological circumstances and the spread of the doctrine of the Affections in music and literature, led to the growth of the individual devotional song as a vehicle of self-expression. Throughout the 17th century the poems, now autonomous, tended towards being personal statements, and the music, more open to foreign, especially Italian, influences (e.g. monody and balletto), was increasingly modelled on the art song, rather than on the folksong as in the 16th century.

Until the mid-17th century chorale texts and German secular poetry, being written by the same authors, developed similarly. Their style was influenced by the reforms of the new literary societies, which achieved a more natural German scansion within more artful poetic designs, as did Martin Opitz in his *Buch von der deutschen Poeterey* (Breslau, 1624). New verse forms (other than the ubiquitous four-foot line) often employed ancient or foreign models, such as the Sapphic metre in Johann Heermann's *Herzliebster Jesu* (*EG* 81), the Horatian ode forms in the lyrics of M.A. von Löwenstern and the French Alexandrine verse scheme, which was popular in Germany throughout the Baroque era, and was used in Martin Rinckart's *Nun danket alle Gott* (*EG* 321) and Heermann's *O Gott, du frommer Gott* (*EG* 495).

But the strongest influence on early 17th-century chorale texts was the Thirty Years War, which produced an outpouring of chorale poetry by laymen as well as professional poets. The destruction of German churches and schools during the war also encouraged private devotions rather than formal church services. This in turn heightened the personal and subjective tone of the chorales, which suggested the term 'Ich-lied' for 17th-century chorale poetry in contrast to the 'Wir-lieder' of the 16th century. It is symptomatic that the works of the most outstanding chorale poets of the time – Paul Gerhardt, whose 134 texts are the greatest in the tradition next to Luther's, Johann Heermann, Johann Franck and Johann Rist – appeared first in collections of home devotions and not in hymnbooks.

The favourite topics of the period, almost all expressions of the personal piety of the individual believer, were also clearly dictated by the experience of the war. They include the memento mori, yearning for death, and sin and repentance (themes usually associated with Heermann and particularly evident in the newly cultivated genre of Passion chorales, e.g. Heermann's *Herzliebster Jesu* and Gerhardt's *O Haupt voll Blut und Wunden*, *EG* 85), and deliberately contrasting affirmations of life and optimistic texts of comfort (also characteristic of Gerhardt, e.g. his *Wie soll ich dich empfangen*, *EG* 11, *Befiehl du deine Wege*, *EG* 361, and *Fröhlich soll mein Herze springen*, *EG* 36). Chorales by the prolific and versatile Johann Rist show his preoccupation with the horrors of hell, as in *O Ewigkeit, du Donnerwort*. More traditional chorales resembling those of the post-Reformation period were still produced by lesser-known poets who are sparsely represented in the modern hymnbook: Rinckart's *Nun danket alle Gott* (*EG* 321), *Ach wie flüchtig* (*EG* 528) by Michael Franck and *Wer nur den lieben Gott lässt walten* (*EG* 369) by Georg Neumark.

Relatively well-known composers, attracted first by the technical demands of four-part setting and later perhaps by the quality of much of the new poetry, began to publish collections of chorale settings in the early 17th century. The most familiar settings by the principal melodists are *Heut triumphieret Gottes Sohn* (*EG* 109), *Auf meinen lieben Gott* (*EG* 345) and *Befiehl du deine Wege* (*EG* 361) by Bartholomäus Gesius; *Gelobt sei Gott* (*EG* 103) by Melchior Vulpius; and the secular tune *Mein G'müth ist mir verwirret* (1601) by Hans Leo Hassler sung to Christoph Knoll's *Herzlich tut mich verlangen* (1605) and later to Gerhardt's *O Haupt* (1647, *EG* 85). Several melodies by Schütz, originally part of his 1628 settings of the German Psalter of Cornelius Becker (a futile attempt to suppress Lobwasser's popular translations set to melodies of the Calvinist Psalter) are now sung to Lutheran texts.

These trained composers were susceptible to the new Italian harmonic and tonal procedures, and their melodies show a strong harmonic sense, having definite major–minor tonality reinforced by such structural devices as frequent semi-cadences and caesurae on important scale degrees, mostly the dominant. Italian influence is also evident in the strong metrical organization and in the use of such recurrent groupings as alternating 2/2 and 3/2 metres, and rhythmic patterns derived from the early Baroque dance suite.

The most important mid-17th-century chorale composer was Johannes Crüger, Kantor at the Nikolaikirche in Berlin (where from 1657 Gerhardt was deacon) and the principal musical collaborator of both Gerhardt and Heermann; his 70 original melodies include those for Gerhardt's *Wie soll ich dich empfangen* (*EG* 11) and *Fröhlich soll mein Herze springen* (*EG* 36), for Heermann's *Herzliebster Jesu* (*EG* 81), and for *Schmücke dich, o liebe Seele* (*EG* 218) and *Jesu, meine Freude* both by Johann Franck. They are all distinguished by their fusion of simplicity suited to the congregation with expressive declamation and rhythmic flexibility, the latter being due largely to the incorporation of Calvinist models. As a hymnbook editor Crüger introduced the private devotional hymn (*Erbauungslied*) that prevailed in the

second half of the 17th century; in his first collection, *Newes vollkömliches Gesangbuch* (1640), which bore the explicit designation 'for home or church use', the standard core of Reformation *de tempore* chorales appeared together with the new *Trostlieder* of Heermann and others. For the first time chorales were presented as melody and figured bass (instead of four-part harmonizations), a format obviously appropriate for home devotions at the keyboard and for church congregations with organ accompaniment. Organ accompaniment had been introduced in about 1600 but had become widespread only as many church choirs were dissolved in the wake of the Thirty Years War. Crüger modified the traditional Reformation melodies by adding large numbers of leading-note accidentals, which helped to erase the last vestiges of the church mode system in favour of major–minor tonality. The second edition, which appeared as *Praxis pietatis melica*, contained a larger number of contemporary chorales including 15 by Gerhardt. (Later editions reflected changing tastes, and with the 44th, the *Praxis pietatis melica* became the most reprinted hymnbook in Protestant history.)

Apart from Crüger the most significant mid-17th-century melodists were his successor at the Nikolaikirche, J.G. Ebeling, who supplied further settings for Gerhardt's texts including *Warum sollt ich mich denn grämen* (*EG* 370), and Rist's principal collaborator, Johann Schop (i), who wrote the melodies for *Sollt ich meinem Gott nicht singen?* (*EG* 325), and *Werde munter, mein Gemüte* (*EG* 475).

12. Pietism and Orthodoxy, *c*1675–*c*1750. The chorale reached its artistic maturity in the achievements of Gerhardt, Crüger and their contemporaries. In the late 17th century the genre began to be overdeveloped and to decline in quality; this situation was aggravated to some extent by such external conditions as increasing secularization, but more specifically by theological dissent within German Lutheranism between the Orthodox and the Pietists.

Pietism as a movement is officially dated from the publication in 1675 of Spener's *Pia desideria*, but it was the natural outcome of the mysticism and religious emotionalism that had been increasing throughout the 17th century. The efforts of the Pietists to replace the formality of regular church services with private Bible classes and home devotions further transformed the character of the chorale and the hymnbook. By 1700 there were two types of hymnbook: one for the congregation, containing only texts (and the melodies of some new hymns), and the so-called 'Choralbuch' for the organist, containing melodies with figured basses and text incipits (the first of this kind was Daniel Speer's *Choral Gesang-Buch*, Stuttgart, 1692).

The new Pietist repertory, which grew rapidly with the mass-production of new hymnbooks, placed renewed emphasis on the soul of the individual believer and the experiences of conversion and penitence. The passivity in the texts of the preceding period was replaced by vigorous utterances and strong contrasts, for example *Jesu, meines Lebens Leben*/*Jesu, meines Todes Tod* (*EG* 86); the chorales on death (*Sterbelieder*), which were numerous during the Thirty Years War, were replaced by combative hymns of faith (*Kampflieder*). For the first time eschatological topics from the Bible (for example the apocalypse) and christocratic theology had special prominence. Paradoxically the Pietists, reacting against traditional dogmatism in the cause of personal piety, made copious use of biblical allusions, and so effected a strong theologizing of the hymnbook. This partly explains why the most significant Pietist poets, Joachim Neander, the author of *Lobe den Herren, den mächtigen König* (*EG* 317), and Gerhard Teerstegen (1697–1769), who were in fact the greatest chorale poets in the history of the German Reformed Church, were both Calvinists.

Of the numerous Pietist hymnbooks the most typical and influential were J.A. Freylinghausen's *Geistreiches Gesang-Buch* (Halle, 1704) and his *Neues geistreiches Gesang-Buch* (Halle, 1714), which contained 815 texts and 158 melody–continuo settings. Like most late 17th-century hymn tunes, Freylinghausen's are of two contrasting types. The first represents a retreat from the rhythmically differentiated pattern of the early and mid-17th-century chorales and a return to isometric melodies, but now – unlike those of the 16th century – with a strict and clearly defined metrical organization, as in *Was Gott tut, das ist wohlgetan* (*EG* 372) by Samuel Rodigast (1649–1708). The second, derived from the Italian Baroque aria by way of the contemporary German continuo lied, made extensive use of short connecting ornaments and stereotyped cadences and were frequently in a continuous dactylic metre. Common to both the isometric and the aria-style chorales is the predominance of a major-mode melodic model in which leaps of a 6th and 7th and cadential progressions from the fourth to the third degree are frequent, often contributing a sentimental and sensuous character symptomatic of the personal enthusiasm of the Pietist movement.

The influence of the Pietist or Freylinghausen style extended to Orthodox chorale poets and musicians, notably Benjamin Schmolck (1672–1737) as well as J.S. Bach's librettists Salomo Franck and Erdmann Neumeister, who both wrote chorale poetry. Orthodox musicians included Bach himself, whose settings of Paul Gerhardt's *Ich steh an deiner Krippe hier* (*EG* 37) and of Johannes Schröder's *Eins ist Not* (*EG* 386) are still in use, Telemann, and his colleague J.B. König, who compiled the largest Choralbuch of the 18th century (the *Harmonischer Lieder-Schatz*, Frankfurt, 1738) and was the presumed composer of the popular melody of *O dass ich tausend Zungen hätte* (*EG* 330).

J.S. Bach's significance for the chorale is not determined by the few original melodies he evidently contributed but rather by his appropriation of the chorale in an enormous variety of instrumental and vocal compositions. His four-part chorale harmonizations in particular, which mark the culmination of the *Cantionalsatz* tradition, may be the most important event in the history of the chorale since the Reformation, for they conveyed a sense of the greatness of the chorale heritage to later generations and helped to inspire and influence the restoration movement in the 19th century (*see* Chorale settings).

13. The Enlightenment, *c*1750–*c*1810. The philosophy of the Enlightenment affected religion in the second half of the 18th century as profoundly as it did secular institutions, and was in many ways the obverse of Pietism. It shared the Pietist emphasis on individual belief and also rejected traditional forms, but it substituted reason for the soul as the noblest human attribute and replaced the ideal of the pious man with that of the enlightened man. Hymnbooks from the Enlightenment period continued

the Pietist arrangement according to categories of dogma such as the characteristics of God, the articles of faith, and so on, but the *de tempore* organization had by now been almost completely abandoned. The church service of this period centred on the moralizing sermon, and prayer was almost entirely eliminated. Older chorale texts were either rewritten or removed; the number of new hymns was greatly reduced, and the number of melodies was reduced even further, with many texts assigned to as few melodies as possible. Four-part harmonizations printed on two staves replaced arrangements for melody and continuo in organ chorale books as the role of organ accompaniment became more crucial. The increasing use of the organ in the church service from the end of the 17th century was accompanied by increasing slowness in the tempo of chorale performance; this reached its extreme when the pastor and theoretician K.W. Frantz (1773–1857) suggested a tempo of four seconds per melody note.

Apart from C.F. Gellert, whose *Geistliche Oden und Lieder* (1757) were set by many well-known composers of the late 18th century (notably and most extensively by C.P.E. Bach but also by Haydn, Quantz, Kirnberger and others), the only other important chorale poets of the Enlightenment were Klopstock and Matthias Claudius (1740–1815). The few melodies produced during the period adopt either the restrained pathos of the contemporary *empfindsamer Stil* or the equally prevalent style of folklike simplicity, as in J.A.P. Schulz's setting of Claudius's *Der Mond ist aufgegangen* (*EG* 482).

14. 19TH AND 20TH CENTURIES. Although a number of new, mainly revivalist, chorales were produced during the 19th century, the most important contributions to chorale history were made by the new disciplines of hymnology and musicology. Research led to the restoration of much of the traditional liturgical structures and the reconstruction of the chorale heritage of the 16th and 17th centuries, and also initiated a movement to implement these restorative achievements by establishing an authoritative, uniform, German Protestant hymnbook. This work was stimulated by patriotic feeling engendered by the wars of independence during the first half of the century, and by the zeal of such individuals as Ernst Moritz Arndt (1769–1860). By 1915 the first all-German hymnbook appeared with the title *Deutsches Evangelisches Gesangbuch*. It was superseded in 1950 by the *Evangelisches Kirchengesangbuch*, which contained a central core of 394 chorales drawn from every historical period arranged according to the reconstructed liturgical categories followed by a variable regional appendix. Its few contemporary chorale texts (by Jochen Klepper (1903–42), Otto Riethmüller (1889–1938) and R.A. Schröder (1878–1962) and others) were mostly written during the revival of interest in the chorale in the 1930s and manifest a consciously traditionalist attempt to re-create not only the congregational tone and orientation of the Reformation chorale but frequently even to resurrect such 16th-century procedures as the transcription and adaptation of existing biblical and Latin hymn texts. The settings for these new texts, by Fritz Werner, Johannes Petzold (*b* 1912) and others, are similarly retrospective, occasionally introducing church modes and bar forms.

The 1950 hymnal was succeeded by the *Evangelisches Gesangbuch* in 1993. While retaining a significant basic corpus of the distinctive German chorale tradition, together with a representative selection of recently written texts and tunes, this hymnal breaks new ground by incorporating self-consciously ecumenical and wide-ranging international hymnody. Like its predecessor, EG offers a core repertory (535 numbered items, although some are subdivided to include as many as 14 individual pieces under one basic number) to which each regional church has appended its own supplement of additional hymns and liturgical pieces. While the newer hymn texts and melodies are thus presented within the context of the basic chorale tradition, it is an open question whether they can be designated 'chorales' in the same sense as in earlier Protestant hymnody.

ROBERT L. MARSHALL/ROBIN A. LEAVER

Chorale cantata (Ger. *Choralkantate*). A composition generally scored for a combination of voices and instruments and cast in several distinct and relatively independent sections or movements, two or more of which are based on the text (and usually also the melody) of a German chorale. The chorale cantata grew from the multi-sectional chorale concerto as developed by Scheidt and was cultivated most extensively from about 1650 to 1750 by the church composers of north and central Germany. In the late 17th century there were two main types: the 'pure' chorale cantata in which all the movements are based on the strophes of a single chorale; and the 'mixed' chorale cantata in which the first and last, and perhaps a central movement too, are based on a chorale, while the remaining movements are settings of other texts. In the 1720s J.S. Bach introduced a third type, the chorale paraphrase cantata, in which the interior movements, set as recitatives and arias, are based on poetic paraphrases of the internal strophes of a chorale, while the outer movements retain the original text and melody of the first and last chorale strophes.

ROBERT L. MARSHALL

Chorale concerto [chorale concertato] (Ger. *Choralkonzert*). A sacred vocal composition, developed during the first half of the 17th century, based on a German chorale and scored for one or more voices and basso continuo and occasionally including obbligato instrumental parts. Like the 'sacred concerto' or *geistliches Konzert*, of which it is a sub-category, the chorale concerto adopted the techniques and aesthetic principles of the concertato style of the early Italian Baroque period. There were two main types, distinguished by the size of the ensembles used: the large-scale chorale concerto, cultivated mostly from about 1600 to 1620, which used two or more vocal or instrumental choirs or both, and was modelled on the elaborate polychoral concertos of Giovanni Gabrieli; and more intimate settings, characteristically set for one or two voices and continuo, which emulated the small *concerti ecclesiastici* of Viadana. Leading composers of the chorale concerto were Michael Praetorius, Schein and Scheidt.

In the 20th century the German equivalent, *Choralkonzert*, was used by Siegfried Reda for a group of his organ compositions.

See CHORALE SETTINGS.

ROBERT L. MARSHALL

Chorale fantasia (Ger. *Choralfantasie*). In its broadest and most common meaning, any large organ composition based on a chorale melody. Such works were composed by north German organists during the mid- and late 17th century, notably by Scheidemann, Tunder and Buxtehude, although the term itself was rarely used by the composers. In these elaborate organ compositions a German chorale melody is freely developed, each phrase normally treated several times in different ways. Bach applied the term 'fantasia' during his Weimar period to a variety of different organ chorale types, but in Leipzig he limited the term to large compositions with the chorale melody presented as a cantus firmus in the bass. (The term 'chorale fantasia chorus' is sometimes applied to the elaborate opening chorus of a chorale cantata by Bach, but this usage is misleading, since Bach's chorale choruses are usually cast in a clear form, most frequently that of the ritornello concerto or the chorale motet.) In the late 19th century, as cultivated by Reger, the chorale fantasia became a rhapsodic organ composition of monumental dimensions based on a chorale melody.

See CHORALE SETTINGS.

ROBERT L. MARSHALL

Chorale fugue [chorale fughetta] (Ger. *Choralfuge*). (1) A short organ composition in which the first line (occasionally the first two lines) of a chorale is treated as the subject of a fugue. Chorale fugues were composed mainly by late 17th-century central German composers, among them Pachelbel and several of Bach's ancestors, notably Johann Christoph. Their function, like that of the chorale prelude, was to introduce the congregational singing of the chorale.

(2) A synonym for CHORALE RICERCARE.

See CHORALE SETTINGS.

ROBERT L. MARSHALL

Chorale mass. A cyclical composition based in whole or part on the Lutheran chorales derived from the Ordinary of the Mass. Luther introduced the concept of such hymnic alternatives in his *Deutsche Messe* (1526; the specific chorales are given in LUTHERAN CHURCH MUSIC, §2) particularly cultivated in the 20th century, notably by Pepping and Distler. The designation is often applied (incorrectly) to the third part of Bach's *Clavier-Übung* because it contains organ settings of the Lutheran Kyrie, Gloria and Credo chorales.

See CHORALE SETTINGS.

ROBERT L. MARSHALL/ROBIN A. LEAVER

Chorale monody. A sacred composition based on the text of a German chorale and written in the expressive declamatory style of the early 17th-century Italian concertato madrigal and monody. The chorale monody differs from the contemporaneous chorale concerto in that it makes no obvious use, if any at all, of the traditional chorale melody. Schein and Schütz included chorale monodies in their collections of *geistliche Konzerte*.

See CHORALE SETTINGS.

ROBERT L. MARSHALL

Chorale motet (i) (Ger. *Choralmotette*). A polyphonic vocal composition in two or more parts based on a German chorale. During the 16th century the chorale motet was the leading form of chorale composition; although it could be performed *a cappella*, instruments were frequently used either to reinforce or to replace one or more vocal parts. At first the chorale melody was usually treated as a rather clearly differentiated cantus firmus, but towards the end of the 16th century and into the early 17th each line of the chorale was normally presented in fugal imitation. After its eclipse by the chorale concerto and the chorale cantata in the 17th and 18th centuries, the *a cappella* chorale motet experienced a significant revival in the late 19th century and in the 20th.

See CHORALE SETTINGS.

ROBERT L. MARSHALL

Chorale motet (ii). An organ chorale written in the style of the chorale motet, that is, a synonym for CHORALE RICERCARE.

See CHORALE SETTINGS.

ROBERT L. MARSHALL

Chorale partita. A set of variations based on a chorale melody. Since the 18th century the terms 'chorale partita' (which, strictly, should be 'choral *partite*') and 'chorale variations' have mostly been used interchangeably. In the late 17th century the chorale partitas developed by central German composers, especially Pachelbel, differ from earlier chorale variations in using structural principles formerly associated with variation sets based on secular songs and dances; each variation retains the original proportions and often the original rhythmic values of the pre-existing melody as well as its basic harmonic properties.

See CHORALE SETTINGS.

ROBERT L. MARSHALL

Chorale prelude (Ger. *Choralvorspiel*). (1) A relatively short setting for organ of a single chorale strophe intended to introduce the hymn tune to be sung by the congregation. The chorale prelude as an autonomous genre was developed by the north German composers of the mid- and later 17th century, notably Buxtehude. The chorale melody, often decorated with expressive ornaments, is usually presented over a mildly polyphonic accompaniment without any interludes separating the individual chorale phrases. The form reached its culmination in the 45 chorale preludes in Bach's *Orgel-Büchlein* but continued to be cultivated throughout the 19th century and especially the 20th by, among others, Brahms, Reger, Distler and Pepping.

(2) A generic term for any chorale setting for organ, i.e. a synonym for organ chorale.

See CHORALE SETTINGS.

ROBERT L. MARSHALL

Chorale ricercare. A leading early 17th-century organ genre in which each line of a German chorale, emulating the style of the contemporary chorale motet, is presented in fugal imitation, whereupon it may be further embellished with idiomatic keyboard figuration. The principal exponents of the chorale ricercare were Michael Praetorius and Scheidt. It is also referred to as 'chorale canzona', 'chorale motet' and 'chorale fantasia'.

See CHORALE SETTINGS.

ROBERT L. MARSHALL

Chorale settings. Arrangements of traditional German Protestant hymns for several parts or voices. Chorale settings have developed since the early 16th century within two main traditions: ensembles for two or more voices or for a combination of voices and instruments; and settings for organ, that is, 'organ chorales'. Compositions in both categories vary from the simplest of harmonizations to the most elaborate contrapuntal and formal designs.

I. Vocal settings

1. THE REFORMATION GENERATION: JOHANN WALTER AND HIS CONTEMPORARIES. The first substantial musical publication of the Reformation, the *Geystliches Gesangk Buchleyn* of Johann Walter (i), prepared under the active supervision of Martin Luther, appeared in Wittenberg in 1524. The collection contained 38 four- and five-part arrangements of 35 melodies set to 32 hymn texts. In his foreword to the volume Luther explained that he desired part settings so that 'young people, who should and must be trained in music and other proper arts, would free themselves from love songs and other carnal music and learn something wholesome instead', and, further, that he wanted 'to see all the arts, especially music, used in the service of him who has given and created them'. The compositions, then, were intended primarily for the schools, but they were also to be used in the church service.

From the first, the newly created repertory of the German Protestant hymn was presented and conceived within the stylistic framework of traditional and prevailing art music. In all Walter's settings the chorale tune is treated as a cantus firmus, that is, the melody is presented in its entirety in a single voice. About half of the arrangements reflect the stylistic conventions of the previous generation, adopting the contrapuntal techniques common to both the Netherlandish motet and the local tradition of the secular Tenorlied of the late 15th century; the chorale melody appears in long note values in the tenor part (doubled in canon in the five-part settings) and is decorated by strongly contrasting, lively counterpoints in the surrounding parts, whose non-declamatory, melismatic character suggests instrumental participation, either *colla parte* or alone. The ornamental lines unfold with almost complete melodic independence, although they occasionally present a 'pre-imitation' of the cantus firmus at the beginning of chorale lines. But this retrospective 'late Gothic' polyphonic style, with its obviously symbolic treatment of the chorale as the structural and stable centre of the composition, is modified by a more modern harmonic style characterized by frequent bass line motion by 4ths and 5ths and by full sonorities instead of open 5ths on the strong beats. The remaining settings are cast in a more chordal or homophonic texture. The concern, reflecting contemporary humanist influence, is for full sonority and the clear projection of the text in all parts. Again the chorale cantus firmus usually remains in the tenor, but the outer parts are more vocal in character; there is little melismatic writing and no use of imitative polyphony.

The *Geystliches Gesangk Buchleyn* provided the classic example of the Protestant cantus firmus chorale motet for the early 16th century. Moreover, it established two basic but opposing approaches to chorale setting that were to endure throughout the history of the genre: the heterogeneous polyphonic style in which the cantus firmus voice is clearly differentiated from the others; and the more homogeneous chordal style in which the cantus firmus is presented essentially in the same rhythmic values as the other parts.

Walter's collection was continually expanded and revised during the following years until, with the appearance of the final edition in 1551, over 80 German chorale settings in three to six parts had appeared in the volume at one time or another along with an increasing number of Latin compositions. The volume (from 1544 bearing

the title *Wittembergisch deudsch geistlich Gesangbüchlein*) ultimately represented the basic liturgical repertory for the central German regions. The later editions reflect notable changes in style, particularly a growing preference for the homophonic type of chorale setting (although the more polyphonic style never completely disappeared) and for settings with soprano rather than tenor cantus firmus.

Next to Walter's *Gesangbüchlein* the most important early collection of chorale settings was the *Newe deudsche geistliche Gesenge* (Wittenberg, 1544), which appeared under the auspices of the principal Protestant music publisher of the Reformation period, Georg Rhau. This too was prepared explicitly for school use but was clearly intended for the church service as well. Unlike Walter's publication, the *Newe deudsche geistliche Gesenge* was an international and interdenominational anthology containing 123 compositions by 19 composers, of whom the best-represented are Balthasar Resinarius, Arnold von Bruck, Lupus Hellinck, Ludwig Senfl, Benedictus Ducis, Sixt Dietrich, Thomas Stoltzer and Stephan Mahu. Resinarius and Dietrich, along with Walter, were the leading composers of the Reformation generation, the three together often referred to as the 'Erzkantoren' (arch-Kantors); but Bruck, Senfl, Stoltzer, Mahu and Hellinck were all Roman Catholic, and their inclusion in the volume is indicative of Rhau's cosmopolitan intent. The anthology reveals in general no stylistic advance beyond Walter's two basic types, the traditional Resinarius preferring the more polyphonic textures and the modern Dietrich the text-orientated homophonic style. Several works, however, tend towards the style of the chorale motet of the later 16th century, most notably Hellinck's setting of *Christ lag in Todesbanden*.

The 1540s also witnessed the publication of numerous volumes of bicinia and tricinia, two- and three-part compositions that presumably served pedagogical purposes but whose history was to continue into the 17th century. One of the most important bicinia collections, Rhau's *Bicinia gallica, latina, germanica* (RISM 1545[6]) included settings of German chorales.

Caspar Othmayr's *Cantilenae aliquot elegantes ac piae* (1546[10]) was another significant publication of the period. It further refined Walter's homophonic type, stressing a more declamatory treatment of the text in all voices and a concomitant reduction in the role of the tenor as an isolated cantus firmus. Othmayr's settings therefore also form part of the stylistic transition to the later 16th-century chorale motet style that appeared fully developed in Walter's penultimate published work, his six-part setting of Luther's chorale *Erhalt uns, Herr, bei deinem Wort* (Wittenberg, 1566). Even so, Walter's successor at the Saxon court, Matthaeus Le Maistre, is still best regarded as a transitional figure. His *Geistliche und weltliche teutsche Geseng* (Wittenberg, 1566), for four and five voices, with their strong contrast between cantus firmus and free voices, are quite conservative, while his *Schöne und auserlesene deudsche und lateinische geistliche Gesenge* (Dresden, 1577), for three voices, reflecting the influence of Othmayr and Lassus, favour systematic imitation of short syllabic units or the motivic treatment of the chorale melody.

2. Development of the 'Cantional' and the chorale motet, *c*1570–*c*1630. The opposing tendencies already evident in Walter's earliest chorale settings led during the last third of the 16th century on the one hand to the flowering of the strictly homophonic setting and, on the other, to the through-imitative chorale motet. Although some of Walter's contemporaries, notably Dietrich, had continued to compose homophonic settings, most of the German Protestant musicians of the 1540s, 50s and 60s concentrated on polyphonic works. The main exponents of the chordal style at the time were rather the Calvinist composers who were interested in developing a simple setting of the Genevan Psalter suitable for private home devotions. Loys Bourgeois' 50 four-part *Pseaulmes de David* (Lyons, 1547), and Claude Goudimel's setting of the complete Psalter, *Les pseaumes ... mis en musique à quatre parties* (Geneva, 1564), accordingly consisted of strictly note-against-note, four-part harmonizations, in which, however, the melody was still placed in the tenor (*see* Psalms, metrical, §II, 2(ii)). With the publication of Ambrosius Lobwasser's German translation of the psalter in Leipzig (1573) this manner of composition spread to Germany; Lobwasser included both the original melodies and Goudimel's four-part settings. Finally, the theologian Lucas Osiander adapted the strictly chordal style to the traditional Lutheran chorale melodies and published the first collection of true four-part chorales under the title *Fünffzig geistliche Lieder und Psalmen* (Nuremberg, 1586). These settings, however, did not merely imitate the Calvinist Psalter publications, for Osiander, motivated by the desire to encourage and facilitate congregational singing in the church service, moved the chorale melody from the tenor to the soprano part in order to ensure its audibility. This may reflect the influence of the older Italian *falsobordone* practice or even that of the contemporary secular villanella. In Osiander's simple harmonizations the text is declaimed simultaneously in all voices and the phrases of the chorale strophe are clearly articulated by cadences marked by fermatas.

Osiander's innovation, soon referred to as the 'Cantionalsatz' or 'cantional' style, so successfully fulfilled its utilitarian purpose that similar chorale collections, or *Cantionale*, were widely produced throughout Lutheran Germany during the next 50 years. Important *Cantionale* were published in Leipzig by Calvisius (1597) and Schein (1627); in Dresden by Rogier Michael (1593) and Erhard Bodenschatz (1608); in other central German cities by Melchior Vulpius (Leipzig, 1604, and Jena, 1609); in Nuremberg by H.L. Hassler (1608) and Melchior Franck (1631); in East Prussia by Johannes Eccard (Königsberg, 1597) and Bartholomäus Gesius (Frankfurt an der Oder, 1601); finally in north Germany by Joachim Burmeister (Rostock, 1601) and Michael Praetorius. In the sixth, seventh and eighth parts of his encyclopedic *Musae Sioniae* (Wolfenbüttel, 1609–10), Praetorius presented a total of 742 harmonizations for 458 hymn texts, comprising settings of almost all the chorale melodies in use at the time, many in every local variant.

Cantionalien and cantional-style chorale harmonizations continued to be produced throughout the 17th century and beyond, but the genre reached its highpoint between about 1590 and 1630 when it was cultivated by such major composers as Eccard, Schein, Hassler and Praetorius. Hassler's and Schein's four-part chorales are enriched by the latest harmonic innovations emanating from Italy (incipient major–minor functional tonality, a wider and more expressive vocabulary of triads, 7ths and dissonances). But by 1627 the inclusion of a basso

continuo part in Schein's *Cantional* signalled the eventual internal dissolution of the style; and as early as 1597 the active accompaniments in Eccard's five-part settings, suggestive of the rhythmic and textural richness of polyphonic writing, had already resulted in a mixed style between the strictly chordal *Cantionalsatz* and the truly polyphonic motet. It was, however, precisely Eccard's intermediate style that was to be appropriated more than a century later when the cantional genre enjoyed a second flowering in the four-part chorales of Bach.

The appearance of the cantional style in the 1580s can be understood as the adoption of mid-16th-century French Calvinist psalmody modified by the discant style of the Italian *falsobordone* and villanella and incorporated into a long-standing German practice, but the chorale motet of this period generally refined and continued the indigenous polyphonic tradition established by the Reformation generation. The *Geistliche und deutsche Gesenge* of Georg Otto (Erfurt, 1588), for example, and many chorale motets of Leonhard Schroeter and Joachim a Burck still consisted of decorative outer parts embellishing a continuous structural tenor cantus firmus, the style familiar from the settings of Walter and Rhau's collection of 1544. But next to this conservative mainstream there appeared a smaller modernist school of chorale motet composers who continued the trend, already evident in Hellinck's setting of *Christ lag in Todesbanden*, towards greater equalization of the tenor and the other voices. Lassus's chorale motets in his *Neue teütsche Liedlein mit fünf Stimmen* (Munich, 1567, 1572) and his four-part *Neue teutsche Lieder* (Munich, 1583) contributed to this development. It was not until the turn of the century, however, that the systematic line-by-line presentation of the chorale melody in imitation by all voices, a technique already common in the 16th-century Netherlandish motet, was completely established in the chorale motet repertory in the Nuremberg publications of Melchior Franck and H.L. Hassler, and in the *Musae Sioniae* of Praetorius.

During the 1580s the most progressive composers usually preferred to abandon the cantus firmus altogether and replace it with freely invented material characterized by a constantly shifting texture alternating between greater and lesser degrees of pure polyphony and declamatory homophony. This style (often called song motet) was capable of the greatest expressivity and drama; it was derived from the motets of Lassus and adopted for both traditional and new chorale texts, most notably by two of Lassus's pupils: Leonhard Lechner, in his *Neue teutsche Lieder* (Nuremberg, 1582, for four and five voices); and Eccard, in his *Preussische Festlieder* (published posthumously, Elbing, 1642; Königsberg, 1644).

Shortly after 1600, the traditional cantus firmus motet, too, particularly those of Hassler, Melchior Franck and especially Michael Praetorius, became receptive to the most significant musical developments of the time – specifically the late 16th-century Italian madrigal – after a period of about 20 years (*c*1580–1600) during which the genre had been cultivated for the most part in relative isolation by conservative composers of modest abilities.

The chorale treatment in Melchior Franck's *Contrapuncti compositi deutscher Psalmen und anderer geistlichen Kirchengesäng* (Nuremberg, 1602), clearly indebted to the late 16th-century Netherlandish tradition, is based on the principles of complete equality of the voices and the systematic presentation of each line of the complete chorale melody in imitation. Indeed, each voice in Franck's chorale settings remains tied as much as possible to the motivic material of the chorale cantus firmus, a result that often could be achieved only by treating the rhythmic values in which the text was declaimed with a flexibility quite uncharacteristic of the motet style, approaching at times the declamatory freedom and shifts of rhythmic motion typical of the contemporary Italian madrigal.

Hassler's *Psalmen und christliche Gesäng* (Nuremberg, 1607, for four voices) are related to Franck's *Contrapuncti*, sharing with them an almost identical repertory. But Hassler's collection is rather a compendium of styles in which Franck's strict imitative type is only one of several approaches to the chorale melody, along with more traditional compositions with tenor or soprano cantus firmus. Like Franck's, and indeed all chorale motets of the 16th and early 17th centuries, Hassler's were to be sung by the choir in the church service as part of the performance of the principal Sunday chorale (the *Haupt-* or *Graduallied*) according to the *alternatim* practice in which the individual strophes were rendered by the congregation, choir or organ (see §II below).

The nine parts of Praetorius's monumental *Musae Sioniae* (1605–10), taken in their entirety with a total of over 1200 compositions, provide a comprehensive and generally retrospective survey not only of the chorale motet but of all the forms of chorale composition developed in the 80 years after the Reformation – from the bicinium and tricinium to the *Cantionalsatz* to the Venetian-style polychoral motet. But in the fifth part of the *Musae Sioniae* (Wolfenbüttel, 1607) Praetorius consistently applied techniques that were only incipient in the works of his contemporaries. The cantus firmus, for example, is often treated with considerable rhythmic variability and melodic freedom. Sometimes the mixture of rhythms within one chorale phrase even results in the creation of short, independent motivic fragments that serve to isolate the meaning of individual words or concepts of the text at the expense of the melodic integrity of the chorale line as a whole: see, for example, the five-part setting of *Gelobet seist du, Jesu Christ* in *Musae Sioniae*, part 5 (no.67 in the complete edition), especially the treatment of the word 'Christenheit'.

In the foreword to the ninth part of *Musae Sioniae* (Wolfenbüttel, 1610) Praetorius suggested a systematic categorization of the principal types of 17th-century cantus firmus treatment. He described three 'manners' (*Arten*): 'Muteten-Art', 'Madrigalische Art' and 'Clausul-Art'. In the 'motet style' the cantus firmus is kept intact in one voice and presented in phrase units of one complete chorale line at a time; the texture is based on the principle of imitative counterpoint; rhythmic motion is mainly in large note values; and the chosen unit of declamation remains constant. Instead of the even disposition of vocal ranges found in the traditional motet style, the 'madrigal style' adopts the basic texture of Viadana's *Cento concerti ecclesiastici* (Venice, 1602), which consists of strongly contrasting registers of two higher parts (usually sopranos or tenors) projected against one lower part (Praetorius, however, made only sparing use of Viadana's instrumental basso continuo); a thorough-going cantus firmus is abandoned; and all the voices are permeated by material derived from the chorale tune, which is dissolved into rhythmically varied motifs. Praetorius referred to the

'Clausul-Art' as 'an innovation invented by the author himself'. The (untranslatable) 'Clausul-Art' is a mixture of quite heterogeneous elements, in effect the attributes of the first two categories; against a statement of the complete cantus firmus presented in long notes in one voice, the other two voices develop throughout a single melodic and textual clause of the chorale in the modern, Italian concertante manner, breaking it down into small, short-breathed and rhythmically variable motivic fragments.

3. CHORALE CONCERTO: PRAETORIUS, SCHEIN, SCHEIDT, *c*1610–50. During the second decade of the 17th century the latest Italian compositional practice continued to influence German Protestant composers, particularly as the principles of the concertato style became increasingly familiar to them. This led to the creation of a new form – the chorale concerto.

With the publication in Wolfenbüttel in 1618 of the third part of his theoretical work, *Syntagma musicum*, and his latest collection of chorale settings, *Polyhymnia caduceatrix et panegyrica*, Praetorius became the advocate and leading exponent of the large-scale chorale concerto. The instrumental combinations in *Polyhymnia caduceatrix* range from continuo-accompanied solo voices and simple *colla parte* instrumental doubling to complete vocal and instrumental choruses conceived as illustrations of the 12 manners of scoring described in the third part of *Syntagma musicum*. But for all their colouristic variety the compositions of *Polyhymnia caduceatrix* never completely disguise an underlying texture of only four or five real parts inherited from the traditional cantus firmus chorale motet. The genuinely modern, concertato elements in these settings are reflected rather in the rhythmic flexibility and melodic freedom of each voice (frequently featuring coloratura scales and virtuoso passage-work), in the exploitation of echo effects, and, most of all, in the clear formal organization that arises from the use of ritornellos and other repetition schemes as well as from strong contrasts of metre, texture and scoring between adjacent sections of a work.

The dissolution, brought about by the Thirty Years War, of the large musical establishments attached to many German courts and churches soon made the composition of elaborately scored chorale concertos of the type in *Polyhymnia caduceatrix* unfeasible. Accordingly, Praetorius's contemporaries preferred the *geistliches Konzert* (i.e. sacred vocal concerto for small ensemble), a form directly modelled on Viadana's *Cento concerti ecclesiastici* and, like these, best understood as in principle constituting a reduction of the large sacred concerto in which tutti ritornellos and independent instrumental choirs were eliminated and the texture was restricted for the most part to one standard type – two upper parts (usually sopranos or tenors) and continuo.

In the first part of his *Opella nova, geistlicher Conzerten ... auff italiänische Invention* (Leipzig, 1618), Schein appropriated this format for the chorale, also using the bold harmonic vocabulary of the Italian style. Schein's chorale concertos, scored for two to four voices with basso continuo, also frequently reflect the influence of Praetorius's 'Clausul-Art'. In the opening composition, for example, a setting of Luther's *Nun komm, der Heiden Heiland* for two sopranos, tenor and continuo, each line is presented as a cantus firmus in the tenor part with the two sopranos manipulating in alternation and imitation short motifs of the chorale melody cast in the typically free rhythms of the concertato manner. In other compositions of *Opella nova* a strict cantus firmus is missing entirely; fragments of the chorale tune appear in the solo voices either ornamented with the affective embellishments and coloratura passage-work of the Italian monodists or declaimed in a parlando-like stream of quavers (see, for example, *Da Jesus an dem Kreuze stund* and *Christ unser Herr zum Jordan kam*). With his setting of *O Jesu Christe, Gottes Sohn*, for solo soprano, violin obbligato and continuo, Schein abandoned the traditional melody altogether and in effect created the first 'chorale monody'.

The 80 chorale settings included in the four parts of Scheidt's *Newe geistliche Concerten* (Halle, 1631–40) belong to a more conservative school, indebted rather to the chorale motets of *Musae Sioniae* (but now consistently provided with basso continuo) and to Scheidt's own organ style (see §II below) than to the expressionistic vocal concertos of the Italian monodists. Unlike Schein, Scheidt frequently set not only the first but several strophes – sometimes all – of a chorale, much in the manner of the chorale variations for organ. Most of Scheidt's settings in the *Newe geistliche Concerten* are scored for three voices (usually cantus, tenor, bass) and continuo (obbligato instruments are only rarely used); the constituent sections, each consisting perhaps of one or more strophes or only of part of a single strophe, are set in contrasting styles. The first section is typically cast as a traditional polyphonic chorale motet, with each line of the cantus firmus presented in imitation, and is a concerto only in the use of the basso continuo and solo scoring. Interior sections may then be set in trio texture according to the 'madrigalian manner'; but Scheidt made considerably more use of literal quotations of the chorale melody and less use of the ornamental vocabulary of the monodists. The final section is normally treated as a simple chordal *Cantionalsatz* (see *Wenn wir in höchsten Nöten sein*, 1634, and *Herr Jesu Christ, meins Lebens Licht*, 1640). The principles of strong stylistic contrast and clear sectionalization embodied in Scheidt's multipartite chorale concertos were to furnish the model for the chorale cantata of the following generation.

The great contemporary of Schein and Scheidt, indeed the leading German Protestant composer of the 17th century, Schütz, did not cultivate the chorale genres extensively or systematically, although more than 50 chorale settings are scattered among his works, mostly as isolated items in larger collections. But they range in style from the cantional harmonizations in his four-part setting of the Becker Psalter (Freiberg, 1628; *see* CHORALE, §10), to cantus firmus chorale concertos and freely composed chorale monodies cast in the contemporary Italian style in the *Kleine geistliche Conzerte* (Leipzig, 1636, and Dresden, 1639; e.g. *Nun komm, der Heiden Heiland* and *Wann unsre Augen schlafen ein* respectively); to retrospective *a cappella* chorale motets in the *Geistliche Chor-Music* (Dresden, 1648), in which, however, references to the traditional melodies are usually indirect or tenuous; as well as to the large-scale polychoral setting of *Komm, Heiliger Geist* for voices and instruments in *Symphoniae sacrae*, part iii (Dresden, 1650).

4. CHORALE CANTATA, *c*1650–*c*1700. During the second half of the 17th century the production of church music increased enormously throughout the Protestant regions of central and northern Germany. With few

exceptions, and in contrast to earlier periods, most of this repertory never appeared in print. Individual Kantors, music directors, or organists of the principal town churches and Lateinschulen, and to a lesser extent the court Kapellmeister, composed or collected in manuscript the works most suitable for local conditions. As a result numerous extensive repertories of manuscripts were established, the largest surviving collections being the so-called Düben, Bokemeyer and Grimma collections (now, respectively, in *S-Uu*, *D-Bsb* and *D-Dl*). But significant collections are known to have existed in Leipzig, Lüneburg and elsewhere; indeed, about 95% of the repertory is thought to be lost.

The predominant form of church music remained the sacred concerto at first. But the trend towards greater internal differentiation, already apparent in Scheidt's *Newe geistliche Concerten*, reinforced by increasingly marked musical (and, later, textual) contrasts between the sections, by the last quarter of the century had gradually transformed the initially unified *geistliches Konzert* into a hybrid form, the cantata, whose sections, now relatively independent, closed movements, appropriated variously the formal and stylistic traits of the prevailing genres of the time – the concerto, the motet, the aria and the chorale. By the end of the century the cantata also adopted the textual and musical forms of the contemporary Italian opera.

As in all previous genres of German Protestant church music, the texts and melodies of the congregational chorale continued to a greater or lesser extent to provide the raw material for the church cantata. But while the strophic form of the chorale lent itself well to the multipartite structure of the cantata, the principle of contrast that was to govern the succession of individual movements made the use of the chorale as the sole text problematic. Nonetheless, the 'pure' chorale cantata *per omnes versus*, in which all the strophes of a single chorale were set with no other text material, was one of the principal cantata types, at least in the early history of the form. Later the 'mixed' chorale cantata was preferred, interpolating biblical passages or freely invented verses between the chorale strophes. Conversely, single chorale strophes or movements appeared at the beginning, middle or end of a cantata based mainly on other texts; and isolated vocal or instrumental quotations of a chorale cantus firmus were frequently superimposed on solo or choral settings of non-chorale texts.

The various uses of the chorale in the cantata were cultivated in different ways and at different times in north, central and south Germany. The north German composers were the first to abandon printed collections and to cultivate the cantata. Moreover, most of the 150 or so surviving pure chorale cantatas (in contrast to mixed cantatas with chorale movements) were written by north German musicians, although some of the earliest examples of the form were composed (before 1650) by the south German, or rather, Nuremberg, composers J.A. Herbst (a work based on the cantus firmus *Wenn wir in höchsten Nöten sein*) and J.E. Kindermann (a setting of *Wachet auf, ruft uns die Stimme*). (Although Nuremberg is in southern Germany, it clearly belonged to the central German musical heritage throughout the 17th century.) In northern Germany influences of the Italian monodic tradition, as represented by the sacred concertos of Schein and Schütz, survived the longest. The characteristically expressive harmonies and declamation used for vivid and subjective text interpretation, as well as the techniques of concertante fragmentation and free elaboration of the cantus firmus (analogous to those found in the contemporary north German organ chorale), and the fluid shifts of texture and styles within the single strophe (rather than between one strophe and the next), resulted in highly complex and individualized forms attained at the expense of the unity of the individual movements and the structural clarity of the cantata as a whole. The hallmarks of the north German chorale cantata can be observed in those of Franz Tunder, Nicolaus Bruhns and, most notably, the six large chorale cantatas of Buxtehude (e.g. his setting *per omnes versus* of *Herzlich lieb, hab ich dich, o Herr*).

The pure chorale cantata is seldom found among the works of central German court Kapellmeister. Only one example survives, for instance, by the prolific J.P. Krieger – his setting of *Ein feste Burg*, which retains a uniform scoring throughout, rendering its classification as a cantata questionable. But the genre is quite well represented in the works of the town Kantors of the region, particularly the Thomaskantors of Leipzig, Sebastian Knüpfer and Johann Schelle. Among composers active in south Germany, only Pachelbel and perhaps one or two others are known to have contributed to the form.

The mixed cantata, containing one or more chorale movements, flowered later than the pure chorale cantata and was apparently more extensively cultivated, especially in central Germany; about twice as many survive. But the hallmarks of the central German cantata and its characteristic treatment of the chorale were established quite early in the second half of the 17th century. Before 1655 Johann Rosenmüller, in at least five of his sacred concertos, used what was to become the typical central German final chorale movement, a straightforward chordal harmonization, usually in 3/2 metre, decorated by ornamented obbligato parts in the upper registers (this modification of the cantional style had been created by Johannes Crüger in his *Geistliche Kirchen-Melodeien*, Leipzig, 1649). By 1670 Knüpfer had developed a standard design for the central German cantata in which several movements, each unified within itself and strongly contrasting with adjacent movements, were symmetrically disposed according to scoring, metre and texture (see his *Was mein Gott will* and *Es spricht der Unweisen Mund wohl*; also Schelle's *Vom Himmel kam der Engel Schar*). In contrast to the north Germans, Rosenmüller, Knüpfer and their successors made practically no use of the monodic style. They used clear, simple structural forms and an undecorated cantus firmus; in their choruses they preferred relatively sophisticated contrapuntal textures based on imitative polyphony (or even canon) to a highly affective and sophisticated harmonic vocabulary. Later central German composers, notably Knüpfer's successor, Schelle, cultivated a more homophonic choral style, and the internal movements of their cantatas began to be dominated by settings without cantus firmus. By the end of the 17th century the structural clarity and more objective style of the central German cantata had been almost universally adopted in north and south Germany, appearing in the works of the Hamburg composers Joachim Gerstenbüttel and Georg Bronner as well as in those of Pachelbel.

By 1700 the pure chorale cantata was abandoned almost entirely throughout Germany in favour of the

mixed type. Typical examples are the compositions on *Christ lag in Todesbanden* and *Wie schön leuchtet der Morgenstern* by Johann Kuhnau (Schelle's successor), in which only the tutti movements at the beginning and end are set to strophes of the chorale; the internal movements interpolate recitatives, arias and biblical settings.

5. EARLY 18TH CENTURY: J.S. BACH. At the beginning of the 18th century, German composers again became receptive to the latest Italian secular developments. The forms and styles of the contemporary Italian opera and, before long, the instrumental concerto as well, exerted as strong and as fundamental an influence on German Protestant church music as had the concertato madrigal, the monody and the sacred concerto a century earlier. Symptomatic of this was the appearance in 1700 of the *Geistliche Cantaten statt einer Kirchenmusic* by the Weissenfels poet and theologian Erdmann Neumeister. The title marks the first use of the term 'cantata' in connection with sacred music, and it is indicative of the collection's nature and significance, for Neumeister's texts consist exclusively of his own freely invented lyrics, all cast in the basic secular text forms of contemporary Italian opera and cantata: the madrigalian (i.e. free-verse) recitative, and the more tightly constructed aria. The two types alternate systematically throughout each cantata.

Neumeister's innovation, usually referred to as the 'new' cantata, immediately became immensely popular, and his texts were set to music by J.P. Krieger, Kuhnau, F.W. Zachow and others. The restriction to recitative and aria texts only in the 'new' cantata, however, was soon modified by Neumeister himself and others, and by 1710 the traditional text sources, biblical passages and chorales, were reintroduced into the German cantata. But their role thenceforth was generally considerably more modest. The only composer of the time to cultivate the chorale extensively was J.S. Bach.

At first Bach made no use of the madrigalian recitative and aria forms of the new Neumeister type. On the contrary, his earliest cantatas adhere strongly to the late 17th-century central and north German traditions with their mixed texts, drawing to a large extent on the standard chorale repertory and passages from the Bible. His setting of *Christ lag in Todes Banden* (BWV4), possibly composed in Mühlhausen in 1708 (or perhaps earlier), in fact is cast as a pure chorale cantata, specifically as a series of chorale variations *per omnes versus*. Its symmetrical ordering of movements (choruses at the beginning, middle and end, separated by duets and arias) with the final chorus set as a simple four-part chorale harmonization, clearly reflects the central German norm going back to Knüpfer. The composition seems to have been influenced by cantatas on the same text by Kuhnau and Pachelbel. The opening and middle strophes are treated as elaborate chorale motets with the cantus firmus presented in long notes in one voice while the remaining voices have imitative motivic material mostly derived from the chorale melody. To a lesser degree elements of the north German practice are evident as well, as in the mixture of techniques within the opening chorus and the decoration of the cantus firmus in the first duet.

The style of Bach's later chorale cantatas, particularly the 40 settings he wrote in 1724–5 in Leipzig as part of a complete cantata cycle for the church year, has no known antecedents, although Bach may have taken the idea for the project from one of his predecessors as Thomaskantor, Johann Schelle, the only other composer known to have written a complete annual cycle of chorale cantatas (now lost). Bach's settings of 1724–5 achieved a unique fusion of the older mixed chorale cantata tradition with the more recent operatic idioms of the Neumeister type. The opening chorale strophe is typically set as an elaborate movement for chorus and orchestra (often described as a 'chorale fantasy') and the final strophe as a simple harmonization in cantional style. The internal strophes, however, are not set literally but are paraphrased and recast in the forms of recitatives and arias. Accordingly, Bach's creation has been called 'chorale paraphrase' cantata. In his chorale cantatas of the late 1720s and 30s, and also in several of the 1724–5 cycle, Bach preferred to set the literal chorale text throughout rather than paraphrases of it. But he retained the musical design of the 1724–5 cycle, which consisted of an opening chorale chorus followed by a succession of recitatives and arias and a concluding four-part chorale.

In his mature chorale cantatas Bach drew on devices from all the prevailing vocal and instrumental genres of his own and earlier periods, characteristically combining two or more simultaneously. The solo movements are usually freely composed recitatives and arias, but they often contain direct or indirect allusions to the chorale melody, perhaps appearing as an instrumental cantus firmus. But the most extraordinary demonstrations of technical virtuosity are in the opening choruses. Here Bach adopted as his usual model the design of the contemporary Italian instrumental concerto as perfected by Vivaldi, the orchestra presenting in effect the ritornellos based on the opening instrumental tutti in alternation with the separated lines of the chorale in the chorus, which function in the formal conception as the solo episodes of the concerto design. The chorale lines themselves are still ultimately cast in one of the two fundamental types of chorale setting, the chordal cantional harmonization or the polyphonic chorale motet. Other chorale choruses may be based not on the concerto model but on the combination of the chorale with other forms: the French overture (BWV61, 20); the strict chorale motet with *colla parte* instruments (BWV2, 28); the recitative, with chorale interpolations (BWV73, 27); or the extended basso ostinato (BWV122). Perhaps Bach's most remarkable combination of techniques is in the opening chorus of *Jesu, der du meine Seele* (BWV78) in which the bar form chorale is presented as a cantus firmus chorale motet, each line being prepared in the lower parts by a polyphonic pre-imitation before the entry of the chorale melody in the soprano. Between statements of the chorale lines there is a ritornello, based on the orchestral introduction, which has the metre of the sarabande. This entire concerto plus chorale motet structure rests on the almost uninterrupted repetition of a basso ostinato that uses the old passacaglia theme of a chromatically descending 4th. The movement, then, combines simultaneously the formal and stylistic properties of the bar form chorale, the chorale motet, the sarabande, the Baroque concerto and the passacaglia. In their expressive depth, their enormous formal variety and their sophistication, Bach's chorale cantatas constitute not only a comprehensive summation of the history of chorale setting but also its greatest artistic manifestation.

Among the cantatas of Bach's contemporaries only those of Christoph Graupner contain relatively ambitious

chorale settings; but Graupner composed no real chorale cantatas. The few chorale cantatas of Telemann use the chorale melody only in the outer movements, where it is set in simple chordal style. Occasional chorale movements, again mostly in simple settings, also appear in cantatas by G.H. Stölzel, J.F. Fasch and others.

6. AFTER 1750. During the second half of the 18th century the growing secularization inspired by Enlightenment attitudes brought about the gradual decline of the religious institutions that had historically supported the production and performance of Protestant church music in Germany: the well-trained school choirs directed by professional Kantors; volunteer church choruses (Kantoreien); and regularly employed court and town musicians. Moreover, the rise of theatre and concert music at this time attracted the most talented musicians away from the church. In response to the new aesthetic ideals of simplicity and naturalness the operatic elements of the early 18th-century church cantata, which had been increasingly cultivated by composers (C.H. Graun, G.A. Sorge, J.P. Kellner) and criticized by theologians – secco recitatives, da capo arias, vocal virtuosity – were suppressed in favour, once again, of biblical and chorale texts, or the new sacred lyrics (*Geistliche Oden*) of such important poets as C.F. Gellert (1715–69). The new musical settings, accordingly, were generally more directly melodious, the textures more chordal.

In the central German regions of Saxony and Thuringia, however, most of the traditional forms were still cultivated; motet composition began to gain in popularity as instrumentally accompanied cantatas declined. J.L. Krebs, a pupil of Bach, and the Dresden Kantor G.A. Homilius and other composers of the region composed motets in which, typically, chorale and biblical texts were combined in textures of greater (e.g. Krebs's *Erforsche mich, Gott*) or lesser contrapuntal complexity (Homilius's *So gehst du nun, mein Jesu, hin*). The motets of the Leipzig Thomaskantor J.F. Doles usually included chorales that were either set as a four-part *Cantionalsatz* decorated by a solo rendering of a biblical passage or presented in systematic alternation with four-part settings of the biblical quotation.

The leading cantata composers of the generation after Bach were, again, Homilius and Doles. In the late 1760s, having composed chorale cantatas modelled on those of Bach and Telemann, Doles cultivated a 'new kind of church music' (in the words of his successor, J.A. Hiller), in which each strophe of a traditional chorale was sung to identical music; a setting of the tune for a four-part chorus was reinforced by a trombone choir (increasingly popular from the late 18th century) and perhaps by the congregation itself, while the rest of the orchestra performed framing ritornellos and interludes between the chorale lines. This 'figurierter Choral Dolesscher Art' was taken up by a number of composers, notably Hiller, C.G. Tag and D.G. Türk.

By the 19th century church cantatas were composed as a rule only for the principal feasts and for special occasions. In general both the style and the scoring of these works were kept modest with a view to congregational participation. The four-part chorale settings published by J.F.S. Döring in 1827 represented the three current principal types: simple strophic settings intended for the school choir, perhaps in alternation or together with wind ensembles (or organ accompaniment) and the congregation; the Doles type; and 'chorale cantatas' containing chorale strophes only in the outer movements. More ambitious settings followed in the wake of the Bach revival of the late 1820s. Between 1827 and 1832 Mendelssohn, the leading proponent of that revival, composed five chorale cantatas based exclusively on the chorale texts, although not always using the traditional melodies. These rather retrospective settings, however, include cantus firmus choruses modelled on those of Bach, simple chorale harmonizations, and lyric arias.

The backward-looking tendency that may be observed in the chorale cantatas of Mendelssohn, the *a cappella* motets of J.G. Schicht, and later in Brahms's chorale motet, *Es ist das Heil uns kommen her* op.29, was a creative response to the Restoration movement in the Lutheran church that had begun in the second decade of the 19th century (*see* CHORALE, §14); this movement led not only to the scholarly investigation of the chorale and liturgical traditions but also to intensive consideration of the question of 'proper' church music. This in turn led to successive revivals of older styles, each presented as the ideal: 16th-century *a cappella* music, especially that of Palestrina and Eccard; then the church music of Bach; and later that of Schütz. The trend continued into the early 20th century with settings by Heinrich Herzogenberg and most notably Reger's four *Choralkantaten zu den Hauptfesten* (1903–5), which are strophic cantus firmus settings for solo voices, organ and accompanying instruments.

The examples of Brahms, Herzogenberg and Reger, but most of all the restoration of the *de tempore* liturgy and the efforts to create a national German hymnbook using the original forms of the traditional chorale repertory, provided the stimulus for the extensive production of artistically ambitious church music from about 1910 on. The chorale cantatas of Arnold Mendelssohn belong to the early stages of this renewal. The trend received further impetus during the anti-Romantic reaction that set in after World War I, leading to the cultivation of a more elaborate polyphonic style. In 1928 Ernst Pepping's *Choralsuite* for large and small choirs marked the beginning of the composer's long series of chorale-based church music in a style characterized by the use of cantus firmus techniques, strict polyphonic texture and a tonal idiom derived from the Renaissance church modes. Other publications of Pepping's include *Kanonische Suite in drei Chorälen* (1928) and his *Deutsche Choralmesse* (1928) – a six-part setting of the Gloria and Credo chorales (*Allein Gott in der Höh sei Ehr* and *Wir glauben all an einen Gott*) and other traditional texts. The work led to further cycles of chorale masses by Hugo Distler, Wolfgang Fortner, Karl Marx and J.N. David. Some of Distler's chorale settings are reminiscent either of the note-against-note style or the polyphonic cantus firmus style of Johann Walter. In general the 20th-century chorale motet repertory of Distler, Günter Raphael, J.N. David and others was characterized by a great variety of styles; but all were predicated on the retention of the cantus firmus, *a cappella* scoring and strict polyphony.

The 1930s and 40s witnessed a renewal of interest in the *Cantional*. Simple settings began to appear with Distler's collection *Der Jahrkreis* op.5 (1932–3), in which the four-part harmonization was rejected in favour of two- and three-part linear writing based on a lightly varied cantus firmus. Pepping's *Spandauer Chorbuch*,

published between 1934 and 1941 (271 settings of 250 chorales for two to six voices, all contained in the congregational hymnbook), is the most exhaustive collection of chorale harmonizations since the 18th century. As in Distler's *Jahrkreis* the texture is polyphonic but maintains a generally simultaneous declamation of the text.

Chorale cantatas based exclusively on the original texts were composed by Kurt Thomas, Fritz Werner, Walter Kraft and others. After World War II interest continued to be focussed on three of the principal genres from the early 16th century onwards: chorale harmonizations, chorale motets and the chorale cantata. Contributions to these genres were made notably by Siegfried Reda and Helmut Bornefeld. Throughout the 20th century the emphasis was on technical sophistication, cultivation of the traditional genres, faithfulness to the historical texts and melodies, and liturgical usefulness.

II. Organ chorales

1. 16th century. 2. Chorale ricercare and chorale variations, *c*1600–50: Sweelinck, Scheidt, Scheidemann. 3. Chorale fantasia and chorale prelude, *c*1650–*c*1700: Buxtehude and the north German tradition. 4. Chorale fugue and chorale partita, *c*1650–*c*1700: Pachelbel and the central German tradition. 5. Early 18th century: J.S. Bach. 6. After 1750.

1. 16TH CENTURY. The function of the organ in the early Protestant church service was not to accompany the congregational singing of chorales. The congregation at that time always sang *a cappella* and completely in unison. Nor is it clear exactly what role Luther expected the instrument to play in the service, for he rarely referred to it in his writings, not mentioning it at all in his hymnbook forewords, the *Formula missae* or the *Deutsche Messe*. But he evidently appreciated the organ's traditional function in the Roman Catholic service in which it played the alternate verses or sections of certain Gregorian chants – principally the *Magnificat*, the *Te Deum*, the gradual and the hymn – for the Reformation applied the *alternatim* practice to the strophic German chorale as well as to the Latin items of the liturgy.

Throughout the 16th and 17th centuries, when the chorale was always performed in its entirety (i.e. *per omnes versus*), strophes sung in unison by the congregation often, for the sake of variety, alternated with strophes performed polyphonically by either the school choir, the Kantorei or the organ. The *alternatim* practice therefore allowed for numerous possible combinations – of polyphonic and unison textures, of *a cappella* and instrumental ensembles, and of choral, congregational and organ performance – in addition to the possibilities of having only the congregation, the choir or the organ perform alone all the strophes of the chorale.

There was, however, no specific literature for the organ in the Reformation period, since Luther and other Protestant theologians were wary of its secular associations and disapproved of displays of virtuosity. Accordingly, they rejected autonomous organ music in the church service. Rather the entire liturgical repertory was available to the instrument; and Protestant organists, adopting a long-standing tradition, prepared intabulations of polyphonic vocal pieces (for example, from the collections of Johann Walter and Georg Rhau; see §I, 1 above), typically adding idiomatic passages and embellishments to the original compositions. Or they improvised on the chorale cantus firmus according to rules and formulae developed by the organists of the 'Fundamentum' tradition that extended back at least to the mid-15th century, to the *Fundamentum organisandi* (1452) of Conrad Paumann and the repertory of the Buxheim Organbook. The *Fundamentum* techniques enabled organists to improvise simple chordal settings, lively counterpoints round a long-note cantus firmus (bicinia), as well as other contrapuntal textures, by mastering a limited number of basic contrapuntal procedures, a vocabulary of stereotyped melodic figures, and a repertory of diminution patterns and embellishments that were to be applied directly to the chorale melody itself, according to the practice known as coloration.

By the early 16th century, organ settings of Gregorian melodies published in the *Tabulaturen etlicher Lobgesang* (Mainz, 1512) by Arnolt Schlick already used devices that became significant in the later history of the Protestant organ chorale, notably the use of introductory pre-imitations in the accompanying parts preceding the entry of the cantus firmus, and the separation of the cantus firmus into segments, each of which was decorated by independent accompanimental counterpoints proceeding in imitation (see Schlick's setting of *Da pacem*).

In marked contrast to the history of vocal chorale settings, no organ chorales by central or north German organists survive from the Reformation period. With few exceptions the early 16th-century liturgical organ repertory consists almost exclusively of settings of Latin liturgical chants by south German Catholic organists. The earliest extant organ setting of a Protestant chorale is an intabulation of *Aus tiefer Not* by the Protestant Swiss organist Hans Kotter. No other Protestant organ chorales are known from the first half of the 16th century and only isolated examples from the 1560s. But church agendas from the post-Reformation generation testify to the increasing role of the organ, and the first important publication to contain Protestant organ chorales, the *Orgel oder Instrument Tabulatur* by E.N. Ammerbach, appeared in Leipzig in 1571. Together with the second edition of 1583, Ammerbach's tablature contained a total of about 20 chorales, largely of praise and thanksgiving, which for the most part did not remain in the repertory. Some of these chorales were intabulations of vocal settings. Reflecting the same stylistic tendencies as the roughly contemporary *Cantional* (see §I, 2 above), Ammerbach's settings are for four parts in a loosely homophonic texture with the cantus firmus usually in the discant. But the lower parts are rhythmically activated and notable for their dissonances.

Towards the end of the 16th century, organ tablatures consisting apparently of intabulations of vocal chorale settings were prepared by Bernhard Schmid (i) (1577) and Jacob Paix (1583) and owned by Christoph Loeffelholz von Colberg (1585). A more extensive collection of 77 chorales, written in a four-part homophonic style related to Ammerbach's, was August Nörmiger's *Tabulaturbuch auff dem Instrument*, a manuscript from 1598 that for the first time in the history of keyboard literature was arranged according to the church year and included settings of the more familiar chorales (e.g. *Nun komm, der Heiden Heiland* and *Vom Himmel hoch da komm ich her*). Of great importance is the so-called Celle tablature of 1601 (now lost), the first known source of organ music from north Germany since the mid-15th century and

containing about 75 chorale settings of which 61 survived, including compositions on *Allein Gott in der Höh sei Ehr*, *Ach Gott vom Himmel sieh darein* and *Vater unser im Himmelreich*. Most of the settings were anonymous; the only composer mentioned by name was Johann Stephan (Steffens). Again, the embellished chordal style familiar from the Ammerbach tablature is represented, but more ambitious compositions appeared in the Celle tablature too (see §2 below).

Organ chorales in basically homophonic style, either strictly chordal or with embellishments applied to the melody or the accompanimental parts, continued to be cultivated after 1600, not only, as in the past, for use in *alternatim* performances but also, as contemporary testimony makes clear, to accompany congregational singing. The first mention of the organ for this purpose is in the *Melodeyen Gesangbuch* (Hamburg, 1604), a collection of cantional-style chorale settings in choirbook format, composed by the principal Hamburg organists of the period: Hieronymus Praetorius, Joachim Decker, Jacob Praetorius (ii) and David Scheidemann. The practice of accompanying the congregation with the organ grew only gradually during the 17th century and did not become the rule until the 18th.

2. Chorale ricercare and chorale variations, *c*1600–50: Sweelinck, Scheidt, Scheidemann. In addition to the continued production of relatively modest and basically utilitarian organ chorale harmonizations the turn of the 17th century witnessed the appearance of more elaborate and autonomous chorale arrangements. Their function, if any, in the church service of the time is not clear (they were possibly performed instead of motets on Sundays when the chorus was unavailable, or during the distribution of Communion when extended chorale settings were possible). The Celle tablature already contained many organ chorales constructed in emulation of vocal genres, specifically in the manner of the contemporary chorale motet with each line of the chorale set as a point of imitation (e.g. a five-part setting of *Ach Gott vom Himmel sieh darein*). This organ counterpart of the chorale motet has itself been called a 'chorale motet', or, adopting the terminology variously used in the early 17th century for similarly constructed instrumental compositions, 'chorale canzona', 'chorale fantasia' or chorale 'ricercare'. The causes of consistency and simplicity seem to be best served by restricting the term 'chorale motet' to vocal compositions, using the term 'chorale ricercare' for the analogous and relatively strict organ form in which each line is presented in fugal imitation, and reserving the term 'chorale fantasia', finally, for the fundamentally freer and more idiomatic organ chorale type that appeared somewhat later and in which each line is characteristically developed several times in different ways.

The chorale ricercare quickly became one of the favourite organ chorale forms of the time. Particularly large-scale examples were contributed by the leading master of the vocal chorale motet, Michael Praetorius (see his *Ein feste Burg* and *Christ, unser Herr, zum Jordan kam*) as well as by the Hamburg organist Jacob Praetorius and others. In addition to adopting the form of the indigenous chorale motet, early 17th-century German organists, following the example of the vocal composers, sought to expand the formal and stylistic resources at their disposal by studying foreign developments. At the same time that sacred and secular Italian vocal music began to exert a strong influence on the style of Protestant vocal music, a similar phenomenon can be observed in the organ repertory. The *Tabulatur Buch* of Bernhard Schmid (ii) (Strasbourg, 1607) was the first such collection in Germany to include a large number of original organ works by Italian composers (the Gabrielis, Merulo and others), and exposed native organists to the elements of the Italian organ style – the sparkling passage-work of the toccata and the rhythmic patterns and textures of the canzona.

Slightly later, a second foreign keyboard idiom, that of the English virginalists, was transmitted to German organists through the Dutch Calvinist master Sweelinck. By adapting the keyboard variation form of the English virginalists to the Protestant chorale Sweelinck became, apparently, the creator of the chorale variations for organ, compositions intended exclusively for concert performance and not for the church service. The basic principle of the chorale variations form is the presentation of the chorale melody, treated usually as a cantus firmus stated in long notes, in several different settings. In Sweelinck's compositions there are normally four variations in a set; the individual variations are mostly for three voices, but also for two or four, and they are characteristically connected by transitional passages. The cantus firmus can appear in any voice and is usually unornamented, although for the sake of variety, especially in bicinia, Sweelinck sometimes alternated 'plain' and 'coloured' presentations of the chorale melody within the same variation.

English influence is most apparent in the active contrapuntal voices of Sweelinck's two- and three-part variations, which typically embellish the cantus firmus with idiomatic keyboard figuration derived from short, mosaic-like motifs that are literally and mechanically repeated in sequence. But Sweelinck's four-part chorale variations are his most successful; they are characterized by a love of variety that often results in a relatively non-systematic, almost improvisatory composition, alternating within a single verse chordal and contrapuntal textures, lively and calm lines, and even occasionally deriving some of the contrapuntal motifs from elements of the cantus firmus. In Sweelinck's few individual variations with a coloured cantus firmus, the principle of embellishment is the same as that used in contrapuntal voices; the melody is adorned with idiomatic, patterned keyboard figuration spun out by sequential repetition, a technique that results in little differentiation between the accompaniment and the cantus firmus. In his chorale variations Sweelinck was not particularly concerned with creating strongly organized cycles. The individual verses are generally similar to each other, adjacent two- and three-voice settings typically sharing their prevailing rhythmic motion. The sense of cyclic design is created only by the increasing number of voices from one variation to the next.

Sweelinck's two leading German pupils, Scheidt and Heinrich Scheidemann, brought the form and the keyboard idiom of Sweelinck's chorale variations to Protestant central and north Germany, respectively, where they were no longer concert pieces but part of the church service. The genre reached its highpoint in the works of Scheidt. Most of the elaborate settings of German Protestant chorales in his monumental publication,

Tabulatura nova (Hamburg, 1624, published in three parts), are in the form of chorale variations. A total of 16 different variation types have been distinguished in Scheidt's chorale variations, according to the number of voices, location of the cantus firmus, plain or coloured treatment of the melody, the type of texture (homophonic, imitative polyphony, canonic), etc. There are two to 12 variations in each cycle, for two, three or four voices, with the four-voice settings prevailing.

In contrast to Sweelinck's, Scheidt's variation sets, as they appear in the *Tabulatura nova*, reveal a systematic principle of internal order. The succession of the constituent variations, like Sweelinck's, is largely controlled by the number of voices in each variation; but Scheidt normally replaced the principle of increasing the number of voices with a symmetrical pattern, generally based on the order of four–three–two–three–four voices (with the first three-voice variation often omitted). Moreover, the styles of the individual variations are designed to contrast with one another. The opening four-voice variation is typically cast as a chorale ricercare with the cantus firmus in the discant and imitative polyphony prevailing. The two- and three-voice variations are usually close to the Sweelinck style: lively counter-voices embellish a sustained cantus firmus, and the two-voice group often makes use of double counterpoint (the cantus firmus presented as the upper and lower part in succession). As a rule the second (or only) three-voice variation has the cantus firmus in the tenor. In the final four-voice variation, the cantus firmus is in the bass, or in two voices, or coloured in the discant and with a chordal accompaniment. The similarity to the design of Scheidt's multi-sectional chorale concertos in the *Newe geistliche Concerten* (see §I, 3 above) is apparent, but there is no evident connection between the musical style of the individual variations and the texts of the individual strophes of the chorale.

Nor is it clear that the variations, in spite of their systematic ordering in the *Tabulatura nova*, were actually intended always to be performed in their entirety as complete cycles. Unlike Sweelinck's chorale variations, Scheidt's are only rarely connected by transitional passages; normally each is a separate, autonomous setting. And it may be significant that instead of the term 'Variatio', found in the headings of Sweelinck's variations, Scheidt used the term 'Versus', and that some of Scheidt's variation cycles were demonstrably partly constructed from earlier single pieces that survive separately in some sources. But the symmetrical organization of the variation sets in their final published form strongly suggests that they were ultimately regarded as unified works. The publication of the south German J.U. Steigleder's *Tabulatur Buch* (Strasbourg, 1627), containing 40 variations for two, three and four voices on the *Vater unser* chorale (mainly in the style of Sweelinck), constituted, along with the *Tabulatura nova*, the culmination of the chorale variations genre, and was surely intended as a repository of alternative settings and not as a closed cycle (the same is true of a contemporary manuscript compilation of 20 variations on *Allein Gott in der Höh sei Ehr* composed by various members of the Sweelinck school).

Scheidt's chorale fantasia on *Ich ruf zu dir* is one of a few early 17th-century uses of the term 'fantasia' for an organ chorale, and it reveals Scheidt's love of rational constructions. Each chorale line has two parts and each is treated in the same general manner: a pre-imitation of each line in small note values is followed by a systematic presentation of the cantus firmus in long note values in each voice against an increasing number of counter-voices, normally concluding with a four-part chordal setting. The work is significant for its mixture of techniques, using points of imitation, long-note cantus firmus setting, and techniques of fragmentation familiar from Scheidt's own chorale concertos.

In contrast to the chorale variations and the chorale fantasia included in the *Tabulatura nova*, in his late publication, the so-called *Görlitzer Tabulatur-Buch* (1650), Scheidt took up the genre of the four-part chorale harmonization, offering 100 of the best-known chorales arranged in the order of the church year and Luther's catechism. These brief works may have been intended either to accompany the congregation or for use in *alternatim* performances; but in their free and extensive use of passing notes, suspensions and syncopations in the inner parts they are more advanced than the basically homophonic chorale settings in the Ammerbach and Celle tablatures, and form an unmistakable stylistic link with Bach's four-part chorales.

The publications of organ works by Scheidt and Steigleder were actually exceptional. Only seven tablature prints, including Scheidt's and Steigleder's, appeared in Germany before 1650. The German organ repertory of the early 17th century was almost entirely transmitted in manuscript. The most significant manuscript collection of the period 1620–40, the so-called LynarB or Lübbenau tablatures (now in *D-Bsb*), contains a repertory predominantly of chorale settings by anonymous composers, but it also includes organ chorales by Sweelinck, Jacob Praetorius (ii), Melchior Schildt, Scheidt and Scheidemann. The appearance of another important manuscript source, the two so-called Zellerfeld tablatures (now in *D-CZ*), led to the discovery of a large number of previously unknown works by Scheidemann. As a result there are now more extant compositions by Scheidemann than by any other 17th-century north German composer with the exception of Buxtehude. Moreover, they reveal Scheidemann not only to be the greatest Sweelinck pupil next to Scheidt but also to be the founder of the specifically north German school of organ composition

A total of 35 organ chorales by Scheidemann survive; most are transmitted in the form of cycles of several chorale verses (usually two or three), but it is not certain whether these sets of variations – any more than those of Scheidt and Steigleder – were necessarily intended as integral sets and not simply as collections from which the performer was expected to choose individual settings. Along with Scheidt, Scheidemann inherited Sweelinck's stylistic synthesis of the English virginalist keyboard idiom with the contrapuntal and cantus firmus techniques of the strict vocal forms – the bicinium, tricinium and chorale motet. And like Scheidt he replaced Sweelinck's relatively loose organization and love of variety with a stronger sense of internal unity, ensuring that the same rhythmic motion and cantus firmus treatment were maintained throughout a verse. Scheidemann's keyboard figuration is spun out more freely than Sweelinck's, betraying a growing independence from the patterned sequences and other techniques inherited from the virginalists. Scheidemann obtained variety by creating contrasts of register and tone-colour (he may have been the first in history to exploit the colouristic resources of the pedals for this

purpose), and by imaginatively constructing the opening imitations of his settings according to a large number of different schemes (using the cantus firmus or the countertheme as the subject, using basically short or long notes, direct or invertible counterpoint, etc.).

Unlike later north German composers Scheidemann did not use echo effects or highly embellished cantus firmi, preferring the more traditional and objective forms of Scheidt and Praetorius. Scheidemann's three-voice organ variations do occasionally colour the chorale melody but in an altogether new way, for the coloration does not take the form of instrumentally conceived displays of keyboard virtuosity (scales or sequential patterns) but rather, for the first time, features vocally inspired 'affective' decorations such as passing notes, suspensions and trills. The resulting style constitutes a basically new genre: the 'monodic' organ chorale (see the second verse of his *Erbarm dich mein, o Herre Gott*). It was to be further developed by Buxtehude and later by J.S. Bach.

As cycles, Scheidemann's variation sets occupy an intermediate position between those of Sweelinck and Scheidt. A few of Scheidemann's sets, like Sweelinck's, include transitional passages between the verses and are organized according to the increase in the number of voices; but most of them, consisting as a rule of only two or three verses, are closer to Scheidt's separable verses and a design based on systematic contrast, beginning, for example, with a strict four-voice setting of a plain cantus firmus, followed by a middle monodic chorale, and finally a verse in keyboard style for two or three voices. During a church service the opening variation possibly functioned as a prelude to the congregational singing, and the second and third as *alternatim* strophes.

Scheidemann also contributed one fantasia on a Lutheran chorale, *Jesus Christus, unser Heiland* (no.16 in the complete edition). It is his longest work – a free, multisectional piece and almost a rhapsodic composite of elements taken from the ricercare, bicinium and free toccata, in which the cantus firmus appears several times in each section, either plain or embellished. This is the first fully formed example of the north German chorale fantasia type that was to be cultivated soon afterwards by Tunder, Weckmann, Buxtehude, Bruhns and Lübeck. The liturgical role of such a piece is unclear.

Scheidemann continued, then, to contribute compositions to the dominant genre of the early 17th century, the chorale variation set, with its preference for the unadorned, plain cantus firmus, but he was also a considerable innovator with respect to form, virtually creating both the monodic chorale and the free chorale fantasia. Since both new forms embodied significant stylistic features of the mid-17th-century Baroque aesthetic – the monodic chorale representing an instrumental equivalent of the aria or arioso with basso continuo, and the chorale fantasia sharing with the concerto style the emphatic combination of two or three contrasting timbres – it is not surprising that, generally speaking, north German composers of the next generation were attracted to them at the same time that they lost interest in plain cantus firmus settings.

3. Chorale fantasia and chorale prelude, *c*1650–*c*1700: Buxtehude and the north German tradition. The north German repertory of the mid-17th century is transmitted for the most part in the so-called Lüneburg tablatures (in *D-Lr*), whose five principal manuscripts contain the works of composers active between about 1640 and 1660, including Matthias Weckmann, Delphin Strungk and Franz Tunder, along with many of the older generation represented in the Lynar B manuscripts (see above). In both collections the two principal types of chorale settings are the chorale variations and the chorale fantasia – both the strict imitative type (designated here as 'chorale ricercare') cultivated by Scheidt and Michael Praetorius and modelled on the motet, and the free toccata-like hybrid form first perfected by Scheidemann.

The chorale fantasia was extensively cultivated by Tunder, organist of the Marienkirche in Lübeck from 1641 until his death. Six of his nine surviving organ chorales are chorale fantasias. As he perfected the genre and transmitted it to later organists, the chorale fantasia became an imposing showpiece, an example of the so-called north German 'Prunkstil' (ornate style), and presumably intended for performance not in the service but in the famous Lübeck Abendmusik. Its basic structural plan is to present each chorale line twice, once ornamented in the soprano, and once unadorned in the bass. Systematic use of pre-imitation and points of imitation in the chorale lines are rare; the governing compositional principle is fragmentation: motifs derived from the first and last few notes of a chorale line are treated imitatively, in echo style, or are passed between the voices in complementary rhythmic patterns; quotations of the cantus firmus are freely embellished either with old-fashioned virtuoso passage-work or with Scheidemann's more restrained but affective ornamentation. In contrast to Tunder, his younger contemporary, Matthias Weckmann, organist at the Jacobikirche in Hamburg, was a conservative. His seven surviving organ chorales are all cast as chorale variations consisting of three or four verses in the style of Sweelinck and Scheidt. Apparently he did not even compose motet-inspired chorale ricercares as had his teacher, Jacob Praetorius. The two surviving chorale settings of J.A. Reincken, organist of St Katharinen in Hamburg and a Scheidemann pupil, are both large-scale chorale fantasias. They too use the keyboard and stylistic resources of the north German style including echoes, passage-work, imitative polyphony, fragmentation techniques, ornamented cantus firmus and, Reincken's hallmark, frequent hand-crossing.

There are over 40 surviving organ chorales by Buxtehude, Tunder's successor at Lübeck, and they constitute the most important contributions to the genre in the 17th century. His settings include chorale variations, chorale ricercares, chorale fantasias and chorale preludes. Buxtehude's chorale variations are mostly conservative, cast in the forms of bicinia and tricinia. The cantus firmus in these settings, however, is usually not presented in the traditional long notes but in normal rhythms, and the counter-voices are not mechanically patterned but rather freely spun out in the manner of Scheidemann. Buxtehude's variation 'suite' on *Auf meinen lieben Gott*, in which the individual verses or variations are set respectively in the forms of allemande and *double*, sarabande, courante and gigue, is unique in the history of the organ chorale (indeed, the keyboard style and the absence of an independent pedal part strongly suggest that the work was intended for the harpsichord). His chorale ricercares, too, are basically conservative, while his chorale fantasias use the fragmentation techniques and keyboard style

established by Tunder. An elaborate chorale fantasia on *Nun komm, der Heiden Heiland* – the single surviving organ chorale by Buxtehude's pupil Nicolaus Bruhns – is a remarkable combination of the obbligato part-writing of the older chorale ricercare with the free, multi-sectional chorale fantasia, incorporating the idiomatic passage-work characteristic of the north German genre.

Buxtehude's principal contributions to the organ chorale are his 30 short chorale preludes, which consist of a single presentation of the chorale melody. The chorale prelude can be best understood as a single chorale variation whose function in the church service was to introduce the hymn tune to be sung by the congregation (increasingly to an organ accompaniment), the congregational rendition of the chorale strophes constituting in effect the remaining variations. Just as Tunder had perfected Scheidemann's chorale fantasia, Buxtehude, in his chorale preludes, appropriated Scheidemann's monodic chorale, liberally ornamenting the soprano cantus firmus with expressive 'vocal' embellishments to a reserved accompaniment in the lower parts in which pre-imitation and other anticipations of the next chorale line are only occasionally used. Buxtehude's most successful compositions in this genre (e.g. *Durch Adams Fall*) convey the general 'affect' of the chorale text quite in the manner of a 19th-century character-piece for piano or, more to the point, in the manner of the contemporaneous devotional song. The six chorale preludes of Buxtehude's Hamburg contemporary, J.N. Hanff, his only surviving instrumental works, are almost all of the Buxtehude type, although Hanff's use of pre-imitation in the lower voices (a central German trait: see below) is more extensive.

4. Chorale fugue and chorale partita, *c*1650–*c*1700: Pachelbel and the central German tradition. While the north German group of Sweelinck disciples, beginning with Scheidemann and passing on mainly to the great Lübeck masters Tunder and Buxtehude, cultivated an approach to the organ chorale increasingly characterized by a flexible manipulation of its structure and dimensions, by the expressive embellishment of the cantus firmus and the general exploitation of an idiomatic keyboard style, the central German line, descended from Scheidt, continued to develop the stricter polyphonic genres based on imitative treatment of the cantus firmus or its presentation as an unadorned, long-note cantus planus; in either case its structural and melodic integrity remained substantially intact. The first significant source of organ music containing any chorale settings to appear in central Germany after the Ammerbach and Nörmiger tablatures of the late 16th century was the *Harmonia organica* (Nuremberg, 1645) by J.E. Kindermann. The organ chorales in the collection are already cast in one of the two characteristic central German genres of the mid-17th century: the chorale fugue, a short composition in which the first and second lines of the chorale (or the first line alone) are treated as a subject for fugal imitation (later chorale fugues typically treated only the first line).

Except for Kindermann's early and tentative experiments with the chorale fugue, the main exponents of the form in the later 17th century were the organists and church music directors of Saxony and Thuringia. The Mühlhausen organist J.R. Ahle, although best known for his sacred arias and concertos, also composed organ works including over 20 (surviving) organ chorales. More conservative than his contemporaries, he continued to compose chorale variations and polyphonic arrangements which, although designated 'chorale fugues', are unlike the prevailing central German chorale fugue, since not only the first line but the complete chorale melody is set in the manner of a chorale ricercare. The cantus firmus is not presented in long notes, but rather in the modern crotchet values. Ahle's settings, then, can be considered generically, if not chronologically, as a transitional stage between the chorale ricercare of Scheidt and the typical central German chorale fugue as cultivated, along with others, by the early members of the Bach family, notably by Johann Christoph Bach (1642–1703). A substantial manuscript collection of 44 short chorale preludes by Johann Christoph Bach survives, most of which are polyphonic settings in imitative style of the first line only (i.e. chorale fugues), although others set the second line or even the entire chorale. While the latter settings are close to the style of Ahle, the former clearly approach that of the leading master of the central German organ chorale, Pachelbel, who occupied significant positions in several central German centres, including Eisenach, Erfurt and Nuremberg. Among his nearly 80 surviving organ chorales are 12 short chorale fugues as well as seven sets of chorale partitas (the term is derived from the Italian *partite*: 'variations'). The chorale partita, along with the chorale fugue, was the most significant central German contribution to the organ chorale in the second half of the 17th century. It takes as its point of departure the formal principle of the 17th-century secular variations descended from Scheidt and Froberger. In contrast to the older variations each variation now retains the harmonic and structural properties as well as the original proportions – and even the original rhythmic values – of the pre-existent melody, so that there is virtually no rhythmic differentiation between the cantus firmus and the other parts. Moreover, the keyboard patterns and figurations of the accompanying parts are decorative rather than contrapuntal. Most of Pachelbel's organ chorales, however, are strict cantus firmus settings cast in a form often referred to as the 'Pachelbel type'. The complete chorale melody, typically unadorned, is presented in minims in the soprano or bass, each phrase prepared by an introductory pre-imitation usually derived from the cantus firmus. While it is sounding, the chorale cantus firmus is embellished as a rule either by two rapid counter-voices proceeding in semiquavers or by three accompanying parts in prevailing quaver motion. The non-motivic character of Pachelbel's accompanying counterpoint distinguishes his cantus firmus settings from those of Scheidt, in which the accompanying parts are based generally on chorale-generated motifs.

Pachelbel was also the creator of a two-part combination form in which the first part consists of a chorale fugue on the first line and the second part, connected to the first by a transitional passage, is a three- or four-voice cantus firmus setting of the entire chorale. The composition as a whole in effect resembles the first two sections of a variation set by Scheidt: the opening chorale ricercare (here reduced to a chorale fugue) is followed by the first cantus firmus variation.

The influence of Pachelbel's organ chorales can be observed in the compositions of his pupil J.H. Buttstett of Erfurt and those of F.W. Zachow of Halle, both of whom cultivated the chorale fugue as well as cantus planus

settings. The central German tradition is also reflected in the *Musicalische Kirch- und Hauss-Ergötzlichkeit* (Leipzig, 1709–13), by the Leipzig organist Daniel Vetter; it is a collection of well-known chorale melodies presented in two contrasting settings, simple four-part harmonization intended for the organ, and an embellished version in the style of the chorale partita.

The central German approach to the inherited organ chorale genres in the second half of the 17th century was, to a remarkable extent, just the opposite of that of north Germany. The north Germans created the chorale prelude by reducing the early 17th-century chorale variation form to a single variation, and they derived the chorale fantasia by incorporating elements of the secular toccata into the old chorale ricercare. Conversely, the chorale fugue was created in central Germany by reducing the early 17th-century chorale ricercare to the opening point of imitation, while the chorale partita represents the incorporation of the principles of the secular keyboard variation forms into the traditional chorale variations genre. Moreover, both abbreviated forms, the north German chorale prelude and the central German chorale fugue, evidently had the same liturgical function, serving as an introduction to the congregational singing of the chorale.

5. Early 18th century: J.S. Bach. Although the characteristic north and central German genres and techniques that had developed mainly during the second half of the 17th century were never totally isolated from one another, at the beginning of the 18th century they began to exert a particularly strong mutual influence. The tendency, already observed in the chorale preludes of Hanff, is quite noticeable in the compositions of the north German Georg Böhm, organist of the Johanniskirche in Lüneburg. Of Böhm's 18 surviving organ chorales, eight are chorale preludes of the Buxtehude type with the cantus firmus embellishments now more elaborate and extensive than before. But the accompanimental parts, reflecting central German tradition, make more consistent use of pre-imitation than is normally the case in Buxtehude's chorale preludes.

The central German influence on Böhm is most evident, however, in the fact that he was one of the principal exponents of the chorale partita and contributed five works to the genre. He also continued to write chorale variations of the older type in which, however, the cantus firmus, reflecting general stylistic developments of the late Baroque period, was internally expanded with spun-out sequential extensions or heavily ornamented in the north German manner. Finally, stylistic elements of the late Baroque vocal forms, particularly the continuo-like accompanimental patterns and motto devices of the contemporary aria, left their imprints on Böhm's organ chorales.

The synthesis of styles, traditions and genres reached its culmination in the organ works, as it had also in the vocal music, of Bach, more than half (about 155) of whose organ compositions are chorales based on a total of 75 different tunes. These compositions draw on all the principal organ chorale forms of the 17th and early 18th centuries, as well as upon vocal genres of the time, adopting them either directly or, more often, modifying or combining them into essentially new genres. Consequently, Bach's organ chorales have been variously classified according to the manner in which the chorale tune is used (e.g. cantus firmus chorale, chorale motet, chorale canon, melody chorale, ornamental chorale, bound or free), the treatment of the accompanying parts, the principles of formal design, or according to the historical or geographical traditions to which they evidently belong.

It is helpful to divide Bach's organ chorales into long or short forms, basing the distinction on the complete or incomplete presentation of the chorale melody; the presence or absence of interludes between the individual chorale phrases; and/or the setting of one or more verses of the chorale. There are, however, not only individual works but even genres of organ chorales by Bach that cannot be unambiguously classified even according to such broad criteria.

The most celebrated of Bach's short organ chorales are the great majority of settings included in the *Orgel-Büchlein* (BWV599–644), a collection of 45 chorale preludes mostly composed in Weimar between 1713 and 1716. They are usually quite short, often between ten and 20 bars; the chorale is normally presented as a continuous melody, essentially in its original rhythmic and melodic shape (melody chorale), to a contrapuntal accompaniment in the lower parts whose constant and unified motivic material, although almost always unrelated to the melodic substance of the chorale, is suggested by the emotional content or theological symbolism of the text. In effect, the chorale text, silent but implied by the traditional melody, is presented simultaneously with its exegesis by the counter-voices. No exact precedent is known for the typical chorale prelude of the *Orgel-Büchlein*. Antecedents can be found in the late 17th-century chorale partita, particularly as cultivated by Böhm, and in the chorale preludes of Buxtehude. Their influence is most prominent in those chorale preludes of the *Orgel-Büchlein* in which the cantus firmus is highly embellished (ornamental chorale) as in *Das alte Jahr vergangen ist* (BWV614), *O Mensch, bewein' dein' Sünde gross* (BWV622) and *Wenn wir in höchsten Nöten sein* (BWV641).

Two different principles of organization underlie Bach's large organ chorales. According to the first, several different settings of a single complete chorale (each in essence a short chorale) are presented in succession as a cycle. This is the additive principle of the chorale variations and chorale partita. Bach contributed to both genres, although he was not consistent in his terminology or practice. Early in his career (presumably *c*1700–07) he composed three cycles called 'Partite' (BWV766–8) in which both variations and 'partite' are included within each set. His greatest contribution to the chorale variation principle, *Einige canonische Veränderungen über das Weynacht-Lied Vom Himmel hoch* (Nuremberg, 1748), dates from the end of his life and is the most significant composition in the history of the genre. Chorale canons appear elsewhere in his work, including the *Orgel-Büchlein* (*In dulci jubilo* BWV608; *O Lamm Gottes, unschuldig* BWV618).

Bach more commonly created organ chorales of large dimension by using the principle of internal expansion, treating the chorale either as a subject extended by polyphonic imitation or as a cantus firmus framed by related or unrelated introductory and concluding material that also appears between the individual chorale lines as a recurring interlude. For the most part Bach neglected the typical north German chorale fantasia with its sectional organization and highly differentiated mixture

of techniques and styles. The clearest example among his organ chorales is a setting of *Christ lag in Todes Banden* (BWV718), which combines north German coloration, echo effects and gigue rhythms with contrapuntal techniques ultimately derived from Scheidt. Bach preferred the more unified forms of the central German tradition and continued to cultivate the 'Pachelbel type' of organ chorale in which each line of the chorale is systematically presented in imitation, usually with one voice presenting the melody as a true cantus firmus in long notes. Both the so-called large and small catechism chorales on *Aus tiefer Not* (BWV686, and 687), from the third part of the *Clavier-Übung* (Leipzig, 1739), belong to this category. The central German chorale fugue, setting only the first line or two of the chorale in imitative or fugal style, is represented in its simplest form by the fughetta on *Christum wir sollen loben schon* (BWV696) and, among the catechism chorales, in more elaborate fashion, by the fugue on *Jesus Christus, unser Heiland* (BWV689) and the fughetta on *Wir glauben all' an einen Gott* (BWV681). In the latter the heavily ornamented cantus firmus subject reflects the infiltration of north German style into the central German genre.

Bach had already enriched the chorale fugue in his earliest works, in many cases by adding obbligato countersubjects that provide both variety and a tension of systematic contrast not found in the chorale fugues of Pachelbel or his other predecessors. Examples are the settings of *Nun komm, der Heiden Heiland* and *Lob sei dem allmächtigen Gott* (BWV699 and 704). Bach's chorale fugues reach their culmination, however, in the large concertante fugues on *Allein Gott in der Höh sei Ehr* (BWV664) and *Herr Jesu Christ, dich zu uns wend* (BWV655), both from the '18 [actually 17] Great Chorales' revised in the composer's late Leipzig period. Here Bach combined the traditional fugue with elements of the trio sonata and the large format of the chorale fantasia. The imitation of the literal chorale subject is replaced with an ornamented version, still treated imitatively, to which are added strongly contrasting obbligato countersubjects and harmonically active interludes. But unlike the north German fantasia, unity is ensured here by textural and motivic consistency.

Bach's organ chorales on the largest scale are the extended cantus firmus settings among the '18' and the large catechism chorales. The complete chorale tune is presented as a long-note cantus firmus whose individual lines are separated by rests while the remaining parts present interludes, a framing introduction and coda to the composition, and accompany the cantus firmus. The most important achievement of these compositions is the imaginative and highly unified organization of the accompanying parts. They characteristically treat one thematic idea throughout and are themselves cast in the form of an almost autonomous composition, usually retaining the basic texture of imitative polyphony: a fugue (e.g. *Nun komm, der Heiden Heiland* BWV661); a trio sonata (*Christ, unser Herr, zum Jordan kam* BWV684); a three-part invention (*Komm, Heiliger Geist* BWV651); or a fugue cast in the rhythm of a sarabande (*Komm, Heiliger Geist* BWV652).

The 'Schübler' chorales, published in Zella about 1748–9, are all arrangements of movements from earlier cantatas. In several of these Bach created cantus firmus settings in which the accompaniments are based on the basso ostinato principle of periodic repetition applied either relatively strictly, as in *Meine Seele erhebt den Herrn* (BWV648), or modified and expanded to resemble a songlike accompanied melody that is repeated several times in the course of the piece, in virtually total independence from the chorale cantus firmus. The settings of *Ach bleib bei uns, Herr Jesu Christ* (BWV649) and *Wachet auf, ruft uns die Stimme* (BWV645) present this new monodic type in its clearest form. The lyric style, combined with the periodic structure of the basso ostinato, served as a model for the next generation.

Bach's contemporaries, notably Telemann, J.G. Walther and G.F. Kauffmann, generally cultivated the same genres and styles as Bach, but their works are considerably reduced in scale and simplified in texture. The contrapuntal style, however, especially in many of Walther's surviving organ chorales, occasionally makes them practically indistinguishable from Bach's. Most notable are the organ chorales published in Kauffmann's *Harmonische Seelenlust* (1733–6), a collection of 98 chorale preludes and simple figured bass harmonizations for almost all of the same melodies; like the collections of Bach, or even Scheidt's *Tabulatura nova*, it was evidently an attempt to survey the variety of organ chorale types available at the time. Telemann's 48 chorale preludes (Hamburg, 1735) also contain twofold settings of each chorale: a three-part chorale ricercare with long-note cantus firmus, then a bicinium for unadorned cantus firmus and a freely patterned, running counter-voice.

6. After 1750. The generation of organ composers after Bach who were active in central Germany (J.L. Krebs, G.A. Homilius and J.P. Kellner – all Bach pupils) occasionally composed organ chorales reminiscent of Bach's style, as did his pupils and others at Berlin, including J.P. Kirnberger, F.W. Marpurg and J.F. Agricola. But in general the contrapuntal genres were almost entirely abandoned after 1750. Indeed, the composition of organ chorales in the later 18th century was increasingly conceived in terms of mood-setting accompaniments of congregational singing. The emphasis on creating a generalized atmosphere also prevailed in the chorale preludes of the period, which in fact only rarely contained any reference to the chorale melody except the occasional quotation of an isolated motif. Homilius and his pupil C.G. Tag wrote a number of melody-dominated chorale preludes modelled after the lyric type in Bach's 'Schübler' chorales, as well as ostinato-accompanied chorales inspired by the same collection.

During the first half of the 19th century organ music for the church service was produced in enormous quantities, but with few exceptions it represented the qualitative nadir of its history. A deliberately neutral and totally utilitarian church style was cultivated, characterized by chordal texture, moderate tempos and stereotyped cadences, modulations and rhythms. Chorale preludes, too, whether based on the cantus firmus tune or not, were generally composed in this style throughout much of the century. The 'Bach Renaissance', however, begun in the 1820s and pursued vigorously after the middle of the century, exerted an increasing influence on the genre. It is evident, for example, in the 11 chorale preludes for organ composed by Brahms (1896, published posthumously as op.122); these are reminiscent at times of Bach's large-scale cantus firmus chorales but are mostly cast in the miniature forms of the *Orgel-Büchlein*, which are quite

compatible with the Romantic keyboard tradition of the character-piece or song without words.

Mendelssohn's Six Sonatas op.65 (composed 1844–5), perhaps the most significant organ works from the first half of the 19th century, represent a more original assimilation of Bach's influence; three of them (nos.1, 3 and 6), which like all ambitious 19th-century organ music were concert pieces and not intended for the church service, use chorale melodies and are therefore often described as 'chorale sonatas', although they are not written in the Classical sonata allegro form. Sonata no.6 indeed is in the form of the Baroque chorale partita, a form that had been sporadically cultivated throughout the late 18th and early 19th centuries. The variations (on *Vater unser im Himmelreich*) begin with a simple chordal setting followed by a series of cantus firmus variations culminating in a chorale fugue on the first line of the tune. The lyrical final section, a character-piece, is not related in any obvious way to the chorale. Mendelssohn's organ sonatas inspired numerous imitations that formed important links with Reger's chorale fantasias of 1898–1900; two of Reger's three fantasias op.52 (on *Wachet auf, ruft uns die Stimme* and *Halleluja! Gott zu loben*) achieved a synthesis of the modern and backward-looking tendencies of the 19th century. They combine the principles of chorale variation with those of the symphonic poem, using all the technical and tonal resources of the Romantic style and the Romantic organ. But Reger, like Brahms and other late 19th-century composers, also composed in the smaller organ forms, particularly chorale preludes which, unlike the large-scale chorale fantasias, were conceived for the church service. In general, however, Reger's organ works were intended for concert performance, so his influence on the renewal of a genuinely liturgical organ repertory in the 20th century was only indirect.

That renewal resulted rather from the broad restoration of the traditional Lutheran liturgical and musical heritage that had been increasingly pursued throughout the late 19th and early 20th centuries. More immediately, it was the inevitable consequence of the *Orgelbewegung* (*see* ORGAN, §VII), which itself grew from the restoration movement. The *Orgelbewegung* called both for the authentic reconstruction of historical instruments and for the revival of the sound-ideal of the Baroque organ. These developments, together with the general revival of composers' interest in polyphony in the 1920s, led to the extensive composition of new, serious organ music, which quite prominently included the intensive cultivation of the organ chorale. The influential toccata *Wie schön leucht' uns der Morgenstern* (1923) by Heinrich Kaminski, which makes systematic use of Baroque-style terraced dynamics, along with Kaminski's Chorale Sonata of 1926 and his Three Chorale Preludes of 1928, are characteristic of the decade. So too are Günter Raphael's Five Chorale Preludes op.1 (1922) and his Chorale Partita op.22 on *Ach Gott vom Himmel sieh darein*.

The desire to provide organ music for the church service resulted by the 1930s in an even greater concentration on the traditional chorale genres, particularly the chorale prelude, understood at this time as a composition of either small or large dimensions in which the cantus firmus is subject to strict or free treatment, and the so-called organ chorale, now the term for a specific genre, namely, simple settings of the complete melody intended for *alternatim* performance. But the preference was at first for the multi-sectional chorale partita, a form not intended for the service. Its cultivation testified to the same artistic interest in creating large-scale and varied polyphonic forms that had motivated the cultivation at the same time of the chorale mass among the vocal genres (see §I, 6 above).

The leading composers of chorale settings for organ after the 1930s were J.N. David, Hugo Distler and Ernst Pepping. David's multi-volume *Choralwerk*, begun in 1932, includes the forms of chorale partita, chorale fantasia and chorale prelude, and in the later volumes is marked by a technique related to serial procedures, the entire texture being permeated by the substance of the chorale melody. Distler's chorale partitas of 1933, with their undecorated cantus firmi and ornate contrapuntal elaborations, on the other hand, are retrospective, reflecting the influence of Scheidt. Distler's 1938 collection of *Kleine Orgelchoralbearbeitungen* op.8 no.3 are more modest settings designed for the service.

The most prolific modern contributor of organ chorales for church use was Pepping. His three-part *Grosses Orgelbuch* (1939) consists of 40 settings of chorales arranged according to the church year. 27 are cast as chorale preludes and 13 as organ chorales in the sense just described. In 1940 he published a less difficult collection of 18 chorale preludes and organ chorales in his *Kleines Orgelbuch*. In 1953, after a gap of 12 years in the production of chorale-based organ music, he returned to the genre with the publication of three partitas on *Sterbechoräle* (chorales on death). This was followed in 1958 by 12 simple chorale preludes and in 1960 by 25 organ chorales on settings for the *Spandauer Chorbuch* (see §I, 6 above). The chorale partitas in Helmut Bornefeld's multi-volume *Choralwerk* (composed 1948–59), his chorale preludes (1958–60) and his three *Choralkonzerte* (1946–8), as well as the 30 chorale preludes (1945–6) of Siegfried Reda, are all notable for their emphasis on colour, a neo-romantic gloss on general neo-Baroque tendencies.

Other composers of organ chorale settings around the middle of the century include Armin Knab, Max Drischner, H.W. Zimmermann and Wolfgang Wiemer; among those active somewhat later were Günter Neubert, K.U. Ludwig, Herbert Beuerle and Rolf Schweizer. J.O. Bender, a pupil of Distler's who spent some time in the USA (1960–76, 1979–82), was a significant factor in the encouragement of American Lutherans to compose chorale-based organ works, among them Paul Bunjes, D.A. Busarow, Ludwig Lenel, Paul Manz and C.F. Schalk.

An important subgroup of the chorale prelude is the chorale intonation, a short introduction to the congregational singing of a chorale, consisting of two- to four-part imitative counterpoint based on the opening of the chorale melody. Although essentially an improvised tradition, many examples of these diminutive organ preludes are found in such published anthologies of chorale harmonizations as M.G. Fischer's *Choral-Melodien der Evangelischen Kirchen-Gemeinde* (Gotha, 1820–21), A.F. Hess's *Rheinisch westphalisch Choral-buch* (Elberfeld, 1840), H.M. Poppen, P. Reich and A. Strube's *Orgelvorspiele zum Evangelischen Gesangbuch* (Berlin, 1953), W. Opp and D. Schuberth's *Singe, Christenheit* (Munich, 1981) and the newer collections designed for use with the *Evangelisches Gesangbuch*.

ROBERT L. MARSHALL/ROBIN A. LEAVER

Chorale variations. In its most restricted historical sense, a series of compositions or sections of a composition generally for the organ in which the same chorale melody is presented several times in succession, each time in a different polyphonic arrangement (e.g. as a chorale ricercare, a long-note cantus firmus surrounded by a variety of contrapuntal voices and patterns, a simple harmonized tune). Chorale variations were cultivated most extensively in the early 17th century, chiefly by Sweelinck, Scheidt and Scheidemann. With the exception of Sweelinck's variations, which are connected by transitional passages, it is not certain that the early 17th-century chorale variation set was intended to be performed in its entirety as an integral cycle. Since the 18th century the term has been used interchangeably with 'chorale partita', and the distinctions between the two genres have disappeared.

See CHORALE SETTINGS.

ROBERT L. MARSHALL

Choralflöte (Ger.). *See under* ORGAN STOP (*Choralbass*).

Choral Harmonists' Society. Amateur choir formed in London in 1833. *See* LONDON, §VI, 2(i).

Choralreform (Ger.: 'chant reform'). A term used in German for any of the major revisions of Western ecclesiastical chant that have taken place from time to time and that have generally been associated with liturgical reforms; the term excludes changes occurring in the chant repertory through gradual evolution. Examples are the revisions of the chant, and the promulgation of authoritative texts of the chant repertory, in the Carolingian era, in the 16th century and in the 20th century after the work of the monks of Solesmes. The word is applied particularly to the editing of the chant repertory, undertaken for their own use, by most of the Western religious orders. Although the term seems never to have been used in connection with Eastern chant, similar revisions of chant were undertaken by hymnographers such as the Greek scholar CHRYSANTHOS OF MADYTOS.

See also PLAINCHANT and articles on individual Western rites.

GEOFFREY CHEW

Choralvorspiel (Ger.). *See* CHORALE PRELUDE.

Chorasselt. An anagram of his name with which CHARLES OTS signed many of his works.

Chord (Fr. *accord*; Ger. *Akkord, Klang*; It. *accordo*). The simultaneous sounding of two or more notes. Chords are usually described or named by the intervals they comprise, reckoned either between adjacent notes or from the lowest: the TRIAD, for instance, consists of two 3rds (reckoning between adjacent notes) or, equally, a 3rd and a 5th (reckoning from the lowest note). In functional harmony the ROOT of a chord is the note on which it seems to be built. If the lowest note of the chord is also its root, it is said to be in root position; if not, it is said to be in INVERSION (i). If a triad is inverted it becomes either a SIXTH CHORD or a SIX-FOUR CHORD.

See also ADDED SIXTH CHORD; ALTERED CHORD; AUGMENTED SIXTH CHORD; DIMINISHED SEVENTH CHORD; DOMINANT SEVENTH CHORD; DOPPELLEITTONKLANG: DOUBLING (i); MYSTIC CHORD; NEAPOLITAN SIXTH CHORD; NINTH CHORD; SEVENTH CHORD; SPACING; SUBSTITUTE CHORD; and 'TRISTAN' CHORD.

□

Chordal style. A style in which all parts move in the same rhythm, thus producing a succession of chords. *See* HOMOPHONY.

Chordophone. General term for musical instruments that produce their sound by setting up vibrations in a stretched string. Chordophones form one of the original four classes of instruments (along with idiophones, membranophones and aerophones) in the hierarchical classification devised by E.M. von Hornbostel and C. Sachs and published by them in *Zeitschrift für Ethnologie* in 1914 (Eng. trans. in *GSJ*, xiv, 1961, pp.3–29, repr. in *Ethnomusicology: an Introduction*, ed. H. Myers, London, 1992, pp.444–61). Their system, which draws on that devised by Victor-Charles Mahillon for the Royal Conservatory in Brussels and is widely used today, divides instruments into groups which employ air, strings, membranes or sonorous materials to produce sounds. Various scholars, including Galpin (*Textbook of European Instruments*, London, 1937) and Sachs (*History of Musical Instruments*, New York, 1940), have suggested adding electrophones to the system, but it has not yet been formally extended.

Chordophones are subdivided into zither-like instruments including the piano and harpsichord, classified as 'simple chordophones', and 'composite chordophones'

where the structure includes a neck, yoke or other component which acts as a string holder. The plucked drums, which were classified with the membranophones by Hornbostel and Sachs, have since been identified as variable tension chordophones but the classified list has not yet been updated. Each category is further subdivided according to the more detailed characteristics of an instrument. A numeric code, similar to the class marks of the Dewey decimal library classification system, indicates the structure and physical function of the instrument. The Hornbostel-Sachs classification (from the *GSJ* translation, with minor alterations) follows as an appendix to this article.

For further information on the classification of instruments in general, *see* INSTRUMENTS, CLASSIFICATION OF. *See also* VARIABLE TENSION CHORDOPHONE.

APPENDIX

3 *Chordophones*: one or more strings are stretched between fixed points
31 *Simple chordophones or zithers*: the instrument consists solely of a string bearer, or of a string bearer with a resonator which is not integral and can be detached without destroying the sound-producing apparatus
311 *Bar zithers*: the string bearer is bar-shaped; it may be a board placed edgewise
311.1 *Musical bows*: the string bearer is flexible (and curved)
311.11 *Idiochord musical bows*: the string is cut from the bark of the cane, remaining attached at each end
311.111 *Mono-idiochord musical bows*: the bow has one idiochord string only – found in New Guinea (Sepik River), Togo
311.112 *Poly-idiochord musical bows or harp-bows*: the bow has several idiochord strings which pass over a toothed stick or bridge – found in West Africa, among the Fang
311.12 *Heterochord musical bows*: the string is of separate material from the bearer
311.121 *Mono-heterochord musical bows*: the bow has one heterochord string only
311.121.1 *Without resonator*: NB if a separate, unattached resonator is used, the specimen belongs to 311.121.21; the human mouth is not to be taken into account as a resonator
311.121.11 *Without tuning noose*: found in Africa (*ganza*)
311.121.12 *With tuning noose*: a fibre noose is passed round the string, dividing it into two sections – found in south-equatorial Africa
311.121.2 *With resonator*
311.121.21 *With independent resonator*: found in Borneo
311.121.22 *With resonator attached*
311.121.221 *Without tuning noose*: found in southern Africa (*hade, thomo*)
311.121.222 With tuning noose – found in southern Africa, Madagascar (*gubo, hungo*)
311.122 *Poly-heterochord musical bows*: the bow has several heterochord strings
311.122.1 *Without tuning noose*: found in Oceania (*kalove*)
311.122.2 *With tuning noose*: found in Oceania (*pagolo*)
311.2 *Stick zithers*: the string carrier is rigid
311.21 *Musical bow cum stick*: the string bearer has one flexible, curved end (NB stick zithers with both ends flexible and curved, like the Basuto bow, are counted as musical bows) – found in India
311.22 *(True) stick zithers*: NB round sticks which happen to be hollow by chance do not belong on this account to the tube zithers but are round-bar zithers; however, instruments in which a tubular cavity is employed as a true resonator are tube zithers
311.221 *With one resonator gourd*: found in India (*ṭuila*), Celebes [now Sulawesi]
311.222 *With several resonator gourds*: found in India (*vīṇī*)
312 *Tube zithers*: the string bearer is a vaulted surface
312.1 *Whole-tube zithers*: the string carrier is a complete tube
312.11 *Idiochord (true) tube zithers*: found in Africa and Indonesia (*valiha*)
312.12 *Heterochord (true) tube zithers*
312.121 *Without extra resonator*: found in South-east Asia (*čhakhē*)
312.122 *With extra resonator*: an internode length of bamboo is placed inside a palm leaf tied in the shape of a bowl – found in Timor
312.2 *Half-tube zithers*: the strings are stretched along the convex surface of a gutter
312.21 *Idiochord half-tube zithers*: found in Flores
312.22 *Heterochord half-tube zithers*: found in East Asia (*qin, koto*)
313 *Raft zithers*: the string bearer is composed of canes tied together in the manner of a raft
313.1 *Idiochord raft zithers*: found in India, Upper Guinea, central Congo
313.2 *Heterochord raft zithers*: found in the north Nyasa region
314 *Board zithers*: the string bearer is a board; the ground too is to be counted as such
314.1 *True board zithers*: the plane of the strings is parallel with that of the string bearer
314.11 *Without resonator*: found in Borneo
314.12 *With resonator*
314.121 *With resonator bowl*: the resonator is a fruit shell or similar object, or an artificially carved equivalent – found in the Nyasa region
314.122 *With resonator box* (*box zither*): the resonator is made from slats (zither, Hackbrett, piano)
314.2 *Board zither variations*: the plane of the strings is at right angles to the string bearer
314.21 *Ground zithers*: the ground is the string bearer; there is only one string – found in Malacca [now West Malaysia], Madagascar
314.22 *Harp zithers*: a board serves as string bearer; there are several strings and a notched bridge – found in Borneo
315 *Trough zithers*: the strings are stretched across the mouth of a trough – found in Tanganyika [now part of Tanzania]
315.1 *Without resonator*
315.2 *With resonator*: the trough has a gourd or a similar object attached to it
316 *Frame zithers*: the strings are stretched across an open frame
316.1 *Without resonator* (perhaps among medieval psalteries)
316.2 *With resonator*: found in West Africa (*kani*)
32 *Composite chordophones*: a string bearer and a resonator are organically united and cannot be separated without destroying the instrument
321 *Lutes*: the plane of the string runs parallel with the soundtable
321.1 *Bow lutes or pluriarcs*: each string has its own flexible carrier – found in Africa (*nsambi*)
321.2 *Yoke lutes or lyres*: the strings are attached to a yoke which lies in the same plane as the soundtable and consists of two arms and a crossbar
321.21 *Bowl lyres*: a natural or carved-out bowl serves as the resonator (East African lyre)
321.22 *Box lyres*: a built-up wooden box serves as the resonator (kithara, crwth)
321.3 *Handle lutes*: the string bearer is a plain handle; subsidiary necks are disregarded, as are also lutes with strings distributed over several necks, like the harpo-lyre, and those like the lyre-guitars, in which the yoke is merely ornamental
321.31 *Spike lutes*: the handle passes diametrically through the resonator
321.311 *Spike bowl lutes*: the resonator consists of a natural or carved-out bowl – found in Persia [now Iran], India, Indonesia
321.312 *Spike box lutes or spike guitars*: the resonator is built up from wood – found in Egypt (*rabāb*)
321.313 *Spike tube lutes*: the handle passes diametrically through the walls of a tube – found in China, Indochina [now Vietnam]
321.32 *Necked lutes*: the handle is attached to or carved from the resonator, like a neck
321.321 *Necked bowl lutes* (mandolin, theorbo, balalaika)
321.322 *Necked box lutes or necked guitars* (violin, viol, guitar): NB a lute whose body is built up in the shape of a bowl is classified as a bowl lute
321.33 *Tanged lutes*: the handle ends within the body resonator
322 *Harps*: the plane of the strings lies at right angles to the soundtable; a line joining the lower ends of the strings would point towards the neck
322.1 *Open harps*: the harp has no pillar
322.11 *Arched harps*: the neck curves away from the resonator – found in Myanmar and Africa
322.12 *Angular harps*: the neck makes a sharp angle with the resonator – found in Assyria, ancient Egypt, ancient Korea
322.2 *Frame harps*: the harp has a pillar
322.21 *Without tuning action* (all medieval harps)
322.211 *Diatonic frame harps*
322.212 *Chromatic frame harps*
322.212.1 *With the strings in one plane* (most early chromatic harps)

322.212.2 *With the strings in two planes crossing one another* (the Lyon chromatic harp)
322.22 *With tuning action*: the strings can be shortened by mechanical action
322.221 *With manual action*: the tuning can be altered by hand levers (hook harp, dital harp, harpinella)
322.222 *With pedal action*: the tuning can be altered by pedals
323 *Harp-lutes* [bridge-harps]: the plane of the strings lies at right angles to the soundtable; a line joining the lower ends of the strings would be perpendicular to the neck; notched bridge – found in West Africa (*kora*)

[*Variable tension chordophones*: formerly defined as plucked drums. For classification *see* MEMBRANOPHONE]

Suffixes for use with any division of this class:
4 sounded by hammers or beaters
5 sounded with bare fingers
6 sounded by plectrum
7 sounded by bowing
71 with a bow
72 by a wheel
73 by a ribbon [*Band*]
8 with keyboard
9 with mechanical drive

HOWARD MAYER BROWN/FRANCES PALMER

Chord zither. *See* AUTOHARP. *See also* HARP ZITHER.

Chorēgia. Part of a system of *leitourgiai* in ancient Greece whereby the rich financed expensive public services. A *chorēgia* was assigned to an individual *chorēgos*, who was responsible for setting up a chorus to compete in dithyramb, tragedy or comedy at a public religious festival. Competing *chorēgoi* cast lots for priority in choosing an aulos player to accompany the chorus. Each *chorēgos* enlisted *choreutai* (members of a chorus) and funded their teacher, training facilities, board and lodging, costumes and accessories. Although the bulk of our information pertains to Athens, where the *chorēgia* was abolished in the late 4th century BCE, there is evidence of *chorēgiai* in other ancient Greek cities.

Chorley, Henry F(othergill) (*b* Blackley Hurst, nr Billinge, Lancs., 15 Dec 1808; *d* London, 16 Feb 1872). English writer and critic. He received some musical training from Jakob Zeugheer (J. Zeugheer Herrmann), and wrote the libretto for Zeugheer's opera *Angela of Venice* (*c*1825). For a while he worked as a clerk in a firm of merchants, a position he detested. In 1830 he began to write articles and reviews for the new weekly *The Athenaeum* and in 1834 joined its staff in London. There he began a long career as the author of plays, novels, poems and essays; he also wrote librettos for Emanuele Biletta (*White Magic*, 1852), Vincent Wallace (*The Amber Witch*, 1861) and Sullivan (*The Sapphire Necklace*, *c*1862), and translated operas by Auber, Cimarosa, Gluck, Gounod, Mercadante and Meyerbeer. His contributions to *The Athenaeum* included weekly notices of musical events in London. His operatic enthusiasms were for the works of Rossini and Meyerbeer. He considered himself the English discoverer of Gounod, and the first English performance of *Faust* took place in Chorley's translation (1863, Her Majesty's Theatre) which, though sometimes ridiculed as stilted, was used on the English stage for many decades. During the 1860s he also advocated the revival of Gluck's operas. Verdi's operas he disliked and Wagner's he detested. Schumann's music repelled him. He admired Mendelssohn, however, almost without reservation, and in 1847 attempted to persuade him to set his own adaptation of Shakespeare's *The Winter's Tale*. Towards the end of his life he promoted the career of Arthur Sullivan. Although performers went in and out of his favour, he exerted his influence consistently on behalf of Pauline Viardot and Charles Santley and was a life-long supporter of the conductor Michael Costa.

Along with J.W. Davison, Chorley was the most influential of the mid-Victorian musical journalists in the eyes of his contemporaries. His books, though hastily put together, have contributed largely to later generations' understanding of mid-Victorian musical taste. *Music and Manners in France and Germany* (1841) is a record of professional travel; most of it was re-used for *Modern German Music* (1854). His masterpiece, *Thirty Years' Musical Recollections* (London, 1862), a year-by-year summary of London operatic seasons from 1830 to 1860, contains informative digressions on contemporary singers and composers and chronicles Chorley's belief that, because of Benjamin Lumley's poor management, Her Majesty's Theatre declined until, after 1847, it was gradually supplanted as the principal opera house of London by the Royal Italian Opera at Covent Garden.

Chorley retired from *The Athenaeum* in 1868, though he continued to contribute occasional reviews and letters. He was said to be moody, quarrelsome and eccentric, and alienated many of his musical and literary friends though he remained intimate with Dickens, to whom he dedicated his novel *A Prodigy: a Tale of Music* (1866). At the end of his life he was working on a study of Rossini's music and his own autobiography; substantial portions of the autobiography were used in Hewlett's compilation.

ROBERT BLEDSOE

Choro. A term with various meanings in Brazilian popular music. Generically *choro* denotes urban instrumental ensemble music, often with one group member as a soloist. Specifically it refers to an ensemble of *chorões* (musician serenaders) that developed in Rio de Janeiro around 1870. One of the first known *choros* was organized by the popular composer and virtuoso flautist Joaquim Antonio da Silva Callado (1848–80). In the mid-19th century the instrumental ensemble generally included flute, clarinet, ophicleide, trombone, *cavaquinho* (a type of ukelele), guitar and a few percussion instruments (particularly the tambourine). The repertory of *choro* ensembles consisted mostly of dances of European origin performed at popular festivities. For the serenades the band accompanied sentimental songs, such as *modinhas*, performed by a solo singer. No special music was composed for the *choros* at that time, but such designations as *polka-choro* and *valsa-choro* indicate the nationalization of European dances in Brazil.

In the 20th century the *choro* or *chorinho* has been closely connected with other popular dances of urban Brazil such as the MAXIXE, the *tango brasileiro* and the SAMBA. All have the same rhythmic patterns (syncopated binary figures), although tempo and instrumentation are distinguishing features. The originality of the *choro* of the 1930s and 1940s, for example those of the Velha Guarda band of 'Pixinguinha' (Alfredo da Rocha Viana), lies in the typical virtuoso improvisation of instrumental variations and the resulting imaginative counterpoint.

GERARD BÉHAGUE

Choron, Alexandre(-Etienne) (*b* Caen, 21 Oct 1771: *d* Paris, 29 June 1834). French writer on music, instructor, publisher and composer. While still a boy, he taught himself Hebrew and German and acquired a permanent interest in scientific experiment and a fascination for music theory and the techniques of composition. Although he reached the age of 16 before taking music lessons, he had already attained elementary skill on keyboard and other instruments. He greatly valued a friendship with Grétry which began in his 20th year and which suggests that he moved to Paris after his father's death.

Choron's earliest publications, the three-volume *Principes d'accompagnement des écoles d'Italie* (1804) and *Principes de composition des écoles d'Italie* (whose publication was announced for 1806 even though it did not appear until the end of 1808 or early 1809 - the preface is dated 9 December 1808), include courses in thoroughbass together with instruction in counterpoint and fugue, implemented by exercises from Sala, Martini, Marpurg and Fux. In February 1806 he undertook the editing for August Leduc of the scores of Haydn's symphonies. He began his activities as a music publisher in partnership with Leduc in November of that year, in order to exploit a licence for lithographic printing bought from Frédéric André in 1807. His partnership with Leduc ended in late 1811. Choron published works by Josquin, Goudimel, Palestrina and Carissimi, as well as Italian and German music up to the time of Bach. In 1827 his daughter Alexandrine (*d* 1835) took over the running of her business, which after her marriage in 1832 to the composer and teacher Stéphano Nicou took the company name of the Société Nicou-Choron. There followed the two-volume *Dictionnaire des musiciens* (1810–11) in which Fayolle was his collaborator. Choron was too idealistic to be financially successful, and his attention to business was limited by his scholarly and scientific pursuits. What might have been his magnum opus, *Introduction à l'étude générale et raisonnée de la musique*, remained unfinished. He was forced to teach music and accept public appointments.

In 1811 he was appointed a corresponding member of the Beaux-Arts class of the Institut de France in succession to Framery. From 1812 until Napoleon's downfall he was Directeur de la Musique des Fêtes Publiques. His essays on plainsong and church music led to his nomination for the task of reorganizing music in French cathedrals and in the royal chapel after the restoration of the Bourbon monarchy. In January 1816 Louis XVIII made him régisseur général of the Académie Royale de Musique. According to Fétis he turned the Opéra 'into a trial theatre', and his dismissal after little more than a year enabled him to devote his energy to the founding of his Institution Royale de Musique Classique et Religieuse. He secured public grants for it between 1826 and the Revolution of 1830, but Charles X's attempt to revive absolutism led the new government under Louis Philippe to discontinue expenditure associated with royal privilege.

The reduced budget not only proved disastrous for Choron but incurred disappointment for music lovers in general, as Choron's students associated with other schools to give choral festivals in Notre Dame, St Sulpice and provincial cathedrals. The programmes included unaccompanied works of the Renaissance, together with Baroque oratorios with orchestra and music of later periods. After years of decline his school was revived by Niedermeyer and renamed Ecole de Musique Religieuse Classique. It remains the most substantial testimony to the work of an influential idealist during a time when French musical life badly needed ideals.

Although a few Conservatoire pupils sought Choron's instruction, his school produced no outstanding composers until the Niedermeyer régime after 1836; yet Choron had a widespread influence on teachers, organists, choralists and those who were awakening to the importance of music history. His inexpensive editions of polyphonic and choral music were invaluable, despite the later issue of most of the works in better format by Proske and the Regensburg scholars and by English and German publishers; nor were his labours towards the revival of plainsong in vain, though the work of the Benedictine monks of Solesmes superseded them. His interest in the Baroque masters was more a revival than a novelty, and contributed indirectly to the demand for scholarly editions. The *Manuel complet de musique vocale et instrumentale*, published after his death by his collaborator, La Fage, was uniquely valuable in its day. In a country whose musical tradition was almost entirely unscholarly, and focussed on the capital, Choron stimulated interest that made his own publications impermanent.

He composed chiefly sacred music, including a *Messe brève*, a *Magnificat*, a *Stabat mater* and numerous motets, both *a cappella* and with organ accompaniment. His opera, *Nadir et Salyha*, was produced in Kassel in 1811. He also wrote a number of songs, of which *La sentinelle* (1810) was popular in his lifetime.

ARTHUR HUTCHINGS/HERVÉ AUDÉON

Chorsaite (Ger.). *See* CHANTERELLE.

Chorton (Ger.: 'choir pitch'). A term applied in Germany and the Habsburg Lands to describe a pitch level used in the performance of church music. *Chorton* has been associated with many different pitch levels. In the Habsburg Empire and in southern Germany until the late 18th century it denoted a pitch a whole-tone below CORNET-TON (which was *a*′ = *c*465), thus about *a*′ = 413. This was directly analogous to the practice in Italy, where *tuono corista* was originally a whole-tone below the pitch of cornetts. In northern Germany, as Praetorius explained (*Syntagma musicum*, ii, 1618), many organs that had been built at a low pitch were raised a whole tone. The level of Chorton therefore rose at this time: confusingly, Praetorius used the term *ChorThon* to mean both low and high pitch levels. The association of Chorton with a high pitch in Germany was reinforced in the last decade of the 17th century when CAMMERTON (secular instrumental pitch) shifted its meaning downwards as the traditional Renaissance woodwind instruments (which had generally been pitched at *Cornet-ton*) made way for new French woodwinds that arrived in the 1680s and were pitched between *a*′ = 385 and *a*′ = 425 (*see* PITCH, §I). Chorton came to be associated with most organs, brass instruments and cornetts, pitched at an average of *a*′ = *c*465 (i.e. the old Cornet-ton). Chorton was also applied to a small number of organs that were built at higher pitch levels, from *a*′ = 437 to *a*′ = 486. An important reason for the existence of these organs was to save tin on pipes; if they were used only to accompany voices, there was no need to tune them to an exact pitch standard. By the early 19th century most new organs were pitched at Kammerton (i.e. *a*′ = *c*440).

BRUCE HAYNES

Chorus (i) [choir] (from Gk. *choros*; Fr. *choeur*; Ger. *Chor*; It., Sp. *coro*). A group of singers who perform together either in unison or, much more usually, in parts; also, by extension, a work, or movement in a work, written for performance by such an ensemble (e.g. the 'Hallelujah' chorus in Handel's *Messiah*). In the performance of part-music a distinction is generally observed between a group of soloists (one singer to each part) and a chorus or choir (more than one singer, usually several or many, for each part); this distinction is not, however, without its exceptions (e.g. the solo *petit choeur* of the 17th-century French *grand motet*). The designations 'chorus' and 'choir' are often used in conjunction with qualifying terms indicative of constitution or function (e.g. mixed choir, male voice choir, festival chorus, opera chorus). Moreover at various times and places certain types of chorus and choir have been generically designated by terms lacking the words 'chorus' and 'choir' (e.g. *schola cantorum*, glee club, singing society, chorale). In English, but in no other language, a distinction is often made between 'choir' and 'chorus': an ecclesiastical body of singers is invariably called a choir, as, normally, is a small, highly trained or professional group; 'chorus' is generally preferred for large groups of secular provenance. This article deals with the chorus as it developed in Western art music; group singing in the art and traditional music of other cultures is discussed in articles on individual countries.

1. ANTIQUITY AND THE MIDDLE AGES. Organized choruses are known to have existed in several cultures of the ancient world. Two pre-Christian cultures, those of Greece and Palestine, fostered choral singing that was destined to have an influence on later developments in Western music.

In ancient Greece the chorus was a dancing as well as a singing ensemble. It consisted of one of four groupings – men, women, men and women together, or men and boys – and performed only monophonic music. It played a particularly important role in the drama of the Periclean Age – indeed, Greek drama evolved from religious and ceremonial performances of a chorus of masked dancers. Of the many types of choral dances performed by such choruses, the paean, first mentioned in the *Iliad* (*c*850 BCE), was an invocation to Apollo in his capacity as god of healing; the partheneia, introduced about 650 BCE, was

for a women's chorus composed of Spartan virgins; and the dithyramb, raised to the level of choral art music about 600 BCE, was a choreographic description of the adventures of the fertility god Dionysus. It was the dithyrambic chorus that led directly to the tragedies and comedies of the 5th and 4th centuries. In these dramas, the chorus, whose leader (*coryphaeus*) sometimes spoke as its representative, functioned as a corporate commentator. Delivering its commentary from a traditional, conservative perspective that bespoke its earlier existence as a religious and ceremonial body, the chorus acted as an articulate spokesman for conventional society, thereby heightening the spectators' perception of the tension existing between the protagonists and their environment. Pre-dramatic Greek choruses are reported to have been sometimes quite large, numbering 600 on at least one occasion; the dithyrambic chorus was conventionally composed of 50 boys and men arranged in a circle about an aulos player (fig.1). Authorities disagree about the size of the chorus in Greek drama. It is generally said to have numbered 12 in the dramas of Aeschylus and 15 in those of Sophocles, and the latter figure subsequently became standard for tragedies; it has been variously asserted that the chorus in comedies consisted of 24, 50 or perhaps as many as 60 singers.

The Old Testament provides ample evidence of the existence of well-organized choral singing in ancient Israel. David, when he made preparations for bringing the Ark of the Covenant into Jerusalem, 'spake to the chief of the Levites to appoint their brethren to be the singers with instruments of musick, psalteries and harps and cymbals, sounding, by lifting up the voice with joy' (*1 Chronicles* xv.16). Of the leaders appointed at that time, three were assigned the honour of signalling with cymbals, and 14 (eight with psalteries and six with harps) were designated to play the string instruments which constituted, then and later, the typical accompaniment for Jewish choral music. Chenaniah, appointed to supervise the singing, 'instructed about the song, because he was skilful' (*1 Chronicles* xv.22). He proved to be an able teacher; when the first Temple establishment was formally organized shortly afterwards, David found it possible to appoint 288 skilful Levite musicians – 24 groups of 12, each group with its designated leader. For ordinary occasions these small groups may have served in rotation, but at more important ceremonies the entire body of Levite musicians performed. At the splendid ceremonies conducted at the dedication of Solomon's Temple, this already large choir was further augmented by the addition of 'an hundred and twenty priests sounding with trumpets ... the trumpeters and singers ... as one, to make one sound to be heard in praising and thanking the Lord' (2 *Chronicles* v.12–13).

1. Part of a dithyrambic chorus, with an aulos player in the centre: detail from an Athenian bell krater by the Kleophon Painter, c425 BCE (Nationalmuseum, Copenhagen)

Several times, during periods of apostasy or adversity, the Temple choir was disbanded, only to be restored subsequently to its original splendour. A choir school was maintained in which Chenaniah's successors trained generation after generation of cantors and choristers. The levitical choir was officially composed of only adult males, but Levite boys were allowed, probably in the role of apprentices, to add the sweetness of their voices to the singing. There is insufficient evidence to support the view held by some authorities that women were allowed to perform with the levitical singers, but, notwithstanding their probable exclusion from the official choir, women no doubt participated in the congregational acclamations and responses introduced into the singing of psalms. The choirs of many synagogues, though more modest in size and usually lacking accompanying instruments, were modelled on that of the Temple in Jerusalem. In the Temple and synagogues, Jewish choral music, which was monophonic, was often performed responsorially or antiphonally. Certain psalms bear superscriptions which have been held to refer to performance by a soloist with responding chorus, and antiphonal singing is described in several biblical passages (e.g. *Nehemiah* xii.31–9). That the ancient practice of antiphonal singing was still in existence among Jews of the 1st century is shown by Philo of Alexandria's description of congregational antiphony as practised by a Jewish sect known as the Therapeutae (*De vita contemplativa*, §29):

> They rise up together and ... form themselves into two choirs, one of men and one of women, the leader chosen from each being the most honoured and most musical among them. They sing hymns to God composed of many measures and set to many melodies, sometimes chanting together, sometimes antiphonally ... It is thus that the choir of the Therapeutae of either sex – note in response to note and voice to voice, the deep-toned voices of the men blending with the shrill voices of the women – create a truly musical symphony.

The leaders of the early Christian Church, guided by Old Testament precedent and New Testament admonition (e.g. *Colossians* iii.16 and *James* v.13), gave their general approval to the use of music in the services of the church; but although Christianity was a Jewish sect at its inception and therefore heir to the musical materials and practices of Judaism, it possessed during its earliest period neither the financial resources nor, since it was forced by persecution to conceal its activities, the physical facilities necessary for the development of a tradition of choir singing like that of the Jews. As a result of these circumstances the singing that flourished among the early Christians was largely congregational. Specific practices varied from place to place, but the activity of singing praise was common to Christians everywhere. 'The Greeks use Greek', reported Origen (*c*185–*c*254), 'the Romans

Latin ... and everyone prays and sings praises to God as best he can in his mother tongue'. The singing of Old Testament psalms was practised, initially at least, by Christians of both sexes and of all ages, but some of the later church Fathers, heeding the interdiction of St Paul (*1 Corinthians* xiv.34), opposed the participation of women in congregational singing.

Not only were the psalms themselves borrowed by the Christians from their Jewish predecessors but Jewish methods of performance were also incorporated into Christian worship. References to antiphonal and responsorial singing occur in the works of several patristic writers. Eusebius (*c*260–*c*340), Bishop of Caesarea, in whose *Historia ecclesiastica* Philo's account of antiphony among the Therapeutae is quoted, remarked that in his own time the manner of singing described by Philo was still practised among the Christians. Responsorial psalmody was mentioned, probably with reference to Rome, by Tertullian (*c*155–*c*222). Antiphonal and responsorial singing may have appeared first among those Christians in closest geographical proximity to the Judaic roots of Christianity, but by the end of the 4th century at the latest these methods of performance were common to Eastern and Western churches alike. Moreover, antiphonal and responsorial singing were not used exclusively in connection with psalm texts but were applied to other types of texts as well, and exercised an influence on the development of the early Christian liturgy. Patristic opinion was divided concerning the propriety of using instruments to accompany singing. Because of their association with pagan festivities, instruments were censured by many of the church Fathers, among them Clement of Alexandria (*c*150–*c*220), who forbade their use in church. Even as late a writer as Didymus of Alexandria (*c*313–38), however, defined a psalm as 'a hymn which is sung to the instrument called either psaltery or cithara'.

Constantine the Great's Edict of Milan of 313 elevated Christianity to the status of an officially recognized religion, thereby eliminating all previously existing impediments to the development of choirs. The work of educating experts in the art of singing seems to have begun almost immediately, for according to tradition St Sylvester, pope from 314 to 336, was the founder of the first *schola cantorum*. The Roman *schola cantorum*, which served simultaneously as the papal choir and as an institution for training apprentice choir singers, was further developed during the 5th-century pontificates of Celestine I and Hilarius; two other 5th-century popes, Sixtus II and Leo I, are reported to have established monasteries devoted to the daily practice of psalmody; moreover, music also held an important place in the activities of the monastic order established in the early 6th century by St Benedict. Thus, when Gregory I, pope from 590 to 604, set about reforming the liturgy and music of the church he found that some of the tools necessary for his task were already at hand. Recognizing its importance to his programme of reform, he reorganized the *schola cantorum*, in the process making use of the musical skills of a Roman community of Benedictine monks. The alliance thus formed between monastery and *schola cantorum* was to have far-reaching effects on the development of choral music; during the next five centuries monasteries, and the cathedral schools that succeeded them, functioned as the principal centres of choral music education, imparting Roman musical methods to many generations of singers, who became the cantors and choristers of churches throughout the Christian world.

The existence of expert singers – soloists and choristers – was reflected in the development of stylistically differentiated liturgical chants. In contrast to the simple, syllabic chants entrusted to the priests and congregation, more elaborate ones were assigned to the choir; the most difficult and elaborately melismatic chants were sung by the virtuosos who functioned as cantors. Methods of performance were also affected by the existence of virtuoso soloists within the choir; responsorial performance, in which the soloists were given an opportunity to display their skills, was eventually employed not only for those liturgical chants that had traditionally been performed in this manner but also for chants that had earlier been performed antiphonally. The resulting prevalence of responsorial singing in the performance of monophonic chant is of basic importance to an understanding of the respective roles of soloists and choir in early polyphony. In the organa of about 1200 and in clausulas throughout the 13th century, only those portions of the responsorial chants originally assigned to soloists were provided with polyphonic settings; those portions originally chanted by the choir remained monophonic. This distinction is almost universally accepted as showing that polyphony in its earliest stages was assigned exclusively to soloists. Indeed, there is a great deal of evidence suggesting that only unison choirs and solo ensembles were known in the medieval church and that it was not until about 1430, a date coinciding with the beginning of the musical Renaissance, that polyphony was assigned to the choir.

In the churches and monasteries of the Middle Ages choirs were composed of men or of men and boys; only in convents were women afforded an opportunity to sing sacred choral music. Extant documents from the last few decades before the Renaissance show that cathedral choirs usually consisted of four to six boys and ten to 13 men; the eight boys and 18 men employed in 1397–8 at Notre Dame, Paris, constituted what was, for that period, an exceptionally large choir. Instruments, if they had ever been entirely eliminated from church services in accordance with the directives of some of the early church Fathers, were readmitted to play in churches by the later Middle Ages. Many churches had organs; string and wind instruments were regularly employed in religious processions outside the church and are known to have been played on occasion inside the church as well; it is probable that in some 14th- and 15th-century performances of sacred vocal polyphony these instruments were combined with the voices, the former doubling, or substituting for, some of the latter.

European secular music during the Middle Ages was almost entirely the province of soloists. In the period of monophony, choral singing of secular music was restricted to the performance of choral refrains in works of the litany and rondel types. Choruses also sang the refrains of some secular and para-liturgical polyphonic compositions, for example carols. In general, however, secular polyphonic works were performed entirely by ensembles of soloists in which there was equal participation between singers and instrumentalists.

2. THE RENAISSANCE. With few exceptions, secular music continued throughout the Renaissance to be sung by soloists. At the courts and in the homes of aristocrats and prosperous merchants, madrigals, chansons and all

other types of Renaissance secular music were performed for pleasure by amateurs, sometimes with the assistance, or perhaps under the leadership, of court or household professional musicians. Men and women were on an equal footing in performing these convivial pieces, and instruments were freely combined and interchanged with the voices; the social nature of the musical activity made it essential for all those present on any given occasion to contribute whatever vocal or instrumental talents they possessed. Although secular music of this period was generally sung and played by solo performers, there were some important occasions, such as festivities associated with court weddings, at which it was publicly performed by choruses consisting for the most part of professional musicians. In 1475, at festivities in celebration of the wedding of Costanzo Sforza and Camilla of Aragon, two 16-voice antiphonal choruses performed along with 'organi, pifferi, trombetti ed infiniti tamburini'; and in a masque described in Balthasar de Beaujoyeux's *Balet comique de la Royne*, a chorus of about 12 singers sang both with and without instruments at a wedding celebration held at the court of Henri III of France in 1581, the instruments on this occasion comprising violins, viols, flutes, oboes, cornetts, trombones, trumpets, harps, lutes and percussion. Choruses also participated in the Italian *intermedi*. For example, Cristofano Malvezzi's 1591 compilation of *Intermedii et concerti*, performed at the wedding in 1589 of the Medici Grand Duke Ferdinando I, includes a six-voice madrigal described as having been sung by a chorus of 24 singers and a concerted finale said to have been performed by a company of 60 musicians composed of about equal numbers of singers and instrumentalists. Though such festive choral performances of secular music were rare, the fact that they occurred at all suggests that the prevalence of solo ensemble singing in Renaissance secular music resulted from the convivial function generally served by the music rather than from any fixed objection to the use of larger numbers of singers.

About 1430 sacred polyphony ceased to be sung exclusively by solo ensembles and began to be sung by choirs as well. As composers of sacred music explored the capabilities of the choir, rapid progress was made in its development as a vehicle for the performance of polyphonic music, and its general constitution was established along lines that were to remain constant throughout the later history of choral singing. Ranges of outer parts were gradually extended until, by the beginning of the 16th century, the range of the choir as a whole spanned three to three and a half octaves. It was recognized that this aggregate range allowed for the existence of four basic voice parts. By the end of the 16th century the Latin forms of the names by which these parts were to be known had emerged. The lowest part was called the bassus, a shortened form of 'contratenor bassus', which had earlier designated the lower part written against the tenor; the next lowest part, the tenor, retained the name originally used for the part assigned the function of carrying (literally 'holding') the pre-existing material of cantus firmus compositions; the part above the tenor was called the altus, a shortened form of 'contratenor altus', which had earlier designated the higher part written against the tenor; and the highest part was often called the superius (later Italianized as 'soprano'). The emergence of this SATB distribution of parts did not deter Renaissance composers from writing for other combinations and for larger numbers of parts. Choirs of the Renaissance, like those of later periods, were often called on to sing in five, six or eight parts; occasionally the number of parts was even greater, as for example in Tallis's 40-part motet, *Spem in alium*. Four parts, however, became the standard minimum and SATB their basic distribution. In works in more than four parts, one or more of the basic parts was subdivided, or if the number of parts was unusually large they were distributed among two or more choirs; for example, Tallis's 40-voice work is for eight choirs, each in five parts resulting from subdivision of the lowest part into what would today be called baritone and bass parts.

The choirs of Renaissance churches and chapels, like their predecessors of the Middle Ages, were composed entirely of male singers (fig.2). Bass and tenor parts were sung by men. Alto parts were sung by men with exceptionally high natural voices, by falsettists, by boys or by boys and men combined. Soprano parts were normally assigned to boys, who occasionally were assisted or replaced by falsettists capable of singing these high parts. In the second half of the 16th century, castratos were introduced into the choirs of the Roman Catholic Church. They were first listed as members of the Cappella Sistina in 1599, but this listing may constitute a belated acknowledgment of an already well-established practice; one singer listed in the Vatican rolls for 1562 as a falsettist is elsewhere referred to as a castrato, and castratos are known to have been employed in Portugal and elsewhere as early as about 1570. Although the use of castratos in church choirs seems to have been most prevalent in Italy, particularly at Rome, the practice spread to all other Roman Catholic countries. At first only soprano parts were assigned to castratos, but after 1687 castratos in the Cappella Sistina sang alto parts as well. Although the

Church took a strong stand against castration, it continued to employ castratos in its choirs. In 1780 more than 200 of them were employed in churches at Rome, and they continued to sing in the Cappella Sistina throughout the 19th century, the last of them retiring as late as 1913.

Renaissance sacred polyphony was probably not infrequently performed by instruments and voices combined. However, all-vocal performances seem to have been the ideal; the Cappella Sistina, for example, was particularly noted for its singing without instruments. When melody instruments were used, they served to replace absent parts, or doubled the singers to enrich the texture on festive occassions; they were rarely required. The players of melody instruments sometimes listed on the membership rosters of church and chapel organizations were usually used as a separate, contrasting ensemble rather than as an accompaniment added to the voices. Although many other melody instruments were employed by such organizations, sackbuts, shawms, dulcians and cornetts were those most frequently associated with performances in ecclesiastical surroundings. Organs were sometimes used to accompany the voices in the last few decades of the Renaissance. Organists often played from bass partbooks, sometimes from organ scores, which consist for the most part of reductions of the vocal parts.

Roman Catholic choirs of the Renaissance, maintained in the chapels of princely patrons as well as in churches, were in general larger than their medieval predecessors. In 1467, for example, the Burgundian chapel of Philip the Good consisted of about 30 men and boys, and in England 16 boys and 16 men made up the choirs of the collegiate churches of King's College, Cambridge, in 1448 and Magdalen College, Oxford, in 1484. Choirs tended to increase in size as the period progressed. Employing only nine singers in 1436, the papal choir, descended from the Roman *schola cantorum* and called the Cappella Sistina from about 1480, grew to 18 in 1450, 24 in 1533 and 28 in 1594; in 1625 its strength was permanently established at 32. Most choirs of the period were probably no larger than the Cappella Sistina, but there were some important exceptions; for example, about 1570 the Bavarian Hofkapelle at Munich, directed by Lassus, consisted of a total of 92 performers: 16 boys, 6 castratos, 13 alto falsettists, 15 tenors, 12 basses and 30 instrumentalists. This and other exceptionally large establishments no doubt functioned on a day-to-day basis as umbrella organizations from which smaller performing units were extracted as needed for ordinary events (even the Cappella Sistina rarely, if ever, performed at full strength); for festive religious and ceremonial occasions their full complements were available to give aural representation to the magnificence of their ecclesiastical or secular patrons.

Although the Reformation signalled the end of Roman Catholic hegemony in the development of church choirs, the 16th century witnessed only modest steps towards the establishment of independent traditions of Protestant choral singing. Both Luther and Calvin, emphasizing the priesthood of all believers, recognized the need for revitalization of the ancient, but generally neglected, practice of Christian congregational singing. Calvin's austere views concerning the function of music in the service of religion led him to sanction only unison congregational singing of psalms, thereby forestalling for at least two centuries the development of choirs in Calvinist churches. Luther, however, encouraged the use of choirs, acknowledging that they served both aesthetic and didactic functions in worship. Early Lutheran choirs were modelled on their Roman Catholic predecessors. The doctrine of the priesthood of all believers did not result in the participation of women singers; men and boys were trained in the cantorial tradition at schools which were under the protection of clerical or municipal authorities. Lutheran choirs may sometimes have been larger and less professional than Catholic choirs of the period. Johann Walter (i), Luther's principal musical adviser and from 1526 to 1548 Kantor at Torgau, was the leader of a Kantorei made up of students from the Torgau Lateinschule, clergy, teachers and other interested citizens. Walter's choir, like many other Lutheran choirs, performed on civic and scholastic as well as ecclesiastical occasions.

Inasmuch as the Reformation in England was motivated more by political considerations than by religious discontent or theological differences with Rome, the early Anglican Church tended to conserve many customs and traditions of the past. English choirs were not therefore greatly altered in constitution or in function as a result of the Reformation. The dissolution of the monasteries

between 1536 and 1540 and the similar fate that befell the choir schools of cathedrals and collegiate churches as a result of the Chantries Acts of 1545 and 1547 would have been fatal to English choral singing traditions had not Henry VIII and his successors provided for the survival or establishment of more than 30 regularly constituted and endowed cathedral and collegiate choral foundations. The Chapel Royal, which had existed since the late 13th century, was also retained, and it continued to attract to its service the finest of England's singers and composers (see LONDON, §II, 1). From the mid-16th century until the Civil War a century later it regularly employed 32 men and 12 boys. The choirs of cathedrals and collegiate churches varied in size from place to place; the cathedral choirs of 16 men and eight boys established in 1541 at Oxford, Ely and Peterborough were average in size, but smaller choirs of 12 men and six to eight boys were established between 1540 and 1542 at the cathedrals of Bristol, Carlisle, Chester, Gloucester and Rochester, while during the same years larger choirs of 20–24 men and ten boys were established at Westminster Abbey and at the cathedrals of Canterbury, Durham, Winchester and Worcester. Unusually large choral bodies were sometimes created when, in connection with particularly important occasions of state, the Chapel Royal joined with the musical forces of one of the cathedrals, thus producing choirs of more than 70 voices. Although recorders and viols were sometimes used in English churches, cornetts and sackbuts were the instruments most frequently combined with choirs; indeed, the use of a quartet of two cornetts and two sackbuts was more or less standard practice in some churches. As on the Continent, the organ, although probably used with voices in earlier times as well, began to be recognized as a constituent part of English choral establishments only during the last few decades of the 16th century; at the Chapel Royal the first appointment of an organist specifically so designated is not recorded until 1601. Following medieval custom, English choirs of the Renaissance were divided into two equally balanced halves; the two groups were seated facing one another on opposite sides of the chancel, *decani* on the dean's side and *cantoris* on the precentor's side. This encouraged an antiphonal mode of performance that was often exploited in the works of English Renaissance composers. The principle of responsorial singing was employed in the English verse anthem. In contradistinction to the entirely choral full anthem, the verse anthem consisted of contrasting sections for soloist or soloists (verse) and chorus. In Renaissance verse anthems, soloists were supported by a consort of viols or an organ; the instruments doubled the voices of the choir during the full choral sections. It has been suggested that the use of the term 'verse' to designate the solo sections of these anthems was derived from its association with responsorial chants (e.g. graduals, alleluias, introits) consisting of verse and respond sections sung respectively by soloists and choir; according to an alternative explanation, the term was derived from secular or paraliturgical compositions (e.g. rondels, carols) possessing a structure of verse (solo) and refrain (chorus). In either case the fact that this term, with its antecedents in earlier responsorial singing, was adopted by English composers of verse anthems may be seen as a specific reflection of the general continuity that characterized the development of the chorus throughout the Middle Ages and up to the end of the Renaissance.

The general statement that women did not sing in church and chapel choirs during the Renaissance and Baroque eras is subject to two important exceptions. In convents, unison chanting was used in daily religious observances from the Middle Ages onwards. During the late Renaissance period and the Baroque, some female monastic houses emerged as centres of musical development. In these centres, polyphony was performed and sometimes composed by nuns specially trained as musical leaders. Late 20th-century research into this subject has tended to show that with some exceptions the polyphony performed in the chapels of convents was more conservative than that sung coterminously in non-monastic

4. Chapel choir accompanied by cornetts and sackbut: woodcut from the title-page of Hermann Finck's 'Practica musica', v (Wittenberg: Rhau, 1556)

musical establishments. This was not the case, however, with the second exception. At four *ospedali* in Venice, renowned composers such as Caldara, Cimarosa, Hasse, Jommelli, Lotti and Porpora were engaged to direct and teach and to compose works in the most up-to-date styles for talented and rigorously trained women singers and instrumentalists who began as students and progressed to become teachers and leaders; these institutions were the forerunner of later conservatories of music. Among the women who emerged as leaders within these conservatories were several composers whose works, some of which compare favourably with those of their famous teachers, have begun to receive the attention of musical scholars. Founded to provide charitable relief for the indigent, the chronically ill and orphans (hence the derivation of the word 'conservatory'), the *ospedali* began in the mid-16th century to offer musical training to the female orphans in their care. By the mid-17th century, this training and the opportunities it opened for its recipients became so desirable that the daughters of Venice's patrician and noble families, who were neither orphans nor indigent, sought admission. Talented young women of lower socioeconomic status who were not orphans were recruited and accepted as what would today be called scholarship students. Each *ospedale* had a large church building attached to it in which services and concerts featured the singing and playing of the student ensembles. Although the orchestras sometimes included male teachers playing alongside their female students, the choruses were made up entirely of women. These choruses were not large – perhaps no more than 20 singers as a rule – but on at least one important occasion, a concert in 1782 in honour of Emperor Joseph II, the four *ospedali* combined to create a force of over 100 singers and instrumentalists. The music historian Charles Burney spent several days in 1771 investigating the *ospedali*. In his *Present State of Music in France and Italy* (1771), he gave a decidedly favourable description of what he saw and heard, commenting as follows on technical aspects of the choral ensembles:

> As the choruses are wholly made up of female voices; they are never in more than three parts, often only in two .... Many of the girls sing in the counter-tenor [range] as low as A and G, which enables them always to keep below the soprano and mezzo soprano, to which they sing the bass.

3. The Baroque. The general enlargement of church and chapel choirs that had taken place during the Renaissance was not carried forward to any great extent during the period from 1600 to 1750. As in the previous period, unusually large choirs occasionally flourished as a result of favourable patronage: the French royal chapel in the second half of the 17th century, for example, consisted of about 60 singers, Louis XIV having doubled its former size in order to make it a sufficiently splendid representative of his opulent court. For the celebration of particularly important occasions, untypically large choral bodies were sometimes created either by combining two or more choirs or by enlarging a single choir through the temporary employment of additional singers. The choirs of the Chapel Royal and Westminster Abbey were customarily combined at English coronations, and on at least one occasion, the funeral of Handel in 1759, they performed in conjunction with the choir of St Paul's Cathedral as well. Extra singers were often employed at, for example, S Petronio, Bologna, in connection with the feast on 4 October of the church's patron saint; in 1687, a typical year, the basic 16-voice choir was augmented by 49 additional singers. On the other hand, Baroque choirs were often smaller than their Renaissance predecessors. Periods of adversity were sometimes the result of external circumstances: for instance, German choirs suffered a drastic shortage of adult male singers during the Thirty Years War (1618–48), and English choirs, already adversely affected during the Civil War (1642–9), ceased to exist altogether during the Commonwealth and Protectorate (1649–60). Towards the end of the Baroque era, indifference on the part of patrons had a deleterious effect on choirs. English choirs, although they had been re-established at pre-Commonwealth strength immediately following the Restoration in 1660, were allowed to degenerate in both size and quality by Charles II's successors. Lack of affirmative patronage is also reflected in the memorandum that Bach submitted in 1730 to the Leipzig town council. In his 'Short but most necessary draft for a well-appointed church music, with certain modest reflections on the decline of the same', he complained of the inferior quality of some of the singers assigned to him and enumerated the minimum number of singers required to serve the three Leipzig churches in which concerted music and motets were performed; this minimum number, according to him, was 36 – three choristers, one of whom also functioned as a soloist, for each of the four parts of three 12-voice choirs. However, notwithstanding the existence from time to time and place to place of larger and smaller choirs, the choir of 30–40 voices which had become common during the Renaissance continued to be regarded as a satisfactory norm throughout the Baroque era. S Marco, Venice, had a choir of 36 in the late 17th century; as has been stated above, the Cappella Sistina numbered 32 from 1625; the restored Chapel Royal of England consisted of 44 singers from 1660 to 1689, 34 from 1689 to 1715 and 38 thereafter; Buxtehude employed a choir of about 30 in his Abendmusik concerts at Lübeck during the last three decades of the 17th century; and even Bach, when major undertakings warranted the use of all his singers in a single performance, possessed a choir of 36.

Thus choirs did not generally grow in size during the Baroque period, primarily because they were expensive. For this reason, solutions less costly and more effective than the mere multiplication of voices were devised to satisfy the Baroque concern for increased sonority. Contrast was the essential factor in these solutions, one of which involved polychoral performance and spatial distribution of the voices, others the use of solo–tutti contrasts and of independent choral and instrumental bodies in a concertato style.

Music for two or more choirs was not a new development of the Baroque period. Mention has already been made of a performance by antiphonal choirs at a 1475 wedding celebration, of *decani–cantoris* antiphony in English Renaissance music and of a motet for eight choirs by Tallis. Polychoral works were produced by many other Renaissance composers, among them Palestrina at Rome and Willaert at Venice. Performance by Cori spezzati – literally 'broken' choirs, that is, choirs spatially separated from one another – was indicated for several psalm compositions by Willaert which were published in 1550 under the designation 'salmi spezzati'. It was, however, during the early 17th century that

performance by two or more choirs in a concertato manner was fully exploited. Choirs of like timbre (e.g. SATB/SATB) as well as those of unlike timbre (e.g. SSAT/SATB/TTTB) were pitted against one another; spatial distribution of the choirs created an illusion of increased sonority. S Marco in Venice became famous for its use of antiphonal *cori spezzati*, and Venetian techniques spread to other countries as well, especially to Germany, where they were employed by Lutheran musicians such as Michael Praetorius and Schütz. At Rome, although the Palestrinian contrapuntal style was perpetuated in conservative *stile antico* writing, polychoral performance flourished and was expanded to unprecedented dimensions. The term 'colossal' has been aptly applied to Roman polychoral performances, some of which involved as many as 12 choirs. André Maugars described one such spectacular performance which he attended in 1639 at S Maria sopra Minerva:

> Two large organs are elevated on the two sides of the main altar, where two choirs of music were placed. Along the nave were eight more choirs, four on one side and four on the other, raised on platforms eight or nine feet high, separated from one another by the same distance and facing one another. With each choir there was a small organ.

The grand style of Roman polychoral performance was exported to other countries, notably to Austria. Indeed, the colossal Baroque style can be said to have reached a climax in the later 17th century with the 53-part polychoral mass formerly attributed to Orazio Benevoli but now thought to be by Biber or Andreas Hofer. Polychoral distribution of the voices, although never again so extensively employed as in the 17th century, remained a device occasionally used by composers of all later periods.

Contrasts between large and small choirs or between soloist(s) and choir(s) were sometimes employed in both Venetian and Roman polychoral performances, but such quantitative contrasts, probably because they contributed to a lesser degree to the illusion of increased sonority, were not an indispensable feature of the splendid performances of Italian music that occurred during the 17th century. In the last half of the century, however, solo–tutti contrast constituted an essential feature of choral performances in both England and France. The French *grand motet* depended for its identity on a juxtaposition of *grand choeur* and *petit choeur*, the latter consisting of solo voices, and the Restoration verse anthem, like its Renaissance forerunner, was similarly identified by contrast between soloists (verse) and chorus.

Since there was no general increase in the number of participants, solo–tutti contrast and polychoral disposition of the singers made a contribution more illusory than real to increased sonority. Initially at least, similar circumstances prevailed in connection with concertato deployment of instrumental ensembles. The same instruments that had previously functioned as an integral part of the choir, reinforcing or replacing *ad libitum* the individual vocal parts, were organized in the late 16th and early 17th centuries into independent ensembles which, functioning now as one or more of the separate choirs of polychoral works, were pitted against the voices. At first, as in a 1587 collection of polychoral compositions by the Venetian composers Andrea and Giovanni Gabrieli which appeared under the title *Concerti ... continenti musica di chiesa*, composers began to express a generalized desire for vocal–instrumental contrast, but without designating either the specific parts to be assigned to instruments or the specific instruments to be used. As time passed, specific instrumental designations began to appear and the contrast between voices and instruments was heightened by concomitant developments in the differentiation of vocal and instrumental idioms. Not only was there a shift from a *colla parte* to a concertato use of melody instruments in the early Baroque period but the organ also began to function in a new role, underpinning the vocal and instrumental choirs with a virtually indispensable continuo part. Shortly after 1600, as the instruments of concertato ensembles began to be specifically designated, a real increase in sonority resulted from enlargement of the instrumental groups. The aforementioned 53-part mass, for example, was written for two eight-part vocal choirs; two six-part choirs of string instruments; a six-part choir of flutes and oboes; a seven-part choir of trumpets, cornetts and trombones; two four-part choirs of trumpets, one with timpani; and three organs, two of them functioning as continuo instruments with the vocal choirs and the third playing a master *basso seguente* part. The instrumental ensembles participating in early Baroque performances of choral music were not standardized, but as the period progressed, choirs performed more frequently with homogeneous groups of instruments, most often strings, and with regularly constituted orchestras. In Louis XIV's royal chapel, for example, the famed '24 Violons du Roi' played a prominent role in performances of concerted motets, and a similar band of string instruments, organized by Charles II in imitation of it, participated in Chapel Royal performances of many English verse anthems. Similar string groups and orchestras also existed in many churches and cathedrals. Buxtehude's choir of 30 or so voices performed with a string ensemble of about 15 players, and Bach, in his 1730 memorandum to the Leipzig town council, specified the need for an orchestra of about 18 players. At S Petronio, Bologna, in the previously cited typical year of 1687, the normal 16-voice choir sang regularly with an orchestra of 13 players, and the 49 singers added to the choir to celebrate the feast of the church's patron saint were balanced by an additional 28 instrumentalists. By the end of the Baroque period, continuo underpinning was virtually an ever-present element in choral music and fully developed orchestral accompaniments were a normal part of most choral performances.

The foundations of opera were laid by the musicians, poets and scholars of the Florentine Camerata, who had as their goal the renewal of musical practices associated with ancient Greek drama. Although concerned chiefly with the creation of a monodic style of declamation suitable for the individual expression of passionate utterances, they recognized that the restoration of Greek practices required the use of the chorus not merely as a decorative element, as had been the case in *intermedi* (which were among the immediate theatrical predecessors of the opera), but in the roles of interlocutor and commentator as well. Moreover, early composers of operas, especially Monteverdi, discovered that the chorus served a useful purpose from a purely musical point of view by providing contrast and structural delineation amid the unvarying style that prevailed in solo song before the development of stylistic contrast between recitative and aria. The chorus therefore played a structurally

important role, dramatically and musically, in early opera, especially in the works of Monteverdi and in those of Roman composers. At about the time that Venice emerged as a leading centre of operatic activity, a variety of circumstances – theoretical, musical, and practical – combined to reduce the importance of the chorus in Italian opera: a waning of speculative interest in the restoration of Greek drama undercut the theoretical basis on which the dramatic importance of the chorus had initially been predicated; developing stylistic differentiation between recitative and aria eliminated the previous need for choral delineation of musical structure; and most important, increasing reliance on public support, rather than, as previously, on the support of munificent patrons, demanded the elimination of the extravagance of choristers' salaries. After about 1640 the chorus virtually disappeared from Italian opera; only in festival operas produced at the italianate courts of such Austrian and German centres as Vienna and Munich, where opera continued to be supported by wealthy patrons rather than by the public, did the chorus retain something of its former importance. In the late 17th century and in the 18th, the chorus flourished briefly in French operas by Lully, Rameau and their contemporaries, as it did also in English theatrical music of the Restoration, especially in the works of Purcell (e.g. *Dido and Aeneas* in which the chorus, with Belinda as its leader, functions very much in the manner of its Greek ancestor).

At about the time of its disappearance from Italian opera, the chorus began to be used in the oratorios which were just then becoming popular in Rome. Supported by church societies, the Roman oratorio was not subject to the budgetary difficulties that adversely affected the chorus in publicly supported opera. The oratorio initially possessed a dramatic libretto in which a sacred story was recounted; non-sacred subjects of a moralizing nature were also used at a later time. These dramatic texts were usually presented, however, without benefit of scenery, costumes or stage action. Under these circumstances the chorus was found to be useful not only in its ancient role of commentator and in its operatic role of collective persona but also for the purposes of narrating the action and compensating for the lack of visual representation. The chorus flourished particularly in the oratorios of Carissimi and, outside Italy, in those of Charpentier and Schütz. During the last decades of the 17th century a few Italian composers of oratorios (e.g. Stradella and Legrenzi) made extensive use of the chorus, but by the end of the century Italian oratorio, like the opera for which it served by that time as a Lenten substitute, featured the singing of virtuoso soloists to the virtual exclusion of the chorus. In the first half of the 18th century, Italian oratorios in which the chorus played a prominent part were produced in Vienna. It was, however, in the English oratorios of Handel that the chorus, enjoying a reversal of its earlier exclusion from opera due to economic considerations, became an element of central importance. Handel, whose entrepreneurial ventures in opera had ended in failure, discovered as a result of several fortuitous circumstances the profitability of a kind of public entertainment that, although presented in the same theatres that had formerly housed his operatic works, dispensed with expensive scenic trappings and highly paid Italian virtuosos and substituted for them an expanded use of the relatively inexpensive chorus. He gave the chorus an importance, invariably structural and sometimes quantitative, that outweighed that of the solo singers. He often, as in *Israel in Egypt*, assigned the chorus the role of idealized protagonist, writing brilliant and varied movements on a grand scale and sometimes combining two or more consecutively to form multi-movement choral structures on an exceptionally large scale. Through his emphasis on the chorus he developed the oratorio far beyond its original scope and produced works that were destined to serve as models for many later generations of oratorio composers, especially in England.

Little documentary evidence is available concerning the size and other physical characteristics of Baroque opera and oratorio choruses. A rare insight into the size of the chorus in the earliest operas is provided by Marco da Gagliano's specification, in the preface to his *Dafne* (1608), that the chorus should be composed of 'no more than 16 or 18 singers'; it is also known that at Vicenza in 1585 a group of 15 singers, a number determined by the supposed size of the ancient Sophoclean chorus, performed the music composed by Andrea Gabrieli for the choruses of the drama *Edippo Tiranno*. Probably the choruses employed in early Italian operas were generally no larger than these. Indeed, evidence shows that the designation 'coro' was sometimes used in these early operas to refer to an ensemble which, although it functioned dramatically as a chorus, was composed of only one singer for each part. Except at the German and Austrian courts, where operas were produced on a grander scale, this latter practice became the norm for all Italian operas after about 1640. In Handel's operas, for example, the final ensembles, although designated 'coro', were performed by the principals. The chorus in French opera was at first no larger than its Italian predecessor. Cambert's *Pomone*, produced in 1671, employed a chorus of 15 singers and an orchestra of 13. Larger groups were organized by Lully and his successors. From at least 1713 the orchestra of the Académie Royale de Musique consisted of 46 players, and it was presumably balanced by a chorus not too dissimilar in size: in 1754, when the orchestra still numbered just under 50, there was a chorus of 38. It is impossible to determine the extent to which women participated in Baroque opera choruses. They appeared from the outset in solo roles. Moreover, in 1681 female dancers were admitted to the French operatic *corps de ballet*, and it may be reasonable to suppose that at this time female singers – if they had ever been excluded – were also licensed to appear in operatic choruses. They had definitely been admitted by 1754; of the 38 choristers employed in that year, 17 were women. It has been generally assumed that the structurally and dramatically important choruses of early Italian oratorios were sung by choral groups no smaller, perhaps even considerably larger, than the average church choirs of the period, but there is at present no direct evidence for this assumption. Maugars, whose account of music performed at a Roman church service included ample description of the use of choirs, provided an analogous account of a 1639 Roman oratorio performance in which he mentioned the singing of an introductory motet but omitted any reference to a chorus. He was apparently unimpressed by the singing of the oratorio chorus – or perhaps there was no chorus, the introductory motet having been sung by an ensemble composed of the soloists who later portrayed the various characters in the oratorio. The instrumentation

5. Rehearsal of De Fesch's oratorio 'Judith', first performed at the Lincoln's Inn Fields Theatre, London, 1733: engraving by William Hogarth, 1733–4

of two violins and continuo typically used by Carissimi and his contemporaries suggests that the chorus was only of modest size, but later Italian oratorios, particularly those produced at Vienna during the 18th century, used larger orchestras and may therefore have required appropriately larger choruses. The English oratorios of Handel, however, were often more fully orchestrated still and virtually always more emphatically choral than any previous oratorios; yet their choruses were generally performed by groups of about 25 singers, sometimes even fewer, this number including the soloists who are known to have participated at times in the singing of the choral movements. For the 1758 Foundling Hospital performance of *Messiah*, for example, Handel's forces consisted of 13 adult male choristers, six boy choristers, three male and three female soloists and an orchestra of 33. Regularly employed as members of the choirs of the Chapel Royal, Westminster Abbey and St Paul's Cathedral, Handel's choristers found in the oratorio a welcome opportunity for part-time employment. They were probably typical in this respect of most of the choral singers in Baroque performances of non-ecclesiastical music, for although opera and oratorio provided additional vocational opportunities for professional choristers, the church remained, throughout the Baroque period, the principal educator and employer of choral singers.

4. FROM THE MID-18TH CENTURY TO THE LATER 19TH. During the last years of his life Handel's oratorios were increasingly performed in the English provinces, generally in conformity with practices familiar in London. His death turned what had already become a cult almost into a religion. In 1759 there were many commemorative Handel performances, not only in London but also in Oxford, Cambridge and other large towns and in the small village of Church Langton, near Leicester, where there was a two-day festival. In the same year, at the Three Choirs Festival at Hereford, *Messiah*, which like the other oratorios had been previously performed only in secular buildings, was for the first time sung in a cathedral. Almost from the beginning of Handel's career as an oratorio composer, the profits on performances of his works had helped sustain charities, and as the need for investment in hospitals became more urgent, so the cult of Handel, assisted by the editions of Randall and Arnold, grew even stronger during the remainder of the 18th century.

The centenary of Handel's birth was celebrated in 1784 (a year prematurely) with a festival of his works in Westminster Abbey; 300 singers and 250 instrumentalists participated. The singers came from various parts of England, and, as a result of the impressions they carried home with them to their local choral organizations, large-scale performances became the rule rather than the exception. As far as interpretation was concerned, the 1784 commemoration was a watershed, for from then until modern times the main emphasis was on large numbers and broad effects, with the orchestra reduced to a supporting role. The success of the 1784 commemoration was followed by other Handel festivals in Westminster Abbey: in 1785 there were 616 participants, in 1786 749, in 1787 806, and in 1791 (when Haydn was present) the number had increased to more than 1000. In the same year the festival in York Minster comprised a force of 100 singers and players, but at the more important festival of 1823 there were 465 ('vocal band' 285, 'instrumental band' 180), including 49 female and 13 boy trebles and 55 altos, all men. It was not always the case at this time, however, that women were included in festival choruses. In the Norwich Festival chorus of 1830 there were 70 trebles, 38 countertenors, 61 tenors and 65 basses; in a memorandum giving these numbers Edward Bunnett noted 'no ladies at this period'.

The stimulus given by Handel's works to choral singing in Britain (already noted in F.W. Marpurg: *Historisch-kritische Beyträge zur Aufnahme der Musik*, 1758) was to some extent paralleled on the Continent. At Hamburg, Michael Arne directed performances of German versions of *Alexander's Feast* and *Messiah* in the early summer of 1772, and these works and a *Te Deum*by Handel were included in the concert series given in the 1775–6 season in the Handlungsakademie. German performances of *Messiah* were stimulated by translations of the text by Herder, J.A. Hiller and Klopstock. One of the most important of these performances was directed by Hiller on 19 March 1786 in Berlin Cathedral; there were 305 singers and players. Hiller also arranged two performances of *Messiah* later in the year in the university church at Leipzig, where he used 90 singers and rather more orchestral players. During the years 1788–90, Mozart, on commission from the Prefect of the Imperial Court Library, Gottfried van Swieten, reorchestrated four of Handel's works: *Acis and Galatea*, *Messiah*, *Alexander's Feast* and the *Ode for St Cecilia's Day*. Mozart's expanded use of woodwinds in *Messiah* became closely associated with 19th-century performances of that work and his version remained in use well into the 20th century.

As in England, where the cult of Handel provided an impetus for the use of grandiose performing forces, the numbers in continental choruses grew, particularly in response to special needs and occasions. At Naples in 1774, 300 performed the music at Jommelli's funeral. In Vienna, oratorios were given in 1773 by 400 performers,

in 1811 by more than 700 while in 1812 1000 took part in Handel's ode *Alexander's Feast*. Annual oratorio performances involving such forces took place in Vienna until 1847.

As choruses grew larger, participation of amateur singers supplanted the reliance on professionals which had been characteristic of oratorio and church music performances in earlier times, and the distinction between church and civic venues began to blur. To some extent, this emancipation of 'sacred' music from its former confinement in the ecclesiastical arena was brought about by a new concept of social obligation, symbolized by the sorts of charity set up during the Enlightenment. As regards the development of the chorus, one of the most important of these charitable enterprises was the Tonkünstler-Societät of Vienna, for which a constitution was drawn up in 1771; it was modelled on the Society of Musicians in London and catered for the needs of indigent members of the musical profession and their dependants. On 29 March 1772 Gassmann's *Betulia liberata* was performed under its auspices and was so well received that further performances were given on 1 and 5 April. Haydn was greatly interested in the society and composed for it his *Il ritorno di Tobia* (1774–5). Later, one of the most popular works in its repertory was his *Creation*, which was greatly influenced by Handel and almost immediately after its composition joined Handel's works in the international repertory.

In Britain, new societies for the purpose of singing madrigals and madrigal-type music came into being during the 18th century, either to conserve old music, as with the Madrigal Society (founded in 1741) and the aristocratic Anacreontic Society (1766), or to encourage the production of new music, preferably of a convivial nature, as with the Noblemen's and Gentlemen's Catch Club (1761) and the Glee Club (1783). Although they were male preserves (except for 'ladies' nights'), such bodies served a useful function in developing musical literacy, especially among the middle classes, and increasing the regard for choral music *per se*. The term 'glee club' was in due course adopted in North America, but its meaning was extended beyond English usage to denote a choral group in general – usually one in a high school or college and, in the late 20th century at least, all-male or all-female – rather than a club devoted to singing catches and glees.

In the 19th century, Romanticism led to the advancement of music associated with words, and choral music enjoyed the benefits of this. The age of the lied and the Wagnerian music drama, was also the age of the *Chorgesang* and Beethoven's Ninth Symphony. That choral music could prove influential in developing political as well as religious philosophies had been shown long before, but it was to become more evident during the epoch to which the storming of the Bastille in 1789 was the prelude. In 1790 a popular festival to celebrate the French Revolution took place in Paris. The music for it, a *Te Deum*, was composed by Gossec, who subsequently wrote a number of other choral works reflecting his political thinking. In 1794 the National Festival – a popular yearly event – was remarkable for the use of a chorus of 2400 voices. From this initial enthusiasm there developed in France a male-voice choir movement, its participants largely working-class men, which from 1833 was generically known under the name ORPHÉON.

In Germany by the end of the 18th century much patriotic music for male voices was being published in such periodicals as the *Berlinische musikalische Zeitung*. In 1793, with an initial membership of 30, C.F.C. Fasch established the Berlin Sing-Akademie (which was also a teaching institution) for the purpose of protecting standards in German choral music. Encouraging developments soon occurred throughout the German states. In 1801 an Akademischer Chor was founded in Würzburg, in 1802 a Singakademie at Leipzig and in 1804 a Singverein at Münster; in 1806 choral societies came into being at, among other places, Dresden, Erlangen and Kassel. Meanwhile Zelter, Fasch's successor at the Berliner Singakademie, founded the first LIEDERTAFEL, a male-voice choir organized as much for convivial as for musical purposes, and many similar bodies so designated (or sometimes called Liederkranz to denote a group rather more popular in character) were later established throughout Germany and ultimately in North American cities with large German communities. By 1839 the male-voice choirs of the German-speaking countries (often, like Orphéon choirs, composed of working-class men) were brought together into an association known as Vereinigte Liedertafeln. Regional festivals, usually including a competitive event, were organized for which festival compositions were sometimes commissioned. For example, for one such festival, an 1843 gathering of Saxon male choruses, Wagner supplied a large-scale work entitled *Das Liebesmahl der Apostel*. Nowhere was the urge to nationalism stronger than in the German male-voice choral movement, which received a great impetus in the first place from the liberation of Germany through the so-called Battle of the Nations at Leipzig in October 1813. Typically nationalist works include Spohr's *Das befreite Deutschland* (1814) and Weber's *Kampf und Sieg* (1815), while anthologies such as *Auswahl deutscher Lieder: Vaterlands- und Bundeslieder, Kriegs- und Heldenlieder nebst Festgesänge für Siegestage* (Leipzig, 1830) appeared in profusion. The importance of the Liedertafel movement is illustrated by the fact that in 1847 Schumann undertook to conduct the one in Dresden in succession to Ferdinand Hiller, whom he also succeeded, in 1850, as director of the Düsseldorf Gesangverein, a mixed-voice choral society. Schumann produced several lovely but relatively easy Liedertafel partsongs, as did a multitude of other composers. A composition that provides some insight into the convivial nature of the Liedertafel is Brahms's 'Tafellied' (1884), a scintillating portrait of 'ladies' night' at a Liedertafel gathering.

Side by side with the French and German development of choral music an important movement grew up in Switzerland. The initial inspiration came from H.G. Nägeli, who postulated that music involving the participation of many people in joint performance was of its very nature democratic. He founded a Singinstitut and a Sängerverein at Zürich, and from time to time he provided them with compositions of his own. The political character of the male-voice choir – for which much music to politically inspired texts was provided by German composers – met with disapproval in Austria, where the formation of such choirs was for a time forbidden. German partsongs were also written for female ensembles by many 19th-century composers. Some, like those composed by Schubert to be performed by the voice students of Anna Fröhlich, were intended for informal

soirées and concerts by ad hoc ensembles. Others, like those supplied by Brahms for the women's chorus he conducted in Hamburg from 1859 to 1861, were written for formally constituted ensembles which enjoyed an existence similar to that of their male-voice counterparts. These women's ensembles, however, were far less numerous than men's ensembles, and they were not organized, as the male groups were, into a strong national organization that existed for the purpose of promoting their development.

In the first half of the 19th century, new choral societies (SATB) sprang up in virtually every British town. Just as the 1784 Westminster Abbey commemoration had proved an inspiration to the country at large so too did the festival held in the Abbey in 1834 by command of King William IV. Once again performers came from all parts of the country; they were directed by Sir George Smart. The conservative nature of the festival was reflected by a programme note which read: 'To avoid giving offence to any living Authors, it was determined, that the selection should be made, solely, from compositions of those who had been gathered to their fathers'. Smart, who in the course of a long life conducted some 1500 concerts, popularized the grand manner of Handel performances through the festivals (many of them dating from the previous century) in Bath, Birmingham, Bury St Edmunds, Cambridge, Colchester, Derby, Dublin, Edinburgh, Hull, Liverpool, Manchester and Norwich. A remarkable growth in secular choral societies was in no small measure due to the vocal scores that were being made increasingly available: just as in Germany Breitkopf & Härtel had seen the commercial possibilities of the situation, so in England Alfred Novello, himself much in demand as a bass soloist in oratorios, put himself in the van of progress by issuing material for amateur singers at low cost. In London the Sacred Harmonic Society (1832–82) did much to widen opportunities and also to broaden the repertory. The chorus had women to sing the treble and alto parts (though they were invited to assist at the performances rather than being admitted to full membership of the society). The Handel Festival at the Crystal Palace in 1859 was prompted by a suggestion from R.K. Bowley, sometime secretary and librarian of the society. When the society's regular meetings came to an end through lack of proper rehearsal facilities the final report presented to the members on 24 November 1879 stated:

> It cannot be forgotten ... that to the efforts of the Sacred Harmonic Society of forty years ago, and to the consistent course pursued by its Managers throughout its entire history, is due the great advance which has taken place in public musical taste, and that cultivation of oratorio music which in times gone by was only the luxury of a few wealthy amateurs. The style of the Society's Concerts has furnished the type and standard of oratorio performances throughout the country.

It was also noted that towards the end of its existence the society had found it difficult to meet ever-increasing costs which all but exhausted its funds. Performances patterned after the large-scale English festivals were presented in other countries as well, most importantly in Germany, Austria and the USA. The manner in which these festivals developed, and the principles that inspired them, affected both architecture and composition. The centuries before the 19th had brought to maturity a style

6. 'Conversazione' and concert by the Vocal Association at St James's Hall, London, 1860: engraving from the 'Illustrated London News'

SACRED HARMONIC SOCIETY, EXETER HALL.

On WEDNESDAY EVENING, NOVEMBER 17th, 1847,

WILL BE PERFORMED,

MENDELSSOHN'S ORATORIO,

E L I J A H.

PART I.

Recit.	Mr. H. PHILLIPS	As God the Lord
OVERTURE		
Chorus		Help Lord!
Choral Recitative		The deeps afford no water
Duet and Chorus	Madame C. ALLAN and Miss DUVAL	Zion spreadeth her hands Lord, bow Thine ear.
Recit. and Air	Mr. LOCKEY	If with all your hearts
Chorus		Yet doth the Lord
Recit.	Miss DOLBY	Elijah, get thee hence
Double Quartet	Madame C. ALLAN Miss E. BYERS Miss DOLBY Miss DUVAL, Mr. LOCKEY Mr PECK, Mr. J. A. NOVELLO & Mr. SMYTHSON	For He shall give His Angels charge
Recit.	Miss DOLBY	Now Cheriths brook
Recit. and Duet	Madame C. ALLAN & Mr. H. PHILLIPS	Give me thy son
Chorus		Blessed are the men.
Recit. & Chorus	Mr. H. PHILLIPS & Mr. LOCKEY	As God the Lord
Chorus		Baal, we cry to thee;
Recit.	Mr. H. PHILLIPS.	Call him louder
Chorus		Hear our cry, O Baal.
Recit.	Mr. H. PHILLIPS.	Call him louder
Chorus		Baal, hear and answer
Recit. and Air	Mr. H. PHILLIPS.	Draw near, all ye people
Quartet	Madame C. ALLAN Miss DOLBY. Mr. LOCKEY, and Mr. J. A. NOVELLO	Cast thy burthen upon the Lord
Recit.	Mr. H. PHILLIPS.	O Thou, who makest
Chorus		The fire descends
Recit. & Chorus	Mr. H. PHILLIPS & Chorus.	Take all the prophets of Baal
Air	Mr. H. PHILLIPS.	Is not His word like a fire?
Air	Miss DOLBY.	Woe unto them
Recit.	Mr. LOCKEY	O man of God.
Recit. & Chorus	Mr. PHILLIPS and Madame C. ALLAN	O Lord, Thou hast over-(thrown
Chorus		Thanks be to God.

PART II.

Air	Madame C. ALLAN	Hear ye Israel
Chorus		Be not afraid!
Recit.	Mr. H. PHILLIPS	The Lord hath exalted
Solo & Chorus	Miss DOLBY and Chorus	Have ye not heard
Chorus		Woe to him!
Recit.	Mr. LOCKEY	Man of God
Recit. and Air	Mr. H. PHILLIPS	It is enough, O Lord!
Recit.	Mr. LOCKEY	See, now he sleepeth
Trio	Madame C. ALLAN Miss DUVAL and Miss DOLBY	Lift thine eyes
Chorus		He, watching over Israel
Recit.	Miss DOLBY & Mr. H. PHILLIPS	Arise, Elijah.
Air	Miss DOLBY	O rest in the Lord
Chorus		He that shall endure.
Recit.	Mr. H. PHILLIPS & Madame C. ALLAN	Night falleth
Chorus		Behold! God the Lord
Recit.	Miss DOLBY.	Above Him stood
Quartet and Chorus	Madame C. ALLAN Miss E. BYERS, Miss DOLBY, Miss DUVAL	Holy, holy,
Choral Recit. and Solo.	Mr. H. PHILLIPS and Chorus	Go return upon thy way
Air	Mr. H. PHILLIPS	For the mountains
Chorus		Then did Elijah
Air	Mr. LOCKEY	Then shall the righteous
Recit.	Madame C. ALLAN	Behold God hath sent
Chorus		But the Lord
Quartet	Madame C. ALLAN Miss DOLBY, Mr. LOCKEY and Mr. J. A. NOVELLO	O come every one
Chorus		And then shall your light

LEADER, MR. PERRY. ORGANIST, MR. MILLER. CONDUCTOR, MR. SURMAN.

The BAND and CHORUS, complete in every department, will be on the most extensive scale, consisting of above 500 PERFORMERS.

The Doors will be Opened at half-past SIX, and the Performance commence at SEVEN o'Clock.

Correct Books of the Words, 6d. each, to be had ONLY in the Hall on the Evening of Performance.

Tickets, 3s. each, Reserved Seats in the Gallery and Area 5s.,

May be had of the Principal Music Sellers; of Mr. BOWLEY, 53, Charing Cross; Mr. MITCHELL, 39, Charing Cross; Mr. SURMAN, 9, Exeter Hall; and Mr. RIES, Grand Cigar Divan, 102, Strand, opposite Exeter Hall.

The Subscription to the Society is One Guinea, or for Reserved Seats, Two Guineas per annum.

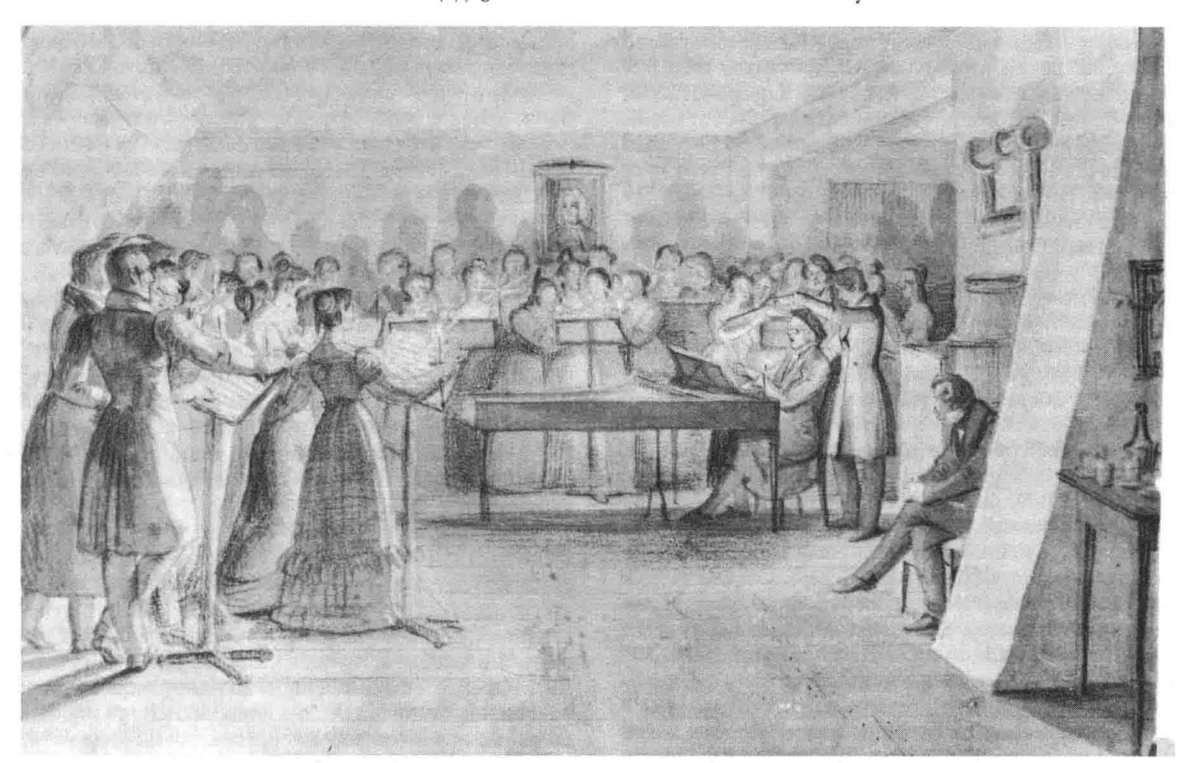
that had evolved within great ecclesiastical buildings and for the purposes of the ceremonies held within those buildings. The major works of the 19th century were mostly designed for secular buildings, which were themselves not infrequently planned with the requirements of oratorio-type music in mind. At the same time, choral festivals encouraged the creation of new large-scale choral works; many festivals regularly commissioned composers to write what were called 'novelties', and the oratorio-type works thus created were for a new category of singers, largely amateurs and members of the emerging middle class, and a new kind of public. The oratorio enjoyed enormous popularity, but the religious element was of relatively little significance, except that it denoted 'serious' music for middle-class audiences who liked to take their pleasures gravely. For example, works by Ferdinand Hiller, Loewe and Spohr detailing the destruction of Jerusalem or Babylon, dramatic themes formerly treated by Handel, had their day. On the other hand, Mendelssohn – 'Bach's spiritual son', in Hanslick's phrase – ensured himself a place beside Handel and Haydn in the pantheon of oratorio composers with *St Paul*, composed

for the Cäcilienverein of Frankfurt in 1836, and *Elijah*, the 'novelty' that received its première at the Birmingham Festival of 1846. Many of the oratorios of the Romantic era were blatantly nationalistic in their aspirations and therefore appealed only within national frontiers. Apart from the religious and nationalistic subjects that inspired composers, mention should also be made of the Faust theme, which aroused so much speculation and introspection: Goethe's masterpiece inspired works by Berlioz and Schumann among others.



The availability of choral-orchestral forces of symphonic proportions and the acoustical possibilities of new concert halls brought a wave of choral symphonies (or works so described) in the wake of Beethoven, of which perhaps the most remarkable are Mahler's Eighth Symphony (the 'Symphony of a Thousand') and the 'Gothic' Symphony by Havergal Brian. In Romantic opera the chorus played an increasingly important role, and certain operatic choral numbers have taken their place in popular esteem by the side of favourite vocal and instrumental excerpts. By the end of the 19th century there was no adequately appointed opera house without a resident chorus, just as today there are few major orchestras which do not possess an affiliated symphonic chorus. In more recent times, at least one opera company has developed from a choral tradition of special significance – the Welsh National Opera (founded 1946), which grew out of the eisteddfod tradition.

In the second half of the 18th century, the choirs of Roman Catholic court chapels continued to be made up of professional musicians. Many of these organizations were quite modest in size. In 1754 the chapels at Gotha and Breslau possessed only one-on-a-part vocal ensembles. Even the famous chapel and chamber music establishment at Mannheim had modest vocal resources: in 1756 its orchestra of 30 string players and ten wind players was balanced by only 'three female and three male sopranos [the former presumably for chamber music only], two male altos, three tenors, two basses' (Marpurg: *Historisch-kritische Beyträge*). On the other hand, the archbishop's Kapelle at Salzburg in 1757 – the year after the birth of Mozart – had a smaller orchestra, less than 20 string players about ten wind players, and a much more grand vocal complement of 10 solo singers (5 male sopranos, 3 tenors and 2 basses), 15 boy choristers and 29 adult male choristers (4 altos, 12 tenors and 13 basses). From 1772 to 1867, the Hofmusikkapelle of the imperial court at Vienna, with an orchestra of about 30, had a choral contingent which hovered at around 20 members, of whom half were boys evenly divided between soprano and alto (no women and no adult male sopranos or altos). Since the Esterházy establishment in which Joseph Haydn was employed had an orchestra slightly smaller than that of the imperial Hofkapelle, we may suppose that its vocal resources were no larger. It was for forces such as these that the masses and other liturgical music of Haydn, Mozart and their contemporaries were written. Towards the end of the 18th century, a series of reforms promulgated by Joseph II attempted to curb what the emperor viewed as excessively ostentatious displays of ecclesiastical opulence. As a result of these reforms, certain limitations were placed on composers. A well-known instance of this involves the restrictions imposed by Archbishop Colloredo on Mozart as to the maximum amount of time which could be taken up by the musical setting of the mass ordinary. But counterbalancing these attempts to discipline and limit composers was a prevailing tendency, in the wake of the French Revolution, to recognize the need to allow composers freedom of expression. The ultimate in this respect was Beethoven's Mass in D, composed for an archbishop's enthronement but destined to take its place among the small group of works that forever test anew the resourcefulness of secular choruses. Ecclesiastical theories concerning the nature of sacred music were put under great strain by this work and also by later self-assertive masterpieces on liturgical texts by Berlioz, Verdi and, in most of his masses, Bruckner. These works were a far cry from the ideal of Palestrina and the *a cappella* style. The Requiem by Berlioz, with its huge instrumental component which was balanced by a chorus of 200 at its first performance in 1837, is one of the foremost examples of gigantism in the 19th century. Verdi's Requiem took the theatre into the church, the first performance in 1874 being given in S Marco, Milan, by a selected choir of 120 trained singers and an orchestra of 110.

The 19th-century Roman Catholic Church, along with some non-Catholic musical conservationists, espoused the view that a special virtue was attached to 16th-century polyphony. Among those who set out to revive interest in it was A.F.J. Thibaut, Schumann's law professor at Heidelberg, who brought together in his home a group of singers to perform Renaissance music (fig.9). In London the Motet Society, with Edward Rimbault as secretary and editor, came into being in 1841 as a consequence of the emphasis on liturgical propriety by the ritualistic Oxford Movement. Giuseppe Baini's pioneering study of the style of Palestrina's music (*Memorie storico-critiche della vita e delle opere di Giovanni Pierluigi da Palestrina*) appeared in 1828 and was published in German (*Über das Leben und die Werke des G. Pierluigi da Palestrina*)

9. Group of singers performing Renaissance music at the Heidelberg home of A.F.J. Thibaut: 'Singing Lessons at Thibaut's' by Jakob Götzenberger, watercolour, c1829 (Kurpfälzisches Museum, Heidelberg)

in 1834; it provided the Catholic reform movement with an icon whose name was associated with all that was good and proper about Renaissance polyphony. It was at this time, too, that the term *a cappella* began to be accepted as synonymous with 'unaccompanied'. About 1600 a distinction began to be made between the old style of the Renaissance, for which Palestrina's music served as a model (PRIMA PRATICA), and the new style of the Baroque (*seconda pratica*). By the middle of the 17th century the term *a cappella* had become associated with the old style, notably in Christoph Bernhard's widely circulated manuscript treatise *Tractatus compositionis augmentatus*. But 19th-century musicians, noting that no instrumental parts were included in the sources in which 16th-century polyphonic works were found, believed the term to have been used to designate the type of ensemble required – i.e. voices only, no instruments – rather than style. The question of forces had not been an issue in the preceding centuries. Although unaccompanied voices were always heard in the papal chapel in the 16th century, elsewhere instruments were sometimes used to replace absent voices or to enrich the sound on special occasions. In the 18th century, *stile antico* compositions had almost invariably included a basso continuo to be played on the organ. In the 19th century, however, many people (following Baini, who stressed the unaccompanied style of the papal chapel), wished, as the cult of Palestrina progressed, to return to the ideal of unaccompanied singing, designated by the term *a cappella* . In 1868, in order to promote the ideals associated with the Palestrina style, the Catholic church choirs of the German-speaking countries were brought together into the Allgemeiner Cäcilienverein, a powerful reform organization named in honour of the patron saint of music. The principles of Cecilianism, as this reform movement has been called, were formally endorsed in the 1903 *Motu proprio* of Pius X. One direction found in this encyclical is particularly pertinent to the subject of choral development: 'wherever it is desired to employ the acute voices of sopranos and contraltos, these parts must be taken by boys, according to the most ancient usage of the church'.

Protestant church music in Germany was also influenced by a reverence for its musical past. Moreover for historical reasons German Protestantism had been closely allied with nationalism, and in the 19th century the urge of the latter stimulated concern for the musical heritage of the former. State schools of church music were established at Breslau (in 1810), Königsberg (1812) and Berlin (1822), the last being the creation of Zelter, who was its first director. A great deal of music and literature was published to provide new material for general use. Key works were *Über den Gesang in den Kirchen der Protestanten* (1817), Thibaut's *Über Reinheit der Tonkunst*(1825), the *Berliner Gesangbuch* (1829), C.F. Becker's *Kirchengesänge von J.S. Bach* (1843), the *Eisenacher Gesangbuch* (1854) and the various works of C.J.V. von Winterfeld published between 1832 and 1850. The so-called Bach revival – incorrectly supposed to have begun with Mendelssohn's performance of the *St Matthew Passion* with the Berlin Sing-Akademie in 1829 – is to be seen in the context of a general revival of Lutheran church music.

A revival of interest in Britain in the classics of the Anglican tradition coincided with a feeling on the part of many church musicians that the authorities of the Church of England were negligent in their maintenance of the choral foundations. In 1841 a large number of organists sent a petition to the deans and chapters of the cathedrals

requesting them not to implement their proposals to economize in this area. None worked harder than S.S. Wesley to restore the standard of church music. In 1849, when he was organist of the new parish church at Leeds, where daily sung services were maintained, he published the first of two pamphlets relating to the improvement of music 'in Divine Worship'. In 1856 Sir F.A.G. Ouseley devoted much of his private fortune to the foundation of St Michael's College, Tenbury Wells, the main purposes of which were to provide a standard for church music and to train choristers. A popular tradition of choralism derived from the Methodist and collateral evangelical movements and gathered new strength through the wish of many among the working classes to perform not only hymns and gospel songs but also oratorios and cantatas. There was a consequent broadening of musical literacy. Many volumes of favourite hymns contained guides to theory, and instruction became available in mechanics' institutes and Sunday schools. The influence of Joseph Mainzer, author of *Singing for the Millions* and other works, and of John Curwen, promoter of the tonic sol-fa system, was of inestimable benefit. Earlier, in the last half of the 18th century, musical literacy in Anglican parish churches (both urban and rural) and in nonconformist chapels had been the object of the educational efforts and publications of a large number of composers, often self-taught, whose principal advantage was their intimate knowledge of the singers for whom they wrote. These men were frequently itinerant teachers whose singing schools involved the formation of choruses, which often became, after the singing masters had departed, the embryos from which the choirs of small churches developed.

English parish and village choirs created in this manner provided what may have been the earliest opportunities for women to participate along with men in church choirs. Nicholas Temperley (*The Music of the English Parish Church*) has called attention to the following passage from a satirical work of 1727 by Alexander Pope in which a fictional parish clerk recounts having tutored both 'the young men and maidens to tune their voices as it were a psaltery; and the church on the Sunday was filled with these new hallelujahs'. On the Continent, women were still a rarity in church choirs in 1772 when Charles Burney noted in his *Present State of Music in Germany, the Netherlands, and the United Provinces* (1773) that at the Stephansdom in Vienna 'there was a girl who sung a solo verse in the *Credo* extremely well'. At the cathedral of St Bartholomäus in Frankfurt, Burney found that the choir 'was not furnished with singers of great talent, but yet there were a number of girls, who, though the service was that of the Roman catholics, were many of them Lutherans or Calvinists, that chanted with the priests and canons'; and in connection with a service he heard at the church of Ste Gudule in Brussels, Burney opined that he:

> was glad to find among the [band of voices] two or three women, who, though they did not sing well, yet their being employed, proved that female voices might have admission to the church, without giving offence or scandal to piety, or even bigotry. If the practice were to become general of admitting women to sing the soprano part in the cathedrals, it would, in Italy, be a service to mankind, and in the rest of Europe render church-music infinitely more pleasing and perfect.

Veneration of the ideal past, a characteristic of the Romantic ethos in all the arts, manifested itself not only in church music, as described above, but also in concert music and in the establishment of choral societies named after and devoted to performing the works of individual great composers of earlier times. The Beethoven Festival of 1845, when the statue of the composer was unveiled at Bonn, brought musicians from all over Europe to hear choral works not only by Beethoven but also by Liszt and other, lesser composers; it also necessitated the building of a new concert hall. The centenary of Bach's death caught the force of a tide already favourable to his genius. Bach Societies were formed, and Bach Choirs followed. The Bach Choir was founded in London in 1875 and stimulated similarly named bodies in many parts of the country. The Handel centenary in 1859 brought into being the Great Handel Festival Chorus in England, with various supporting 'Amateur Divisions' in different parts of the country, and the consequent long tradition of the Crystal Palace Handel Festival. Held triennially until 1926, this festival exemplified good intentions married to doubtful taste, but it gave great satisfaction to performers and audiences alike.

Many of the groups of settlers who established themselves in North America during the 17th and 18th centuries were religious communities. Music was important to some of these groups, most notably the Moravian Brethren (or Unitas Fratrum) who established communities in Bethlehem, Pennsylvania, and Salem (now Winston-Salem), North Carolina. The Moravians produced some outstanding composers and maintained choirs and orchestras on a par with those of Europe, but they remained, as a matter of religious principle, isolated within their insular settlements, and therefore had virtually no influence on contemporaneous American music. Of much more importance during the 18th century were the so-called Yankee tunesmiths, self-taught composers and teachers who travelled from place to place – sometimes in urban centres such as Boston but more often in small rural communities – offering singing schools at which they taught the rudiments of music, sold tunebooks of their own creation and formed choruses. It was formerly believed that these itinerant singing masters emerged without precedent, arising more or less spontaneously on the American scene, but Temperley has shown that there were English antecedents for these men and their methods. William Billings has long been deservedly recognized as the leading figure among Yankee tunesmiths and, notwithstanding the debt he owed to his English predecessors, he was a man of great imagination and originality. He issued six collections of sacred music for popular use. In his *Continental Harmony* (1794) formal instruction in music theory was presented in the form of an entertaining dialogue (in the manner of Thomas Morley's *Plaine and Easie Introduction to Practicall Musicke* of 1597) between master and pupil. Billings and his co-workers made a great contribution to musical literacy in 18th-century America, and their enthusiasm for music, especially choral music, was infectious. In many small communities the singing school choruses they organized were transformed after their departure into church choirs. In keeping with the egalitarian principles of the new country in which they came into being, the singing school choruses and the church choirs which were their successors were open to male and female participants of all ages.

During the 19th century, later generations of singing masters – whose music became associated with a newly invented notational system in which variously shaped notes were associated with solmization syllables (*see*

SHAPE-NOTE HYMNODY) – carried the traditions of the Yankee tunesmiths to rural and frontier communities of the American South and West, but in the cultural centres of the eastern USA, choral development was patterned after European practices. Men who prized orthodox musical learning – Lowell Mason, Thomas Hastings, W.B. Bradbury and others – railed against what they considered to be the immature crudity of the music of Billings and his colleagues and advocated imitation of the more refined and sophisticated music of Europe. It is by no means certain that this imitation of Europe made an immediately positive contribution to the development of musical composition by American composers, but there can be no doubt that it contributed greatly to the proliferation and development of choral groups. Among the earliest were the Handel and Haydn Society of Boston (founded 1815) and the Sacred Music Society of New York (1823). Towards mid-century, German emigrés formed singing societies modelled after those already in existence in Germany. In New York, the Deutsche Liederkranz was organized in 1847, and a rival organization, the Männergesangverein Arion, was set up in 1854. Similar Germanic convivial music societies were established in the Mid-western cities of Milwaukee, Chicago, Cincinnati and in other centres with large German communities. Glee clubs were organized on English models. Among the most notable were the Mendelssohn Glee Club (New York, 1866), the Apollo Club (Boston, 1871), the Apollo Club (Chicago, 1872) and the Mendelssohn Club (Philadelphia, 1874). Glee clubs and Germanic singing societies began almost invariably as all-male convivial organizations, but often evolved into large choral societies of mixed voices. Many societies were formed specifically to perform large-scale choral works with orchestra. The Oratorio Society of New York (1873) was the best-known civic chorus, but oratorio societies were also established in most major cities. Other large choruses followed the example of the Handel and Haydn Society in naming themselves after famous European composers: a Mendelssohn Society (1858) and a Beethoven Society (1873) were founded in Chicago, and the Bethlehem (Pennsylvania) Bach Choir, tracing its ancestry back to 18th-century Moravian roots, was founded in 1898 and sponsored the first of its annual Bach Festivals in 1900. Choral festivals were organized along British and German lines. The Cincinnati May Festival, which began as an all-male *Sängerfest* in 1849, converted to a festival for a chorus of mixed voices in 1873, in which year there was a chorus of 800 and an orchestra of over 100, and in 1880 a permanent May Festival Chorus of 600 singers was established. In 1856 the Handel and Haydn Society of Boston sponsored the first American event initiated as a festival for a chorus of mixed voices: in that year 600 singers and an orchestra of 78 participated. The largest festivals held in the USA during the 19th century were the Peace Jubilees which took place in Boston in 1869 and 1872. These were gargantuan affairs: in 1869 there were more than 10,000 choristers and 1000 instrumentalists, and in 1872 these numbers doubled.

Black Americans developed a choral idiom of great vitality in which African and European elements were combined (*see* UNITED STATES OF AMERICA, §II, 2 and SPIRITUAL, §II). In 1878 George Grove was present at a service in a black Methodist church in Philadelphia and was greatly impressed by the vigour of the singing and the wide contrasts in mood and dynamics. Grove's experience was shared by many as the spirituals of the recently emancipated black slaves became known. One group in particular, the JUBILEE SINGERS, a small touring ensemble of ex-slaves from Fisk University in Nashville, Tennessee, eloquently presented the tradition of the black spiritual to audiences throughout America and in Britain and Germany.

In the 19th century the principle that music was universally educative was an ideal that coincided with the provision of general education. In countries with a strong choral tradition, class-singing was cultivated, but not always under the direction of adequately trained teachers. In America, Lowell Mason introduced systematic music teaching in the public schools of Boston and New York, and organized and conducted teacher-training institutes. In Britain the lead was given by John Hullah, inspector for music in elementary schools, and John Stainer, his successor. During the 19th century, patriotic songs (giving way in the early 20th century to folksongs) were the basis of elementary school music. Children's choirs were provided by obliging teachers in most Western countries for church, civic and even national occasions; the greater the occasion the larger the choir. Thus the number of choristers assembled for such events as the 1863 festival of the Metropolitan Schools Choral Society in the Crystal Palace was hardly smaller than that of adults who took part in the Handel festivals.

5. THE 20TH CENTURY. Two major trends – sometimes mutually contradictory, but nonetheless co-existent as the century drew to a close – marked the progess of choral development in the 20th century. On the one hand, there was the pursuit of a monolithic ideal in terms of choral organization and sonority. This tendency, which predominated during the first 60 or so years of the century, was challenged, mildly at first and more strongly from the 1960s, by a growing tendency towards differentiation: organizational, structural, functional, timbral and stylistic.

From very early in the century, the SATB chorus of mixed voices became the favoured medium. Female sopranos and altos were firmly entrenched in choruses large and small, sacred and secular. Choirs of men and boys continued to exist only in a few tradition-laden ecclesiastical and academic insitutions, primarily those of the Anglican and Roman Catholic churches. These all-male church choirs, as the century progressed, became exceptional even within the Anglican and Roman churches, and they were no longer in the forefront of choral development. Secular choruses, like those founded during the 19th century for oratorio singing, became increasingly important. Under the leadership of choral specialists such as the Englishman Henry Coward, these organizations pursued the ideal of 'artistic choralism', as it was called in Coward's *C. T. I. [i.e. Choral Technique and Interpretation]: the Secret* (1938). In the USA, choruses associated with colleges and universities assumed a leading role. These ensembles were often involved in what has been called the '*a cappella* choir movement'. F. Melius Christiansen, founder of the St Olaf Choir of St Olaf College in Northfield, Minnesota, and J.F. Williamson, founder of the Westminster Choir of Westminster Choir College (from 1930 in Princeton, NJ) were leaders in pursuit of the *a cappella* ideal. Their methods and goals

were communicated to large contingents of choral conducting disciples, who made the unaccompanied chorus pervasive in colleges, high schools and churches throughout the USA. Fred Waring, Robert Shaw and Roger Wagner, although not involved exclusively in the *a cappella* choir movement, were also influential in shaping the ideals of American choral music. Although these and other leading American choral conductors differed from one another with regard to certain technical questions (Waring, for example, made the control of diction and blend through what he called 'tone syllables' the centre of his methodology, while Christiansen became known for his emphasis on straight tone production), they are seen in retrospect to have been united in their pursuit of an ideal of discipline, blend, balance and tonal unity.

In addition SATB mixed-voice choruses, male-voice ensembles of tenors and basses and all-female ensembles of sopranos and altos proliferated in American educational institutions and elsewhere. The all-male choruses traced their ancestry in a direct line to ensembles of the 19th century and earlier, but the all-female groups, although they had isolated antecedents in the past, gained a firm footing as coequal with their male counterparts for the first time in the early 20th century. This was at least partially a result of the existence enjoyed by female-voice ensembles in women's educational institutions, but as colleges and universities became coeducational, men's and women's glee clubs continued alongside mixed choruses as standard components of a well-rounded choral music programme. These single-gender groups tended to perform a somewhat lighter repertory than the mixed-voice ensembles, but as they grew and developed during the 20th century, they were no less focussed than their SATB counterparts on the achievement of 'artistic choralism'.

As the century progressed, however, the concept of a monolithic, universally applicable choral ideal was called into question. Nationalism, for example, and, later, multiculturalism promoted an awareness that concepts of choral beauty differ from culture to culture, and improved communication, especially through recordings and international touring, made this awareness pervasive in the choral community. In the early and middle years of the century, the tendency was to make an eclectic use of these differences by borrowing attractive features from nationally and ethnically diverse sources, while incorporating these features within the universally admired performance style of western Europe and the USA. Towards the end of the century, under growing influence of multiculturalism, attempts were made to capture performance techniques associated with diverse repertories, even if this sometimes meant sacrificing traditional views concerning choral unity and beauty of tone.

In part, the quest to master multicultural styles is one aspect of the broader topic of authenticity in choral performance. Similar, and of more consequence, is the concern for historical accuracy which has arisen among choral conductors as a result of musicological elucidation of performing-practice issues. At the end of the century it was generally recognized that the style of performance appropriate to the music of one historical period might not be equally appropriate to the music of another. This attention to performing-practice issues affected not only performing styles, but also the choice of forces. Although pre-Baroque, Baroque and Classical works continued sometimes to be performed by large choruses like those preferred during the 19th century, there was a tendency to restore pre-1800 works to the dimensions originally envisioned by their composers. Thus, Handel's oratorios, for example, were often performed by choruses and orchestras only a fraction of the size of those employed in pre-1950 performances. The initial fervour to achieve historical accuracy in early music restored to favour the choirboy (in secular terminology described as a boy chorister or boy soprano, the latter replacing the time-honoured 'treble'), but by the end of the century early-music ensembles tended to employ women sopranos, often seeking from them a boy-like quality. Many large choruses that specialized in singing oratorio-type literature began to mix adult male falsettists with female altos in order to achieve a more penetrating alto part (but it is not clear whether this was being done as a restoration of practices of the 18th century and the early 19th, or simply as a useful technique for enhancing modern performances). Perhaps the most provocative controversy surrounding appropriate performance forces concerned whether or not Bach intended some of his vocal works – the controversy centres on the Mass in B minor – to be performed not by a chorus, but by an ensemble of one-on-a-part soloists: Joshua Rifkin asserts the affirmative, Robert L. Marshall the negative.

The quest for cultural and historical accuracy demanded a new versatility, perhaps even a new virtuosity, from choral singers. No longer were they permitted to sing all works in a single style, but they had to master the different techniques appropriate to various styles. Recognizing that this burden weighs heavily upon singers, especially the amateurs who continued to populate most choruses, conductors sought an alternative solution by forming specialist choruses of various sizes and make-ups. Madrigal groups of 12 to 16 singers were popular from mid-century. Towards the end of the century, many groups of moderate size (generally 24–36 singers) were formed to perform early music and the vocal chamber music of later periods. These groups, although they are often given imaginative names (e.g. Camerata Chorus, Amor Artis Chorale, Gloriana Singers), are generally called chamber choirs. Another type of specialist chorus that came into existence at least partly as a result of the widening repertory horizon was the show or swing choir. These choirs specialized in popular music and often combined singing and visual elements (dance, costumes, etc.). Yet another type of ensemble that became a standard component of multifaceted university choral programmes in the USA was the black chorus (usually with membership not racially restricted). Some black choruses sang only black spirituals, gospels and so forth; others performed a wider variety of works that included selections from the standard repertory of classical choral music.

Some specialist ensembles looked to the future rather than the past, performing avant-garde literature that required the use of what have been called 'extended vocal techniques'. This term refers to sound production through non-traditional use of the vocal mechanism: grunting, hissing, shrieking, inhaling audibly and so forth. Ensembles specializing in extended vocal techniques have been in existence since the 1960s. By 1971 the vocabulary of non-traditional techniques was sufficiently well developed to generate a compendium of new notational devices associated with it (Pooler and Pierce), and during the last

decades of the 20th century many techniques developed by groups specializing in avant-garde performance made their way into music for mainstream choruses.

In the late 20th century, choruses sometimes owed their existence to some non-musical affinity shared by participants – e.g. age, occupation, sexual orientation. These affinity choruses often achieved a very high level of artistic performance. Especially important musically are the superb children's choirs that emerged as part of municipal programmes of cultural and educational enrichment. Many adult groups found that choral music offered a highly satisfactory method of expressing solidarity for a cause. Perhaps the fastest growing and artistically most significant example of this tendency has been the gay choral movement, organized internationally as GALA Choruses (the Gay and Lesbian Association of Choruses). There are currently more than 150 gay choruses in the USA, 70 in Europe, 10 in Australia and about 15 others world wide.

Another factor that contributed significantly to the development of choral music in the 20th century was the establishment of advanced programmes of study in choral conducting. In the 1950s the DMA degree was established in American universities as a performance-oriented analogue to the PhD. At the end of the century the DMA degree in choral music was offered by several universities, and hundreds of choral conductors, firmly grounded in choral literature, conducting techniques and performing practices, had graduated from these programmes.

The 20th century witnessed the formation of several organizations dedicated to the advancement of the choral art. The largest national organization of choral leaders, the American Choral Directors Association (ACDA), founded in 1958, had a membership of over 16,000 in 1997. In 1981 ACDA was one of seven national and pan-national organizations that joined together to form the International Federation for Choral Music (IFCM); the other founding organizations were A Coeur Joie International (France and other French-speaking countries), Arbeitsgemeinschaft Europäische Chorverbände (Germany), Asociación Interamericana de Directors de Coros (Latin America), Europa Cantat (a European federation of youth choruses based in Passau, Germany), the Japan Choral Federation and the Nordiska Körkommittèn SAMNAM. Both individually and collectively as IFCM these organizations provided opportunities for collegial interchange among conductors, held conventions and symposia, sponsored important performances and published journals and bulletins. Leading members of these organizations spearheaded efforts to harness for the benefit of the worldwide choral community the most recent technological advances in rapid communication. As of 1997, ChoralNet (with branches named ChoraList, ChoralTalk and ChoralAcademe) provided internet and e-mail services for choral professionals throughout the world. Begun by Walter Collins of the University of Colorado at Boulder and developed by James Feiszli of the South Dakota School of Mines and Technology, ChoralNet is now operated under the auspices of IFCM. Another internet service provided by IFCM is MUSICA, an on-line database, developed by Jean Sturm of the University of Strasbourg, which currently includes more than 60,000 choral compositions.

In the early centuries of the choral tradition the singers were professional, employed by royal and noble patrons, churches and abbeys. In the 18th and 19th centuries a great expansion of interest and opportunity placed the emphasis on amateur singers. In the second half of the 20th century the growth of the recording industry, the needs of radio and television programmes and the film industry, and the more exact requirements of concert and festival promoters and of contemporary composers created a rebirth of choral professionalism. At the end of the century there were professional choruses, either entrepreneurial or state supported, in virtually all countries in which the music of Western civilization is performed. In the USA, an umbrella organization, Chorus America (formerly the Association of Professional Vocal Ensembles), was formed to promote the welfare of professional choral singing. Founded in 1977 by Michael Korn of Philadelphia, this organization had in 1997 a membership of 550 choruses, about half of them professional, which together provide performance opportunities for more than 25,000 singers. While professionalization proceeded, the standards of amateur choral music, no doubt to some extent due to the professional models available were in general significantly raised. Perhaps the most encouraging guide to this and to the cultural opportunities inherent in the medium was the development of the A Coeur Joie movement, founded in Lyons by César Geoffray in 1945, which spread interest in choral music among young people throughout French-speaking countries and also into Spain, and Europa Cantat, which was founded at Passau in 1961 to bring together young choralists from many lands and which has continued on a triennial basis.

JAMES G. SMITH (1–3), PERCY M. YOUNG/JAMES G. SMITH (4–5)

Chorus (ii). (1) In a strophic composition, that section of text and music, more properly called REFRAIN or burden, which is repeated after each stanza or verse.

(2) In jazz any statement, or, more particularly, any restatement with variations, of a theme. The term is commonly applied to those clearcut forms that consist of a theme, followed by a series of variations on the theme, and then a repetition of the theme itself; it is not generally used in discussing those styles of jazz in which free improvisation takes the place of the series of variations on the theme.

Chorus (iii). A Latin term (translated from the Hebrew *machol*), used during the Middle Ages for several different types of musical instrument. Two meanings were given in the letter *De diversis generibus musicorum* from 'Jerome' to 'Dardanus', which was apparently written in the 9th century. One referred to a simple form of bagpipe, consisting of a mouthpipe and chanter both of brass, inserted into a bag of skin which served as an air reservoir. The other referred to a string instrument which would presumably have been plucked, as the bow is not known to have reached Europe by the 9th century; the 11th-century Tiberius Psalter (*GB-Lbl* Tib c.vi, f.18) says that its frame was of wood. Sebastian Virdung in his *Musica getutscht* of 1511 says that 'it has a mouthpiece, into which one blows, and two tubes in the middle. After that, at the lower end, it has one aperture from which the sound or air exits'. His picture shows no bag. These descriptions, however, were attempts to represent instruments of the Psalms, and although they were reproduced many times from the Carolingian period onwards, they do not represent genuine medieval instruments.

More realistic references also show a variety of types. Giraldus Cambrensis (*c*1146–*c*1223) says that the chorus was played by the Scots and the Welsh, but neither he nor his imitator Ranulph Higden (*d* 1363) specified its type. A 15th-century translator of Higden (*GB-Lbl* Harl. 2261, f.57) rendered the word 'chorus' as 'crowde', as did the *Promptorium parvulorum* of the Dominican Frater Galfridus (*c*1440), while the commentary on Psalm cl in the Psalter of Richard Rolle (*c*1340) says 'Louys him . . . in croude, that is, in pesful felagheship and concord of voicys' – a reference to the sounding together of more than one string on the crowd or crwth. Aimeric de Peyrac (*d* 1406) in his *Lamentacio cantorum* said that the chorus had double strings, but did not indicate how they were played. The anonymous *Summa musice* (*5v*) of 1274–1312 includes the chorus among instruments strung with metal, gut or silk, while Jean de Brie in *Le bon berger* (1379) says that it is played by the fingers and best strung with gut. Jean Charlier de Gerson (1363–1429), however, describes it in his *Tres tractatus de canticis* (before 1426) as a string drum of the *tambourin de Béarn* type. No strings are referred to in John of Trevisa's translation of Higden (completed in 1347), where 'chorus' is rendered as 'tabour'.

MARY REMNANT

Chorus (iv). A type of signal processing unit that makes a single instrument sound like a group of instruments. Its effect is produced by time-delay electronics. The unit is often operated by means of a foot-pedal. *See* ELECTRIC GUITAR, §2.

Chorzempa, Daniel (Walter) (*b* Minneapolis, 7 Dec 1944). American organist, harpsichordist, pianist and composer of Polish and Alsatian parentage. He studied at the University of Minnesota (1955–65) and the Staatliche Musikhochschule, Cologne. He is an accomplished pianist and harpsichordist, and his first major successes were as a pianist in Hamburg and Cologne in 1969, and in Oxford and London in 1970 and 1971, playing Beethoven's Diabelli Variations. It is as a virtuoso organist, however, that he is best known in Europe and the USA. His first London recital at the Royal Festival Hall in 1969 won critical acclaim, as did another at St Paul's Cathedral, where he replaced Germani at short notice and learnt a new programme in five days. He plays the whole of a wide-ranging repertory from memory, and has won particular distinction as an exponent of the major organ works of Liszt; his fluent pianistic technique gives brilliance as well as depth to his interpretations in the concert hall and on disc. Chorzempa's PhD dissertation (University of Minnesota, 1971) was on the life and works of Julius Reubke. He became a member of the Studio für Elektronische Musik, Cologne, in 1970 and has composed electronic music. His organ recordings include music by Bach, Handel, Mozart, Liszt and Widor. He has also recorded Bach's *Das wohltemperirte Clavier*.

STANLEY WEBB

Chottin, Alexis (*b* Algiers, 13 Aug 1891). French ethnomusicologist. He studied music theory, composition and the viola, and took a diploma in classical Arabic. After World War I he moved to Rabat, where he was director of the Conservatory of Moroccan Music (1929–39, 1956–9) and professor of Arabic at the Collège des Orangers (1945–56). Concurrently he served as adviser to the Théâtre Mohammed V on the orchestration and interpretation of Arabic music. His writings, chiefly on Arab music, contain useful collections of Moroccan music, notably in his *Corpus de musique marocaine* and his *Tableau de la musique marocaine*.

DORIS J. DYEN

Chotzinoff [Chatianov], **Samuel** (*b* Vitebsk, Belorussia, 4 July 1889; *d* New York, 9 Feb 1964). American critic and administrator of Russian birth. He studied briefly at Columbia University with D.G. Mason, but left without graduating in 1911. He achieved early success as a piano accompanist and toured with Alma Gluck, Efrem Zimbalist and Jascha Heifetz. In 1925 he succeeded Deems Taylor as music critic on *The World*, a position he held until 1931. He was music critic on the *New York Post* (1934–41); among his projects for the promotion of music appreciation was a series of recordings made anonymously by well-known artists and organizations, distributed at cost by the newspaper. In 1936 he was appointed music consultant for NBC radio, and his first assignment was to induce Toscanini to organize and conduct the station's new symphony orchestra, which gave its first concert on Christmas Day 1937. Chotzinoff commissioned the first opera composed expressly for radio, Menotti's *The Old Maid and the Thief* (1939). From 1938 he was the official commentator for the broadcasts of the New York PO. He also lectured on music for the Carnegie Corporation and taught at the Curtis Institute in Philadelphia. In 1949 he was appointed general music director of NBC radio and television. He became a pioneer in televised opera, sponsoring the first opera composed for television, Menotti's *Amahl and the Night Visitors* (1951).

PHILIP L. MILLER

Choudens. French firm of publishers. It was founded in Paris by Antoine Choudens (1825–88) and is first mentioned in an advertisement in September 1844. From 1888 to 1890 the firm was run by Choudens's two sons, the second of whom, Paul, continued alone from 1890 until his death on 6 October 1925; after this the leadership was shared by Paul's sons-in-law, Gaston Chevrier (until 1952) and André Leroy (until 1958), and grandson, André Chevrier. Choudens published three of the most important French 19th-century operas: Berlioz's *Les Troyens* (piano-vocal scores of Parts I and II, 1863), Bizet's *Carmen* (piano-vocal score, 1875; full score, 1877)

and Gounod's *Faust* (piano-vocal score, 1859; full score, 1860); the firm also issued works by Reyer, Saint-Saëns and the first editions of Fauré's early songs. In 1891 Choudens published five of Debussy's early piano works: *Valse romantique*, *Reverie*, *Ballade*, *Marche écossaise* and *Tarantelle styrienne*.

NIGEL SIMEONE

Chouquet, (Adolphe) Gustave (*b* Le Havre, 16 April 1819; *d* Paris, 30 Jan 1886). French writer and historian. His musical enthusiasms were fostered in Paris, where he studied for the *baccalauréat*. He returned to Le Havre in 1836 for four years before going to the USA, where he taught music in New York and wrote criticism for 16 years. A serious respiratory condition then obliged him to go to the south of France. In 1860, however, he moved to Paris and rapidly took an active part in writing for *France musicale*, *Art musical* and to a lesser extent *Le ménestrel* and the *Gazette musicale*. He also became known as the author of song texts, choral pieces and cantatas: his cantata *David Rizzio* was the text for the 1863 Prix de Rome, won by Massenet.

In 1864 Chouquet wrote his *Histoire de la musique depuis le XIVe siècle jusqu'à la fin du XVIIIe siècle*, which won the Prix Bordin; he received the prize again in 1868 for a history of opera which was published in 1873 as *Histoire de la musique dramatique en France depuis ses origines jusqu'à nos jours*. This book was recognized as a pioneer work of research and evaluative criticism. Chouquet was on the editorial board of a *Dictionnaire des beaux-arts*, and wrote many articles for the first edition of *Grove*. In 1871 he was appointed keeper of the Conservatoire instrument museum, recently acquired by the state, and made large additions to it. His exemplary catalogues of this collection, *Le Musée du Conservatoire national de musique, catalogue raisonné des instruments de cette collection*, were issued in 1875 and 1884; supplements by L. Pillaut were published in 1894, 1899 and 1903, and the entire work was reprinted by Minkoff in 1993. He is also the author of *Les instruments de musique et les éditions musicales* (Paris, 1878).

GEORGE GROVE/DAVID CHARLTON

Chourmouzios the Archivist [Chourmouzios the Chartophylax; Chourmouzios (Georgiou) Chartophylax] (*b* Chalki, ?1770; *d* Chalki, 1840). Romaic (Greek) composer and scribe. He studied Byzantine chanting with Georgios of Crete and the patriarchal cantors PETROS BYZANTIOS and JAKOBOS PELOPONNESIOS. As was customary, he also became fluent in the Arabo-Persian tradition of Ottoman secular music. He was evidently active by 1792, the date of his only known autograph not to employ Chrysanthos of Madytos's 'New Method' of Byzantine notation, yet he seems never to have held a major office among the singers of the Ecumenical Patriarchate, which bestowed on him the title 'archivist' (*chartophylax*). He chanted at several Constantinopolitan parish churches and at the monastic dependency (*metochion*) of St Catherine's, Mt Sinai. Following patriarchal acceptance of the New Method in 1814, Chourmouzios began to collaborate with CHRYSANTHOS OF MADYTOS and GREGORIOS THE PROTOPSALTES on the refinement and dissemination of the reform. While the 'three teachers' were serving together as instructors at the Fourth Patriarchal School of Music (1815–21), Chourmouzios began to work in parallel with Gregorios on the transcription of the received repertory into Chrysanthine notation. Gregorios's efforts were cut short by his early death in 1821, but Chourmouzios worked steadily on the project until his own death.

Chourmouzios's published liturgical works, most of which were printed with the aid of his student Theodore Phokaeus, are editions of the contemporary chant repertory supplemented by a number of his own compositions. For the Divine Office he wrote two sets of 'abridged' *anoixantaria* (festal tropes to Psalm ciii), festal, Marian and penitential *polyeleoi* (Psalms cxxxiv, lxiv and lxxxvi), six Great Doxologies and a cycle of *doxastika* for the *stichēra aposticha*. His chants for the eucharistic liturgies include the psalms of the *typika* (cii and cxlv), a modally ordered series of eight Cherubic Hymns, a cycle of 21 Marian *katabasiai* drawn from the 9th odes of festal kanons, and several communion verses for the feasts of the liturgical year.

In 1830 Chourmouzios, Theodore Phokaeus and Stavrakes the Domestikos jointly brought out the first printed collection of Greek secular songs with musical notation; it contains melodies in both Ottoman and European styles. Also of great significance are Chourmouzios's 34 unpublished volumes of liturgical music (*GR-An* MPT 702–15, 722, 727–34, 747–50, 758, 761–4), which represent a systematic attempt to transcribe the entire patrimony of Byzantine and post-Byzantine chant into the New Method. Two approaches to the realization (*exēgēsis*) of pre-Chrysanthine notation are evident in his methodology, which was essentially identical to that of Gregorios: a 'short' form, applied to the chants of PETROS PELOPONNESIOS and Petros Byzantios and their contemporaries, whereby intervallic neumes (with the exception of certain stereotyped florid melodic formulae – *theseis*) were converted into the New Method in a ratio of no more than 1:2; and a 'slow' (*argē*), florid form, rendering earlier repertories at a ratio of 1:4 or greater. Chourmouzios's highly melismatic realizations of chants by such composers as JOANNES KOUKOUZELES have generated considerable controversy among scholars and performers of Byzantine chant. According to some Greek commentators, the transcriptions faithfully record the way in which the original works were realized in performance at the time of their composition, thus representing a 'key' to the interpretation of medieval Byzantine notation. This view has been rejected by other Greek and most Western scholars, who regard the realizations as reflecting later developments in performing practice.

ALEXANDER LINGAS

Chou Wen-chung (*b* Chefoo, Yantai, 29 July 1923). Chinese composer, scholar and teacher, active in the USA. He had already completed his studies as a civil engineer when he arrived in the USA to study architecture at Yale University. After one week, however, he changed his plans and enrolled at the New England Conservatory, where he studied with Carl McKinley, Nicolas Slonimsky and others. In 1949 he moved to New York, and began to conduct research into traditional Chinese music. During this period, he took private composition lessons from Martinů (1949) and Varèse (1949–54), and completed the MA (1954) at Columbia University. Between 1955 and 1957 he directed a research programme at Columbia on classical Chinese music and drama. Entrusted with Varèse's music shortly before his death, he completed *Nocturnal* and *Tuning Up*, based on Varèse's sketches, and prepared several new editions of Varèse's works.

A professor at Columbia from 1964, Chou, who became a naturalized American citizen, founded the Fritz Reiner Center for Contemporary Music (1984) and was appointed its first chair (1984–91). He served extensively in the capacity of academic dean at Columbia's School of the Arts, designed and developed curriculum for the doctoral programme in composition, and was mentor to many young composers. He was also president of CRI (1970–75) and founder of the Center for US-China Arts Exchange (1978), which later extended its scope from arts education to conservancy of Asian folk cultures. His writings cover a wide range of topics, including philosophies of contemporary music, Varèse's music and Chinese historiography. Among his honours are the Rockefeller Award (1992), the University of Cincinnati Award for Excellence (1996), membership in the American Institute and Academy of Arts and Letters, honorary membership in the ISCM, and numerous commissions and fellowships.

Chou's first orchestral work, *Landscapes* (1949), is an exploration in timbre. Based on traditional Chinese melodic patterns, the work alludes to the immaculate proportions of Chinese landscape painting. The Suite for Harp and Wind Quintet (1951), based on five Chinese melodic patterns, synthesizes his philosophy on the merging of East and West, a perspective confirmed in two later works, *All in the Spring Wind* (1952–3) and *And the Fallen Petals* (1954). Also characteristic are titles inspired by poetry or calligraphy. *The Willows are New* (1957), after Wang Wei's poem *Yang Kuan*, treats the piano as a metamorphosis of the *qin* (Chinese zither). *Cursive* for flute and piano (1963) translates the expressivity of cursive script into music by projecting 'not only fluid lines in interaction but also density, texture and poise'.

Chou's works from the 1960s onwards are inspired by the *wenren* aesthetic of a harmonious communion of humanity and nature. In *Yü Ko* ('Song of the Fisherman', 1965), *qin* articulations and pitch inflections are adapted to Western instruments. Texture, colour and varied techniques of sound production became the essence of the counterpoint. *Pien* ('Transformation', 1966–7) is a virtuoso chamber concerto, employing 'variable modes' based on the *I Ching*; *Yün* (1969) translates the reverberations of nature into music, depicting the harmonious merging of the universe and humankind, and achieving balance not only in a Western structural conception, but also in the yin–yang duality of sound and silence.

After a hiatus from composing (1969–86), during which time he concentrated on teaching and administrative duties, Chou wrote *Echoes from the Gorge* (1989), a work that continues along much the same path as *Pien* and *Yün*. Scored for percussion quartet, *Echoes* is an intricate contrapuntal interplay of register, timbre, articulation, duration, rhythmic modal permutation, ascending-descending relationships, advancing-receding relationships and nature imagery. *Windswept Peaks* (1990) is dedicated to Chinese intellectuals. The Concerto for Violoncello and Orchestra (1992) synthesizes the Western concerto genre and a central aesthetic of Chinese art, the interaction between the individual and the environment. The String Quartet 'Clouds' (1996) is based on a constant transfor-

mation of 'variable modes', reflecting the natural fluctuation of cloud formations.

WORKS
(*selective list*)

Orch: Landscapes, 1949; All in the Spring Wind, 1952–3; And the Fallen Petals, 1954; In the Mode of Shang, 1956; Metaphors, wind ens, 1960–61; Riding the Wind, wind ens, 1964; Pien [Transformation], chbr conc., pf, wind, perc, 1966–7; Vc Conc., 1992

Vocal: 7 Poems of the T'ang Dynasty, S/T, ens, 1951; Poems of White Stone, chorus, ens, 1958–9, unpubd

Chbr and solo inst: 2 Chinese Folksongs, hp, 1950; 3 Folksongs, fl, hp, 1950; Suite, wind qnt, hp, 1951; 2 Miniatures from the T'ang Dynasty, 10 insts, 1957, unpubd; Valediction, kbd, 1957, unpubd; The Willows are New, pf, 1957; Soliloquy of a Bhiksuni, tpt, brass, perc, 1958; To a Wayfarer, cl, hp, perc, str, 1958; Cursive, fl, pf, 1963; The Dark and the Light, vn, va, vc, db, pf, perc, 1964, unpubd; Yü Ko [Song of the Fisherman], 9 insts, 1965; Ceremonial, 3 tpt, 3 trbn, 1968, unpubd; Yün, wind sextet, pf, 2 perc, 1969; Beijing in the Mist, 10 insts, 1986; Echoes from the Gorge, perc qt, 1989; Windswept Peaks, vn, cl, vc, pf, 1990; Clouds, str qt, 1996

5 documentary film scores, 1960–66

Edns (all works by E. Varèse): Nocturnal (New York, 1973); Amériques (New York, 1974) [orig. 1922 version (New York, 1996)]; Integrales (New York, 1980); Octandre (New York, 1980); Dance for Burgess (New York, 1998); Tuning Up (New York, 1998)

Principal publisher: Peters

JOANNA C. LEE

Chowning, John M(acLeod) (*b* Salem, NJ, 1934). American composer. A pioneer in computer music, he studied composition with Boulanger (1959–61) and at Stanford University (PhD 1966) under the guidance of Leland Smith. In 1964, while a still postgraduate student, he visited Max V. Mathews and his collaborator John R. Pierce at Bell Telephone Laboratories and brought Mathews' computer program, Music IV, back to Stanford to establish a computer music facility. His discovery of frequency-modulation computer sound synthesis allowed for rich musical sounds to be created in a simple, straightforward and elegant way, due to the complex phasing that occurs between component waveforms. In 1974 a patent for his discovery was licensed to Yamaha, who used the algorithm in the DX-7 synthesizer, an instrument hugely popular with rock and jazz musicians during the 1980s. In 1975 he became the director of Stanford's Center for Computer Research in Music and Acoustics (CCRMA).

Chowning's other primary interest has been simulating the motion of sound through physical space. In *Turenas* (an anagram of 'natures'), the first work to employ this technique, he created the illusion of a continuous 360-degree environment using only four speakers. He recognizes his entire oeuvre as comprised of four works, all for computer: *Sabelithe* (1966–71), *Turenas* (1972), *Stria* (1977, commissioned by Berio for the opening of the IRCAM studio in Paris) and *Phoné* (1980–81). He is a fellow of the American Academy of Arts and Sciences (1988) and a recipient of the Légion d'Honneur (1994).

OLIVIA MATTIS

Chreli. Signs used in Georgian chant notation in the 17th and 18th centuries. *See* GEORGIA, §II, 5.

Chrétien [Crétien, Chrestien], **Gilles-Louis** [Louis-Gilles] (*b* Versailles, 5 Feb 1754; *d* Paris, 4 March 1811). French cellist, teacher and engraver, son of JEAN-BAPTISTE CHRÉTIEN. He gained the survivance of his father's position as a cellist in the *chambre du roi* in 1760, and after the Revolution was a musician at Napoleon's court. He had the reputation of a brilliant though expressionless performer. As a teacher of cello and solfège, he was well in advance of his time. He valued a child-like spontaneous invention over the traditional scholastic rudiments, promoted a strictly tempered tuning and was the first to recommend audio-visual methods. His novel vocabulary was undoubtedly misunderstood by his contemporaries, who showed little enthusiasm for his theories. Many of his ideas were expressed in his posthumously published *La musique étudiée comme science naturelle, certaine et comme art, ou Grammaire et dictionnaire musical* (Paris, 1811). He was also a skilful engraver of music and portraits, and invented the *physionotrace*, a system of portrait making regarded as the forerunner of photography.

Joseph Chrétien, probably a relative of Gilles-Louis, was a cellist who may have been active at Versailles in the second half of the 18th century. He is known only from a directory of the masonic Lodge 'Le patriotisme' at Versailles and may have been confused with Gilles-Louis.

ROGER COTTE

Chrétien, Hedwige (Gennaro-) (*b* 1859; *d* 1944). French composer and teacher. She studied with Ernest Guiraud at the Paris Conservatoire, where she won first prize in both harmony and fugue in 1881 and later became a professor. Little else is known of her life. She composed about 150 works, including 50 songs, 50 piano pieces,

two one-act comic operas, a very successful ballet, and several chamber and orchestral works. Although the subject matter of her texts is often traditional, such as love, patriotism and troubadours, the musical idiom is clearly 20th century: most works are through-composed, using ninth, eleventh and thirteenth chords, with chromatic melodies and frequent changes of metre and tonality, often modulating into remote keys. Chrétien's fame extended beyond France into England and the USA. Some of her songs were translated and published in England, and her wind quintet was reprinted in the USA.

JUDY TSOU

Chrétien, Hippolyte (*b* Sommervillers, 1 April 1845; *d* Neuilly-Plaisance, April 1913). French violin maker. He succeeded his uncles Pierre and Hippolyte Silvestre; *see* SILVESTRE family.

Chrétien [Crétien, Chrestien], **Jean-Baptiste** (*b* ?Paris, *c*1728–30; *d* Versailles, 31 May 1760). French cellist and composer. Older members of his family included Marin Chrétien (*d* ?Versailles, 1657), a baritone in the *chambre du roi* but a tenor in the *chambre de la reine*, and Jacques Chrétien (*d* after 1683), a maker of brass instruments which are still valuable. Jean-Baptiste is often referred to as Charles-Antoine Chrétien in early reference sources. From the age of 14 he held a post in the *chambre du roi*, where he studied with Campra. In 1744 he was a soloist at the Concert Spirituel and in 1746 he made his début as a composer at Versailles with a motet 'with which the whole court was pleased', according to the *Mercure de France*. Later he composed orchestral and chamber music as well as stage works; his *divertissement lyrique, Iris, ou L'orage dissipé*, was favourably reviewed by the *Mercure*. With other court musicians, he was a member of the first masonic lodge to be allowed at the Versailles palace.

WORKS

Iris, ou L'orage dissipé (divertissement lyrique), Fontainebleau, 2 Oct 1752, lost
Les précautions inutiles (oc, 1, Achard, L. Anseaume), Paris, Foire St Laurent, 23 July 1760, lost; excerpts in Nouveau Théâtre de la Foire, v (Paris, 1763)
Vocal: motet, perf. Versailles, 1746, lost; Le sommeil, cant., inst acc. (Paris, 1756); ?other works
Inst: sym., 1754, lost; Piéces de différens auteurs mises en trio, vns, op.1 (Paris, 1751); 6 trios, vn, vc, b (Paris, 1758); 4 sonatas, vc, bc, lost

ROGER COTTE

Chrétien [Crétien] **de Troyes** (*b* Troyes; *fl* *c*1160–90). French trouvère, writer and poet. He was the author of the Arthurian romances and the earliest lyric poet in Old French. Although best known as the author of *Perceval* and *Lancelot*, he is also the earliest of the trouvère poet-composers whose name has come down to us. Some scholars have speculated that he was a converted Jew, owing to his unusual name and taking into account the presence of a large Jewish community in Troyes in the 12th century. He received a clerical education in Troyes, and later spent at least some time at the court of Henry I, Count of Champagne, where his presence is documented in the year 1172. Henry's wife was Marie de Champagne, daughter of Eleanor of Aquitaine by her marriage to Louis VII of France; it was probably in Marie's 'court of love' that Chrétien was active, and the themes of some of his romances were inspired by her. Because of the prominence of the 'matière de Bretagne' in Chrétien's works, and the family connections of the court in Champagne with England, it has been suggested that Chrétien visited England, but this cannot be documented.

Five poems have been attributed to Chrétien in the trouvère chansonniers, two of them without music. The problem of attribution is difficult since all but *Amours, tenson* and *De joli cuer* are also ascribed to other trouvères. Foerster, on stylistic and linguistic grounds, considered only *Amours, tenson* and *D'Amours qui m'a tolu* to be genuine, and these are the only ones normally included in editions of Chrétien's works. On the basis of manuscript attribution, however, at least four of the five may be by Chrétien.

WORKS

Amours, tenson et bataille, R.121 (no melody)
De joli cuer chanterai, R.66 (no melody)
D'Amours qui m'a tolu a moi, R.1664 (also ascribed to Gace Brule); ed. J. Maillard, *Anthologie de chants de trouvères* (Paris, 1967)
Joie ne guerredon d'amours, R.2020 (ascribed to Tressorier de Lille and Guiot de Dijon in five of six sources)
Quant li dous estés decline, R.1380 (also ascribed to Guiot de Dijon)

Chrismann, Franz Xaver [Crisman, Chrismanni, Križman, Krismann, Frančisek Ksaver] (*b* Reiffenberg, Austria [now in Slovenia], 22 Oct 1726; *d* Rottenmann, 20 May 1795). Austrian organ builder. He was ordained a priest in 1750. In 1754 he became a pupil of the famous priest organ builder Pietro Nachini in Venice. His workshops were first in Wippach in Krain, and from about 1764 in Upper Austria: Engelszell (where he built an organ for the Cistercian monastery, *c*1765–6, the case of which is still extant), St Florian (1770–74), Garsten (1775–83), Vienna and Linz. His pupil and colleague Peter Hölzel, who came from Grulich in Bohemia, completed his last organ at St Nikolaus, Rottenmann (1795; case extant). Chrismann adapted and extended Nacchini's 18th-century Venetian style of organ to develop an individual Austrian type relevant to the interpretation of Mozart's and Albrechtsberger's organ writing. A century later, Bruckner was inspired by Chrismann's St Florian organ (1774; three manuals, 54 stops; case extant). Important surviving organs are at Vienna, St Laurenz am Schottenfeld (1788; two manuals, originally 25, now 22 stops), and Linz Old Cathedral (after 1788; possibly originally two manuals, 23 stops; now three manuals, 31 stops).

Christchurch. New Zealand city. Known colloquially as the Choral City, Christchurch developed a strong choral tradition from its settlement by the English in 1851. The pioneering Canterbury Vocal Union became the nucleus of the Royal Christchurch Musical Society, founded in 1860. In 1927 Victor Peters started the Christchurch Harmonic Society. With two large choirs competing for a similar audience, amalgamation into the 160-strong Christchurch City Choir in 1991 under the conductor Brian Law became inevitable. Its landmark was the Australasian première of Szymanowski's Symphony no.3 in 1997. The most prominent of the many chamber choirs is the Jubilate Singers, founded in 1977 by Martin Setchell, who directed the country's first authentic performance of Monteverdi's Vespers. In 1988 its new director, John Pattinson, extended its repertory to all eras.

The nucleus of Christchurch's professional music activity is the Christchurch SO (founded 1973), with its key support role for local opera, ballet and choirs. The amateur 75-piece Christchurch Youth Orchestra performs much local music, 20th-century repertory such as Stravinsky, Kodály and Shostakovich, and standard symphonic works. The professionally funded Canterbury Opera, founded in 1985, had produced 30 works by 1999.

The University of Canterbury (founded 1873), which started its music faculty in 1891 with one part-time lecturer, now has a permanent staff of 11 offering courses in performance and composition to MMus level and musicology and music education to PhD level. The main provider of teacher training in school music is the Christchurch College of Education. The National Academy of Singing and Dramatic Art, initiated in 1992 by Luisa Shannahan, trains singers and actors towards a stage career in a three-year Bachelor of Performing Arts degree. In 1991 Christchurch Polytechnic started the Christchurch Jazz School offering a three-year diploma course under its founder and director Neil Pickard. Christchurch School of Instrumental Music, which opened in 1955 under Robert Perks to provide affordable group tuition for primary school children after hours, is now the Christchurch School of Music and has expanded to all levels of performance, from pre-school to adults. Its annual enrolment of 1500 students taught by over 90 part-time staff makes it the country's largest after-hours conservatory.

Christchurch Civic Music Council, founded in 1941, coordinates the city's musical activity. As a strong pressure group it has organized fundraising for the two Steinways, the concert harpsichord and the outstanding new Austrian-built Rieger pipe organ, all housed in the new Town Hall complex built in 1972. It also organizes various musical activities, including the country's first National Concerto Competition in 1967. Christchurch's other main competitions are the biennial Adam International Cello Competition and Festival (founded 1995) and the biennial International Chamber Music Festival and Competition (founded 1996), both initiated by the cellist Alexander Ivashkin. Other biennial events include the three-week Arts Festival (1995). Contemporary resident composers include John Ritchie, Philip Norman, Tony Ryan, Patrick Shepherd, Chloe Moon and Eric Biddington. John Cousins and Chris Cree-Brown compose electro-acoustic music and performance installations.

IAN DANDO

Christenius, Johann [Christianus, Johannes] (*b* Buttstädt, nr Weimar, *c*1565; *d* Altenburg, between July and Dec 1626). German composer. He is not heard of before 1617, when he became court Kantor to Duke Johann Philipp of Saxony at Altenburg. He was pensioned towards the end of 1625, perhaps because of illness or the disastrous effects of the Thirty Years War. His most important work is the *Complementum und Dritter Theil Fest- und Aposteltägiger Evangelischer Sprüche*, one of a large number of publications of occasional motets from the period around 1600 whose contents were used liturgically in the Lutheran Mass in place of readings. His *Symbola saxonica* is one of the last collections to consist of three-part pieces and settings of heraldic mottoes in the tradition dating back to Caspar Othmayr. The *Kirchen Quodlibet* contains simple four-part settings of 113 melodic lines from the familiar repertory of Lutheran hymns. Both of Christenius's secular collections include dance movements, with and without words, in the style of those in the early Baroque suite. By including a few based on Polish themes, Christenius, like Christoph Demantius and Valentin Haussmann, prepared the way for the inclusion of such themes in German instrumental music of the time.

WALTER BLANKENBURG/DOROTHEA SCHRÖDER

Christensen, Axel W(aldemar) (*b* Chicago, 23 March 1881; *d* Los Angeles, 17 Aug 1955). American popular pianist, teacher and editor. He studied the piano as a youth and in 1903 opened a teaching studio in Chicago with the advertisement 'Ragtime Taught in Ten Lessons'. He simplified African-American ragtime piano playing to three essential melodic-rhythmic patterns or 'movements', and these became the basis for his teaching method and for a series of instruction books he brought out from 1904. *Christensen's Rag-time Instruction Book for Piano* went through numerous revisions and title changes to incorporate early jazz and, eventually, swing styles; one method book remained in print until at least 1955.

Early in his career Christensen began establishing branch schools to teach ragtime piano. By 1914 he had founded 50 branches, and by 1918 he had schools in most major cities in the USA and also some abroad. By 1935 these schools had taught ragtime, popular piano and jazz piano to approximately 500,000 (mostly white) pupils.

From 1914 to 1918 Christensen edited and published the monthly *Christensen's Ragtime Review*, the only magazine of the period devoted to ragtime. The *Review* heavily promoted Christensen's schools and publications, covered vaudeville and early jazz, and occasionally published information on the 'classic ragtime' of Scott Joplin and his peers. In April 1918 the *Ragtime Review* was absorbed by *Melody* magazine, for which Christensen continued to contribute a regular column.

By the 1910s Christensen had become known as the 'Czar of Ragtime', and was later given the title the 'King of Jazz Pianists'. He composed a number of piano rags, several of which he recorded in the 1920s. He was also active as a pianist-entertainer and musical monologuist.

WORKS
(*selective list*)

Pf: Irmena Rag (1908); The Cauldron Rag (1909); Star and Garter, ragtime waltz (1910); The Minnesota Rag (1913); Webster Grove Rag (1915); Teasing the Classics (1923); Axel Grease (1924); Nighty Night! (1924); Boogie Woogie Blues (1927)

Pedagogical: Christensen's Rag-time Instruction Book for Piano (1904, 8/1920 as Axel Christensen's New Instruction Book for Rag and Jazz Piano Playing); Christensen's Rag Time Instructor no.2, for Advanced Pianists (1909, 3/1925); Instruction Book for Vaudeville Playing (1912) [books 1–5]; Saxophone Rag Jazz Instructor (1922); Axel Christensen's Instruction Book for Jazz and Novelty Piano Playing (1927, 3/1933); Axel Christensen's Instruction Book for Modern Swing Music (1936, 3/1954)

Principal publisher: Christensen

JOHN EDWARD HASSE

Christensen, Dieter (*b* Berlin, 17 April 1932). German ethnomusicologist active in the USA. In Berlin he studied the cello with Richard Klemm at the Hochschule für Musik (1950–53) and musicology and anthropology with Reinhard and Dräger at the Free University (1952–7), where he took the doctorate in 1957 with a dissertation on music in New Guinea. He was curator and director of the department of ethnomusicology of the Museum für Völkerkunde, Berlin (1958–71), while working as an external lecturer at the Free University, Berlin (1962–70); he was also editor of the museum's publication *Klangdokumente zur Musikwissenschaft*. In 1971 he was appointed associate professor of music and director of the Center for Studies in Ethnomusicology at Columbia University, New York, and was made full professor in 1975. He was editor of the book review section in *Ethnomusicology* (1972–5) and of the *Bulletin of the International Council for Traditional Music* (1981–96). In addition to having served on committees for the Society for Ethnomusicology (1968–72) and the International Folk Music Council (1969–81), he has been secretary general of the International Council for Traditional Music since 1981 and editor of the *Yearbook for Traditional Music* since 1982. In 1994 he became editor for the CD series 'UNESCO Collection of Traditional Music'. His chief areas of research have been the music of Oceania, Turkey (particularly the Kurds), Mexico, Bosnia-Hercegovina, and the Sultanate of Oman, in addition to the methodology and history of ethnomusicology.

LINDA FUJIE

Christian IV, King of Denmark and Norway (*b* Hillerød, 12 April 1577; *d* Copenhagen, 28 Feb 1648). Danish ruler and patron of music. He succeeded to the throne on the death of his father, Frederik II, in 1588 but ruled under a regency until his coronation in 1596. In the course of his education he revealed a marked interest in the arts, especially architecture and music, both of which enjoyed the advantage of his personal encouragement throughout his long reign, with results that have contributed much to the enduring impression of the period as a golden age in Danish history.

The royal chapel at the time of Christian's coronation numbered 71 musicians divided into three groups – singers, instrumentalists and trumpeters. Like those of most other European courts in the 16th century, it had been built up by importing its leading musicians from the Netherlands, and just as Christian's big architectural undertakings – Frederiksborg, Kronborg and Rosenborg palaces, for example – show a continuing Netherlandish influence, so for most of his reign the chapel was under the direction of the Dutch Gregorius Trehou, who played an important role in building up the chapel, and Melchior Borchgrevinck. He was nevertheless anxious to cultivate Danish talent, and he instructed government representatives all over the country to look out for promising talent for his chapel. It is said that whenever possible he himself interviewed and auditioned those who applied to enter his service. In 1599 he sent a party of young Danish musicians, including Mogens Pedersøn and Hans Nielsen, under the leadership of Borchgrevinck, to study with Giovanni Gabrieli in Venice; Pedersøn and Nielsen both went back to Venice later for further study, and Hans Brachrogge also went there twice. These visits resulted in a brief flowering of the Italian madrigal on Danish soil. According to the dedication of Vecchi's *Le veglie di Siena* (1604) Borchgrevinck had won the admiration of Gabrieli and the fame of Christian's chapel had spread throughout Europe.

Whereas Danes and Dutchmen predominated among the singers (among whom was the composer Jan Tollius), English lutenists and violists were favoured among the instrumentalists. According to the dedication of his *Schoole of Musicke* (1603), Thomas Robinson must have been at Elsinore before the marriage of Christian's sister Anne to James VI of Scotland in 1589, but undoubtedly Christian's greatest catch was John Dowland, for whom he was prepared to pay a salary nominally (if not actually) equal to that of an admiral of the fleet. Dowland was at the Danish court from 1598 to 1606, during which time he published his second and third books of songs and composed part at least of his *Lachrymae* (1604). The *Varietie of Lute-lessons* published by his son Robert in 1610 contains a galliard by him 'commonly known by the name of the most high and mightie Christianus the fourth, King of Denmark'. Other English instrumentalists at the court included Thomas Warren (who left in 1588), William and Christian Brade, Daniel Norcome, Thomas Cutting, John Stanley, Darby Scott and Thomas Simpson. The traffic was not all one way, however; in 1611 Christian reduced his chapel drastically because of his involvement in the Kalmar War with Sweden and sent four of his Danish musicians (Pedersøn, Brachrogge, Jacob Ørn and Martinus Otto) to his sister Anne, whose husband had now become King James I of England. They remained in England for three years and apparently had some contact with Francis Tregian, then in prison for recusancy; some of their music, unknown elsewhere, has been found in the manuscripts associated with Tregian. Christian himself made two visits to England. The second, in 1614, was brief and unofficial, but in July and August 1606 he made an official visit on a grand scale which was accompanied by brilliant entertainments, including performances of several of Shakespeare's plays; it has been persuasively argued that the king and the playwright may have met at one or more of these occasions (*Hamlet*, which suggests some familiarity with the Danish court, is, however, thought to have been written in about 1600–01).

Christian's organists and the music teachers to his children included Borchgrevinck, Truid Aagesen, the Dutchman Michael Utrecht, the German Johann Meincke and from Poland the Italian Vincenzo Bertolusi and Michael Crakowitz. Apparently none of the famous English keyboard players attracted his interest. Instead, from the 1620s Denmark became an outpost of the north German organ school which developed around the pupils of Sweelinck, among them Melchior Schildt, who went to Copenhagen in 1626. Another Sweelinck pupil, Jacob Praetorius (ii), unlike his friend Johann Schop (i), did not accept Christian's invitation to go to Copenhagen, but his teaching was transmitted to Denmark by his son-in-law, Johann Lorentz (ii), another of Christian's protégés. The king also encouraged the building of organs and had his 'privileged' organ builders Nicolaus Maas and Johann Lorentz (i). Esaias Compenius was apparently in Denmark in 1610, and in 1617 Christian received as a gift the splendid Compenius organ which still exists in its original condition and tuning in the chapel of Frederiksborg Castle.

In 1602 Christian's sister Hedvig married the Elector of Saxony. She became a patron of Heinrich Schütz, and in 1633 Schütz was invited to Copenhagen to serve as director of music for the magnificent celebrations planned for the marriage in 1634 of Crown Prince Christian to Magdalena Sibylla of Saxony. The invitation came from the crown prince himself and was presumably occasioned by the fact that Schütz was at that time not only the greatest composer of the Lutheran world but also an experienced Kapellmeister. It has been thought also that his experience of the *stile rappresentativo* was required for the composition of the first such music to be performed in Denmark but no evidence has been found to confirm this. Virtually all this music directly associated with the wedding celebrations is lost, but other music by Schütz written in Denmark during this (1633–5) and another period of service to King Christian (1642–4) includes the second sets of *Kleine geistliche Concerte* (1639) and *Symphoniae sacrae* (1647). Until his death in 1647, Prince Christian maintained a chapel of his own, which included as organist Matthias Weckmann, who had been a pupil both of Schütz at Dresden and of Jacob Praetorius (ii) at Hamburg.

JOHN BERGSAGEL

Christian, Charlie [Charles] (*b* Texas, 29 July 1916; *d* New York, 2 March 1942). American jazz guitarist. He grew up in a poor black section of Oklahoma City. His father, who was blind, was a guitarist and singer, his brothers Edward and Clarence were also musicians, and Charlie himself built and played cigar-box 'guitars' during his elementary school days. He later became much admired as a local musician in Oklahoma, and played an amplified acoustic guitar as early as 1938. Word of his skill reached the writer and record producer John Hammond, who arranged for Christian to travel to Los Angeles in August 1939 for an audition with Benny Goodman. Goodman, deeply impressed by Christian's playing, engaged him and soon featured him on weekly radio broadcasts and in recordings, notably on *Breakfast Feud/Good Enough to Keep (Air Mail Special)* (1941, Col.); before the year was over he was a nationally prominent jazz soloist. Unfortunately his success was as brief as it was immediate: he contracted tuberculosis in mid-1941 and died the following year.

Christian was among the first jazz guitarists to amplify his instrument in order to match the volume of wind instruments, and he was clearly the most brilliant soloist of his time on electric guitar. He was emulated by many swing-style players, and his posthumous impact on younger bop guitarists was enormous. Had he lived longer he doubtless would have become the first great bop guitarist, for he was a regular participant in the Harlem jam sessions at which Dizzy Gillespie, Kenny Clarke, Charlie Parker and a few others played as they gradually developed the new idiom. Some of Christian's favourite melodic figures (especially the chromaticisms indicated in ex.1) became common property among bop musicians. Christian remains among the most creative soloists of the swing period and a seminal figure in the evolution of the jazz guitar.

THOMAS OWENS

Christian Church, music of the early. The musical practices and attitudes of Christians from Apostolic times to the mid-5th century CE. The definition of early Christian music is broader than that of formal ecclesiastical chant. It embraces not only the psalmody of the Mass and Office but also the great variety of hymnody, psalmody, declamation and acclamation employed by Christians in any number of settings from eucharistic gatherings to night-time vigils. It includes, moreover, the hymns of heretical groups, and, finally, the attitudes of Christians towards every aspect of music, whether it be their own liturgical song, the diverse manifestations of pagan music or the classical philosophy and theory of music.

I. History. II. Special issues.

I. History

1. Background and scope. 2. 1st-century origins. 3. 2nd and 3rd centuries. 4. 4th century: (i) Psalmody and the developing Office (ii) The psalmodic vigil (iii) Psalmody in the Mass.

1. BACKGROUND AND SCOPE. The choice of the mid-5th century as the date by which to limit the following discussion of early Christian music is appropriate for two reasons. First, by this time the golden age of patristic literature in both East and West had come to an end; eminent figures such as AMBROSE (*d* 397), JOHN CHRYSOSTOM (*d* 407), JEROME (*d* 419/420) and AUGUSTINE OF HIPPO (*d* 430) had all passed from the scene, and with their deaths the abundant stream of evidence about Christian music dwindled to a trickle. The second reason is related to the first: the mid-5th century witnessed the end of an historic era. The back of the Roman Empire had been broken by barbarian incursions, and even if the East managed to maintain some semblance of the ancient order, the West was devastated and the cultural bonds that had unified the people of the Mediterranean basin were irrecoverably severed. The result of this for liturgy was that the roughly homogeneous liturgical practice that had developed during the 4th century came to be fragmented. East and West went their separate ways, and the West in particular developed the divergent liturgical dialects known as the Mozarabic, Gallican, Ambrosian and Roman.

The principal languages of early Christian music were Greek, Latin and Syriac. The very first Christians, and indeed Jesus himself, spoke Aramaic (Hebrew had become a literary language by his time), but with the spread of Christianity to the Gentiles by way of Paul's mission, Greek became the dominant early Christian language. In the wake of the Alexandrian conquests, Greek had become the principal language of the eastern Mediterranean basin, particularly in the cities and seaports. This Greek , known as the *koinē* (the 'common' tongue), a grammatically simplified form of classical Greek, was also spoken in parts of the West; the Christian community at Rome itself spoke it until well into the 3rd century, and there were traces of spoken Greek in the Rhône valley as late as the 6th century. Latin, however, had always been the language of Christianity in the western reaches of North Africa, and from the 3rd century was all but universally spoken among Western Christians. Syriac, a dialect of late Aramaic, was the language of the Mesopotamian region. With the spread of Christianity to that area, an important literature developed, including some of the earliest translations of the Bible and an extensive body of patristic writings. The latter is especially remarkable for its religious poetry; the hymns of figures such as Ephrem Syrus (*d* 373), Narsai (*d* *c*503) and Jacob of Serugh (*d* 521) are generally acknowledged to have exercised considerable influence on Byzantine hymnography.

In the 5th century the Bible and the Syriac liturgy were translated into Armenian. An Armenian hymnody had its beginnings during the same period, but its history belongs more to the Middle Ages than to the early Christian period. (*See also* ARMENIA, §II.) The same can be said for the music of the Coptic rite. The Coptic language was a survival of the ancient Egyptian tongue, written by and large with Greek letters. The liturgy of Christian Egypt was at first in Greek but was translated into Coptic for the population of the Upper Nile region. The music that survives today from this rite is considerably later than the period under consideration here. The Coptic monks of the 4th century, however, were the dominant force in early Christian monasticism, and their psalmodic practices had a profound influence on the formation of both Eastern and Western Offices. (*See also* COPTIC CHURCH MUSIC.)

Patristic literature presents a pervasive problem for the study of early Christian music in that most authors use the terms 'psalm' and 'hymn' interchangeably. In the following discussion, modern usage is employed: 'psalm' refers to a psalm of the Hebrew Psalter, and 'hymn' to a non-biblical composition.

2. 1ST-CENTURY ORIGINS. The origins of Christian song are extremely difficult to trace. Indeed the subject remains obscure even between the later 2nd and earlier 4th centuries, a period in which the evidence becomes relatively more plentiful. Not until the later 4th century, the peak period of patristic production, was a measure of clarity achieved. Moreover, it is not only insufficient evidence that makes the earlier centuries so difficult to understand; it is highly probable that the musical practices were themselves in a state of considerable fluidity until the later 4th-century consolidation and standardization of liturgical usage.

The subject has been rendered all the more obscure in recent years because it has lost one of its principal certainties. Most liturgical and music historians had long assumed that the early Christian liturgy was adopted from Jewish ritual practices. Now, however, it appears that for all the obvious general influence of Judaism upon Christianity – Christianity after all originated as a Jewish sect – it is often a mistake to trace Christian liturgical usage to specific Jewish practices. In many cases the Jewish rites in question did not yet exist in the 1st century, but neither did their purported Christian counterparts. This applies most notably to the ancient Synagogue service and the pre-eucharistic synaxis, or Fore-Mass, as it came to be called. The Synagogue service was thought to have consisted of four elements – reading, discourse, psalmody and prayer – and to have been adopted *en bloc* by the first Christians. It is true that the reading of scripture and commentary upon that reading was customary in the synagogues of the 1st century; indeed Jesus himself participated in the practice (*Luke* iv.16). And it is not unlikely that some sort of prayer might have accompanied the synagogal readings, although there is no positive evidence for it. But at this time it was the Temple that was looked upon as the centre of Jewish worship, and all the evidence suggests that a stable and formalized Synagogue service of prayer was established only after the Temple's destruction by the Romans in 70 CE. And even then it was developed only gradually, indeed reluctantly, as a temporary substitute for the Temple service; the hope that the Temple and its ritual would be restored remained alive in Judaism for centuries. As for psalmody, its regular practice is not attested in the sources until the 8th-century tractate *Sopherim*, which tells how the recitation of the daily Temple psalm was finally allowed in the Synagogue as a surrogate for its original performance at the moment of sacrifice.

But again, to deny the Christian adoption of specific Jewish rituals is not to deny a more general, indeed more profound, influence of Judaism upon early Christian worship. At issue here is the status of the Temple among Jews at the time of Jesus. The Temple of Jerusalem shared a common ritual pattern with the pagan temples of antiquity. It was fundamentally different from a church or synagogue, whereby a congregation would gather within a room for instruction and prayer; rather, the people stood in a temple square and looked on as priests slaughtered the sacrificial animals. The sacrificial act was generally accompanied by the playing of musical instruments, which performed magical functions such as the frightening away of unwanted demons. It is not true, as many have maintained, that the more enlightened Jews had by the dawn of the Christian era rejected this form of worship in favour of the Synagogue; most Jews of the time remained loyal to the Temple and its ritual, even though they were engaged in the process of creating new religious resources. They developed a complex ethical code and a pervasive habit of prayer, and they established a canon of sacred books, among them the incomparable Book of *Psalms*. It is true that the Synagogue, though as much a civic as a religious institution, was the centre of a considerable portion of this activity, particularly those aspects of it that involved instruction. But just as important was the home; indeed Jesus berated the hypocrites who prayed publicly in the synagogues and on the street corners rather than in the privacy of their homes (*Matthew* vi.5). And within the home the event that was the focus of the most intense religiosity was the evening meal, which was also an event of special musical significance.

The first Christians maintained the religious practices of their Jewish background. They continued to worship in the Temple and to gather for instruction and discussion in the Synagogue, but there was an increased emphasis upon the sacral meal – now a communal rather than family meal – frequently referred to as the 'breaking of bread'. As the new religion spread beyond the borders of Palestine with Paul's mission, the converts were no longer expected to worship in the Temple, and after an initial period of controversy they came to be exempted from the more onerous aspects of the Mosaic Law such as circumcision. Meanwhile, the process of conversion was carried out in the synagogues and other public places, but the proper ritual gathering of the faithful was the communal meal, which was usually held in the home of some Christian prominent in a particular locality. It is not certain whether every mention in the New Testament of the 'breaking of bread', or of related terms such as 'the Lord's supper', refers to a eucharistic celebration, but certainly many of them do.

The precise nature of the primitive eucharistic celebration is not known, even if it is no longer thought to consist of a preliminary Synagogue-derived service of reading, psalmody, prayer and discourse, followed by a formal ritual meal. Rather than a split between a service of instruction and the Eucharist proper, there was probably a sacral meal in which instruction was frequently an integral part. But not much can be said with any certainty beyond that; indeed the likelihood is that there was no set pattern but rather a variety of practices. The process whereby the Eucharist came to be separated from the evening meal and was celebrated in the morning, preceded by a discrete service of instruction, cannot be traced; it is possible to observe only that this classic pattern is manifested in Justin Martyr's mid-2nd-century description of the Roman Eucharist (see §I, 3 below).

The musical aspect of the Eucharist while it was still celebrated in conjunction with an evening meal is also a matter for speculation. Two factors make it probable that singing was not uncommon at this meal. First, musical diversion of some sort has been a constant feature of the common evening meal throughout history, and the meals of late antiquity were no exception. Once the evidence becomes more abundant in the 3rd century, the custom can be observed among the pagans of the time, among the Jews and indeed among the Christians. Secondly, the New Testament, even if its references to music are notoriously difficult to interpret, creates an unmistakable general impression of enthusiasm for sacred song.

As for the nature of this singing, it is generally believed that it consisted of newly created material rather than Old Testament psalms. For example, when Paul said to the Corinthians 'What then, brethren? When you come together each one has a psalm, has a teaching, has a revelation, has a tongue, has an interpretation' (*1 Corinthians* xiv.26–7), it seems that he was referring to individual contributions of the congregation. The Corinthians, it is true, were notoriously individualistic in their style of worship, but they differed from other Christians in this respect only by a matter of degree. Many scholars find the New Testament to be permeated with fragments of liturgical hymns, and they consider the canticles of Luke's Gospel (the *Magnificat*, the *Benedictus* and the *Nunc dimittis*) to be complete hymns that were sung in the liturgy of the time. But this is a highly problematic view. With respect to the fragments, it can be argued that the majority of them are simply examples of rhetorical rather than hymnic language, just as it can be argued that the Lukan canticles were the evangelist's own creation rather than contemporary liturgical hymns. Whatever the truth on this question of New Testament hymnic quotation, few are inclined to deny that hymns of some sort were sung at the primitive Eucharist.

In addition to the singing of full-length hymns, which would probably have been performed by individuals, the entire congregation must have participated in short acclamations and responses. In the enthusiastic atmosphere of the time, one-word acclamations like 'Amen', 'Alleluia' and 'Maranatha' must have been common, as well as somewhat longer exclamations such as doxologies or perhaps favourite psalm verses. These were possibly chanted in response to prayers and readings, which themselves might have been declaimed rather than read.

And what of the Old Testament psalms? Recent scholarship, in emphasizing the prevalence of newly created material over the Davidic psalms, may have gone too far in its exclusion of the latter. It is said that the Old Testament Psalter was considered at this time in both Judaism and Christianity as more a book of readings than a hymnbook. Although there is undoubtedly some truth in this, the obviously musical character of the psalms cannot be denied. Smith (1990) has shown that considerably more than two-thirds of the psalms were sung at one time or another in the Temple. So while it is true that there was no ritual pattern of psalmody in the Synagogue of the time, and probably nothing of the sort in the early Church either, it is entirely reasonable to suppose that the first Christians would have sung selected psalms on occasion.

See also JEWISH MUSIC, §II, 4, and PSALM, §I.

3. 2ND AND 3RD CENTURIES. There exists one particularly clear description of the Eucharist from the mid-2nd century, that of Justin Martyr (*d c*165). The portion that describes the pre-eucharistic synaxis reads as follows:

> On the day named for the sun there is an assembly in one place for all who live in the towns and in the country; and the memoirs of the Apostles and the writings of the Prophets are read as long as time permits. Then, when the reader has finished, he who presides speaks, giving admonishment and exhortation to imitate those noble deeds. Then we all stand together and offer prayers. (*First Apology*, 67)

The precision of Justin's description is striking; he presents each element of the synaxis in sequence, separating them by some adverb that means 'then'. Reading, discourse and prayer are cited, but not the fourth element of the later synaxis, psalmody. Justin's description tallies in this respect with that of the early 3rd-century Carthaginian Tertullian (*d c*225): 'I myself shall now set down the practices of the Christian community ... We come together to surround God with prayer ... We gather together to consider the divine Scriptures ... And at the same time there is encouragement, correction and holy censure' (*Apologeticum*, xxxix.1–4). But on another occasion the same author speaks of a charismatic woman who goes into 'an ecstasy of the spirit' during the Sunday liturgy: 'The material for her visions is supplied as the scriptures are read, psalms are sung, the homily delivered and prayers are offered' (*De anima*, ix.4). Although the last of these three descriptions mentions 'psalms', it must be pointed out that the context of the description is probably a service of the enthusiastic Montanist heresy. The

'psalms', moreover, may very well have been heretical hymns, as is suggested by other passages in the writings of Tertullian where he speaks scornfully of heretical 'psalms'. On balance the rather scanty evidence creates the impression that psalmody was not a formally acknowledged feature of the 2nd- and 3rd-century pre-eucharistic synaxis; however, the possibility that it was present on occasion cannot be excluded.

That singing was typical of the earliest eucharistic gatherings but not as common in the Eucharist of the 2nd and 3rd centuries should not be surprising in view of the rite's separation from the evening meal. In fact there is considerable evidence from the 3rd century that singing continued to be a frequently encountered practice at the communal evening meals of Christians, whether these meals were the so-called *agapē* ('love feast'), at which the poor were fed, or simply informal social occasions involving Christians. There is, for example, a passage from Cyprian of Carthage (*d* 258) that shows a particularly warm appreciation of sacred song:

> Now as the sun is sinking towards evening, let us spend what remains of the day in gladness and not allow the hour of repast to go untouched by heavenly grace. Let a psalm be heard at the sober banquet, and since your memory is sure and your voice pleasant, undertake this task as is your custom. You will better nurture your friends, if you provide a spiritual recital for us and beguile our ears with sweet religious strains. (*Ad Donatum*, xvi)

It was mentioned above that Tertullian was disturbed by the phenomenon of heretical hymns. In one instance he contrasts the psalms of David with the hymns of Valentinus: 'Not the psalms of that apostate, heretic and Platonist, Valentinus, but those of the most holy and illustrious prophet David. He sings among us of Christ, and through him Christ indeed sang of himself' (*De carne Christi*, xx.3). Valentinus was not the only heretical hymnodist of the early 3rd century. Bardaisan of Edessa (*d* 222) composed a collection of 150 hymns in imitation of the Davidic Psalter, which his son Harmonios is said to have set to music. It was Bardaisan's work that spurred on the great poet Ephrem Syrus (*d* 373) to compose his own orthodox Christian hymns.

The passage of Tertullian quoted above may be taken to imply that Old Testament psalms came to be sung in the 3rd century only as a reaction to heretical hymns: psalms were canonical scripture and hence doctrinally safe. The great upsurge in the singing of the Davidic Psalter during the 4th century has often been cited in support of such a view, reinforced by a passage from Canon 59 of the Council of Laodicea (possibly later 4th century): 'One must not recite privately composed psalms (*psalmi idiotici*) nor non-canonical books in the church, but only the canonical books of the Old and New Testament'. Again, the argument is that it was the fear of heresy that encouraged the singing of biblical psalms. Yet, whatever the interpretation of the 4th-century evidence, it is just as easy to read the passage from Tertullian as indicating simply that in the early 3rd century the Davidic psalms were being sung with some frequency and would have been sung whether heretical hymns had become fashionable or not. On another occasion Tertullian makes an apparent reference to the singing of Old Testament psalms (and orthodox hymns as well) at the *agapē*, this time without mentioning heretical hymns: 'After the washing of the hands and the lighting of lamps, each is urged to come into the middle and sing to God, either from the sacred scriptures or from his own invention' (*Apologeticum*, xxxix.18). It should be further noted that there is nothing in either of these passages from Tertullian to suggest that the singing of Davidic psalms was an innovation in his time.

4. 4TH CENTURY. However common the singing of the Old Testament psalms was in the first three centuries of the Christian era, there appears to have been a sharp increase in the practice during the 4th century, particularly in its closing decades. This is observable in three contexts especially: the newly emerging Office, the popular psalmodic vigil and, to a lesser extent, the Mass.

(i) Psalmody and the developing Office. Among the more important factors underlying the increase in psalmody in the 4th century was the movement of desert monasticism. Ascetical groups had banded together before in the history of Christianity to pursue a common life of virtue, but what began to happen in the deserts of Egypt around the turn of the 4th century was so unprecedented in scope that the origins of Christian monasticism are generally traced to this time and place. Literally thousands of stalwart souls fled the cities and towns to seek a life of prayer and deprivation in the harsh environment of the Egyptian deserts. The connection between psalmody and monasticism came about because the central ideal of desert monasticism was to 'pray unceasingly' (*1 Thessalonians* v.17). The means that the early monks found most appropriate to achieve this was the 'continuous' recitation of the Psalter: psalms were not singled out individually but were recited in order and, moreover, in considerable quantity, even if interspersed with prayers. There are anecdotes from the time that tell of individual monks chanting the entire Psalter in a single night. The desert monks recited the Psalter by themselves especially, but they did so also at their common morning and evening Offices. The typical manner of psalmody in common was for a single monk to chant while the rest listened in silence, occupying their hands in such tasks as weaving linen and plaiting rope, by which the monks supported themselves. The purpose of this psalmody was not the later liturgical ideal of a ceremony of praise but rather a device to sustain individual prayer and meditation. Presumably the musical character of the chanting was sober and unassuming, even if it was not selfconsciously unmusical.

Desert monasticism stirred the imagination of 4th-century Christianity. Many of the most eminent ecclesiastical figures of the time – Basil, Jerome, Cassian, Rufinus, Paul and Palladius – visited Egypt to observe the lives of the heroic monks and nuns in residence there. They went away inspired to found and foster monastic communities of their own, in some cases in remote regions but as often as not in the cities, where they could serve as models for the general population. Virtually every important Christian leader of the 4th century, including Augustine, Jerome, Basil, John Chrysostom, Gregory of Nyssa and Ambrose, whether they had visited Egypt or not, either lived at one time as monks or at least actively encouraged monasticism in their own dioceses. The monastic life became the dominant ideal of Christian spirituality, so that when Jerome, for example, counselled the lay women of Rome to live the life of committed Christians, he simply advised them to follow the monastic horarium.

Jerome also recommended that they memorize the Psalter. Psalmody was, after all, emblematic of the

monastic life; virtually no contemporary description of the monastic life fails to mention it. John Chrysostom, for example, wrote: 'As soon as they are up, they stand and sing the prophetic hymns ... Neither cithara, nor syrinx, nor any other musical instrument emits such sound as is to be heard in the deep silence and solitude of those holy men as they sing' (*In I Timotheum*, Homily XIV.3–4). Basil, in recommending the attractions of his monastic retreat at Pontus to his friend Gregory of Nazianzsus, wrote: 'What is more blessed than to imitate the chorus of angels here on earth; to arise for prayer at the very break of day and honour the Creator with hymns and songs?' (*Epistle* II.2). Basil's brother, Gregory of Nyssa, said of their younger sister, the nun Macrina: 'She had psalmody with her always, like a good companion which one forsakes not for a moment' (*Vita S Macrinae*, 3). The matter is well summarized in that frequently quoted anonymous paean to psalmody:

> In the monasteries there is a holy chorus of angelic hosts, and David is first, middle and last. In the convents there are bands of virgins who imitate Mary, and David is first, middle and last. In the deserts men crucified to this world hold converse with God, and David is first, middle and last. (Pseudo-Chrysostom, *De poenitentia*)

Monastic psalmody had a profound effect upon the early development of the Christian Office. The Office's remote origins derive from the fact that certain times of the day were considered to be especially appropriate for prayer; this was true both of early Christianity and of Judaism before it. Different patterns appear to have characterized different times and places; there was, for example, the threefold pattern of prayer at morning, noon and evening, and the threefold pattern of the third, sixth and ninth hours, either of which might be combined with prayer in the middle of the night. Generally, however, these hours were observed more privately than publicly in the centuries before the emancipation of the Church under Constantine in 313.

The pattern that became standard in the cities after that date was a daily public Office in the morning and in the evening – the 'cathedral' Office. This Office was originally free of monastic influence, and its psalmody and hymnody were distinctly different from the psalmody of monasticism. In contrast to the continuous psalmody of monasticism, the musical component of the cathedral Office was carefully selected so as to be appropriate to the time of day. In the morning the hymn *Gloria in excelsis* was sung in many of the principal ecclesiastical centres, while Psalm lxii (in the Greek and Latin numbering of the Psalter), 'O God my God, I arise before thee in the early morning', was sung in most cathedrals throughout the East. Also common were the set of alleluia psalms – Psalms cxlviii–cl – that would come to be the psalms *par excellence* of Lauds. The evening service opened, typically, with the *lucernarium*, the ceremony of lamp-lighting, accompanied by the hymn *Phōs hilaron* ('O gladdening light'). The standard psalm of the service was Psalm cxl, with its appropriate second verse: 'Let my prayer be guided to thee as incense, and the lifting of my hands as an evening sacrifice'. Significantly, John Chrysostom spoke of both Psalms lxii and cxl as psalms that his congregation knew by heart.

Monastic psalmody had its effect upon the Office in the later decades of the 4th century. This is best observed in Egeria's description of the Office of Jerusalem, the most detailed description of any urban Office of the time. In the morning the monastic and cathedral Offices were combined, each one remaining intact but celebrated successively. Well before daylight there was the monastic vigil of continuous psalmody, and then the morning cathedral service of praise, a pattern still recognizable in Western medieval Matins and Lauds. Egeria provides the following description of the monastic vigil:

> Each day before cockcrow ... all the *monazontes* and *parthenae*, as they are called here, come down, and not only they, but also those lay people, men and women, who wish to keep vigil at so early an hour. From that hour until it is light, hymns are sung and psalms responded to, and likewise antiphons; and with every hymn there is a prayer. For two or three priests, and likewise deacons, who say these prayers with every hymn and antiphon, take turns to be there each day with the *monazontes*. (*Itinerarium*, xxiv.1)

Three essential points about this vigil may be noted: the prolonged psalmody is sung exclusively by the monks and nuns; devout lay people arise early in the morning to observe the vigil; and while the bishop is not present, a few representative members of the local clergy are on hand to recite the prayers, thereby, it would appear, giving ecclesiastical sanction to the monastic service. All this is in sharp contrast to the second service, Egeria's description of which begins: 'As soon as it begins to grow light, they start to sing the morning hymns, and behold the bishop arrives with the clergy' (*Itinerarium*, xxiv.2). This service continues with a series of prayers led by the bishop and concludes with his blessing. It is clearly a cathedral service: the bishop and his clergy preside; it ends with an episcopal blessing; and the 'morning hymns', presumably, are not continuous monastic psalmody but the special morning hymns of praise such as *Phōs hilaron*, Psalm lxii and Psalms cxlviii–cl.

The time between the morning and evening services came to be filled in by those shorter services at the third, sixth and ninth hours that are known as the LITTLE HOURS in the later Western Office (the service at the first hour, Prime, was not yet present in the 4th century). These were typically services of monastic psalmody; Egeria describes Sext (at Jerusalem Terce was sung only during Lent) as follows: 'Again at the sixth hour all come down ... and sing psalms and antiphons until the bishop is called in. He first says a prayer, then blesses the faithful ... And at the ninth hour they do the same as at the sixth' (*Itinerarium*, xxiv.3). It should be noted that these services consisted simply of psalmody, which was performed in the absence of the bishop, who entered only at the conclusion to say a prayer and to bless the congregation.

The evening Office at Jerusalem began with the cathedral element of the *lucernarium* and its proper hymnody, but continued with a period of protracted psalmody before the bishop and clergy arrived and took their places. The service concluded with additional singing followed by the customary closing prayers and bishop's blessing. Egeria's description reads in part:

> But at the tenth hour – what they call here *licinicon*, and what we call *lucernare* – the entire throng gathers again, and all the lamps and candles are lit, producing a boundless light ... And the *psalmi lucernares*, as well as antiphons, are sung for a long time. And behold the bishop is called and comes down and takes the high seat, while the priests also sit in their places, and hymns and antiphons are sung. (*Itinerarium*, xxiv.4)

This service appears to be a more complex mix of monastic and cathedral elements, even suggesting the overall pattern of medieval Western Vespers, with its prelude of four or five psalms, sung in numerical order

(the monastic contribution), followed by a diverse grouping of prayers and chants (the cathedral contribution). An elaborate evening Office of this sort was typical for the principal ecclesiastical centres of the time; in a few locations it was followed by a brief gathering of monks and nuns for a final period of prayer and psalmody, a kind of proto-Compline.

While Egeria's description of the Office at Jerusalem is the clearest and most detailed for any location, sufficient evidence has been found to reconstruct the later 4th-century Office of several important centres, for example, Basil's Caesarea and John Chrysostom's Antioch (see Taft, 1986). There are different combinations of cathedral and monastic elements in each location: Taft has characterized the Offices of Palestine and Antioch, for example, as 'a monastic cursus that has absorbed cathedral elements', and that of Cappadocia as 'a cathedral cursus onto which monastic hours have been grafted'. But the musical contribution of monasticism remains clear: continuous psalmody as opposed to selective psalmody and hymnody. A reverse influence must also be assumed, however: the sober psalmody of desert monasticism could not have remained totally unaffected by the more overtly musical urban psalmody.

(ii) The psalmodic vigil. Monastic psalmody appears to have played a part in the rise of the popular psalmodic vigil, another important musical phenomenon of the later 4th century. Egeria's description of the pre-dawn monastic Office at Jerusalem was given above. This service, however, was held on just six days of the week; in its place on Sunday the people themselves performed something remarkably similar to it: 'On the seventh day, that is, the Lord's Day, all the people gather before cockcrow ... Hymns are sung and also antiphons, and there are prayers with each hymn and antiphon. For priests and deacons are always prepared for vigils in that place because of the crowd which gathers' (*Itinerarium*, xxiv.8). It would appear that on Sunday at Jerusalem when the monks and nuns did not rise for their accustomed vigil, the people held one in imitation of them.

In his Letter 207, written in the year 375, Basil defends the nocturnal psalmodic vigil of his congregants; in this case the principal performers of the psalmody appear to have been the men and women of his diocese who lived a quasi-monastic existence. Early in his letter he admits that they are mere children compared to the famous desert monks of Egypt, Palestine and Syria, but he claims that they are brave souls, nevertheless, who 'have crucified their flesh with its affections and desires', who, moreover, 'sing hymns to our God unceasingly, while they work with their own hands'. He goes on to assert that the psalmodic vigils of his congregation are no different from those practised in other churches of the East:

> Among us the people arise at night and go to the house of prayer; in pain, distress and anguished tears they make confession to God, and finally getting up from prayer they commence the singing of psalms. At first they divide themselves into two groups and sing psalms in alternation with each other ... And then they entrust the lead of the chant to one person, while the rest sing in response. After thus spending the night in a variety of psalmody with interspersed prayer, now that the light of day has appeared, all in common as if from one mouth and one heart offer the psalm of confession [?Psalm l] to the Lord, while each fashions his personal words of repentance. Now if you shun us because of these practices, you will shun the Egyptians, you will shun the Libyans as well, and the Thebans, Palestinians, Arabians, Phoenicians, Syrians and those who live by the Euphrates; and indeed all those among whom vigils, prayers and common psalmody are esteemed.

In discussing this much-quoted passage musicologists tend to dwell upon the reference to antiphony, one of the very few such references in patristic literature. The question of early Christian antiphony is taken up below (§II, 5); for the moment, attention should be focussed on the broader point, namely, that the passage describes a nightly psalmodic vigil and that Basil felt constrained to defend the practice. He concludes by asserting that 'vigils, prayers and common psalmody are esteemed' throughout all the regions of the Christian East; his need to make the claim suggests that the custom may have been relatively new.

Basil mentions only Eastern localities, but just over a decade later, in 386, a psalmodic vigil was held in Ambrose's church at Milan, an occasion made famous by Augustine's description of it. Ambrose and his congregation were prevented from leaving the city's basilica because of guards posted outside by the Arian empress dowager, Justina:

> Not long since had the church of Milan begun this mode of consolation and exhortation with the brethren singing together with voice and heart ... At that time the custom began that hymns and psalms be sung after the manner of the Eastern regions lest the people be worn out with the tedium of sorrow. The practice has been retained from that time until today and imitated by many, indeed, by almost all your congregations throughout the rest of the world. (*Confessions*, IX, vii.15)

Many have interpreted the phrase 'after the manner of the Eastern regions' as referring to the singing of psalms in antiphony. Augustine did not use the term, however, and the more obvious meaning of the passage is the broader one, that is, he was referring to the custom of the nightly vigil of psalmody and hymnody, which Basil told us was common throughout the East several years earlier. Ambrose's own description of the event confirms this interpretation: 'I was not able to return home, because the soldiers surrounded the basilica, keeping it under guard; we recited psalms with the brethren in the lesser basilica of the church' (*Epistle XX*, 24). There is no mention of antiphony here, whereas the more general consideration that psalms were sung was deemed significant enough to merit inclusion in a minimally brief reference to a momentous event. The term *antiphona* was finally associated with the occasion some 37 years later in the biography of Ambrose written by his secretary Paulinus in 422: 'At this time antiphons, hymns and vigils first began to be celebrated in the church of Milan' (*Vita S Ambrosii*, 18). Paulinus states explicitly that vigils were an innovation at the time, and the fact that he includes the term *antiphona* should come as no surprise in a passage that dates from the third decade of the 5th century, by which time the word appeared routinely (as a noun) in references to ecclesiastical song.

The most extended discussion of psalmody at vigils is that of Niceta of Remesiana (*d* after 414), who devoted an entire sermon to the subject. This remarkable work for a long time remained unknown to musicologists because ot its false attribution in Gerbert's *Scriptores* to the 6th-century Nicetius of Trier. The sermon is the second of a pair. The first, *De vigiliis*, is a defence, against certain unnamed rigorists, of the vigils held during the early morning hours before the Saturday and Sunday Eucharist. Niceta closes it with a promise to devote a second sermon to the psalmody that played so important a role in the

vigils. The result, *De psalmodiae bono*, is an extended defence of psalmody that manages to summarize the entire patristic doctrine on ecclesiastical song. The relevance of the two sermons to the famous vigil at Ambrose's Milan is obvious: they defend at great length the custom of psalmodic vigils but make no mention of antiphony.

There is no evidence to suggest that monks or nuns were involved in the vigils of Niceta's Remesiana (now Bela Palanka in Serbia), whereas they may well have been in Ambrose's Milan (both Augustine and Ambrose refer to the singing of 'the brethren'). On the whole there appears to have been a broad influence of the monastic vigil on the popular psalmodic vigil, even if monks or nuns were not directly involved at every time and place. More important is the phenomenon of the congregational psalmodic vigil considered in itself; it appears to have been greatly popular at the time, even if a puritanical minority objected to it.

(iii) Psalmody in the Mass. The third area in which the Davidic psalms came to play an important role in the later 4th century is the Mass itself, although here their use was more narrowly defined. A psalm was sung during the distribution of Communion, and this appears to be the ancestor of the Byzantine *koinōnikon* and Western communion chants; another sung during the pre-eucharistic synaxis is the apparent ancestor of the Byzantine *prokeimenon* and the Western gradual. In addition to these two an alleluia psalm appears to have been sung at Jerusalem by the earlier 5th century.

The psalm sung during the distribution of Communion was probably the first of these, and this is not surprising. The event was an occasion of joy occurring at the climax of the service; it was also an action that would have been conducted in silence unless accompanied by song; and, finally, the distribution might still have had associated with it lingering connotations of the common meal. The communion psalm, in any event, is attested by several sources from the second half of the 4th century. These sources generally specify the singing of Psalm xxxiii with its appropriate verse 8: 'Taste and see that the Lord is good'; indeed this proto-communion might even be considered as an Ordinary rather than a Proper item of the Mass. Significantly Psalm xxxiii.8 still appears as the *koinōnikon* of the medieval Byzantine Liturgy of the Presanctified, and as such is the most common of the Byzantine communion chants. The history of the communion psalm in the West appears to be significantly different. There are hints in the sources that Psalm xxxiii was singled out in at least some localities as a special communion psalm, but Augustine referred at one time to the singing of 'hymns from the Book of Psalms ... while what has been offered was distributed to the people' (*Retractationes*, II.37). This might suggest that a different psalm was sung at Communion each day, at least in Hippo, and it is true that the Gregorian communion derived from Psalm xxxiii.8, *Gustate et videte*, occupies a place of no special significance in the liturgical year. (*See also* COMMUNION.)

The history of the gradual psalm is quite different from that of the communion psalm. Until recently the conventional view of its origin was that it functioned as a musical response to a reading; it was thought to have occupied this position in both the Synagogue and the primitive Church. It is true that the medieval responsory, related as it appears to have been to the gradual, functioned more or less in this manner, but there is no ancient evidence, Jewish or Christian, that readings were customarily paired with complementary psalms. On the contrary, the gradual psalm was at first looked upon as a reading itself. Augustine, for example, said: 'We heard the Apostle, we heard the psalm, we heard the gospel; all the divine readings sound together so that we place hope not in ourselves but in the Lord' (Sermon 165). If, however, in the later 4th-century literature, the gradual psalm was spoken of as a reading, it was at the same time just as clearly described as something that was sung. The most plausible hypothesis, perhaps, to explain these apparently contradictory circumstances is that in earlier centuries a psalm had been selected on occasion to serve as the Old Testament reading in the pre-eucharistic synaxis, while in the later 4th-century period of enthusiasm for psalmody, a psalm came to be chanted at every pre-eucharistic synaxis and to be treated as a discrete musical event.

There are numerous patristic references to the responsorial singing of the gradual psalm. A typical formulation might be that of Augustine in his Sermon 153 where he says: 'We heard and we responded together and we sang with harmonious voice, *Beatus vir quem tu erudieris, domine*' (Psalm xliii.12); or that of John Chrysostom in his commentary on Psalm cxvii: 'The passage of the psalm which the people are accustomed to sing in response is this: "This is the day which the Lord has made"' (Psalm cxvii.24). In spite of the wealth of such references it remains possible that the gradual psalm, particularly on less festive occasions, might have been chanted without a congregational response. The sources frequently mention the singing of a psalm without specifying a response verse; in such cases it is simply not known whether a response was involved or not.

A final point of considerable significance concerning the gradual psalm is that the abundant Western references, in particular those from the sermons of Augustine, refer to a single psalm in the pre-eucharistic synaxis. This has an obvious bearing upon the early history of the Western alleluia. If an alleluia psalm existed in the later 4th and earlier 5th centuries, it might be expected that two psalms would have been sung regularly in the synaxis: the gradual psalm, and a second psalm with an alleluia response. But there is only the one psalm, even if its response might on occasion be an 'alleluia', particularly if it is one of those psalms that have 'alleluia' prefixed to them in the biblical text (e.g. Psalms cx–cxviii). The situation in the East is more complex. There are several passages that suggest the singing of a single psalm in the synaxis, but others that appear to call for an indeterminate number. The *Apostolic Constitutions* (VIII, xii.27), for example, state: 'After two readings [from the Old Testament] let someone else sing the hymns of David, and let the people respond with verses. After this let our Acts be read and the epistles of Paul our fellow worker'. Whatever the interpretation of this passage (it could be argued that it lists everything that might be read in the course of the year rather than on a single day), the testimony of the so-called Armenian Lectionary is unambiguous. This document (Renoux, 1961), which is believed to reflect the liturgy of Jerusalem for the earlier 5th century, assigns two psalms to each date in the calendar and prefixes the second of them with the word 'alleluia'. (*See also* GRADUAL (i).)

The overall impression remains, then, that a gradual and a communion psalm were sung in most ecclesiastical centres of the East and West in the later 4th century, and that these can legitimately be looked upon as the ancestors of the Byzantine *prokeimenon* and *koinōnikon* and the Roman gradual and communion; by the earlier 5th century an alleluia psalm was sung in Jerusalem and possibly at other Eastern centres but not in the West. As for psalms that might prefigure the medieval entrance and offertory chants, there is no convincing contemporary evidence for their existence.

1. Instruments. 2. Biblical exegesis. 3. The jubilus. 4. The singing of women in church. 5. Antiphony. 6. Music theory. 7. Metrical hymns. 8. The musical character of early Christian song.

1. INSTRUMENTS. The polemic against musical instruments in patristic literature is remarkable for both its pervasiveness and its intensity. Virtually every one of the major Christian authors of the 3rd and 4th centuries made pejorative remarks about instruments, and they seem almost to vie with one another in the vehemence of their rhetoric. John Chrysostom, for example, referred to musical instruments along with dancing and obscene songs as the 'devil's heap of garbage' (*I Corinthios*, Homily XII.5), and Arnobius of Sicca asked: 'Was it for this that God sent souls, that in men they become male prostitutes, and in women harlots, sambuca-players and harpists?' (*Adversus nationes*, II.42).

The Church Fathers were not alone in casting musical instruments in an unfavourable light. A pagan author such as Livy, for example, included the employment of women harpists at banquets among the undesirable luxuries introduced to Rome from Asia (*Ab urbe condita*, xxxix, 6.7); and Rabbi Johana said: 'Whoever drinks to the accompaniment of the four musical instruments brings five punishments to the world' (*Soṭah*, 48a). Nevertheless the fulminations of the Christian authorities on the subject go well beyond anything uttered by their pagan and Jewish contemporaries.

The most common explanation given for the patristic attitude is the association of musical instruments with pagan religious practices. Tertullian, for one, gave credence to the view when he said of the theatre: 'Whatever transpires in voice, melody, instruments and text is in the domain of Apollo, the Muses, Minerva and Mercury. You will despise, O Christian, those things whose authors you can only detest' (*De spectaculis*, x.9). But certainly the patristic position is not just one of theological opposition; the ethical element is at least as potent a factor. Indeed at times the two factors appears to merge in the minds of some Church Fathers, with the sense of sexual immorality seemingly to be chiefly responsible for the intense emotional tone of their rhetoric. John Chrysostom, for example, wrote in this manner about the musical abuses at a marriage celebration:

> Nature indulges in Bacchic frenzy at these weddings; those present become brutes rather than men; they neigh like horses and kick like asses. There is much dissipation, much dissolution, but nothing earnest, nothing high-minded; there is much pomp of the devil here – cymbals, auloi and songs of fornication and adultery. (*In Acta Apostolorum*, Homily XLII.3)

A number of typical contexts for the patristic polemic may be noted: the lewd behaviour of musicians in the theatre, the coarse singing and dancing at weddings and the dubious profession of female harpists at banquets. It is significant that there are no instances of a patristic condemnation of musical instruments in church. If there had been, it would be reasonable to assume that the occasional intrusion of instruments into Christian ecclesiastical song was a problem. But it was not; apparently the psalmody and hymnody were simply of such a musical character that the issue of instrumental accompaniment did not arise. This is not to say absolutely that at no time were instruments used in association with early Christian song. Despite the lack of positive documentary evidence, it is easy to imagine that in the earlier centuries in particular – before the patristic chorus of condemnation had become so strident, and when Christian song was especially spontaneous in character – a psalm or hymn sung at an evening ritual meal might sometimes have been accompanied by a lyre or kithara.

See also BIBLICAL INSTRUMENTS.

2. BIBLICAL EXEGESIS. A considerable portion of the references to music in early Christian literature were made in an exegetical context. A large majority of these references are found in a single exegetical genre, the psalm commentary, which itself was the most common genre of all patristic literature, with most of the major Church Fathers of the 3rd and 4th centuries contributing their own example of it. The typical psalm commentary is a lengthy work, explaining verse by verse each of the 150 psalms in order. There are many references to music in the psalms, especially references to musical instruments, and hence there exist a great number of corresponding passages from the psalm commentaries. The modern scholar cannot assume that these remarks about music refer to the author's contemporary circumstances, but their biblical context must be taken into account. This is all the more so because most psalm commentaries are written in the style of the so-called allegorical or figurative exegesis. This style, influenced in its early stages by the Jewish Neoplatonist Philo and developed by his Christian follower Origen, generally ignores the literal and historical meaning of a biblical passage and seeks instead to extract some spiritual, ethical or prophetic meaning from it.

As for musical subject matter, this is particularly obvious in the way musical instruments are treated. At times the allegorical interpretations that the instruments are given produce moderately successful figures, as in the following passage where Pseudo-Athanasius explains the distinction between the two different types of trumpet cited in Psalm xcvii.5–6 – the trumpet of forged metal and the trumpet derived from an animal's horn: 'A fervent and intense study of evangelical preaching is understood by the metal trumpets; whereas kingly dignity is understood by the horn because kings are anointed from a horn'. The treatment of the same passage in the psalm commentary of Eusebius of Caesarea is, perhaps, less poetically apt; for him the metal trumpet, beaten into shape over a burning forge, signifies the preaching of the Apostles who underwent trial by fire on account of their faith, while the horn represents action because the horn is taken from a beast of burden. The purpose of these interpretations, however, was not to create good poetry in the Romantic sense; it was, rather, to provide theological and ethical edification. In any event, what is noteworthy in this instance is a total lack of reference to the historical objects of the original psalmic passage, that is, the metal trumpets of the Levites and the shofar, and

most certainly a lack of reference to any contemporary Christian use of instruments.

While instruments account for much of the patristic musical exegesis, other musical categories are also subject to occasional interpretation, most notably the set of related terms: psalm, hymn and canticle. For example, Hilary of Poitiers (*d* 367), in the preface to his psalm commentary, provides a complex explanation of the terms psalm and canticle as they appear in superscriptions to the Old Testament psalms. He establishes four genres: 'psalm', 'canticle', 'psalm of a canticle' and 'canticle of a psalm'. He defines, for example, the 'psalm' as the type where 'the voice rests and only the playing of the instrument is heard'. A music historian who misses the exegetical context of Hilary's interpretation might take the passage to refer to the use of instruments by Christians in the psalmody of their own time. Some Church Fathers distinguish the types of psalms by their content: generally 'hymns' and 'canticles' are said to be more exaltedly spiritual and 'psalms' more pragmatically ethical. In any event these distinctions, generally made in reference to the superscriptions of the psalms, have to do with different categories of Old Testament psalms; they must not be confused with the threefold modern distinction of Old Testament psalms, newly composed hymns, and biblical canticles.

While the majority of patristic psalm commentaries employ the allegorical method, those produced by members of the Antiochene exegetical school use the 'literal' or 'historical' method. These exegetes, then, were required to explain the use of instruments by the ancient Israelites; why was it, they asked themselves, that God permitted the use of instruments in his worship. The explanation that they provided is not without an element of anti-semitism, a typical example being the commentary by Theodoret of Cyrus (*d c*460) on Psalm cl:

> The Levites employed these instruments long ago as they hymned God in his holy temple, not because he enjoyed their sound but because he accepted the intention of those involved ... He allowed these things to happen because he wished to free them from the error of idols. For since they were fond of play and laughter, and all these things took place in the temples of the idols, he permitted them and thereby enticed the Jewish people, thus avoiding the greater evil by avoiding the lesser.

3. THE JUBILUS. The so-called jubilus, mistakenly associated with the melismatic alleluia of the Mass, is also something that must be understood in the context of biblical exegesis. Virtually all patristic references to the jubilus occur in psalm commentaries by way of interpreting the term 'jubilare' and its derivatives (not 'alleluia') as the word appears, for example, in the opening verse of Psalm xcix: *Jubilate Deo omnis terra*.

The jubilus was not a genre of Christian ecclesiastical song but rather a secular vocal phenomenon characterized by the absence of words. At times it was described in the literature as a shout rather than a song, although at other times a more lyric character was attributed to it. It appears in various contexts but most often as a kind of rhythmic chant that agricultural workers used as an aid to their labours. It earned its place in Christian literature when Latin Church Fathers appropriated it as a trope upon the word 'jubilare'; Augustine in particular exploited the figure to great effect in his virtually Romantic expansions upon the notion of a joy that surpassed ordinary speech. But no passage from patristic literature either states or implies that the jubilus was a device of Christian ecclesiastical song.

The application of the term 'jubilus' to the melismatic extension of the alleluia of the Mass was first made by Amalarius of Metz (*d c*850): 'This jubilation which the cantors call the sequence, leads our mind to that state, when the speaking of words will not be necessary' (*Liber officialis*, I.i, 16.3). The context of this passage makes it clear that Amalarius was using the term sequence to refer to the melismatic extension of the alleluia. Still, the identification of the jubilus with the alleluia was not yet complete; medieval authors, including Amalarius, used the term to refer to any sort of melismatic flourish in the ecclesiastical chant, and it was only in modern times that it came to be associated exclusively with the alleluia.

See also ALLELUIA, §I, 2, and JUBILUS.

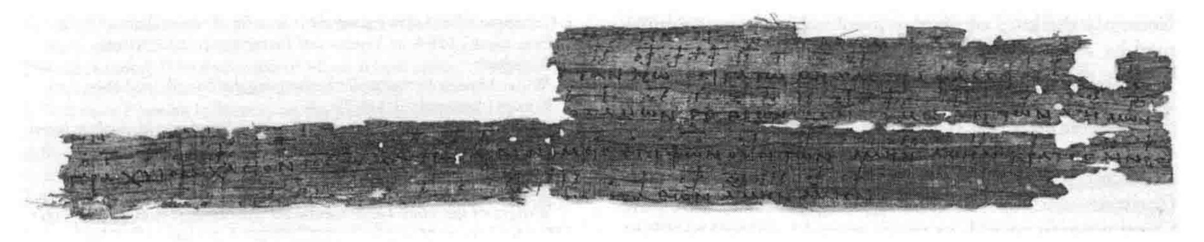
4. THE SINGING OF WOMEN IN CHURCH. St Paul set the tone for this issue when he wrote to the Corinthians: 'Let your women keep silent in the churches for it is not permitted unto them to speak' (*1 Corinthians* xiv.34). Three centuries later St Ambrose felt obliged to refer to Paul's injunction when advocating that all members of the Christian congregation (including women) engage in psalmody: 'The Apostle admonishes women to be silent in church, yet they do well to join in a psalm; this is gratifying for all ages and fitting for both sexes' (*Explanatio psalmi* i, 9).

Paul's words aside, it appears that the issue of whether or not women ought to sing at liturgical gatherings was not frequently raised in the earliest years of Christianity. Presumably, women as a matter of course joined in the psalmody and hymnody of this time when ecclesiastical song was more informal and spontaneous. The custom was seldom questioned until the 3rd and 4th centuries, and even then not very frequently. There are two obvious reasons – in addition to the inhibiting presence of Paul's words – why the issue was finally raised. First, the emergence of women's choirs in heretical circles of the 3rd century, such as that which sang under the auspices of Paul of Samosota, may have caused orthodox Christians to have scruples over the matter. Secondly, there was the spectacle of immoral female professional musicians, a phenomenon to which the Church Fathers of the 3rd and 4th centuries made increasingly common allusion.

Related to this second reason was a general puritanical sensibility that looked upon all physical pleasure as morally suspect, sexual pleasure in particular, but musical pleasure as well. Jerome, for example, well known as a rigorist on matters of sexuality from his notorious Letter 22 on the subject of virginity, betrays a hint of musical puritanism when he says: 'The *kakophonos*, if he has performed good works, is a sweet singer before God. Thus let the servant of Christ sing, so that not the voice of the singer but the words that are read give pleasure' (*In epistulam ad Ephesos*, III, v.19). And there is more than a hint of both sexual and musical puritanism present when he argues that women ought not to sing in church: 'You insist upon being regaled with their voices and songs ... but who does not know that women are to sing psalms in their chambers, away from the company of men? You, however, allow them to put on display what they ought to do modestly and without witness' (*Contra Pelagianos*, i.25).

But Jerome's position is that of the minority: Ambrose, as stated, approved of women singing in church; Niceta

in his thoroughgoing discourse on psalmody at vigils did not so much as allude to the issue, and neither did Basil and John Chrysostom, the chief spokesmen on ecclesiastical music in the East, in their numerous references to Christian song; Ephrem is said to have actively encouraged women's choirs to sing his hymns. Even Augustine, who expressed an extraordinary sense of guilt over the pleasure he felt listening to the psalmody at Milan, never once suggested in his many remarks about singing in church that women ought to be excluded. But if women were not silenced in church by early Christian authorities, they were in later centuries as a result of historical circumstances, namely, when lay congregations ceased to join in the singing and an exclusively male clergy assumed control of church music.



5. ANTIPHONY. The role of antiphony in early Christian music is a matter of some controversy. For many years scholars maintained a neat threefold categorization of early Christian psalmody: (1) 'direct' psalmody – the singing of a psalm from beginning to end without responses or antiphons; (2) 'responsorial' psalmody – the singing of the individual verses by a soloist, with a choral refrain sung after each verse; (3) 'antiphonal' psalmody – the alternate singing of the verses by two choirs. The third category, however, came to be questioned by scholars such as Helmut Hucke (1953) and Helmut Leeb (1967). The primary difficulty they had with the conventional view stemmed from the inconclusiveness of the patristic evidence. On the one hand there are extremely few unambiguous references to the alternate singing of two choirs (like that of Basil's Letter 207 quoted in §I, 3 above), and where such references do occur the term antiphony is not used to describe the phenomenon. On the other hand, those passages in which the term (or some derivative) is used do not in fact describe the alternate singing of choirs.

The uncertainty over the issue focusses especially upon the two related passages that fall into the latter category. Socrates and Sozomen, two early 5th-century ecclesiastical historians, in describing the same event tell how Arians assembled outside at night and sang 'antiphonal songs' expressing heretical views on the nature and relationship of the Father, Son and Holy Spirit. Christians, in turn, were organized to sing orthodox Trinitarian hymns, creating an impressive display for the faithful with their illuminated silver crosses. A confrontation between the Arian and orthodox groups resulted in serious violence and a consequent imperial ban on Arian hymnody. These two passages suggest a number of conclusions of varying degrees of probability. The Christian 'antiphonal song' that they describe clearly involved newly composed texts celebrating the Trinity, and most scholars see a connection between this observation and the fact that later descriptions of antiphonal psalmody specify the use of a concluding doxology. The passages also convey a general sense of musical excitement, with the presence of enthusiastic crowds gathering in the night-time. New melodies of a popular nature may have been involved, as well as a variety of performance styles, choral and solo, including quite possibly some manner of antiphony, perhaps between choirs of men and women, even if not a neatly symmetrical arrangement whereby two choirs sang the verses of a psalm or hymn in alternation.

The existence of a different category of evidence serves to complicate the issue still further. There are several passages concerning monastic psalmody that use the term *antiphona* as a noun within a series of terms that appear to refer to different modes of liturgical psalmody. Egeria, for example, in describing the singing of the Jerusalem 'monazontes' and 'parthenae', frequently uses expressions such as 'and with every psalm and antiphon a prayer is said', or 'and there are prayers with each hymn and antiphon'. Similarly, the contemporary monastic Rule of Pseudo-Augustine has expressions such as: 'During May, June, July and August there are eight antiphons, four psalms and two readings'; and that of the nun Melania the Younger: 'For the night-time three responsories are to be completed ... and at the morning office fifteen antiphons'. A century later Benedict would write in his Rule of 'six psalms with antiphons', and, conversely, 'let these three psalms be said straightforward without an antiphon'. Benedict appears to speak of the antiphon as a short musical piece sung somehow in conjunction with the psalms, and it is not implausible that the 4th- and 5th-century passages quoted here use the term similarly. This has prompted some to claim that antiphonal psalmody was nothing but responsorial psalmody with non-biblical refrains. This is surely an oversimplification, just as it is an oversimplification to equate antiphonal psalmody with the alternate singing of two choirs. Precisely where the truth lies, however, may continue to elude even the most perceptive of modern commentators.

6. MUSIC THEORY. Although the Church Fathers were vigorous in their opposition to the concrete manifestations of pagan music, they were largely receptive to the classical discipline of music theory. This was because their attitude towards music as an intellectual discipline was simply one facet of their attitude towards classical intellectual culture as a whole. The early Christian authorities recognized the necessity of a rapprochement with pagan learning. Jerome might have scrupled over the pleasure he experienced in reading the classics, and the irascible Tertullian might have asked disdainfully, 'What has Athens to do with Jerusalem? What has the Academy in common with the Church?'; but most acknowledged their dependence on classical learning. It was after all the only intellectual system available to them; they needed it if they wished to express their beliefs systematically, to defend them effectively and to interpret the Bible with sophistication.

Classical culture was conveyed to the citizens of late antiquity in the educational system of the seven Liberal Arts. Much of the essential doctrine of the system was present already in the educational teaching of Plato and Aristotle, even if it received its definitive form only in the early 5th-century *De nuptiis Mercurii et Philologiae* of MARTIANUS CAPELLA. This work provides short treatises on each of seven arts: Grammatica, Rhetorica, Dialectica, Arithmetica, Musica, Geometrica and Astronomica. The first three are language arts, the Trivium as they came to be called in the Middle Ages; they are propaedeutic to the group of four mathematical arts (including Musica), the so-called Quadrivium. In practice the typically well-educated person of late antiquity, whether a pagan or Christian, was given a thorough grounding in the language arts, especially Grammatica and Rhetorica, and only a superficial acquaintance with the mathematical arts, which were more intensively cultivated by specialists. Still, it was the mathematical arts that Augustine had in mind when he explained how an acquaintance with Musica aids in the interpretation of the Bible: 'We find

Oxyrhynchus papyrus 1786, showing the end of a hymn written in Greek vocal notation, end of the 3rd century CE *(Ashmolean Museum, Oxford)*

both number and music honourably placed in many passages of the Sacred Scriptures' (*De doctrina christiana*, II, xvi.26).

Augustine also made his own contribution to the discipline of Musica with his treatise *De musica*. In this work he concentrated on just two of the three principal divisions of Musica: Metrica and Rhythmica. He announced his intention to contribute another treatise on the third division, Harmonica, a highly technical subject that deals with the classical tonal system, but not surprisingly he failed to accomplish this. (In fact his work on Musica was originally conceived as part of an ambitious plan, again not realized, to compose a treatise on all seven of the Liberal Arts.)

The early Christian acceptance of the pagan Liberal Arts was of great significance for subsequent music history. The tradition was continued by the 6th-century Christian intellectuals BOETHIUS and CASSIODORUS, both of whom attempted to summarize classical music theory within their encyclopedic treatment of the Liberal Arts. Their work, in turn, was absorbed by the Carolingian music theorists, who applied the vocabulary and concepts of the classical Musica to the ecclesiastical chant of their own time. This unique effort not only provided a systematic explanation of their own music but probably helped to determine the subsequent course of Western classical music, characterized as it is by its strong rationalistic bias.

7. METRICAL HYMNS. To be distinguished from the anonymously composed, quasi-prose hymns like *Phōs hilaron* and *Gloria in excelsis* are the metrical hymns of self-consciously artistic character created by ecclesiastical figures of the 4th century. The greatest of the Eastern poets was EPHREM SYRUS (*d* 373), whose Syriac *madrāshe* – strophic hymns with refrain verses – had an important influence upon later Eastern liturgical hymnody, in particular upon ROMANOS THE MELODIST, the celebrated 6th-century Byzantine hymnographer of Syrian descent.

The first of the Latin hymnodists was HILARY OF POITIERS (*d* 367). It is not known whether his highly complex poems were intended for liturgical use, but those of his somewhat younger contemporary AMBROSE of Milan (*d* 397) most assuredly were. These were graceful verses in a simple iambic tetrameter that must have been eminently singable from the start, even though it is not known if the beguiling tunes to which they are set in the medieval sources have any relation to their original melodies. Many hymns of the Ambrosian type – referred to in fact by the term 'ambrosiana' – were composed in the early Middle Ages and were attributed to the revered bishop of Milan. At least four of them – *Aeterne rerum conditor*, *Deus creator omnium*, *Jam surgit hora tertia* and *Veni redemptor gentium* – are most certainly his work and possibly another ten in addition. It remains something of a surprise that the Ambrosian hymn gained a place in the monastic Office of 6th-century Gaul and Italy; apparently its liturgical appropriateness and general attractiveness proved sufficient to overcome the ascetic bent of early monasticism as well as the early Christian reluctance to employ non-biblical texts.

See also HYMN, §I.

8. THE MUSICAL CHARACTER OF EARLY CHRISTIAN SONG. There exists only one certain monument of early Christian music, and a possible second. The first is the so-called Oxyrhynchus Hymn, a substantial fragment of a hymn to the Trinity discovered at Oxyrhynchus in Lower Egypt in about 1920 by Grenfell and Hunt (1922); it was copied on the back of a papyrus towards the end of the 3rd century by a Greek-speaking Christian (see illustration). Its Greek letter notation allows for an accurate transcription. It is a diatonic piece of slightly less than an octave in range, with its final on G, and with most syllables of its text set to one or two notes. Scholars have held widely divergent views on how characteristic of early Christian music this seemingly isolated fragment was. The possibly contemporary example of Christian song is the simple Sanctus melody that is best preserved in the Western medieval Requiem Mass. Kenneth Levy (1958–63) has argued persuasively that this melody, and indeed the entire dialogue between celebrant and congregation of which it forms a part, dates from the 4th century. It is narrower in range than the Oxyrhynchus Hymn, as befits a congregational acclamation, and slightly more syllabic, while its diatonic tonality differs from that of the Hymn in that it has a half-step below its final.

Even if this Sanctus is accepted as authentic music of the 4th century, and its rough similarity to the Oxyrhynchus Hymn is noted, the two provide little evidence on which to generalize about the character of early Christian song. Only a number of broad reflections on the subject are possible. It can be said with some degree of certainty that early Christian music was largely diatonic. The one or two preserved examples aside, it appears that the music of the entire Mediterranean basin and Mesopotamian area, over a period of many centuries, was basically diatonic, even if sometimes embellished chromatically and microtonally (see Crocker). No doubt Christian music inevitably participated in this tonal environment.

It can also be said that early Christian music was text-centered and as such probably tended more towards the syllabic than the melismatic melodic pole. This does not exclude the occasional wordless utterance in the enthusiastic atmosphere of primitive Christianity, but it does rule out the supposedly common rhapsodic types of song incorrectly associated with the jubilus. Might it be said, then, that early Christian music was 'simple' in character?

Certainly the kind of display involved in song accompanied by a battery of instruments, like that of the Jewish Temple or of many pagan cult practices, was foreign to it. And taking into account that the Christian worship of the first centuries was conducted in domestic settings, it is reasonable to suppose that the song of the time was characterized by a certain intimacy. But, accordingly, as Christian worship moved into the great basilicas of the Constantinian period, its music would have had to adapt to the new acoustical environment. Still, it was the soloist with congregational response, rather than the practised choir, that remained the dominant mode of performance in the 4th century. The soloist, moreover, continued generally to be called a lector rather than a cantor and frequently was a mere youth rather than an adult.

All this does not mean that Christian song was dull and unattractive in the 4th century. Probably the singing of the nocturnal vigil, employing at times the so-called 'antiphonal songs', was generally livelier and more popular in character than that of the Eucharist, although this is not to say that the Eucharist was altogether lacking in musical interest. Much depended, no doubt, upon the native ability of the lector and also upon the quality of the tunes that were used as congregational responses. Of significance for the latter is the remark of Augustine about Psalm cxxxii.1, *Ecce quam bonum*: 'So sweet is that sound, that even they who know not the Psalter sing that verse' (*In psalmum* cxxxii.1). In summary it must be remembered that early Christian song was the music of an oral tradition, indeed of many different oral traditions, maintained in a variety of regions over a number of centuries. Variety might very well have been its single most constant quality.

Christiansen, Henning (*b* Copenhagen, 28 May 1932). Danish composer and action artist. He entered the Copenhagen Conservatory in 1950, studying the clarinet (Thomsen) and theory (Holmboe), and then became a clarinettist in the Danish Royal Guard (1956–60). He re-entered the Copenhagen Conservatory in 1960 to study theory (Westergaard), form (Høffding) and history (Hjelmborg). There he became a leading figure among the students who sought to emphasize experimental music by presenting Fluxus-dadaist performances; he left the conservatory, however, not finding its environment conducive to experimental approaches. Two summers in Darmstadt (1962–3) expanded his musical awareness; while there he deepened his acquaintance with Terry Riley, and they worked together in Darmstadt in presenting musical 'happenings'. Christiansen taught at the Odense Conservatory in 1961, worked as a clarinettist and taught privately until the early 1960s. He then devoted himself to composition and to writing articles on compositional goals and music aesthetics. In 1962 he took part in a Fluxus concert in Copenhagen, and in 1964 met Joseph Beuys at a Fluxus-dadaist festival in Aachen. The two began a significant collaboration which lasted until 1985; from 1967 to 1970 Christiansen worked with Beuys in Düsseldorf, producing a number of mixed-media, 'action' works. From 1985 to 1997 he was professor of multimedia at the Hochschule für Bildende Künste in Hamburg.

Christiansen's early works have a neo-classical character, but by the end of the 1950s his style approached that of the Darmstadt school. In the mid-1960s, however, he reacted against the complexity emphasized at Darmstadt, producing a number of static compositions which employed a slow-moving, repetition principle. *Perceptive Constructions* (1964) is one of the first works of this type, and Christiansen became influential in the movement among Danish composers called 'Den Ny Enkelhed' (The New Simplicity), which for him meant the establishment

of a new artistic starting-point. In his chamber opera *Dejligt vejr idag, n'est-ce pas, Ibsen* ('Lovely weather today, isn't it, Ibsen', 1968), in which he began to 'move the music again' in a more melodic manner, the repetition principle was combined with cyclic-ritual rules for text and stage action. By 1970 he was adopting a more straightforward tonal style, using folk-type melodies, harmonies and rhythms to create a simple music which 'people can play and sing'. Christiansen's membership of the Danish Communist Party has influenced his compositional attitude, encouraging a musical statement which 'can say something to the people'. He has provided a number of scores for films produced by the Danish Film Institute and for plays shown on Danish television and abroad. In continuation of the Fluxus movement's breaking-down of the differences among art forms, Christiansen works with a mixture of art in action, picture and sound. He has gradually abandoned scored music in favour of 'visual music' and no longer composes works in the conventional sense of the term. He describes himself as an 'idea composer', advocating thinking in sound rather than in music.

WORKS
(selective list)

DRAMATIC AND VOCAL

Stage: Dejligt vejr idag, n'est-ce pas, Ibsen [Lovely weather today, isn't it, Ibsen] (chbr op, H.-J. Nielsen), op.37, 1968, Danish TV, 1968; Blomsten og forraederiet [The Flower and the Treachery] (op, Shandorf, after H.C. Andersen), op.88, 1974, Danish TV, 1975; It is a matter of your security, musical, op.95, 1975; Bridas Fall, op, op.103, 1976

Film scores: Den forsvundne fuldmaegtig [The Missing Bureaucrat], op.69a, 1971; Skarpretteren [The Executioner], op.68, 1972; Livet i Danmark, op.73, 1972

Choral: Oktober er gul [October is Yellow] (Nielsen), op.61, tr vv/solo v, elec gui, 1968; Laeserne [The Readers] (Andersen), op.92, solo vv, chorus, pf, 1975; Venceremos (C. Scharnberg), op.94b , unacc., 1975; Folk Poetry from Central Asia, op.104, female vv, 1976

Songs: 3 sange fra 'Aftonland' (P. Lagerkvist), op.5, 1v, pf, 1957; 3 Beckettsange, op.14, Bar, chbr ens, 1963; Artikulationer (Nielsen), op.30, 1v, orch, 1965; Jüngling auf der Wanderschaft (P. Kirkeby), op.63, reciter, pf, 1971; Politiske og folkelige sange og viser (Christiansen), op.74, 1972; Efter 2. oktober, op.80, Bar, pf, chorus ad lib, 1972; Naturdigte (E.K. Mathiesen), op.81, Bar, pf, 1974; Venceremos, 94a, 1v, pf, 1975; Melodrama: Enter your Time (N. Grieg), op.97, reciter, pf, 1975

INSTRUMENTAL

Orch: Rhapsody, op.2, cl, orch, 1955; Korrespondance, op.15, b cl, orch, 1963; Space and Object, op.23, 1964; 'To play to-day', pf conc., op.25, orch, 2 vv, the composer, 1964; Perceptive Constructions, op.28, 1964; En rose til frk. Stein [A Rose for Mrs Stein], op.31, 28 str, 1965; Sym. no.2 'Den forsvundne fuldmaegtig' [The Missing One], op.69c, 1971; Conc., op.83, rec, str, hpd, 1973; Viking-Music, op.96, wind, perc, 1975; Danish Summer, op.98, pf, orch, 1975; Summer Festival Music, op.101, band, 1976; Summer Dance, op.106, 2 cl, brass band, 1976; The Jutland Gipsies, op.108, ens, 1972

Chbr: Quintetto infernale, op.9, cl, bn, perc, pf, vn, 1961; Quintetto espressione, op.10, fl, pf qt, 1962; Sonata, op.13, vn, pf, 1962; Den arkadiske, op.32, str qt, 1965; Den rokadiske [The Castling], op.34, str qt, 1966; Demonstrationer, op.35, str qt, 1966; Ein Engel ging vorbei, cl qnt, op.38, 1967; Satie auf hoher See, op.52, (vn, pf)/pf, 1969; Det er forår [It's Spring], op.56, rec, hpd, 1970; Laenge leve livet [Long Live Life], op.76, rec, vc, hpd, 1972; Det forsømte forår [The Neglected Spring], op.93, cl, pf, 1975; Trio, op.91, rec, vc, spinet, 1975; In the Deep Woods, op.102, 5 tubas, 1976; It might be so lovely, op.105, rec, vc, 1976; The Merry Future, op.107, rec, spinet, 1976; Turkeymusic, op.109, ens, 1977

Solo inst: Sonata, op.4, pf, 1957; 3 progressive sonater, op.17, pf, 1963; Modeller, action pieces, op.33, pf, 1964–8; Informations (after Nielsen: *Textures*), org, 1965; Eurasienstab, fluxorum organum, op.39, org, 1967; Lokaliteter [Localities], op.53, pf, 1970; 'Den forsvundne fuldmaegtig', sonata, accdn, op.69b, 1971; Tragedy, op.77, elec gui, 1972

Tape: Dialectical Evolution, op.16, 1963; Watersong, op.22, 1964; '1, 2, 3, 4, 5', op.36, tape, pf, 1966; HAIKU-demonstrationer (Haiku, trans. Nielsen), op.40, with action, 1967; 'Rastplatz bitte sauber halten', op.43, with action, 1967; Requiem of Art, op.50, 1970; Musik als grün, op.51, 1969–70; Scottisch Symphony, op.61, 1970; One Year with a Girl, op.75, 1972

COLLABORATIVE
with Beuys

Manresa, Düsseldorf, 1966; Hauptstrom, Darmstadt, 1967; Eurasienstab-fluxorum organum, Vienna, 1967; Wide-White-Space, Antwerp, 1968; Ich versuche dich freizulassen . . . WILLIAM H. REYNOLDS/THOMAS MICHELSEN

Christianus, Johannes. *See* CHRISTENIUS, JOHANN.

Christie, John (*b* Eggesford, Devon, 14 Dec 1882; *d* Glyndebourne, 4 July 1962). English patron of music. An opera enthusiast, he was the founder of the GLYNDEBOURNE Festival.

Christie, William (Lincoln) (*b* Buffalo, NY, 19 Dec 1944). American conductor. He studied the piano and organ in Buffalo and took a degree in art history at Harvard University before going to Yale University, where he studied the harpsichord under Ralph Kirkpatrick and musicology under Eliot Forbes. In 1969–70 he lectured at Dartmouth College, New Hampshire, where he directed the collegium musicum, but in 1971 he moved to Paris where at first he worked chiefly as a harpsichordist, collaborating with such artists as Judith Nelson and René Jacobs. Successful work with ensembles led him in 1979, to found a group that he called Les Arts Florissants, after

a work by M.A. Charpentier, a composer with whom he has shown special affinities.

This group, principally of French and American musicians, quickly set new standards in the performance of French music of the Baroque period, playing and singing with much refinement and urbanity and with particular care for shapely line and accurately placed detail. They at first specialized in the music of Charpentier but soon extended their repertory, giving such works as madrigals by Monteverdi, Landi's *Sant'Alessio*, Luigi Rossi's *Orfeo* and, particularly admired, a production of Lully's *Atys* (given widely in 1987, the composer's tercentenary year) as well as Charpentier's *Médée* and music by Rameau. They have also performed works by Purcell (among them a sumptuous tercentenary production of *King Arthur*) and Handel, with a recording of *Messiah* that was widely praised but also noted for a hint of French inflection. Christie conducted productions at Glyndebourne of *Theodora* (1996, staged by Peter Sellars) and *Rodelinda* (1998). In the late 1990s he also enjoyed success in performances and recordings of Mozart operas, bringing to them his usual refinement of style and care for detail, obtained through his cool, undemonstrative but precise conducting technique.

It is, however, primarily in the field of Baroque music, French in particular, that Christie's impact has been powerful, in effect drawing attention to what had traditionally been considered a recondite repertory and making it widely popular with the concert-going and record-buying public, and at the same time propagating in France, and drawing to the attention of a generation of French musicians, a historically aware style of interpretation of French Baroque music. Christie taught at the Paris Conservatoire, 1982–95, and is an honorary professor at the GSM, London; of dual French and American citizenship, he has been appointed Officier de l'Ordre des Arts et Lettres (1986) and Officier de la Légion d'Honneur (1993). He has written, with Marielle Khoury, *Purcell au coeur du Baroque* (Paris, 1995).

STANLEY SADIE

Christina [Christina Alexandra], Queen of Sweden (*b* Stockholm, 8 Dec 1626; *d* Rome, 19 April 1689). Swedish ruler and patron of music, active partly in Italy. She was one of the principal 17th-century patrons of arts and learning and for 30 years the leading figure in the cultural life of Rome.

1. Sweden. 2. Rome.

1. SWEDEN. Christina succeeded at the age of six to the throne of her father, Gustavus II Adolphus, hero of the Thirty Years War, who was killed at the Battle of Lützen in 1632. In accordance with his wishes she was given the education of a prince during the chancellorship of Axel Oxenstierna, and by 1644 she had achieved a reputation for intelligence, learning and culture. After the alliance with France in 1635, French culture began to assert itself at the Swedish court, and in 1637 she brought from France the dancing-master Antoine de Beaulieu. In 1646, to provide authentic music for the French ballets that quickly became the rage in Stockholm, she imported six French violinists, among them Pierre Verdier, who at first were established as a separate ensemble independent of the so-called German chapel of Andreas Düben. Other French musicians were brought in, and in 1647 the Swedish representative at Elsinore was instructed to engage English musicians formerly with the Danish king, but they seem not to have gone to Stockholm.

Of more far-reaching importance than the engagement of French musicians, however, was the contact that this rapprochement with France occasioned between the young queen and the remarkable French diplomat Pierre Chanut and, through him, Descartes. Descartes went to Stockholm at her invitation in October 1649. His first assignment was to collaborate on the ballet *La naissance de la paix* to be performed for her birthday in December, and thereafter he met her two or three times a week at 5 o'clock in the morning to discuss philosophy and mathematics. Though he died in February 1650, his impact on her was tremendous, and she later paid tribute to him, as well as to Chanut, for resolving many of the difficulties she encountered on her path to Catholicism.

For his part, Descartes could not praise the queen highly enough, but he complained that he had to compete with her interest in Greek, ancient philosophy and old books. These interests, combined with her well-known passion for music, made her the obvious dedicatee of Marcus Meibom's *Antiquae musicae auctores septem* (Amsterdam, 1652). She promptly invited him to Stockholm, but his stay was brief and ended unhappily (*see* MARCUS MEIBOM). He was named as assistant royal librarian, but Christina, having secretly decided early in 1652 to convert to the Catholic faith, abdicate her throne and take up residence in Rome, soon began smuggling her valuable library and art treasures out of Sweden to Antwerp. Simultaneously she transferred her musical interest from French ballet to Italian opera. In November 1652 an Italian troupe engaged for her by Alessandro Cecconi was attached to the court. Cecconi, himself a musician who became the queen's trusted personal servant and continued in her service in Rome, had discharged his commission well; the troupe included a number of excellent musicians such as Domenico Albrici and his sons Vincenzo and Bartolomeo, Domenico and Nicola Melani and Pietro Reggio. Soon after the elaborate celebration of Christina's coronation on 20 October 1650 (which continued into 1651) was concluded, the court's German and French chapels joined forces under Düben's direction, but the new Italian group remained independent under the leadership of Vincenzo Albrici. Curiously, no account survives of any operas performed by them, but a great deal of other Italian music from this period remains in Swedish sources. English music also made its appearance at Christina's court with the arrival of an embassy from England headed by Sir Bulstrode Whitelocke, representing Oliver Cromwell. The music-loving Whitelocke left a lively account of the young queen, and, like Cromwell and Milton, he esteemed her highly and praised her in eloquent terms. He reported that she admired the English music he had had performed for her and that she had requested him to obtain copies of it for her. It presumably included the viol music by Benjamin Rogers which is found in autograph sets in Uppsala University Library. Whitelocke also admired the excellent performances of Christina's musicians, and it may have been through his friendship and encouragement that some of them went to England to pursue their careers after Christina left Sweden. One who did so was the virtuoso

violinist Thomas Baltzar, and the Albricis and Reggio eventually made their way to England too.

2. Rome. Queen Christina abdicated her throne on 6 June 1654, for reasons which are still a matter of dispute, and left Sweden without delay. She went first to Antwerp and then to Brussels, where on Christmas eve she secretly embraced the Catholic faith. In the autumn of 1655 she proceeded to Innsbruck, where her official reception into the Church was celebrated, under the auspices of Archduke Ferdinand, with a week of festivities that included a performance of Cesti's opera *L'Argia*. Her journey to Rome, which she reached just before Christmas, was nothing less than a triumphal procession accompanied by special entertainments and music at every stage (see illustration). She entered Rome through the Porta del Popolo, which still bears an inscription of welcome dated 1655. Pope Alexander VII received her for communion on Christmas Day and established her in Rome as if she were still a reigning monarch; in gratitude she added 'Alexandra' to her name. The celebrations in her honour continued in the New Year and included Marazzoli's opera *La vita humana* (dedicated to her and performed on 31 January 1656) and a revival of his *Le armi e gli amori*, both given at the Palazzo Barberini; *Il giudizio di Paride* by Tenaglia, performed at the Palazzo Pamphili; and, at the Collegio Germanico, Carissimi's *Historia di Abraham et Isaac*, with the lost *Giuditta* as an intermezzo.

Christina's first residence in Rome was the Palazzo Farnese and she established herself at once as one of Rome's leading cultural figures by founding an academy at which leading artistic and scholarly personalities met for the first time on 24 January 1656. This influential assembly, which had as its purpose the re-establishment of classical ideals, continued to meet until her death and beyond, when it became the Arcadian Academy. Though it was essentially a literary society, music occupied an important place in its activities, and every meeting ended with a concert. In 1680 Christina founded a second society in memory of her friend Pope Clement IX, the statutes of which stipulated the performance of a sinfonia and a vocal work at every meeting.

Queen Christina riding into Rome, flanked by cardinals Orsini and Costaguti, on 23 December 1656: engraving by Orazio Marinari; the vignettes below show her reception outside the Porta del Popolo and the basilica of S Pietro, and before Alexander VII in consistory

Late in 1656 and again during the period 1657–8 Christina was in France plotting with Mazarin for the throne of Naples. They were betrayed, however, and, invoking a royal prerogative, she had the Marchese di Monaldesco executed for his part in the affair. Shortly afterwards her favourite, the musician Alessandro Cecconi, died in the Palazzo Rospigliosi, into which she moved on her return from France in 1658. In 1659 she moved to the Palazzo Riario, where, except for a journey to Sweden (1660–62) and another to Hamburg (1666–8), she remained for the rest of her life. She added to her collection of treasures with such taste and to such purpose that her home became a virtual museum for connoisseurs and a haven for scholars (e.g. Kircher), artists (Bernini, Maratta), men of letters (Guidi, Filicaja, Menzini) and musicians, over which she presided as 'Pallas nordica'. She built a theatre in her palace where she produced operas and plays, and in 1671 she opened the rebuilt Teatro Tor di Nona as the first public opera house in Rome with a performance of Cavalli's *Scipione affricano*, now rededicated to her and provided with a new prologue by Stradella.

Numerous musicians were associated with her during her 30 years as the leading figure in the cultural life of Rome. Some, such as Marazzoli, Pasqualini, Vittori, Francesco Bianchi and Giuseppe Melani, were also musicians to Cardinal Antonio Barberini and may have been only shared or borrowed by her, though in 1656 Marazzoli was referred to as her *virtuoso da camera*. Other prominent figures who enjoyed her patronage and protection and dedicated works to her included Pasquini (the operas *L'Alcasta*, 1673, and *Il Lisimaco*, 1681), Alessandro Melani (*L'empio punito*, 1669), Corelli (op.1, 1681) and Alessandro Scarlatti, who at the age of 18 attracted her enthusiastic attention with his *Gli equivoci nel sembiante* to the extent that she defended him against the displeasure of Pope Innocent XI. She sponsored the performance of his *L'honestà negli amori* in 1680, and from then until he left to join the King of Naples in 1684 he was styled her *maestro di cappella*. In a letter to the Grand Duke of Tuscany in 1706 he remembered this remarkable and perceptive woman and reported that the madrigals of Gesualdo pleased her more than anything else. In 1687, on the arrival of Lord Castlemaine from England to reopen diplomatic relations with the Vatican, she held a special meeting of her academy to celebrate the coronation of the Catholic James II two years before. For this meeting Pasquini composed his *Accademia per musica* to a text by Guidi, which was performed by an assembly of 150 musicians led by Corelli.

After Christina's death 1900 books and manuscripts from her library went to the Vatican, where they have

been admired and used by scholars (e.g. Burney) ever since. She was buried in S Pietro.

JOHN BERGSAGEL

Christmann, Johann Friedrich (*b* Ludwigsburg, 9 Sept 1752; *d* Heutingsheim, nr Ludwigsburg, 21 May 1817). German composer and writer on music. He grew up in a musically congenial atmosphere, often attending academies given by the excellent Württemberg court orchestra, and was himself proficient as a keyboard player and flautist. He attended the Gymnasium at Stuttgart in 1762 in preparation for a scientific career but subsequently studied theology at Tübingen (1770–74). In 1777 he moved to Winterthur, where he was a preceptor at court and where he completed preparations for his *Elementarbuch der Tonkunst*. Two years later he lost his right eye in an experiment with flammable gas for an aerostat; after recuperating he became a tutor at the Karlsruhe court, where he met the Abbé Vogler. In 1784 he married and became pastor at Heutingsheim and Geisingen, where he served for the rest of his life.

Christmann is best known for his *Elementarbuch* (Speyer, 1782–9) and as joint editor (with Bossler) of the *Musikalische Realzeitung* (1788–90), a Speyer weekly in which he outlined plans for a comprehensive music dictionary, never realized, and (with J.H. Knecht) of the Württemberg hymnbook. He gained some fame as a composer of lieder and wrote several lengthy articles of interest to music historians for the Leipzig *Allgemeine musikalische Zeitung* (1798–1803).

WORKS

Vocal: [26] Vaterlandslieder, für Wirtemberger und andere biedere Schwaben, vv, kbd (Stuttgart, 1795); Die Bataille: ein Tongemälde, 1v, pf (Darmstadt, 1796); Oden und Lieder für das Klavier (Leipzig, 1797); Vollständige Sammlung, [266, 26 by Christmann] theils ganz neu componirter, theils verbesserter, vierstimmiger Choralmelodien, für das Neue Wirtembergische Landgesangbuch, ed. with J.H. Knecht (Stuttgart, 1799, appx 1806); Die Braut von Korinth (J.W. von Goethe) (Leipzig, 1799); Arion (A.W. Schlegel), romance (Augsburg, 1801); Die Kinder im Walde, ballad, arr. kbd (Leipzig, n.d.); at least 90 songs in contemporary anthologies issued mainly by Bossler at Speyer

Inst: Tiroler sind immer so lustig und froh: l'air connu varié, vn, bc (Offenbach, 1800); Ah! Vous dirai-je, Maman: varié, fl, bc, op.2 (Offenbach, 1801); Recueil de 12 marches, pf, 2 for pf 4 hands, op.3 (Offenbach, *c*1801); numerous other kbd works and inst pieces in contemporary anthologies

SHELLEY DAVIS

Christmas plays. For the music of medieval Christmas plays, *see* QUEM QUERITIS. *See also* MEDIEVAL DRAMA.

Christo, Luiz de [Cristo, Luís de] (*b* Lisbon, 1625; *d* Lisbon, 7 Sept 1693). Portuguese composer. His father's surname was Dias. He became a Calced Carmelite on 18 May 1641 and professed at the Lisbon monastery of his order on 19 May 1642. From about 1660 he was organist of Lisbon Cathedral. That he was a favoured composer at the court of Afonso VI is attested to by his settings of Tonos IV and V in Francisco Manuel de Melo's *Avena de Tersicore* (Lyons, 1665). His sacred works included four choral Passions, Lessons for the Dead, motets and vilhancicos, none of which survives.

ROBERT STEVENSON

Christofellis, Aris (*b* Athens, 5 Feb 1960). Greek male soprano. He studied the piano and singing at the Athens Conservatory and the Ecole Normale de Musique in Paris, and continued his vocal studies with Fofi Sarandopoulo, with whom he developed a remarkable range of over three octaves. He made his recital début in Bordeaux in 1984 and his operatic début, in Vivaldi's *L'Olimpiade*, in Frankfurt in 1986. He has subsequently sung in many 18th-century operas, among them Handel's *Il pastor fido* and *Arminio*, Jommelli's *Armida abbandonata* and Paisiello's *L'idolo cinese*. His recordings include Vivaldi's *Ottone in villa* and *L'Olimpiade*, and discs of soprano castrato arias. Christofellis has also made a detailed study of the vocal techniques and ornamentation of the 18th-century castratos and has unearthed a number of forgotten works. He combines a bright, penetrating timbre with impressive agility and a sure command of style.

MICHAEL HARDY

Boris Christoff in the title role of Musorgsky's 'Boris Godunov'

Christoff, Boris (Kirilov) (*b* Plovdiv, 18 May 1914; *d* Rome, 28 June 1993). Bulgarian bass. He first studied law, but was heard in the famous Gusla Choir by King Boris of Bulgaria who sent him to Rome to study singing with Riccardo Stracciari; he continued in Salzburg with Muratti. Returning to Italy in 1946, he made his operatic début as Colline at Reggio di Calabria. The following season he sang Pimen at both Rome and La Scala. He first sang Boris Godunov in 1949 at Covent Garden, creating a sensation; he repeated the role in many leading houses, including La Scala and the Opéra, and in 1974 sang it at Covent Garden to celebrate the 25th anniversary of his first appearance there. He first sang his other great role, Philip II in *Don Carlos*, at Florence in 1950, and repeated it, memorably, in Visconti's Covent Garden staging in 1958. His repertory also included Khan Konchak, Rocco, King Mark, Hagen and Gurnemanz, Gounod's and Boito's Mephistopheles, Dosifey and most of Verdi's leading bass roles. He made his American début as Boris at San Francisco in 1956 and sang at Chicago from 1957 to 1963. He was also a fine recitalist, and made an extensive series of recordings of Russian song, most notably of Musorgsky. His last major appearance was in concert in New York in 1980.

Christoff was hailed by many as Chaliapin's successor because of his identification with the great singing-acting parts in the Russian repertory. His voice, though not large, was of fine quality, smooth, round, well projected and perfectly controlled. His many operatic recordings include two of *Boris Godunov* in which he sings three roles, Boris, Pimen and Varlaam. He was able, through his personal magnetism and theatrical skill, to generate tension whenever he was on stage. His dramatic powers, and his ability to give words their fullest meaning and expressive weight, placed him among the great singing actors of his day.

HAROLD ROSENTHAL/ALAN BLYTH

Christoforus [Cristoforo] **de Monte** [de Feltro] (*b* Feltre, *fl* 1406–37). Italian composer; two single-texted motets for four voices are found in the old layer of *I-Bb* Q15. The text of *Dominicus a dono* (*I-Bc* Q15 no.220) includes autobiographical information that he was 'in Feltro natus' and that he learned singing in his native mountains. New documentation (provided by Paolo Da Col) suggests that he may not be the same Cristoforo who was employed at Padua Cathedral between 1402 and 1426, as was previously suggested (S. Clercx: *Johannes Ciconia*, Brussels, 1960). While a sojourn in Padua is not necessarily incompatible with the known facts, and would fit well with the presence of his works in Q15 in the 1420s, an identification is premature in the absence of a more specific name.

He is already described as a priest by 1406 and must therefore have been born by 1383. His patronymic (son of Antonius Donatus) is given in documents from Belluno of 1407 and 1411; archival sources and the fragment *D-Mbs* Mus.ms.3224, which includes an incomplete Credo by him (ed. in Wolf), call him 'de Feltro' (the name 'de Monte' seems to have been derived from the scribe of Q15 from the text of *Dominicus a dono*). A notarial act of February 1406 calls him 'plebanus' and, in the same year, Clemente Miari's Belluno chronicle (Padua Biblioteca del Seminario, MS 627) calls him 'cantor', 'presbyter' and 'plebanus de Petra Rubea' (i.e. Pederobba). Miari refers to an occasion when Christoforus was summoned from Feltro to Belluno, together with other musicians, to provide music at the celebration of the first Mass in Belluno of the new bishop, Enrico Scarampi. From 1407 Christoforus was salaried by the Belluno Cathedral chapter, first (until 1411) as *magister cantus* and later (from 1412 to 1415) as *mansionarius* and sacristan. His name is absent in 1416–17; from 1418 to 1420 he was paid as cantor. After an absence from the Belluno archives (which includes the period when one and posibly both his motets were composed and copied into Q15 in Padua) he next appears at Udine, where he is documented from 17 May 1432 to 29 April 1437 as *mansionarius* of that cathedral; various domestic records record some of his activity in 1432. In the same year Nicolaus de Capua was also present in Udine.

His two motets (both ed. in Cox), are single-texted motets for four voices with equal discantus parts notated in *tempus perfectum* and show strong signs of Ciconia's influence; the lower parts of *Dominicus a dono* (in honour of the Dominicans) are in major prolation. *Plaude decus mundi* (no.215) was evidently written for the installation of Doge Franceso Foscari in 1423 and is the latest composition to be copied in the old layer of the manuscript.

MARGARET BENT

Christou, Jani (*b* Heliopolis, Egypt, 8 Jan 1926; *d* Athens, 8 Jan 1970). Greek composer. The son of a Greek chocolate manufacturer who settled in Egypt, he grew up in the patrician Greek community of cosmopolitan Alexandria. These surroundings – not least the shadow of an ancient civilization obsessed with survival after death – had a deep effect on his creative personality. His education was predominantly in English institutions, giving him a mastery of the language in which he was to write his many unpublished philosophical and musical texts, his diaries and notes on his dreams. After studying at the wartime branch of Victoria College in Alexandria (?1936–45), he went to King's College, Cambridge, to study with Russell and Wittgenstein, receiving the BA in 1948. Having previously taken lessons with Alexander Plotnikoff, a Russian emigré pianist, in Egypt, and with Gina Bachauer, he studied counterpoint and composition privately with Redlich at Letchworth during his Cambridge years. In the course of the next two years he studied analysis and orchestration with Lavagnino in Gavi and Rome. Also, on five occasions, he attended the summer courses at the Accademia Musicale Chigiana in Siena, where he took classes in composition with Frazzi and film music with Lavagnino. At some unknown time his interest in depth psychology took him to the Jung Institute in Zürich. It has not been confirmed that he took lessons with Jung himself, but his brother Evangelos, who was a profound influence on Christou, studied at the institute from 1951 to 1954 and became a practising analyst.

In 1950 or 1951 Christou returned to Alexandria where in 1956 he married Theresia Horemi. Later in that year Evangelos died in a car crash, an event which precipitated a decisive change in Christou's work. In 1960 he settled in Greece, dividing his time between Athens and Chios. Although he remained somewhat apart from Greek musical life, the impact of his creative work and his personal charm gained him an increasingly important position in avant-garde circles in his later years. At this time his reputation began to spread abroad and in 1969 Christou considered organizing an international festival of modern music in Chios. He died, like his brother Evangelos, in a car crash.

Christou's oeuvre presents a continuously evolving unity, which can be detected even in such stylistically discrepant works as *Phoenix Music* and *Enantiodromia*. Papaïoannou (*MGG1*) described six periods in Christou's output, but it is more appropriate to condense these into three moderately distinct phases illustrating his evolving philosophy and attitude to art: from *Phoenix Music* (1948–9) to the Symphony no.2 (1957–8), from *Patterns and Permutations* (1960) to *Tongues of Fire* (1964) and lastly from *Mysterion* (1965–6) onwards. The works of the first period were described by Christou as 'freely atonal'. The slight and gradually disappearing influences of Stravinsky (in the Latin Liturgy), Berg and Mahler (in the Eliot Songs) do not detract from the individuality of a rather austere linear polyphony which is carefully constructed and discreetly orchestrated. Broad cantilenas are avoided in favour of forms built from three-note motifs containing only semitones and whole tones (e.g. *Phoenix Music* and much of the Symphony no.2). In this early period Christou's music and his philosophy were already interdependent.

In his second phase Christou progressed to what he called 'meta-serialism' (in Christou's vocabulary that prefix 'meta-' often has the sense of 'beyond'), producing a sparkling polyphony from rhythmic ostinatos and the 'fusion of incompatible instrumental colours' (Slonimsky). Christou was now far from considering music as an activity for its own sake (he scorned such a view as 'decorativism' and 'aestheticism'), but rather as a means of activating primordial shared emotions otherwise hidden by civilized experience, and of achieving mystical states of trance or hysteria. From this period he introduced, or redefined, terms to describe the techniques and aims of his music. For example, the 'patterns' of *Patterns and Permutations* are 'the constant regroupings of the same or different aspects of the same components of a musical statement', while 'permutation' is defined as 'the general process of multiplication of musical matter, through the organization into different structural combinations of a given number of factors'. Christou's philosophy at this time may be said to evoke a mystic fusion with the divinity, principally expressed in *Tongues of Fire*.

In dramatic contrast to the second, the third phase manifests Christou's increasing concern with death and the after-life (*Mysterion*, appearance of Darius's ghost in *The Persians*). Perhaps this was one of the results of his brother's death, but he may also have had presentiments of his own end. Among other works he sketched some 120 *Anaparastasis* ('Re-enactments'), of which two were performed during Christou's lifetime and 33 left in a state he regarded as completed. They are essentially short 'scenarios' designed to stimulate deep psychic reactions between the performers, so their performance is extremely problematic. Christou began to use a notation of his own ('shorthand' or even pictographical devices), but always (except in *Epicycle*) determined durations for passages of more or less free improvisation. However, in *Epicycle* he aimed at 'a voluntary abdication of [his] role as a composer' in order to bring about 'a confrontation with chaos … in its negative, non-artistic aspect'. Again in this phase new terms appeared; most importantly, 'praxis' (an action which conforms purposefully with the current logic of a medium) and 'metapraxis' (a concept essentially elusive, an assault on the logic of the performer's relationship to his own particular medium). *Enantiodromia* provides an example of the former in performers

playing their instruments, and of the latter in performers who begin to shout. Basic to *Epicycle* (1968) is the notion of 'continuum': 'a sustained sound' and 'a climate of total impassivity, whose participants must dissociate themselves from all other events ... taking place around them'. Also in his last years Christou became more concerned with the possibilities of tape, producing in his own studio a rich archive of sound recordings.

Some of the *Anaparastasis* were possibly intended for incorporation in the *Oresteia*, a massive stage ritual for actors, singers, dancers, chorus, orchestra, tape and visual effects, which was to take the Aeschylean trilogy as the starting-point for dealing with mythical archetypes. Shortly before his death Christou stated that the work was finished, but the fragmentary nature of the notes, sketches and tapes which survive makes it unlikely that a realization of the *Oresteia* will be possible. In his last interview, Christou associated the *Oresteia* with 'the panic of the lack of solution to the problem of human existence'.

WORKS

DRAMATIC

Ops: Gilgamesh (op-orat), 1953–8, lost; La ruota della vita (3 ops, D. de Paulis), 1955–7, lost: Una mamma, Savritri, Il trionfo della morte; The Breakdown (op, 3, Christou), 1964, lost; Oresteia, 1967–70, inc.

Incid music: Prometheus Bound (Aeschylus), 1963, Epidaurus, 16 June 1963; Agamemnon (Aeschylus), 1965, Epidaurus, 27 June 1965; The Persians (Aeschylus), 1965, London, Aldwych Theatre, 20 April 1965; The Frogs (Aristophanes), 1966, Athens, Herod of Atticus Theatre, 19 July 1966; Oedipus Rex (Sophocles), 1969, London, Aldwych Theatre, 22 May 1969

Other dramatic: The Inner World (TV score), 1964, 19 April 1964; Mysterion (ancient Egyptian funeral texts), 1965–6, Athens, 13 June 1974; The Strychnine Lady, Athens, Hilton Hotel, 3 April 1967; Oedipus Rex (film score), 1967–8; Epicycle, variable forces, 1968, Athens, Hilton Hotel, 20 Dec 1968

GEORGE LEOTSAKOS

Christy, Edwin Pearce (*b* Philadelphia, 28 Nov 1815; *d* New York, 21 May 1862). American minstrel-troupe organizer and performer. In 1842 while helping the widow Harriet Harrington to run a tavern at Buffalo, he joined her son George (who adopted the name Christy) and Thomas Vaughn to sing blackface songs. The troupe was augmented with Lansing Durand and others, and toured upstate New York in 1843–5. Acting as manager, interlocutor (centre man on the minstrel semicircle), ballad singer and banjo player, Christy took the six-man troupe to Palmo's Opera House in New York on 27 April 1846. From 15 February 1847 to 15 July 1854 they played at Mechanics Hall, Broadway, perfecting a minstrel show in three sections that appealed to all levels of audience. On 25 August 1847, at the close of their second Cincinnati visit, Christy's Minstrels gave Stephen Foster a benefit performance that included *Oh! Susanna*. From that time the troupe specialized in Foster premières, and in 1851 at Foster's request Christy published *Old Folks at Home* as his original song.

Christy's Minstrels sailed on 20 September 1854 for San Francisco, where they played at Music Hall until early in 1855, when Christy retired from performing and the group returned to New York. He was then manager, and bought circus properties and theatres (called Christy's Opera Houses) from Brooklyn to Chicago. He never visited England, although the troupe licensed to use his name opened on 3 August 1857 at St James's Theatre in London with such success that 'Christy Minstrels' became the generic name for blackface minstrels in Great Britain.

The texts of the troupe's most popular songs were published in the five volumes of *Christy's Plantation Melodies* (Philadelphia, 1851–6). The fifth includes an

Edwin Pearce Christy (inset top), George Christy, Thomas Vaughn and the Christy Minstrels: chromolithograph by Sarony and Major from a sheet-music cover of 'Christy's Melodies', published sequentially from 1847 by Jaques and Brother, New York

article by Christy, 'The Original Christy Minstrels', which cites a New York State Supreme Court decision supporting his claim to having originated blackface minstrelsy. Fearing that his business would be ruined by Civil War reverses, Christy committed suicide by jumping from a window of his New York house on 9 May 1862, and died 12 days later.

ROBERT STEVENSON

Christy [Harrington], **George** (*b* Palmyra, NY, 6 Nov 1827; *d* New York, 12 May 1868). American minstrel performer. He changed his family name of Harrington after joining (as a jig dancer) the troupe of his stepfather, Edwin Pearce Christy, at Buffalo in 1842. He appeared with Christy's Minstrels in New York from 1847 to 1853, creating such roles as Lucy Long and Cachuca, and distinguishing himself in every part from endman and bone player to wench. In 1853 he joined Henry Wood at 444 Broadway to form Wood and Christy's Minstrels. After a fire destroyed their premises in December 1854, the company went on tour; they later returned to New York and re-established themselves on Broadway. Christy formed his own company, George Christy's Minstrels, in 1858, and played at Tom Maguire's Opera House in San Francisco. In May 1859 he attempted to resume occupancy of the rebuilt 444 Broadway in New York, but was prevented from doing so by his erstwhile partner Wood. His last appearance was in Brooklyn with Hooley's Minstrels ten days before his death. Christy published collections of his songs, dialogues and jokes, including *Essense of Kentucky* (New York, 1862), and collaborated with Charles White (1821–91) in *Christy and White's Ethiopian Melodies* (Philadelphia, 1854), an especially large collection, with 291 songs.

ROBERT STEVENSON

Chromatic (from Gk. *chrōmatikos*: 'coloured'). Based on an octave of 12 semitones, as opposed to a seven-note DIATONIC scale. A chromatic SCALE consists of an ascending or descending line that advances by semitones. An instrument is said to be chromatic if throughout the whole or a substantial part of its compass it can produce all the semitones. An interval is said to be chromatic if it is not part of a diatonic scale (e.g. F–F♯, B–E♭).

In melodic and harmonic analysis the term 'chromatic' is generally applied to notes marked with accidentals foreign to the scale of the key in which the passage is written. But a note that is chromatic with reference to a particular key may cease to be chromatic if a suitable modulation takes place at the same time. Thus if one considers ex.1 as representing in its entirety a move from

Ex.1

I to V in C major, then there are points of chromaticism throughout, on the weak beat of each bar; but if the incidental modulations to D minor, E minor, F major and G major are taken into particular account, then none of the notes in the passage is actually chromatic.

The diatonic–chromatic opposition is roughly analogous to the contrast between *musica recta* and MUSICA FICTA in medieval and early Renaissance polyphonic theory; unlike the later diatonic system, however, *musica recta* generally included B♭ in addition to the seven 'uninflected' notes from A to G. Throughout this period notes were altered by semitone in performance, mainly to avoid vertical or melodic dissonances and to create leading-note relationships at cadences. This practice led some 20th-century commentators to speak of a 16th-century 'secret chromatic art' (Lowinsky, 1946, 1972; but see Bent). True chromaticism had its first flowering in the secular music of the second half of the 16th century, above all in the Italian madrigal (Rore, Marenzio and Gesualdo), where it went hand in hand with expressive, affective text-setting. This development was transported to England in the late 16th and early 17th centuries, and also had a profound influence on secular monody and the beginnings of opera in Italy around the turn of the 17th century.

In the Baroque era the use of chromaticism was closely linked with the Doctrine of the Affections (*see* AFFECTS,

THEORY OF THE), as well as with abstract musical composition (conceived in particular for the keyboard), rather than with vocal music. Ricercares (and similar contrapuntal forms) with chromatic subjects are common in the works of early Baroque keyboard composers, such as Sweelinck and John Bull. In the 18th century the acceptance of EQUAL TEMPERAMENT made all chromatic intervals equivalent to some diatonic interval (e.g. C–D♯ = C–E♭) and the use of such ENHARMONIC relationships made for an expansion of harmonic possibilities. These were fully realized in the music of Bach throughout his career, from the Chromatic Fantasy and Fugue to the six-part ricercare from the *Musical Offering*. In the Classical period there seem to have been simultaneous yet relatively independent developments in diatonicism (J.C. Bach, Haydn) and chromaticism (C.P.E. Bach, Mozart).

The flourishing of chromaticism belongs to the 19th century. The work of Schubert and Chopin takes enharmonic change to its limits. In the mid-19th century the seminal work in the development of a totally chromatic language is Wagner's *Tristan und Isolde*, in which the implications of harmonic ambiguity in the opening bars of the Prelude (especially in the 'TRISTAN' CHORD itself) are spelt out in the course of the opera. For Wagner, however, chromaticism was still partly tied to the notion of 'affections': he used it where it seemed necessary for the expression of the text, mood or emotion. In a work such as *Parsifal* strict diatonicism is made to co-exist with a chromaticism even more strongly inflected than in *Tristan*; see especially the Prelude to Act 3. After Wagner chromaticism developed more along abstract lines, from the impressionism of Debussy to the 'free' atonality of Schoenberg and his contemporaries after 1907. In TWELVE-NOTE COMPOSITION, in which all the notes of the chromatic octave are of equal weight, the significance of chromaticism as an extension of the diatonic system no longer exists.

For a definition of 'chromatic' as used in ancient Greek music theory, *see* TETRACHORD.

GEORGE DYSON/WILLIAM DRABKIN/R

Chronos prōtos (Gk.). The temporal unit of ancient Greek music (*see* GREECE, §I), as defined by Aristoxenus; it could not be divided into smaller values, and all larger temporal values were multiples of it. No absolute value is known to have been associated with it; in most modern transcriptions it is rendered as a quaver. □

Chrysander, (Karl Franz) Friedrich (*b* Lübtheen, Mecklenburg, 8 July 1826; *d* Bergedorf, nr Hamburg, 3 Sept 1901). German music scholar. The son of a miller, he started work as a private tutor in and around Rostock, later teaching at schools in Doberan and Schwerin. An intense interest in music led him to compose an opera, but he soon decided to concentrate on criticism and scholarly studies. His first publications were reviews and articles in local journals. In 1853 he published essays on folksong and oratorio, on the strength of which he was awarded a doctorate by Rostock University on 19 April 1855. By then he was already deeply interested in the study of Handel and had begun collecting material for a biography of the composer, the first volume of which appeared in 1858. The second followed in 1860 and part of the third in 1867; the work was never finished.

In 1856 Chrysander and the literary historian Gottfried Gervinus (1805–71) founded the Händel-Gesellschaft to publish a collected edition of Handel's works. The first volume (*Susanna*) appeared in October 1858. By 1860, however, the society had collapsed because of dissension among the members. With Gervinus's help, Chrysander determined to continue the project and it became his life's work. Financial problems were eased in 1860 by an annual grant from the Hanoverian crown, but that ceased with Prussia's annexation of the state in 1866. Chrysander then took over the entire production of the edition, setting up a small printing shop in the garden of his Bergedorf home. The sale of produce from his market garden provided some finance, but as this was hardly sufficient Chrysander took on the editorship of the *Allgemeine musikalische Zeitung* (1868–71 and 1875–82) and further editorial work, including two important essay collections entitled *Jahrbuch für musikalische Wissenschaft* (1863, 1867); in 1885 he founded with Spitta and Adler the influential, though short-lived, quarterly *Vierteljahrsschrift für Musikwissenschaft*. To obtain further funds Chrysander sold part of his library in 1875 to the state of Hamburg, which at the same time acquired the collection of Handel's conducting scores that Chrysander had bought from Victor Schoelcher with funds provided by Hamburg businessmen. (This material, with the rest of Chrysander's papers, is now in the Staats- und Universitätsbibliothek, Hamburg.) Though the Hanoverian grant was renewed by Prussia in 1870 Chrysander was never free from financial worries and was unable to bring his Handel edition to completion (volume xlix was begun, but never published). He frequently visited London to examine the Handel autographs then at Buckingham Palace, staying with his daughter and her husband, Charles Volkert, the managing partner of Schott & Co. His last years were clouded by the deaths of his eldest son in 1884 and his wife in 1887; his other surviving son, Rudolf (1865–1950), was Bismarck's private secretary and physician from 1890 to 1898.

Chrysander was one of the pioneers of 19th-century German musicology. He wrote essays and articles on a vast number of musical figures (including C.P.E. Bach, J.S. Bach, Beethoven, Buxtehude, Dussek, Keiser, Mendelssohn, Mozart, Pergolesi, Alessandro Scarlatti, Spohr and Spontini) and a wide range of musical subjects (including notation, church music, operetta, pedagogy and theory). Though as a critic he was blinkered by severe prejudice against the music of his own time, the thoroughness and documentary accuracy of his Handel biography

and other writings inspired a whole generation of German scholars, while his various editorships exerted a continuing influence almost to the end of the 20th century. His musical editions, which covered Bach, Corelli and Carissimi as well as Handel, are now hard to judge. The inadequacies of the Händel-Gesellschaft edition are well known: Chrysander did not, in the case of the major works, make the detailed and thoughtful comparison of sources needed to clarify Handel's numerous revisions, and arbitrarily ignored items present in the sources available to him. In the light of the conditions under which he worked and the rate at which the volumes were produced (an average of three a year) these defects are understandable. Unfortunately, Chrysander's prefaces – sometimes laconic, sometimes arrogant – give a misleading impression of a search for definitiveness and have thus led to some justified personal criticism; but his industry and persistence have never been in question.

ANTHONY HICKS

Chrysanthos of Madytos (*b* ?1770; *d* Bursa, 1846). Greek archimandrite, chanter and teacher of music. With his two collaborators CHOURMOUZIOS THE ARCHIVIST and GREGORIOS THE PROTOPSALTES, he was responsible for the much needed reform of the notation of Greek ecclesiastical music. His first endeavours were presented in a short introductory treatise (*Eisagōgē*) published in 1821. This was followed 11 years later by the more exhaustive and highly influential *Theōrētikon mega tēs mousikēs* ('Great Theoretical Treatise on Music'), the first part of which expounds the New Method and notational principles of the three reformers. The second part is purely historical: an ambitious but unsuccessful attempt to present, in the form of a chronicle, a general history of music from the time before the Flood to his own day.

Chrysanthos's reform consisted essentially of a simplification of medieval Byzantine neumatic notation, which by the early 19th century had become so complex and technical that only highly skilled chanters were able to interpret the symbols accurately. To aid beginners, Chrysanthos invented a kind of sol-fa based on the first seven letters of the Greek alphabet. Each degree corresponds to one note in a scale, as shown in ex.1. In addition, he systematized the ordering ofthe eight modes into the three

species: diatonic, chromatic and enharmonic. Within each of these three categories the intervallic progression of the degrees was fixed according to elaborate mathematical calculations. Chrysanthos also introduced new processes of modulation and chromatic alteration, and abolished some of the notational symbols. Fundamental to this New Method was the system of 'interpreting' the medieval chants composed in the 14th and 15th centuries, a process known as exegesis (*exēgēsis*). The reformers eliminated a large number of the red subsidiary symbols (*cheironomiai*) and replaced them by fully realized musical 'positions' (*theseis*). As a result of these efforts, a large repertory of medieval hymnody was made available to chanters who were ignorant of the melodic and dynamic content of these signs.

Despite its numerous shortcomings, Chrysanthos's work represents a landmark in the history of Greek church music since it introduced the system of neo-Byzantine music upon which are based the present-day chants of the Greek Orthodox Church.

DIMITRI CONOMOS

Chrysaphes, Manuel (*fl c*1440–63). Byzantine composer and theorist. The only surviving biographical evidence about Chrysphes is contained in music manuscripts. Information in *IL-Jp* 31 (*c*1440) reveals that he held the office of *lampadarios* (leader of the left choir) in the Byzantine palace. His autograph appears in an AKOLOUTHIAI manuscript, *GR-ATSiviron* 1120, which bears the date 1458. The latest recorded date for Chrysaphes is in a signed manuscript, *TR-Itks* 15, completed on 29 July 1463. A number of sources indicate that some of his compositions were commissioned by the last two Byzantine emperors, John VIII Palaeologos

(1428–48) and Constantine XI Palaeologos (1449–53). Chrysaphes is also known to have spent some time in Crete and even to have travelled as far as Serbia, where he wrote liturgical music.

His treatise, *Peri tōn entheōroumenōn tē psaltikē technē kai hōn phronousi kakōs tines peri autōn* ('On the theory of the art of chanting and on certain erroneous views that some hold about it'; *GR-ATSiviron* 1120, ff.11*r*-28*v*), contains important evidence, not found in any other source, for certain aspects of modal theory and musical practice; it also provides a great deal of information about the development of the tradition of Byzantine singing in the 14th and 15th centuries. Chrysaphes deplored the practice of those chanters who were satisfied to follow only the bare melodic line without considering the ornamental formulae (*theseis*) that were introduced by the early 14th-century composers. The second part of the treatise deals with an explanation of the *phthorai*, notational symbols that refer to modal transposition.

Chrysaphes's chant compositions appear in unequalled numbers in Byzantine music manuscripts written after the mid-15th century. Like his predecessors, JOANNES GLYKYS, NIKEPHOROS ETHIKOS, JOANNES KOUKOUZELES, XENOS KORONES and JOANNES KLADAS, he adhered to the new stylistic trends of the Palaeologan renaissance, characterized by the dominant KALOPHONIC CHANT. Chrysaphes recomposed older chants and enriched the repertory with new vocal settings. His prolific output includes hymns and psalmic compositions for choirs and soloists, embellished chants, *kratēmata*, *mathēmata*, *anagrammatismoi* etc. These were known and sung for four centuries, not only in the Greek Church but also in the Slavonic and Romanian Churches.

Chrysoponus [Chrysogonus] **Gevicenus** [Gevicensis], **Andreas** [Chrysoponus Jevíčský, Ondřej] (*b* Jevíčko, *c*1550; *d* after 1590). Czech composer. He was the son of a Calixtine priest and worked as an organist and cantor. During the period 1576–82 he was active in Prachatice in southern Bohemia. His only publication, *Bicinia nova* (Prague, 1579; ed. M. Sršňová and M. Horyna, Prague, 1989), is a collection of 100 two-voice works. Also extant are four masses for six to eight voices, two cycles of Proper chants and 25 motets; all these works, with the exception of the motet *Et valde mane*, dated 1578 (ed. J. Černý, *Hudba české renesance*, Prague, 1982), survive incomplete. For Czech schools and literary associations, Chrysoponus composed settings of Latin texts for five to nine voices with melodies inspired by Gregorian chants and Czech sacred songs.

JIŘÍ SEHNAL

Chrysostom, John (*b* Antioch, *c*347 CE; *d* Komana, Pontus, 14 Sept 407 CE). Saint, churchman and preacher. He was born to a wealthy Christian family at Antioch where he was thoroughly schooled in rhetoric. After a period of severe asceticism, living as a hermit in the wilderness, he returned to Antioch to take up an ecclesiastical career. In 386 he was ordained a priest and assigned to preach in the cathedral; during the following years he preached most of the eloquent homilies that earned him the sobriquet Chrysostom, meaning 'golden mouth'. In 398 CE he reluctantly agreed to be patriarch of Constantinople. In that position his outspoken moralism was a reproach to both clergy and court; he was exiled in 404 to Cucusus in Armenia and again in 407 to the remote Pontus on the Black Sea, where he died from the rigours of the journey.

The richly anecdotal style of his many surviving sermons offers a wealth of musical reference. On numerous occasions he voiced vivid denunciations of the musical excesses of secular society, most notably the musical instruments, dancing and lewd songs observed at weddings. On the other hand, in his commentary on Psalm xli he wrote a long and enthusiastic encomium of Christian psalmody. Of greatest value perhaps are his remarks about the liturgy and ecclesiastical song of his time, which make it possible to reconstruct the broad outlines of the eucharistic pro-anaphora and the 'cathedral' and monastic Offices of late 4th-century Antioch; they tell, moreover, of the singing of numerous specific psalms and hymns at these services.

The so-called Liturgy of St John Chrysostom, the most widely used eucharistic liturgy of the Eastern churches (*see* DIVINE LITURGY (BYZANTINE)), is for the most part spurious, dating to a period long after John's time.

Chuchro, Josef (*b* Prague, 3 July 1931). Czech cellist. He studied with K.P. Sádlo in Prague (1946–53), made his debut there in 1950, and won the Prague Spring Competition in 1955 and the Casals Competition in Mexico in 1959. He has played in most European centres and in the USA, Japan and Australia. His repertory

includes Strauss, Prokofiev, Martinů and contemporary composers, and his interpretation of Dvořák's B minor Concerto (which he has recorded) is considered a model. The intellectual and emotional sides of his playing are perfectly in balance, and the beauty of his tone is most apparent in slow-moving cantilena. He played with the Suk Trio (from 1952) and has taught at the Prague Conservatory (from 1965) and at the Prague Academy (AMU), where he was appointed in 1967 and served as dean of the music faculty from 1990 to 1997. In 1961 he was appointed the soloist of the Czech PO.

ALENA NĚMCOVÁ/R

Chudova, Tat'yana Alekseyevna (*b* Moscow, 16 June 1944). Russian composer. She studied at the Central Music School in Moscow, then at the Moscow Conservatory with Shaporin (1963–6) and with Khrennikov (1965–70); she has taught at both establishments since 1970 and was appointed professor at the conservatory in 1995. Chudova has participated in many folk expeditions and made a special study of folk culture, including folk singing skills. Her own music has reflected this; she has evolved a language where folk elements and techniques such as polytonality, pointillism and Sprechstimme are closely interwoven. The world of Russian fairy tale and folklore pervades her symphonic suites and operas. In the 1970s the subject matter and style of her works changed, and she began to write bold and distinctive melodies, march- or toccata-like pieces, characterized by rapid changes of dynamics. Episodes from Russian history form the basis of her cantatas, and also of the symphonic trilogy *Sovetskoy molodyozhi* ('To Soviet Youth'), the third part of which was awarded the Lenin Komsomol Prize in 1984.

WORKS
(*selective list*)

Stage: Agitator (ballet, D. Plotkin), 1965; O myortvoy tsarevne i semi bogatïryakh [The Dead Princess and the Seven Heroes] (fairy tale op, Chudova, after A.S. Pushkin), 1966–7; Na derevnyu k dedushke [To the Village, to Grandfather] (op, V. Shuldzik and I. Maznina, after A.P. Chekhov: *Van'ka*), 1978

Orch: Iz russkikh skazok [From Russian Fairy Tales], sym. suite, 1962; Pf Conc., 1970; Suite no.1, folk inst orch, 1980; Pf Conc., 1981; Suite no.2., folk inst orch, 1981; Suite no.3, folk inst orch, 1982; Sovetskoy molodyozhi [To Soviet Youth], sym. trilogy: Timur i yego komanda [Timur and his Team] (after A. Gaydar) 1981–2; Kak zakalyalas' stal' [How the Steel was Tempered] (after N.A. Ostrovsky), 1983; Molodaya gvardiya [The Young Guard] (after A. OL'GA MANUL'KINA

Chueca, Federico (*b* Madrid, 5 May 1846; *d* Madrid, 20 July 1908). Spanish composer. He studied elementary piano and theory at the Madrid Conservatory, but then, at his parents' insistence, turned to medicine. However, Barbieri brought him back to a musical career when he conducted a set of Chueca's waltzes, *Lamentos de un preso*, which commemorated a student escapade. His first theatrical success was *La canción de la Lola* (1880), which ran for two years at the Teatro de Variedades. He composed about 37 zarzuelas, mostly in one act (*género chico*), many of them orchestrated by Joaquín Valverde. Chueca was able to capture the local flavour of regions as far apart as Asturias and Andalusia and had the gift of writing facile tunes that immediately appealed to the Madrid public and eventually won the favour of the entire Spanish-speaking world, as well as the esteem of Falla. *La Gran Vía* (1886) ran uninterruptedly for four years at the Teatro Apolo and had numerous productions in Italy, France and England, while the march from *Cádiz* (1886) became the *de facto* Spanish national anthem during the Spanish-American War of 1898. Two months before his death he composed the patriotic anthem *El dos de mayo* to celebrate the centenary of the Madrid uprising against Murat.

WORKS
(*selective list*)

STAGE

all first performed in Madrid; all in 1 act and published in vocal score shortly after first performances unless otherwise stated

Las ferias (sainete lírico, M. Barranco y Caro), Buen Retiro, 3 July 1878, collab. J. Valverde, unpubd; La canción de la Lola (sainete lírico, R. de la Vega), Alhambra, 25 May 1880; Fiesta nacional (acontecimiento cómico-lírico, Luceño, Burgos), 1882, collab. Valverde; Luces y sombras (gacetilla cómico-lírico, S. Lastra y Sira and others), Variedades, 1882, collab. Valverde; De la noche à la mañana (sueño cómico-lírico, Lastra), Variedades, 1883, collab. Valverde; Caramelo (juguete cómico-lírico, Burgos), 1883/4, collab. Valverde; Hoy sale, hoy (sainete lírico, T. Luceño y Becerra, J. de Burgos), Variedades, 16 Jan 1884, collab. F.A. Barbieri, unpubd; Vivitos y coleando (coplas y zapateado, Lastra and others), March 1884 (1890)

La Gran Vía (F. Pérez G.), Felipe, 2 July 1886, collab. Valverde; Cádiz (episodio nacional cómico-lírico-dramático, 2, Burgos), Apolo, 20 Nov 1886, collab. Valverde; El año pasado por agua (Vega), Apolo, 1 March 1889, collab. Valverde; De Madrid à Paris (viaje cómico-lírico, J. Jackson Veyán and E. Sierra), Felipe, 12 July 1889, collab. Valverde (1888)

El arca de Noé (problema cómico-lírico, A. Ruesga and E. Prieto), Zarzuela, 26 Feb 1890 (1889), as Fotografías animadas, 1897, unpubd: El chaleco blanco (episodio cómico-lírico, M. Ramos Carrión), Felipe, 26 June 1890; La caza del oso, ó, El tendero de comestibles (viaje-cómico-lírico, Jackson Veyán and Sierra), Apolo, 6 March 1891; Los descamisados (sainete lírico, López Silva and C. Arniches), Apolo, 31 Oct 1893; Las zapatillas (Jackson Veyán), Apolo, 5 Dec 1895 (1898)

El coche correo (sainete lírico, Arniches and López Silva), Apolo, 4 April 1896, unpubd; Agua, azucarillos y aguardiente (pasillo veraniego, Ramos Carrión), Apolo, 23 June 1897; El mantón de Manila (F. Iráizoz), 1898; Los arrastraos (sainete lírico, Jackson Veyán and López Silva), Apolo, 1899, as El capote de paseo, 1901

La alegría de la huerta (A. Paso and E. García y Álvarez), Eslava, 20 Jan 1900; El bateo (sainete lírico, A. Domínguez and Paso), Zarzuela, 7 Nov 1901 (1910); La borracha (zar, Jackson Veyán and López Silva), 1904; Chinita (sainete lírico, L. Ibáñez), collab.

P. Córdoba (1907); El estudiante (zar cómica, López Silva), Gran, 19 April 1907, collab. L. Fontanals; Las mocitas del barrio (A. Casero and A. Larrubiera), Lara, 1909, unpubd

OTHER WORKS

Lamentos de un preso, waltzes, orch, arr. pf (Madrid, c1880); Preciosita, gavotte, arr. gui (London, 1899); Himno al ciudadano Emilio Castelar, v, pf; 3 waltzes: Viloz Club, Veni vidi vici, Zamacois; 2 polkas: Tute de caballos, La patinadora; Guerrita, pasacaglia; Los marinos, collection of waltzes; Felices, Don José, mazurka; El dos de mayo, pasodoble militar

ROBERT STEVENSON

Chugayev, Aleksandr Georgiyevich (*b* Yeysk, Krasnodar district, 29 Jan 1924; *d* Moscow, 22 March 1990). Russian composer, musicologist and teacher. In 1940 he enrolled at the Moscow Conservatory in Shebalin's class and in 1941 joined the volunteer corps, but was soon discharged on health grounds. In 1943 he returned to the conservatory, studying with Shostakovich (1946–8), and graduating from Shaporin's class in 1953. In 1947 he began teaching at the Gnesin Academy of Music, and in 1952 at the Gnesin State Institute for Musical Education, from 1967 as senior lecturer. In 1979 he became a senior lecturer at the Moscow Conservatory.

Chugayev's creative interests became apparent even during his years of study at the conservatory. For many years his idol was Shostakovich, whose traditions he developed in his own works. He also acknowledged J.S. Bach as a source of inspiration, in particular his polyphonic art; it was to this that Chugayev devoted his chief musicological studies. However, Chugayev did not try to recreate the style of Bach, even to the degree that Shostakovich did: the neo-Baroque remained alien to him. Far more important to Chugayev was the continuation of the Russian polyphonic tradition, brought to fruition above all in the creative work of Sergey Taneyev and the composers of his school. Chugayev's music relies on the classical principles of tonality and is characterized by its strong melodies, thematic richness and the well developed use of polyphonic devices. Like that of many Soviet composers of his generation, it is traditional in its approach to form and genre. His works were rarely performed, and this may possibly account for his small output. The Violin Concerto and the two chamber works with piano – the trio and quintet – are considered to be his finest works.

WORKS

Ballet: Chernolikiye [Black Faces] (3, 8 scenes, N. Kanin and Kh. Mustafayev, after M. Gafuri), 1965, collab. Kh.Sh. Zaimov, Ufa, 1965

SVETLANA SAVENKO

Chukhajian, Tigran Gevorki (*b* Constantinople, 1837; *d* Izmir, 23 March 1898). Armenian composer, conductor and teacher. He studied with G. Yeranian and Mangioni at Constantinople, then at the Milan Conservatory (1861–4). On his return to Turkey he took part in the activities of the Armenian Musical Society, published the journal *K'nar Haykakan* ('The Armenian Lyre') with G. Yeranian, gave lectures and concerts, organized a small orchestra and worked with the Gusanergakan Music Theatre. He also worked from 1864 to 1867 with the Arevelyan Tadron, the theatre of the Constantinople Armenians, and it was there that his incidental music to the play *Vardan Mamikonean, p'erkitch hayreneats* ('Vartan Mamikonian, the Saviour of his Country', by Durian, Terzian and Sedefjian) was first performed in 1867. In 1868 he completed the opera *Arshak Erkrord* ('Arshak II'), to a libretto by Terzian, marking the birth of Armenian national opera. Excerpts were performed in Constantinople, Naples, Venice, Paris and Vienna during the composer's lifetime. The score, which was thought to have been lost, was discovered in Yerevan in 1942, and a revised version by Shahverdian and Khojia-Eynatov to a libretto by A. Gulakian was given in 1945. In 1872 Chukhajian began working with the Vardovian Theatre, and in the period 1877–87 he headed his own company which gave guest performances in Turkey, Greece and Egypt. In the 1870s Chukhajian wrote the comic operas *Arif* (based on Gogol''s comedy *The Government Inspector*), *Kyose kyokhva* ('The Balding Elder') and *Leblebidji hor-hor agha* ('The Pea Seller'), and in 1890 the *opéra féerie Zemire* with a libretto from Arabian tales; he composed his last opera, *Indiana*, in 1897. He also wrote chamber and orchestral music and the earliest Armenian piano pieces (dances, marches, fugues, fantasias, paraphrases), which appeared in Constantinople in the 1870s and 1880s. In 1896 Chukhajian moved to Izmir, where he taught; among his pupils was the pianist and composer H. Sinanian (1872–1930).

As the founder of Armenian opera, Chukhajian was an important figure in the cultural history of West Asia. He was the first composer to fuse the techniques of European music with the special features of Eastern, and in particular Armenian, folk music. His musical ideals were interwoven with notions of patriotism and the liberation of the Armenians from Turkey, and he was instrumental in rousing the Armenian liberation movement in the second half of the 19th century. His style was forged under the influence of various factors: the Italian operatic school (he has been called 'il Verdi armeno'), French operetta (when he was giving concerts of his own music in 1891, the Paris press called him 'the Eastern Offenbach') and above all Armenian urban folklore, the influence of which is particularly noticeable in *The Balding Elder* and *The Pea Seller*. The historical–heroic opera *Arshak II* occupies

an important place in Armenian music because of its high level of artistry; with a libretto based on 4th-century Armenian history it is national in its general tone, though conceived on the scale of grand opera, with extensive choruses and ballet scenes. Its monumental proportions present a contrast to Chukhajian's comic operas which, with their social awareness, stereotyped characters and references to Armenian folk music, are thoroughly local and convey a true feeling of their time. *The Pea Seller*, a satirical comedy of manners, is distinguished by lively action, precise characterization, variety of vocal forms and *buffo* writing; the opera was instantly popular, and in 1943 was produced in a revised version under the title *Karine*. Chukhajian's non-operatic works are programmatic in nature, sometimes consisting of potpourris from his incidental music, and are based on folksongs and dance melodies of Eastern or European origin. The style of his vocal music is determined by his choice of texts, which are of lyrical or patriotic Armenian poetry.

WORKS

SVETLANA SARKISYAN

Chula. A Brazilian dance and song of Portuguese origin. It has a mix of features identified with both Hispanic and African traditions. As a song it was known in Portugal from the 16th century. The first descriptions of the dance in Brazil date from the early 19th century. It was related to the *lundu* in its voluptuous and lascivious character and its provocative choreography, which included *umbigada* (a final touch of the navel), shoe-tapping and hand-clapping. In the 20th century *chula* dance became virtually extinct. The few samples of *chula* song collected since the early 1900s show an alternation of syncopated rhythmic figures with regular ones, binary form and guitar accompaniment. In southern Brazil the term 'chula' designates the fandango, while in Bahia it refers to the tunes associated with the *samba-de-viola*.

GERARD BÉHAGUE

Chulaki, Mikhail Ivanovich (*b* Simferopol', 6/19 Nov 1908; *d* Moscow, 30 Jan 1989). Russian composer and teacher. He graduated from the Leningrad Conservatory under Vladimir Shcherbachyov in 1931. Thereafter he was director and artistic adviser of the Leningrad PO (1937–9) and a teacher of composition and instrumentation at the Leningrad Conservatory (from 1939). In 1948 he moved to Moscow, where he worked as secretary of the Composers' Union, lecturer at the conservatory, director of the Bol'shoy Theatre (from 1955) and deputy of the supreme soviet of the RSFSR, which granted him the title Honoured Art Worker in 1963. His compositions draw on Russian folk music.

DETLEF GOJOWY

Chunchus-collas. A dance-drama of the Amerindian peoples of Bolivia and Peru in which the historic conflict between the Incas and the Spanish conquistadors is re-enacted. The dancers are arranged in two lines and proceed alternately forwards and sideways towards the opposite file of dancers. Elaborately dressed in costumes of ribbons and feathers and singing verses in the Quechua or Aymara languages, the dancers are armed with spears, arrows and swords which they hurl into the earth at intervals indicated by the music.

WILLIAM GRADANTE

Chung. Family of musicians of Korean birth.

(1) **Myung-Wha Chung** (*b* Seoul, 19 March 1944). American cellist of Korean birth. She first appeared as a soloist with the Seoul SO in 1955, at the age of 11, and at 13 she was the youngest performer to win the Korean National Competition. She studied with Rose at the Juilliard School of Music (1961–5) and with Piatigorsky in Los Angeles (1965–8). She made her US début in San Francisco in 1967 and her European début at Spoleto in 1969. In 1971 she won the Geneva International Music Competition and has since performed with major orchestras in the USA and in Europe, and has taken part in many international festivals. Of her recordings, the Tchaikovsky Variations on a Rococo Theme with the Los Angeles PO has been particularly praised. She also plays chamber music with her sister, Kyung-Wha Chung, and her brother, Myung-Whun Chung. In 1991 she was appointed to the faculty of Mannes College of Music, New York, and in 1993 became professor at the Korean National Institute for the Arts. She plays a Stradivarius, the 'ex-Braga' dated 1731.

(2) **Kyung-Wha Chung** (*b* Seoul, 26 March 1948). Violinist, sister of (1) Myung-Wha Chung. She learnt the piano initially but at six was given a violin and took to it immediately. Making rapid progress under teachers including Shin Sang Chul, at nine she played Mendelssohn's E minor Concerto with the Seoul SO and at 12 she toured Japan. In 1961 she moved to New York to study at the Juilliard School of Music with Ivan Galamian; and in 1967 she shared the Leventritt Memorial Award with Pinchas Zukerman. The following year she played concertos with the New York PO and Pittsburgh SO, but she continued studying with Galamian until 1971, also taking advice from Paul Makanowitzky, Szymon Goldberg, Josef Gingold and Joseph Szigeti. In 1970 she made her London début playing the Tchaikovsky Concerto and since then she has been extremely popular in Britain, where she has made her home for some years. Her committed, if not always technically perfect, playing has also made her a favourite in America, Europe and the Far East – she was the first Korean to achieve an international reputation in Western music. Although best known as a concerto soloist, she has often appeared in the Chung Trio with her younger brother, the pianist and conductor Myung-Whun and her elder sister, the cellist Myung-Wha, and some of their repertory has been recorded. Her sonata partners have included Radu Lupu, Krystian Zimerman, Stephen Kovacevich, Peter Frankl and Itamar Golan. Kyung-Wha Chung's innate musicality is enhanced by a pleasing platform manner and a delightfully spontaneous personality. She rarely gives a dull performance and at her best she is capable of real inspiration. Her tone, though not large, is both flexible and concentrated. Her recordings of the concertos by Elgar, Walton, Sibelius, Bartók, Prokofiev and Stravinsky have been widely praised and she has recorded fine interpretations of many of the Classical and Romantic masterpieces. She plays the 1734 'ex-Rode' Guarneri del Gesù.

BIBLIOGRAPHY

M. Campbell: 'Kyung-Wha Chung: a Profile', *The Strad*, lxxxviii (1977), 385–95, 439

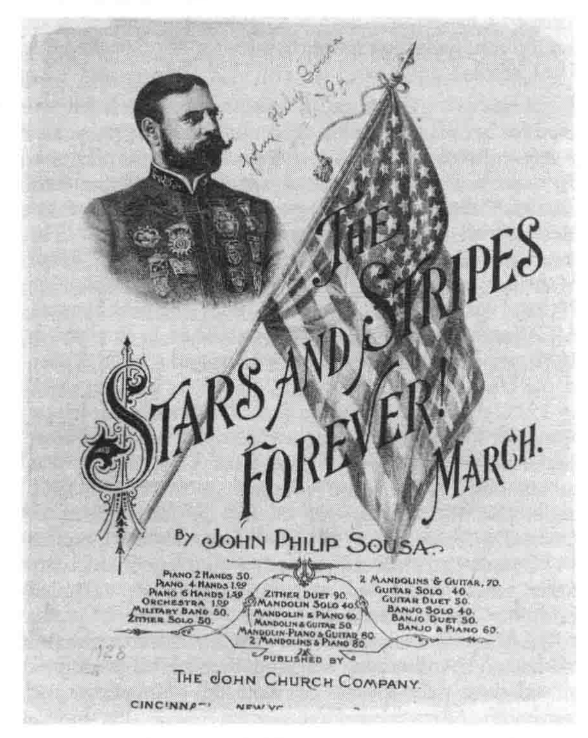
H. Kurzbauer: 'The Art of Balance', *The Strad*, cx (1999), 1131–5

(3) **Myung-Whun Chung** (*b* Seoul, 22 Jan 1953). Conductor and pianist, brother of (1) Myung-Wha Chung. He made his début as a pianist with the Seoul PO at the age of seven, and then studied the piano with Reisenberg and conducting with Bamberger at Mannes College in New York. After graduating from the Juilliard School in 1974 he worked with Sixten Ehrling from 1975 to 1978. He made his conducting début in 1971 with the Korean SO and won second prize in the Tchaikovsky Piano Competition in Moscow in 1974. Giulini appointed him assistant conductor at the Los Angeles PO in 1978 and two years later promoted him to associate conductor. He was chief conductor of the Saarbrücken RSO (1984–90) and in 1986 made his Metropolitan début conducting *Simon Boccanegra*. This resulted in numerous guest engagements, including performances with the Vienna PO, the Berlin PO and leading British and American orchestras. From 1987 to 1992 he was principal guest conductor at the Teatro Communale in Florence and in 1989 was awarded the Arturo Toscanini Prize. In the same year he succeeded Barenboim as director at the Opéra Bastille in Paris, following the latter's dispute with the government. Chung's directorship led to a similar impasse; after conducting acclaimed productions of *Les*



Myung-Whun Chung

Troyens, *Otello* and *Lady Macbeth of the Mtsensk District* and directing the opera orchestra with great success on tour, he left the Bastille in 1994 amid strikes and lawsuits. He was subsequently appointed chief conductor of the Korean Broadcasting System SO and is active as a guest conductor in concert and opera. In 1994 he gave the première of Messiaen's *Concert à quatre*, of which he is the dedicatee.

Chung often directs piano concertos from the keyboard, and has formed a piano trio with his sisters Kyung-Wha and Myung-Wha. On the podium, much of his technique is reminiscent of Karajan. He favours long singing lines, but is also a master of powerful dramatic effects. He has made eloquent, idiomatic recordings of French, Russian and Italian repertory, including several major works by Messiaen.

MARGARET CAMPBELL (1), TULLY POTTER (2), CHARLES BARBER (3)

Church. American firm of music publishers. On 21 April 1859 Oliver Ditson of Boston bought the catalogue of Baldwin & Truax (established in 1851 by David Truax in Cincinnati, named Curtis & Truax in 1855 and Baldwin & Truax in 1857), and in association with John Church jr (*d* Boston, 19 April 1890) founded the firm of John Church, Jr. On 1 March 1869 Church bought the half-interest of Ditson and, in partnership with his bookkeeper John B. Trevor, established the firm of John Church & Co., which became incorporated in 1885 as John Church Co. Church bought the catalogue of George Root & Sons of Chicago in 1872, and at about this time William Sherwin joined the firm. In 1881 James R. Murray became chief director of publications and editor of the firm's periodical, *Music Visitor* (1871–97).

Sheet-music cover of John Philip Sousa's march 'The Stars and Stripes Forever' (Cincinnati: John Church Co., 1897)

Church became notable for publishing the operas and, particularly, the celebrated marches of John Philip Sousa (see illustration); the firm's other publications include operas and operettas by Julian Edwards and Reginald de Koven as well as a set of piano pieces by Theodore Presser and works by contemporary American composers. At Church's death his son-in-law R.B. Burchard became president: W.L. Coghill became manager of publications in 1919, and in 1930 the entire catalogue was sold to Theodore Presser Co.; it is no longer active.

ERNST C. KROHN

Church, John (*b* 1674; *d* London, 6 Jan 1741). English composer and singer. He was trained as a chorister at St John's College, Oxford. He may have been the John Church from Oxford who was apprenticed to the music publisher Henry Playford on 3 June 1689 but did not complete his apprenticeship, or the one from Alscott [?Ascot], Berkshire, who matriculated at St Edmund's College, Oxford ('aged about 14'), on 31 March 1690 and gained the BA in 1693, though the latter seems slightly too young. By 1695 he was singing tenor at the Theatre Royal, Drury Lane, in London. He was appointed a Gentleman Extraordinary of the Chapel Royal on 31 January 1697 and admitted to a full place on 1 August; in the same year he also became a lay vicar at Westminster Abbey, where he was Master of the Choristers from 1704 until Michaelmas 1740. He was principal copyist for both the Chapel Royal and Westminster Abbey until about 1735, and compiled the earliest extant set of Chapel Royal partbooks (*GB-Lbl* R.M.27.a.1–15); he is thought to have been responsible also for the Chapel Royal anthem wordbook, *Divine Harmony* (1712). In about 1716 he supplied Tudway with some of the material for his collection of church music (*Lbl* Harl.7337–42). From 1724 Church was 'receiver of the tomb money' at Westminster Abbey, and from 1729 to 1740 he kept the 'Chapel Royal subscription book for a perpetual fund' (*Cfm* MU MS 1011) to provide pensions for the relatives of deceased choirmen.

Church was a conservative composer, little influenced by contemporary Italian style. Although harmonically unadventurous, he showed considerable imagination in his handling of form, especially the ground.

Another John Church was a vicar-choral at St Patrick's and Christ Church cathedrals in Dublin in the 1730s.

WORKS

all printed works published in London

2 services, F, e, chants, canons: *GB-Lbl*

17 anthems: *Cfm*, *Lbl*, *Ob*

3 hymns in The Divine Companion (1701); 1 in Harmonia sacra, i (2/1703); 1 in *Ckc*

1 song in *The Self Conceit, or, Mother made a Property*: *Ob*

Songs in 1699^4, 1699^5, 1699^6, 1700^6, Wit and Mirth, iii (2/1707) and single sheets

MARGARET LAURIE

Church mode [ecclesiastical mode] (Ger. *Kirchentonart*). Term used for the scalar and melodic categories into which the repertory of Gregorian chant was classified from about the 8th or 9th century. *See* MODE, §II.

Church Music Association. Breakaway group of the SOCIETY OF ST GREGORY, active from 1955 to 1975.

Church Music Society. British society, the main aim of which has always been to publish performing editions of church music of all schools. It was founded in 1906 to assist clergymen in selecting and performing church music. It also did valuable work organizing lectures, rehearsals and courses. Among early members were Robert Bridges, Hugh Allen and Walford Davies. The first chairman was Henry Hadow, whose successors have included H.C. Colles and E.H. Fellowes. In 1928 its educational tasks were largely taken over by the School of English Church Music (later renamed the Royal School of Church Music). Since then the society has concentrated almost entirely on publishing, most recently through Oxford University Press. Its honorary general editors have included Watkins Shaw (chairman of the society from 1979 to 1987), Peter le Huray, David Lumsden, Richard Marlow and Richard Lyne. Among the society's publications are many anthems by Purcell and a substantial corpus of 18th-century music.

SIMON LINDLEY

Church of Christ, Scientist, music of the. The church was founded in Boston in 1879 by Mary Baker Eddy, as a result of her discovery in 1866 of healing through prayer and her subsequent development of the doctrine of Christian Science; this teaches that all human ills are caused by the failure to understand and obey God, and that the cure for these ills can be achieved only through such understanding and obedience. When groups of Christian Scientists began to form, Eddy organized the Christian Science Mother Church, the First Church of Christ, Scientist, of which all other groups (though self-governing) are considered to be branches; the movement has adherents worldwide.

No official service book exists for the Church of Christ, Scientist, and worship is extremely simple. There are no choirs, nor are there special musical services. According to Eddy's *Manual of the Mother Church* (1895), the music shall be 'of an appropriate religious character and of a recognized standard of musical excellence'. It normally consists of organ (or piano) selections, three hymns, and, on Sunday, a solo. The choice of solos of 'musical excellence' has on occasion proved difficult, and the Christian Science Publishing Society has therefore issued helpful volumes. Texts of hymns and solos are at all times carefully integrated with the subjects of the lesson-sermons, which are standard throughout the movement. The first Christian Science Hymnal was issued in 1892 (2/1909), and a substantially revised and enlarged edition, containing over 400 hymns, appeared in 1932. In view of the church's international character, a number of hymns from other countries are included, particularly from England, Germany and Scandinavia. Complete translations of the hymnal have been issued in several European and Scandinavian languages and also in Japanese. *A Concordance to Christian Science Hymnal and Hymnal Notes* was published in Boston in 1961.

H. EARLE JOHNSON

Church of Jesus Christ of Latter-Day Saints [Mormon Church], **music of the.** Mormons see themselves as a 'new Israel', invested with divine authority and commissioned by angelic messengers to re-establish the Church of Jesus Christ after centuries of apostasy, so that Christ may come again to reign personally upon the earth. Mormon theology is based on the principle of continuous revelation and the restoration of 'all things' in the latter days. The *Book of Mormon*, an account of the ministry of Christ in ancient America, was translated by Smith from ancient records through 'the gift and power of God' and is accepted by Mormons as scripture, along with the Bible and other sacred revelations.

1. Historical background. 2. Hymnody. 3. Secular music. 4. Choral tradition. 5. The Tabernacle organ. 6. Worship and musical training. 7. Art music.

1. HISTORICAL BACKGROUND. The Church, whose headquarters are in SALT LAKE CITY, Utah, USA, was formally organized by Joseph Smith in Fayette, New York, in 1830, with important communities at Kirtland, Ohio (1831–8), western Missouri (1831–9) and Nauvoo, Illinois (1839–46), all of which were abandoned because of intense persecution and mob violence. Even before Smith was martyred at Carthage, Illinois, in 1844, Mormon leaders had been searching for a remote place of refuge and in February 1846 began an exodus to the Rocky Mountains, reaching the Valley of the Great Salt Lake in July 1847. Infused by a steady stream of converts, especially from Europe and Great Britain, successful colonies were established throughout the western USA and in Canada and Mexico. Today, the Church is a vital force in Christianity, with a worldwide membership of ten million, including more than four million in the USA and Canada.

2. HYMNODY. From its inception the Church felt the need for hymns that would reflect its unique doctrine and purpose. An early revelation directed Smith's wife, Emma, to 'make a selection of sacred hymns' from the existing Christian repertory, which was to suffice 'till we are blessed with a copious variety of the songs of Zion'. The result was *A Collection of Sacred Hymns, for the Church of the Latter Day Saints*, a vest-pocket hymnal containing 90 texts without music, issued in 1835. The next hymnal, *A Collection of Sacred Hymns*, published in England in 1840, contained some original hymns and was later used in the USA in expanded form; 25 editions had appeared by 1912, the title changing to *Sacred Hymns and Spiritual Songs* for the 9th and subsequent editions. A new volume, *Latter-Day Saint Hymns* (Salt Lake City, 1927), was substantially revised and enlarged in 1948 and 1950 under the title *Hymns: the Church of Jesus Christ of Latter-Day Saints*. The 1985 publication *Hymns* contains 341 hymns and children's songs, a quarter of which are either newly composed or hymns previously excluded from the Christian tradition.

The dramatic early history of the Church and its wealth of new and sometimes startling theological principles provided a rich source of materials for poets and composers. Many hymns focussed on 'restoration' motifs and the Church's strong millennial expectations; others dealt with the 'gathering of Israel', the building of Zion,

and themes of faith and courage through times of hardship and persecution. Notable among these early hymns are *The Morning Breaks* by Parley P. Pratt (1807–57), perhaps the most skilful writer of this period, *High on the Mountain Top*, *If You Could Hie to Kolob* and *The Spirit of God Like a Fire is Burning* by William W. Phelps (1792–1872), the much-loved *O my Father* by Eliza R. Snow (1804–87) and *Come, Come Ye Saints* by William Clayton (1814–79).

3. Secular music. Reflecting a prejudice of many 19th-century Americans, some early Mormons were uneasy about the role of secular music in their society, but Nauvoo, the first Mormon city of consequence, enjoyed an active concert and theatre life, and its short-lived university contained a fledgling music department. European converts in particular aspired to infuse their adopted religion with high musical standards, and some were professionally trained musicians. The rise of Mormonism in the 1820s and 30s coincided almost exactly with the beginnings of the brass-band movement in Europe and America; thus the city's militia, the Nauvoo Legion, had both a military band (essentially a fife and drum corps) and a brass band, led by British convert William Pitt. Pitt's band (said to have converted *en masse* in England) accompanied the pioneer trek west; its multi-talented members were central to the establishment of theatre and orchestral music in 19th-century Utah. In time virtually all pioneer communities had their own bands, many of which were associated with units of the Territorial Militia. These bands played an active and sometimes controversial role in the fractious era before statehood.

Music was especially important in the era of colonization (1849–*c*1915) that followed the settlement of Salt Lake City. Unwilling to abandon themselves to the crudities of the wilderness, colonists often sacrificed other necessities to accommodate musical instruments (19th-century commentator John Hyde observed that every third Mormon seemed to be a fiddle player). Colonies were established in some of the most rugged and remote regions on earth, which, even today, are terrible in their isolation. Music was a major force in sustaining these communities against the hardships and loneliness of pioneer life. Church buildings served as schoolhouses and social halls, hosting dances and often some form of amateur theatre. An extensive repertory of folksongs and quodlibets has survived from this period. Important collections include A.M. Durham's *Pioneer Songs* (1932), *Mormon Songs from the Rocky Mountains* (1968) edited by T.E. Cheney, and *Ballads of the Great West* (1970) edited by Austin and Alta Fife.

4. Choral tradition. Choral music, which had flourished in the Midwestern settlements, continued to grace Mormon worship in its new surroundings. Church choirs were ubiquitous, and in towns important enough to have tabernacles, 'tabernacle choirs' became prominent. Competition among communities often induced choirmasters to move from town to town, as the more successful choirs vied openly for their talents. Inevitably, the centrality and prestige of the Tabernacle in Salt Lake City elevated its choir above the others. Shortly after the pioneer company reached Salt Lake Valley, a sagebrush Bowery was erected for assembly and worship. There, at a 'general conference' of the Church on 22 August 1847, a choir drawn from the mostly male assembly sang for services, an event officially held to be the origin of the Salt Lake Mormon Tabernacle Choir. However, the arrival of a group of Welsh Mormons in 1849, and the appointment of their leader, John Parry, as conductor, can be regarded as the real beginning of the now famous choir. George Careless and Ebenezer Beesley (both professionally trained in England) were outstanding conductors in the 19th century, followed by Evan Stephens (1880–1916), Anthony C. Lund (1916–35), J. Spencer Cornwall (1935–57), Richard P. Condie (1957–74), Jay Welch (1974–5), Jerold Ottley (1975–) and Craig Jessop (1995–). Richard L. Evans was for many years the commentator for the choir's weekly radio broadcast 'Music and the Spoken Word'; first heard nationwide on 15 July 1929, this programme became the longest-running network broadcast in the history of radio (it was televised from 1962). In 2000, a new auditorium was inaugurated to accommodate the rapid growth of the Church; however, the Tabernacle continues to house the 320-voice choir, which, through tours, radio and television appearances, numerous recordings (including a 1959 Grammy award for its recording with the Philadelphia Orchestra of *The Battle Hymn of the Republic*) and the presidential inaugurations of Lyndon Johnson, Ronald Reagan and George Bush, has become one of the most celebrated choirs in the world.

5. The Tabernacle organ. In 1852 the Bowery was replaced by the 'Old Tabernacle' (served by a small pipe organ built in Australia by Joseph Ridges and carted by wagon from San Pedro, California, to Salt Lake City in 1857); this building was itself replaced in 1867 by the now familiar, dome-shaped Tabernacle with its remarkable acoustics. The 'new' Tabernacle's first instrument, built by Niels Johnson, Ridges and other pioneer craftsmen between 1867 and 1885, was followed by a Kimball rebuild in 1901 and extensive changes by Austin between 1916 and 1940. This organ was replaced in 1948 by the current, world-renowned instrument, designed in the 'American Classic' tradition by G. Donald Harrison of Aeolian-Skinner (op.1075). Additional work completed in 1988 by Schonstein brought the five-manual organ to 147 voices in 206 ranks, with 11,623 pipes in eight divisions. Joseph J. Daynes, the son of English immigrants, was the first organist (1867–1900). Prominent successors in the 20th century have included John J. McClellan (1900–25), Tracy Y. Cannon (1924–30), Edward P. Kimball (1924–37), Frank W. Asper (1924–65), Alexander Schreiner (1924–77), Wade N. Stephens (1933–44), Roy M. Darley (1947–84), Robert Cundick (1965–91), John Longhurst (1977–), Clay Christiansen (1982–) and Richard Elliott (1991–).

6. Worship and musical training. Latter-Day Saint worship places little emphasis on liturgy. Services are simple and dignified in conception, but quality varies with the degree of training and committment in local congregations. A typical Sunday service includes an organ prelude and postlude and the singing of several congregational hymns, including a 'sacrament hymn' while young men (Mormonism functions with a lay priesthood, to which boys are typically ordained at age 12) prepare the bread and water symbolic of the body and blood of Christ. Each congregation is expected to have a choir for regular services and special occasions, and often a vocal or instrumental soloist may perform. Because all music

positions are filled by volunteers, the development of music skills is encouraged in every family, and various programmes exist to train lay musicians. Brigham Young University (Provo, Utah), BYU-Hawaii (Laie) and Ricks College (Rexburg, Idaho) offer accredited college-level music programmes. The Church Music Workshop provides a week-long training session each summer at BYU's Provo campus. Between 1917 and 1957 the Church maintained the McCune School of Music and Art in Salt Lake City, with conservatory training, as well as a populist outreach that led to a concerted effort to train local musicians under the direction of the General Music Committee by sending qualified professionals into 'the field'. As this generally successful programme (beginning in 1936) dissipated in the late 1960s owing to rapid growth of the Church outside the Rocky Mountain core, a new programme was initiated whereby musically trained missionaries would teach music fundamentals and keyboard skills to beginners, especially in Third-World countries.

7. ART MUSIC. Although there is little demand for art music in the typical worship service, the composition of sacred music continues to thrive, and a substantial body of anthems and hymn arrangements has been produced. The Church also fosters festivals, pageants and musicals of various types. By the turn of the 19th century, aspiring Mormon composers, encouraged by Church leaders, had begun to study at leading music schools in the USA and Europe, with high hopes of creating an indigenous classical tradition in Latter-Day Saint music. Among the most promising, Arthur Shepherd graduated in 1897 from the New England Conservatory but produced nothing overtly Mormon except for an anthem *And the Lord shall Bring Again Zion* and a reference to a Latter-Day Saint hymn in his orchestral work *Horizons* (1927). B. Cecil Gates (Brigham Young's European-trained grandson) achieved temporary success with his oratorio *The Restoration* (1916), and lasting fame with a highly regarded setting of the Lord's Prayer. But the quintessential 'home' composer was Leroy J. Robertson, who, after study with G.W. Chadwick at the New England Conservatory and, later, with Bloch and Schoenberg, received international recognition for his music incorporating Amerindian as well as Mormon themes; his Oratorio from the *Book of Mormon* (1953) remains the outstanding work of its kind. Merrill Bradshaw's *The Restoration* (1974) and Robert Cundick's *The Redeemer: a Sacred Service in Music* (1978) have also received both critical and popular acclaim. Crawford Gates's impressive score for chorus and orchestra (1956, rev. 1988) for the Hill Cumorah Pageant (a religious epic staged each summer since 1937 at the birthplace of Mormonism near Palmyra, New York) and his musical *Promised Valley*, commissioned for the centennial observance of the founding of Salt Lake City (1947), are among the most celebrated of Latter-Day Saint works. An increasingly significant group of young composers and arrangers has addressed Latter-Day Saint themes in the later 20th century. Their work is not to be confused with Mormon 'religious pop', which, though prolific, is generally undistinguished. Children's music is also a genre in which Mormon composers have excelled.

ROGER MILLER

Church sonata. *See* SONATA DA CHIESA.

Churgin, Bathia (Dina) (*b* New York, 9 Oct 1928). American and Israeli musicologist. She graduated in 1950 from Hunter College, where Louise Talma was among her teachers. During the summers of 1950 and 1951 she studied music theory with Nadia Boulanger at Fontainebleau. She received the MA from Radcliffe College in 1952 and the PhD from Harvard University in 1963; at Harvard she studied theory with Piston and music history with Gombosi and Pirrotta. She taught at Vassar College from 1952 to 1957 and from 1959 to 1971. She was also visiting professor at the Harvard Summer School in 1963 and at Tel-Aviv University in 1972. From 1970 she was professor and head of the musicology department at Bar-Ilan University, Ramat Gan, Israel; her tenure as department head ended in 1984, and she retired in 1996. Her work has been concerned with the origin and early phases of the Classical symphony and style, and the contributions of Sammartini and other Italian composers. Her research interests also include Beethoven, where her main focus has been on the compositional process and the analysis of stylistic development; she has also prepared editions of symphonies by Beethoven, Sammartini and Antonio Brioschi. A Festschrift in her honour was published in Winter 1999 (*JM*, xvii).

PAULA MORGAN

Churkin, Nikolay Nikolayevich (*b* Dzhalal-Ogli, nr Tbilisi, Georgia, 9/21 May 1869; *d* Minsk, 27 Dec 1964). Belarusian folklorist and composer. He completed his studies in composition with Ippolitov-Ivanov at the Tbilisi Music College (1892), and then worked as a music teacher in Baku and from 1903 in the north-west region of Russia (in the towns of Kovno, Vil'no and Mstislavl'). He headed amateur societies and choirs, and began his work as a folklorist. His first volume of 53 Belarusian songs was published in Vil'no in 1910. His opera *Osvobozhdyonnïy trud* ('Emancipated Labour') was written in Mstislavl' in 1922 and was staged there by amateurs in the same year.

After 1935 Churkin lived permanently in Minsk and devoted himself to folklore. He recorded around 3000 Belarusian, Lithuanian, Polish, Georgian, Armenian and Azerbaidjani folksongs. These served as sources for many of his instrumental works – three sinfoniettas (1925, 1949, 1955), two orchestral suites and overtures in addition to numerous chamber works which are particularly associated with Belarusian folklore. Churkin wrote many choruses, romances and songs in a traditional Belarusian style to verses by many of his compatriots.

Some of Churkin's papers were destroyed in Minsk during World War II; the material which has survived is housed at the Central State Archive of Literature and Art of the Republic of Belarus' (TsDALiM, fund 123).

WORKS

Stage: Osvobozhdyonnïy trud [Emancipated Labour] (op, P. Shestakov), 1922; Kok-sagïz (musical comedy, A. Ushakov and A. Zhavruk), 1939; Rukavichki [Mittens] (op, L. Voronkova), 1941; Pesnya Berezinï [Song of the Birch Tree] (musical comedy, O. Borisevich and K. Titov), 1947
Vocal: Partïzanï [The Partisans] (Y. Kupala), 1936; Tï pridzi, Kalïkanka [You Arrive, Lullaby] (Kupala, Ye. Ognetsvet), 1948; Detskiye pesni [Children's Songs] (I. Gutorov and others), 1950; 2 romansa (Kupala), 1952; 3 romansa (Ya. Kolos), 1952; various choruses (M. Gomolka, A. Rusak, A. Staver), 1952–63
Orch: Sinfonietta no.1, 1925; 2 minatyurï, 1938; Suite, 1940; Sinfonietta no.2, 1949; Tantseval'naya syuita [Dance Suite], 1950; Suite no.2, 1951; Sinfonietta no.3, 1955
Folk insts orch: Suite, 1945; Tanets 'Golubets' [The Golubets Dance], 1949; Pol'ka Partïzanka [The Partisan Woman's Polka], 1950; Suite no.2, 1951; Uvertyura Pamyati Yanki Kupali [Ov. in memory of Yanka Kupala], 1952; Suite no.3, 1955
11 str qts, 1927–63
Other chbr and solo inst: Rodnïye napevï [National Melodies], 12 pieces, pf, 1952; Sonata, vn, pf, 1953; Rondo, vn, pf, 1960; Pesnya bez slov [Song without Words], vn, pf, 1961
Numerous arrs. of folk music for various forces

TAISIYA SHCHERBAKOVA

Chusid, Martin (*b* Brooklyn, 19 Aug 1925). American musicologist. He studied at the University of California, Berkeley, under Bukofzer, Kerman, David Boyden and Lowinsky, receiving the BA in 1950, the MA in 1955 and the PhD in 1961. He taught at the University of Southern California from 1959 to 1963. Since then he has been on the faculty of New York University, where he was made professor in 1968; he was also the chairman (1967–70) and acting chairman of the department of music (1966–7; 1981; 1986–7) and associate dean of the graduate school of arts and science (1970–72). In 1976 he was appointed director of the American Institute for Verdi Studies at the university.

Chusid's principal fields of research are the operas of Verdi and the music of Schubert. In addition to his articles on tonality in Verdi's operas he has contributed *A Catalog of Verdi's Operas* (1974) and a monograph on Verdi's middle period (1997). In his edition of Schubert's B minor Symphony he has advanced a novel explanation for the work's incompleteness.

PAULA MORGAN

Chustrovius, Johannes (*d* Lüneburg, 18 Oct 1605). German composer. He was sacristan at the Nikolaikirche, Lüneburg, from 1577. He also appears to have directed performances of sacred music there, a task that was normally the responsibility of the Kantor of St Johannis. He published two collections of motets: *Sacrae cantiones plane novae*, for four to six and more voices (Helmstedt, 1589) – which he dedicated to the Lüneburg town council and, according to an autograph letter of 24 October 1589, had assembled at the request of his admirers – and *Sacrae cantiones*, for five, six and eight voices (Frankfurt, 1603). They contain a total of 48 works. There is also a *Missa 'Concussum est mare'* for five voices (Helmstedt, 1595), and four other sacred pieces by him in manuscript (two in holographs dated 1593 in *D-Hs* and two Christmas motets, one for four voices and one for eight, the latter incomplete, in a volume dated 1604–5 in *D-Lr*).

HORST WALTER

Chute. *See* CHEUTE.

Chutney (from Hindi *catnī*). A local and popular music and dance form of East Indian culture in the Caribbean. In the Indo-Caribbean communities of Guyana, Surinam and Trinidad the term *chutney* traditionally denoted light, fast and often ribald songs in Bhojpuri, a dialect of Hindi, set to variants of the four-beat *tāla* known in India as *Kaharvā*. *Chutney* songs were most typically performed, often with lewd dancing, by women in sexually segregated contexts at weddings and childbirth festivities. In Trinidad in the mid-1980s *chutney*, as performed by a solo vocalist with harmonium, *dāṇḍtāl* (a metal rod struck with a clapper) and *ḍholak* (barrel drum), became widely popular as a social music and dance genre, enjoyed by both men and women at large public fêtes and weddings. In the next decade a hybrid genre called *chutney-soca* emerged which incorporated dance-band instruments, modern calypso rhythms and mixed Hindi and English lyrics. Although controversial, *chutney-soca* has become popular among many Creoles as well as Indo-Caribbeans and its appeal has spread to the Indo-Caribbean communities in North America.

Chvála, Emanuel (*b* Prague, 1 Jan 1851; *d* Prague, 28 Oct 1924). Czech critic and composer. He studied as a railway engineer in Vienna and worked all his life as an official of a railway company in Prague. A composition pupil of Fibich and Josef Foerster, he began writing music criticism for *Lumír* in 1878. He was best known for his writing in the daily press, in *Politik* and *Národní politika* (1880–1921, under the cypher '-la'), where he championed Dvořák and Fibich and, of the younger generation, Suk and Novák. Conscientious and well informed, his reviews were to the point and free of malicious polemics and chauvinism. Particularly valuable is his early, eye-witness account of Czech national music (1886). Four volumes of memoirs remain unpublished, apart from a few excerpts (e.g. 1916). His compositions, now forgotten, include the opera *Záboj* (3, J. Vrchlický, 1906–7), belatedly performed at the Prague National Theatre on 9 March 1918.

JOHN TYRRELL

Chybiński, Adolf (Eustachy) (*b* Kraków, 29 April 1880; *d* Poznań, 31 Oct 1952). Polish musicologist. He received a rudimentary musical education in Kraków, where he studied classics and German, and in Munich. Between 1904 and 1908 he undertook a regular course of musicological study under Adolf Sandberger and Theodor Kroyer, while at the same time taking private composition lessons with Ludwig Thuille. In Munich he also attended lectures in art history and philosophy. In 1908 Chybiński took the doctorate at Munich with a dissertation on

aspects of the beat in music and in 1912 completed the *Habilitation* at Lwów University with a work on the 16th-century Polish theories of mensural music. He was appointed reader in 1917 and full professor in 1921. He was in charge of the musicology institute at Lwów University from 1913 to 1941 and was, during this time, also a professor at Lwów Conservatory. From 1945 until his death he was head of the musicology institute at Poznań University. In 1928 Chybiński began to publish Wydawnictwo Dawnej Muzyki Polskiej, a series of editions of outstanding early Polish compositions. Together with Kazimierz Sikorski he edited the *Kwartalnik muzyczny* (1928–33), with Bronisław Rutkowski the quarterly *Muzyka polska* (1934–5), and he was editor of *Polski rocznik muzykologiczny* (1935–6) and *Kwartalnik muzyczny* (1948–50).

Chybiński had wide interests. His writings range from scholarly studies to newspaper reviews and consist of some 650 items. He paid particular attention to the history of Polish music, especially that of the 16th century to the 18th, and to Polish contemporary music. His ethnomusicological studies chiefly concern the people of the Tatra Mountains. Chybiński devoted most of his energies to the investigation of sources as he believed that the insufficient knowledge of sources at that time made it impossible to formulate reliable general statements about Polish musical culture. Chybiński created modern Polish musicology, and most of the Polish musicologists of the following generation were his direct or indirect pupils.

ZYGMUNT M. SZWEYKOWSKI

Chyliński, Andrzej (*fl* 1620–35). Polish composer and singer, probably of Russian or Lithuanian extraction. He was a Franciscan monk and in 1625 was director of music at a house of his order at Drohiczyn Podlaski. He left for Italy in 1630 to work as a musician and priest at the basilica of S Antonio, Padua. He soon became a bass in the choir, but after he was appointed *maestro di cappella* in 1632 conflicts developed, which led to his departure from Padua; he returned to Poland in 1635. Chyliński's only known work is *Canones XVI. Idem ad diversa, rectis contrariisque motibus toti in toto et toti in qualibet parte* (Antwerp, 1634). Each of the canons is based on the same theme, *Da pacem in diebus nostris*. According

to Starowolski he published a puzzle canon in Venice as early as 1620 and called in vain on musicians to solve it.

Ciampi, Francesco (*b* ? Massa or Pisa, ?*c*1690; *d* after 1764). Italian composer. He is usually said to have been born at Massa, where he was later in the service of the duke, Alderamo Cybo, as a composer and violinist; but on the rolls of the Bologna Accademia Filarmonica, of which he became a member on 3 July 1719, he is said to be from Pisa. In 1735 he was *maestro di cappella* of S Angelo Custode, Rome. He composed ten *opere serie* between 1715 and 1735. Burney had high praise for a mass and *Miserere* by him; the latter (in *GB-Lcm*) is a large work in several movements for soloists, two choirs and orchestra.

Ciampi, Marcel (*b* Paris, 29 May 1891; *d* Paris, 2 Sept 1980). French pianist and teacher. He studied from an early age with Marie Perez de Brambilla, a former student of Anton Rubinstein, and in 1909 he received a *premier prix* in the class of Louis Diémer at the Paris Conservatoire. He performed throughout Europe as a soloist, as the pianist in a trio with Maurice Hayot and André Hekking, and as the frequent partner of Casals, Enescu and Thibaud. From 1941 to 1961 he taught at the Paris Conservatoire, where his students included Yvonne Loriod, Cécile Ousset and Eric Heidsieck; he also taught at the Ecole Normale de Musique in Paris and at the Yehudi Menuhin School, Stoke d'Abernon, Surrey. His few recordings, which include Franck's Quintet (with the Capet Quartet) and works by Chopin and Liszt, reveal a broad, free style and a subtle approach to sound that seem to reflect the Russian influence of his first teacher. Ciampi was also a noted interpreter of Debussy, for whom he once played.

CHARLES TIMBRELL

Ciampi, Vincenzo (Legrenzio) (*b* Piacenza, ?1719; *d* Venice, 30 March 1762). Italian composer. His place and date of birth, from Fétis, may be incorrect; he was frequently called a Neapolitan in librettos. He studied in Naples with Leo and Durante (perhaps at the Conservatorio di S Onofrio), and his first six comic operas were performed there (1737–45). He was at Palermo for half the 1746–7 opera season, composing his first *opera seria* and serving as *maestro al cembalo* for another. From 1747 he worked at the Ospedale degli Incurabili, Venice, first as an assistant to G.B. Runcher, the *maestro di coro*, then as *maestro di coro* himself (he first has this title in the libretto of his next opera, *L'Adriano*, Carnival 1748). He composed at least 15 motets for the Incurabili during this period, and his oratorio *Christus a morte* was probably given there in 1748. His comic opera *Bertoldo, Bertoldino e Cacasenno* (probably given in Venice on 26 December 1748) was highly successful in Paris in 1753, where it played a decisive role in the *Querelle des Bouffons*, influencing through Favart's parody *Ninette à la cour* (1755), the development of *opéra comique*. Frederick the Great is said to have been highly entertained by the opera and the *primi buffi* Maria and Carlo Paganini, who played an important role in the dispersion of Venetian comic opera.

Ciampi was one of the first music directors of the Incurabili to be given leave of absence for a period of several years, and by autumn 1748 he was in London (he was replaced in Venice by Gioacchino Cocchi). In London Ciampi became composer and music director of a company under G.F. Crosa that gave London's first season of Italian comic operas at the King's Theatre. These included *Gli tre cicisbei ridicoli*, in which the favourite song 'Tre giorni son che Nina' has sometimes been attributed to Ciampi, but on very dubious grounds, according to Walker. In summer 1749 the company visited Brussels, but it is uncertain whether Ciampi was with them. In autumn 1749 he visited Venice, composing the comic opera *Il negligente*.

Back in London for the 1749–50 season, Ciampi moved with the Crosa company to the Little Theatre in the Haymarket after a dispute between Crosa and Vanneschi, impresario of the King's Theatre. From 21 November to 16 December they gave eight performances of *Il negligente*, and in January 1750 they returned to the King's Theatre, performing comic operas and two *opere serie* by Ciampi. The season was cut short in April by the impresario's bankruptcy, whereupon the company returned to the Little Theatre for four performances.

There was no Italian opera in London in the next three seasons but Ciampi remained there; he began to publish instrumental works about 1751. His opera *Didone* was given nine times in the King's Theatre in the 1753–4 season, but a version of *Bertoldo* put on in December 1754 at Covent Garden seems not to have repeated its successes on the Continent, being given only three times. The extent of Ciampi's association with the Italian opera seasons in London in this period is not known. By the end

of 1756 he seems to have been back in Venice, as he resumed his operatic career there. By Holy Week 1760 he was again *maestro di coro* at the Incurabili, a post he kept until his death. He may have composed for the Ospedale della Pietà as well.

Ciampi's music is typical of that of many composers of his era in combining what are now considered old-fashioned (Baroque) elements with modern (*galant*) ones. Even when using Baroque material, he often cast it in the regular, short-breathed phrases of the *galant* style, though on occasion – as in the aria 'Se resto sul lido' in *Didone* (which Burney considered the best of his London *opere serie*) – he achieved an effect of majesty and broad rhythmic sweep. He was an agreeable and tuneful, if not a distinguished, composer, and Burney's judgment of his vocal works is still valid: 'they are not without merit; he had fire and abilities, but there seems something wanting, or redundant, in all his compositions; I never saw one that quite satisfied me, and yet there are good passages in many of them. ... The comic songs of *Il negligente* are infinitely better than his serious, and convince me that his *genre* was buffo'.

Ciampi's instrumental works were published in London between about 1751 and 1757 by John Johnson and John Walsh, each of whom used an independent series of opus numbers (only intermittently indicated on Walsh's prints). This has helped produce considerable bibliographical confusion, still to be found in the latest listings. In about 1751 each publisher issued two sets of six trio sonatas – thus 24 different pieces, all but one in three movements. Still in 1751, Walsh issued six two-movement harpsichord sonatas, probably to be counted as op.3 (the 12 trio sonatas, only the second set of which has an opus number, are mentioned on the cover as previously published). These sonatas also bear the notice 'Speedily will be published 12 solos for a violin and harpsichord'. Nothing is known that can be counted as op.4, but six violin solos make up op.5, so possibly another set of six, op.4, is lost. However, the one known copy of op.5 refers on its cover to six concertos for harpsichord or organ as having just been published. The only known set of such concertos is op.7, first advertised in January 1756. It may be that the surviving copy of op.5 is a 1756 reprint; Smith and Humphries date it speculatively as about 1753, but it should be noted against this that the set of six concertos, op.6, published in 1754, refers on its cover to the 12 trio sonatas and six harpsichord solos, but not to the violin solos. Ciampi also published three sets of concert arias, mostly to texts by Metastasio.

DENNIS LIBBY/SASKIA WILLAERT (text)
JAMES L. JACKMAN (work-list)

Cianchettini, Pio (*b* London, 11 Dec 1799; *d* Cheltenham, 20 July 1851). English pianist and composer. He was the son of the Bohemian pianist Kateřina Dusíkova and Francesco Cianchettini of Rome, head of the London music publishing firm Cianchettini & Sperati; he was a nephew of J.L. Dussek. At the age of five he appeared in London as an infant prodigy; when he was six he toured Germany, Holland and France with his father, and at the age of eight he was reported to be proficient in four languages. When he was ten he composed various works, including a concerto, which he played in London. He composed for and directed the concerts and tours of Angelica Catalani. He also composed and published a Benedictus, a cantata to Milton's *Paradise Lost*, 60 Italian catches and other vocal and piano music.

Cibber [née Shore], **Catherine** (*b* London, bap. 24 Oct 1669; *d* Knightsbridge, London, 17 Jan 1734). English soprano and actress. She was the daughter of the trumpeter Matthias Shore. According to Hawkins she was 'a very beautiful and amiable young woman, whom Purcell taught to sing and play on the harpsichord'. After her marriage to the actor Colley Cibber in May 1693 she appeared on stage for a few years. She sang Purcell's 'Then follow brave boys to the wars' in the second part of Thomas D'Urfey's *The Comical History of Don Quixote* (May 1694), with her brother John playing trumpet obbligato. According to their daughter Charlotte (later Mrs Charke), Cibber fell in love with her after hearing her singing to her own accompaniment, and he wrote a part for her which used this double skill in his *Woman's Wit* (1697). Their son Theophilus (*b* 1703) was the husband of Handel's Mrs Cibber.

OLIVE BALDWIN, THELMA WILSON

Cibber [née Arne], **Susanna Maria** (*b* London, bap. 28 Feb 1714; *d* London, 30 Jan 1766). English tragedienne and singer, sister of the composer THOMAS AUGUSTINE ARNE. As a child she studied singing with her brother Thomas. She made her singing début (as Miss Arne) at the Little Theatre in the Haymarket on 13 March 1732 in the title role of J.F. Lampe's *Amelia*, to extremely enthusiastic reviews, and on 17 May she sang Galatea in a pirated version of Handel's *Acis and Galatea*. During the next two years she sang in Arne's *Rosamond*, *The Opera of Operas* and *Dido and Aeneas*, the title role in J.C. Smith's *Teraminta*, and Venus in Charke's *The Festival*. She performed a minor role in Handel's *Deborah* on 20 March 1733, thus establishing a lifelong friendship with the composer. That same year her name appeared in the playbills offering entr'acte songs 'by popular demand' at the Haymarket. In 1734 she and her brother Richard were engaged as singers, and Thomas as composer, at Drury Lane, and on 5 April she gave a benefit concert for Charke at Hickford's Room. In the same year, she married Theophilus Cibber, son of the actor, dramatist and poet laureate Colley Cibber, who, recognizing in Susanna the makings of a great tragic actress, trained her for what was to become one of the most famous careers of a tragedienne of the 18th century. Mrs Cibber made her début as a dramatic actress playing the title role in Aaron Hill's *Zara* (1736) and was widely acclaimed. She also played Shakespearean roles. A much noted dispute with Kitty Clive over the part of Polly in *The Beggar's Opera* inspired a satire, *The Beggar's Pantomime, or The Contending Columbine*. In 1738 her husband tried to sue her for adultery with a Mr William Sloper. The court documents reveal that Cibber had persuaded his wife into relations with their friend and then had the couple followed and their intimacies documented. Aware of Theophilus's collusion, the jury awarded only £10 of the £5000 that he had claimed. Susanna went into seclusion with Sloper and gave birth to their daughter, Susanna Maria (Molly).

Leaving London to flee the scandal, Susanna went to Dublin in autumn 1741 for a busy season at the Aungier Street Theatre with her good friend and mentor, the actor James Quinn. Quinn is reported among the fine company that visited her London house on Sunday evenings. Burney, referring to these evenings, wrote that he found himself 'in a constellation of wits, poets, actors, and men of letters', including, among others, Handel, Garrick and Arne. In Dublin, Cibber also sang in some of Handel's oratorios, including possibly *Acis and Galatea* and *Esther*, and certainly *Alexander's Feast*. She also sang in the première of *Messiah* (13 April 1742), and her emotional singing of 'He was despised' caused the Rev. Dr Delany to exclaim 'Woman, for this thy sins be forgiven thee'. On 21 and 28 July she sang a duo recital with her sister-in-law, the soprano Cecilia Arne (née Young). The Dublin notices were full of praise for Cibber for both her acting and her singing. Thomas Sheridan wrote:

> What then must [the mighty force of oratorical expression] be, when conveyed to the heart with all the superadded powers and charms of musick? No person of sensibility, who has had the good fortune to hear Mrs Cibber sing the oratorio of the Messiah, will find it very difficult to give credit to accounts of the most wonderful effects produced from so powerful an union.

Cibber returned to the London stage in autumn 1742 to perform at Covent Garden, adding many new dramatic roles to her repertory. She was also engaged by Handel for his oratorio season, creating the role of Micah in *Samson*. In 1744–5 she continued to sing for Handel, now at the King's Theatre in the Haymarket. Her roles included Jael (*Deborah*), Lichas (*Hercules*) and David (*Saul*), and she sang in *L'Allegro*, *Alexander's Feast* and *Messiah*. Handel wrote for her the part of Daniel in *Belshazzar*, but, due to illness (she suffered from recurring illness most of her life), she never sang the role. In 1744 she became Garrick's leading lady at Drury Lane, and their partnership and friendship (reflected in letters) continued until her death. From 1744 to 1765 she added numerous dramatic roles to her repertory and was, after Garrick, the highest paid Thespian in London.

Contemporary reviews, dedications, letters and poems all refer to her ability to affect the listener deeply. According to Burney, Handel 'was very fond of Mrs Cibber, whose voice and manners had softened his severity for her want of musical knowledge'. Burney also wrote that she 'captivated every hearer of sensibility by her native sweetness of voice and powers of expression'. She began her career as a soprano with a small voice that had considerable agility and range, but later the music written for her was in the contralto range.

She was buried in the north cloisters of Westminster Abbey. On the day of her death Covent Garden and Drury Lane closed their doors as a tribute to one of their finest actresses and singers. Garrick, upon hearing of her death, said: 'Then Tragedy expired with her'.

MOLLY DONNELLY

Cibell [cebell, sebell]. An English musical form of the period 1690–1710 found in instrumental and vocal pieces. It derives from the 'Descente de Cybelle' in the first act of Lully's opera *Atys* (1676) in which there is a chorus with orchestral accompaniment, 'Nous devons nous animer d'une ardeur nouvelle', in praise of the goddess Cybele. How and why this became popular in England has not been ascertained, but its melody became known as the 'Old Cibell' and is found arranged for oboe in *The Sprightly Companion* (RISM 1695[14]) by John Banister (ii) and in other sources. At least two songs were written as contrafacta to it: *Lard, how men can claret drink* and *Pray now, John, let Jug prevail*. Purcell's *Trumpet Tune, called the Cibell* (Purcell Society Edition, vi, 27) was clearly modelled on Lully's chorus, as apparently was a cibell by Gottfried Finger; but others (by Henry Morgan, Jeremiah Clarke (i) and Robert King) take the piece by Purcell as their starting-point and are thus parodies of a parody.

True cibells are in duple metre with phrases beginning and ending at the half bar, as in the gavotte. They are characterized by comparatively frequent episodes in which the bass has running figures in crotchets and quavers, either unaccompanied or, in keyboard cibells, with simple chords functioning as the realization of an imaginary figured bass. A strongly marked anapaestic rhythm is a feature deriving from Purcell's parody rather than from Lully's original. Thurston Dart's article 'The Cibell' (*RBM*, vi, 1952, pp.24–30) includes a thematic index of 21 cibells.

MICHAEL TILMOUTH

Cibot, Noel. *See* CYBOT, NOEL.

Ciccarello, Nuntio (*b* ?Cerreto, nr Naples, ?1585–90; *d* ?Naples, after 1611). Italian composer. His only known music, *Primo libro de' madrigali a quattro voci* (Naples, 1611), is dedicated to Fabio Carrafa, brother of the Duke of Maddaloni, Martio Carrafa; he mentioned that every day he sang and had his compositions sung for the Carrafa family. His madrigals have short syllabic phrases, a great many of which are repeated, occasionally to new words. This, plus his *Lidia, ti lasso, ahi lasso*, which is in part modelled on G.D. Montella's setting of the same Marino poem, suggests that Montella may have taught him. The collection also includes settings of poems by Guarini and Francesco Contarini.

KEITH A. LARSON

Ciccolini, Aldo (*b* Naples, 15 Aug 1925). French pianist of Italian birth. At the age of 15 he received a first prize in piano at the Naples Conservatory in the class of Paolo Denza, a former student of Busoni. In 1942 he made his local début, playing Chopin's F minor Concerto, and in 1947 he became the youngest musician until then to hold the post of piano professor at the Naples Conservatory. Subsequently he won a number of international piano prizes, including the S Cecilia prize in Rome in 1948 and first prize at the Marguerite Long-Jacques Thibaud Competition in Paris in 1949, the year of his move from Italy to France. He made his New York début in 1950 and has since performed throughout the world. From 1971 to 1989 he taught at the Paris Conservatoire. His early recordings of Satie have not been surpassed for their insight and panache; he is also a noted interpreter of Debussy and Saint-Saëns. In his most recent recordings he has concentrated on Viennese masters, and has given musicianly accounts of many of Mozart's works and of the last five sonatas of Beethoven.

DOMINIC GILL/CHARLES TIMBRELL

Ciccolino. *See* RIVANI, ANTONIO.

Ciceri, Pierre-Luc-Charles (*b* Saint-Cloud, 17 Aug 1782; *d* Saint-Chéron, Seine-et-Oise, 22 Aug 1868). French stage designer and painter. After his training as a singer at the Paris Conservatoire was broken off because of an accident, he began in 1802 to take instruction in drawing and painting from the architect and stage designer F.J. Belanger. By 1805 he had entered the Paris Opéra studio as 'peintre des paysages'; about 1816 he was accepted into the circle of 'peintres en chef' and after the death of Eugenio Degotti (1824) he was effectually head of this institution until 1847. He also worked as stage designer for other Parisian theatres, and was active in Kassel (1810), Saint-Cloud (1813) and London (1815). After an early phase in which he carried on the traditional forms of neo-classicism, culminating in the designs for Spontini's *Olimpie* (1819, with Degotti), he developed during the time of the Bourbon restoration a style of scenery design which reflected technical and economic developments and the discovery of national historical and cultural consciousness. It combined the progressive technique of gas lighting (first in *Aladin ou La lampe merveilleuse*, 1822, with L. Daguerre, music by Isouard and Benincori), and the effective use of the new panorama and the diorama (first used in *Alfred le Grand*, 1822, ballet, music by Gallenberg; see illustration) as well as the moving panorama (*La belle au bois dormant*, 1829, ballet, music by Hérold), with neo-Baroque mechanical effects (volcanic eruption in *La*

Design by Pierre-Luc-Charles Ciceri for Robert Gallenberg's ballet 'Alfred le Grand', Paris Opéra, 1822 (Bibliothèque et Musée de l'Opéra, Paris)

muette de Portici by Auber, 1828, after the model by Sanquirico in Milan), and the accurate, detailed depiction of historical epochs in stage scenery (e.g. Meyerbeer's *Robert le diable*; *see* PARIS, fig.20). Ciceri's effective scenography corresponded exactly with the intentions of Romantic music drama and it was above all due to his ability to conceive stage design as the integrating element of theatrical production that he became the dominating personality of Romantic stage art and the prophet of an age of 'spectacles purement oculaires' (Théophile Gautier, 1858). A commerical scenic studio founded by him in 1822, which made scenery for theatres at home and abroad, made a considerable contribution to the international fame of the style of setting developed in Paris.

Ciceri should not be confused with the American stage designer Charles Ciceri (*fl c*1794–*c*1837) who created the scenery for one of the first American operas, James Hewitt's *Tammanny or The Indian Chief* (John Street Theatre, New York, 1794).

MANFRED BOETZKES

Cicero, Marcus Tullius (*b* Arpinum [now Arpino], 3 Jan 106 BCE; *d* Caieta [now Gaeta], 7 Dec 43 BCE). Roman statesman, orator and man of letters. The hundreds of references to music in his writings (see Wille, 1967) include no comprehensive statement of theory; individual passages show that his usual eclecticism prevailed here as well. The Epicurean condemnation of music and of late Stoic musical theory by a philosopher well known to him personally, PHILODEMUS of Gadara, influenced his thinking; nevertheless, he occasionally used Platonic and Stoic doctrines. He accepted the view of Democritus and Epicurus that music is one of the fine arts, not a pursuit necessary for life (*Tusculan Disputations*, i.25.62); at the same time, the musical culture of Hellenic Greece seemed to him admirable (ibid., i.2.4).

Cicero's orations usually referred to the place of music in private life and for forensic purposes treated it as a sign of dissolute tendencies; but his treatises on rhetoric show a lively awareness of the rhythmic and melodic elements that entered into oratorical technique. The influence of Cicero's oratorical theory is most directly seen in the

Institutio oratoria of QUINTILIAN. Evidence of Cicero's views on fundamental points may be gained by comparison of his *Republic* and *Laws* with statements in the corresponding dialogues of Plato. Two passages have special importance: *Republic*, vi.9–29 on the music of the spheres (the 'Somnium Scipionis', preserved in the commentary of MACROBIUS AMBROSIUS THEODOSIUS, which enjoyed considerable influence in the Middle Ages), and *Laws*, ii.15.38–9 (cf ii.9.22) on the power of music, the beliefs of Plato about ethos (perhaps derived from DAMON) and the musical conservatism of the old Greek city-states. Cicero's *Republic* was known to ARISTIDES QUINTILIANUS, who referred to it explicitly in his *On music* (ii.6; he also seems to have known Cicero's oration *Pro Q. Roscio comoedo*), and Cicero was regularly cited as a musical authority in early medieval treatises such as those by MARTIANUS CAPELLA, REMY OF AUXERRE and REGINO OF PRÜM, and very frequently in later treatises of the 15th and 16th centuries.

Ciciliano (Old It.). *See* SICILIANA.

Cicognini, Alessandro (*b* Pescara, 25 Jan 1906; *d* Rome, 10 Nov 1995). Italian composer. He studied composition at the Milan Conservatory with Giulio Cesare Paribeni and Renzo Bossi, graduating in 1927. He first became involved in film music in 1936 with *I due sergenti* (dir. Enrico Guazzoni) and *Il corsario nero* (dir. Amleto Palermi) and settled in Rome. In the last decade of Fascist cinema he worked with many important directors, including Alessandro Blasetti, Augusto Genina, Mario Camerini, Camillo Mastrocinque and Carmine Gallone. The sentimental vein in his music, a sort of simplified echo of the operatic tradition, was well suited to these films, but, curiously, it survived intact in some of Vittorio De Sica's masterpieces of neo-realism (*Sciuscià*, 1946; *Ladri di biciclette*, 1948; *Umberto D*, 1952), to which it was ill-matched, as well as in his visionary fantasies (*Miracolo a Milano*, 1951; *L'oro di Napoli*, 1954; *Il giudizio universale*, 1961). Cicognini also wrote more convincing scores for the first examples of Italian film comedy, by Luigi Comencini, Dino Risi, and Mario Monicelli. In all, he composed for more than 100 films, but in 1965 abandoned the genre altogether. Other works include an opera, *Donna lombarda* (1933, Turin), a cantata, *Saul* (1932), and a Mass for five voices (1943). Cicognini was president of the Associazione nazionale compositori di musica cinematografica and director of the Reggio Calabria Conservatory from 1969 and the Brescia Conservatory from 1971. He was awarded a Nastro d'argento.

SERGIO MICELI

Cicognini, Giacinto Andrea (*b* Florence, 1606; *d* *c*1650). Italian playwright and librettist, son of JACOPO CICOGNINI. He earned a law degree from the University of Pisa in 1627, and from 1640 to 1645, in Florence, he regularly assisted G.B. Ricciardi (also a Tuscan poet and playwright) with his legal problems. During much of his residency in Venice, Cicognini was employed as secretary to Francesco Boldieri, who managed the Venetian priory of the Knights Hospitaller of St John of Jerusalem. Like his father, Jacopo Cicognini (1577–1633), Giacinto Andrea achieved fame as a playwright; he produced works in every dramatic genre, including tragedies, comedies, sacred comedies and opera librettos. One of the most important figures in 17th-century Italian drama, he fused comic and tragic elements and, also like his father, introduced Spanish influence, drawing on the works of authors such as Calderón de la Barca and Tirso de Molina. Cicognini's first libretto, *Il Celio*, appeared in Florence in 1646 with music by Sapiti and Baglioni. That same year he moved to Venice, where his remaining librettos were written and originally staged. He participated in the meetings of the Accademia degli Incogniti, whose members shaped the direction of Venetian opera during the 1640s. Two of Cicognini's operatic works, *L'Orontea* and *Il Giasone* (both 1649, with music by Lucio and Cavalli respectively), were the most popular of the century; they were performed throughout Italy for more than three decades, and *L'Orontea* was presented in Innsbruck (1656, music by Cesti), Hanover (1678) and Wolfenbüttel (1686). His works were discussed by literary critics such as G.M. Crescimbeni and Stefano Arteaga. Cicognini's librettos are known for their intermingling of comic, satiric and tragic elements, their comic characterizations and their variety of verse forms. The libretto *Gl'amori di Alessandro Magno, e di Rossane* was completed by an unidentified author after Cicognini's death and was subsequently set to music by Lucio (1651), Ferrari (1656), G.G. Arrigoni (*c*1657–8) and Boretti (1668, as *Alessandro Amante*). A modern edition of the libretto for *Giasone* is included in the anthology *Libretti d'opera italiani* (ed. G. Gronda and P. Fabbri, Milan, 1997).

BETH L. GLIXON

Cicognini, Jacopo (*b* Castrocaro, nr Forlì, 27 March 1577; *d* Florence, 27 Oct 1633). Italian playwright, poet and actor, father of GIACINTO ANDREA CICOGNINI. In 1586–7 he was enrolled at the Compagnia di S Antonio da Padova in Florence. By 1600 he had received a diploma in law, from Pisa. From 1601 to 1615 he served various aristocratic patrons in Rome, although he made frequent appearances in Florence during this period. In 1605 he married the Florentine Isabella di Domenico Berti and in 1611 he apparently began his various collaborations with Jacopo Peri, who in that year reported the completion of the music for one of Cicognini's librettos, probably *Adone*. After a brief period of service for Cardinal Capponi at Bologna in 1614, he apparently lived in Florence until his death by suicide in 1633. In 1618 the Florentine carnival activities included his texts for *Andromeda*, an elaborate *intermedio* with music by Domenico Belli. Another of his secular works, *La finta mora* (published in 1625), was performed with musical *intermedi* by Filippo Vitali in 1623. Of special interest are his *rappresentazioni sacre* with musical *intermedi*, produced for the Compagnia dell'Arcangelo Raffaello, which he joined in 1622, and the Compagnia di S Antonio da Padova. For S Antonio da Padova he wrote *Il martirio di S Agata* (performed in 1622 and published in 1624) with music by G.B. da Gagliano and later additions by Francesca Caccini; *Il martirio di Santa Caterina* (performed in 1627) with music possibly by F. Caccini; and *Trionfo di David* (performed in 1629 and published in 1633) with music by Agnolo Conti. For Arcangelo Raffaello he revised and expanded Giovammaria Cecci's *La benedittione di Jacob* (performed in 1622), and he wrote *Il gran natale di Christo salvator nostro* (performed in 1622 and published in 1625) and *La celeste guida o vero l'arcangelo Raffaello* (performed in 1623 and 1624 and published in 1625). The music for all three works produced for the Compagnia dell'Arcangelo Raffaello was provided by G.B. da Gagliano and Jacopo Peri. Florentine records indicate productions of additional texts by Cicognini in the confraternities and at court (some now lost) which very likely included music (see Harness). Cicognini also provided texts for short sacred dialogues with music, the most notable being *Coro d'anime del Purgatorio* for All Saints' Day 1622. For all of Cicognini's texts known to have been set to music, very little music is known to have survived; an exception is a chorus from *Il gran natale di Christo salvator nostro* in G.B. Gagliano's *Varie musiche*, 1623. His plays, treating both sacred and secular subjects, followed Italian theatrical genres of the late 16th century, although in the preface to his *Trionfo di David* he acknowledged the influence of Lope de Vega, with whom he had corresponded. He produced numerous collections of poetry, which often reflect the style of his friend and colleague Chiabrera.

WILLIAM V. PORTER

Ciconia, Johannes (*b* Liège, *c*1370; *d* Padua, between 10 June and 12 July 1412). Franco-Flemish composer, active principally in Italy. More music by him survives, with more stylistic variety, than by any other composer active around 1400.

1. Life. 2. Music: (i) Secular works (ii) Motets and Latin contrafacta (iii) Mass settings. 3. Theoretical works.

1. LIFE. In two Paduan documents Ciconia identified himself as the son of a Johannes Ciconia of Liège, but although his Paduan career has been extensively researched, first by Suzanne Clercx and more recently by Anne Hallmark, his pre-Paduan years are less well documented. The existence of several clerics from Liège with the same name has given rise to various hypotheses explaining his whereabouts and early training. The composer's career was first conflated by Clercx with that of his father, owing to the identity of their names. The possible error was first pointed out by Fallows (1976), following an earlier suggestion by Heinrich Besseler: the Johannes Ciconia who was born in about 1335 could only have composed the surviving music attributed to Ciconia if he reached an advanced age, to judge from the style of the works and the likely dates of the manuscripts that transmit them. This led Fallows to a passage in a liégeois chronicle that stated that the descendant of a noble family, 'une filhe mal provee', had produced 'pluseurs enfans natureis de saingnor Johan de Chywongne, canonne de Saint Johan'. The composer was then identified as a *duodenus* documented in 1385 at the collegiate church of St Jean l'Evangéliste in Liège. He was thus presumably born in about 1370, although no confirming documentation has come to light. Clercx vigorously refuted this, furthermore identifying the father of her canon/composer as another Johannes Ciconia, a fur trader documented up to the 1350s, but this did not resolve the principal questions regarding the style of the surviving music. Other members of the larger Ciconia family held canonicates at St Jean, including a Guillelmus (*d* by 1417) and another Johannes (documented until at least 1423).

If we accept the hypothesis of a Ciconia father and son, the composer's musical education and apprenticeship is still to be explained, for at the start of his Paduan years Ciconia already reveals a solid musical preparation and, above all, a remarkably deep knowledge of Italian genres and styles of the Trecento. Where, therefore, may one

imagine that his musical career developed during the last decade of the 14th century?

A partial answer was presented by Nádas and Ziino, who recognized elements that would place Ciconia, if only briefly, at the Visconti court at the very end of the 14th century. Among these are references to heraldic Milanese-Pavian devices in *Una panthera* (previously linked to the city of Lucca), *Le ray au soleyl* and *Sus une fontayne*, also supported by French-Italian and Ars Subtilior musical features. Moreover, documents from the Vatican Archives show that Ciconia was in Rome for some of the 1390s. A letter from Pope Boniface IX dated 27 April 1391 presents the information that a *clericus* by the name of Johannes Ciconia, the illegitimate son of a priest, served as *clericus capelle* of cardinal Philippe d'Alençon, who had travelled to northern Europe as a papal legate. This Johannes Ciconia, who had obtained a papal dispensation for his *defectus natalicium*, as well as an expectative of a prebend at the church of the Holy Cross in Liège, was now granted the possibility of pursuing his ecclesiastical career, the right to hold more benefices and, more important, allowed never again to have to mention his illegitimate birth. A document from July 1391 makes it clear that the *clericus* Ciconia did indeed follow Philippe's household from Liège back to Rome, where he was present as a witness at the cardinal's titular church, S Maria in Trastevere.

The new Roman documents associated with Cardinal d'Alençon appear to fill the biographical void for Ciconia, providing a possible context for a liégeois musician seeking a career in Padua in the early years of the 15th century. The notion that Ciconia had lived in Italy – at Rome – prior to his Paduan years is attractive from a number of standpoints, both biographical and musical. First and foremost, the important status of the liégeois cleric in the cardinal's household merits particular attention: he was a *clericus capelle*, a position in the cardinalate and papal chapels of the period that was most often filled by young musicians who eventually became fully fledged *capellani capelle*. There is no question that some distinguished musicians served in Alençon's chapel, among them Guillelmus de Hildernisse and Johannes Sapiens, who later also became singers in the papal chapel; thus one can seriously consider the Johannes Ciconia in Rome as having had a connection with the musical functions of the chapel.

Some details of Philippe d'Alençon's life are also noteworthy: he was a member of the French royal family, whose brilliant ecclesiastical career seemed to emphasize the tremendous political stroke of his appointment as one of Urban VI's new cardinals of Roman obedience in 1378. As a powerful member of the curia he travelled extensively as papal legate, and his legations to northern Europe resulted in a notable expansion of his *familia*, with the presence of numerous clerics from Germany and the Low Countries, especially Liège. Among his tasks in Italy was the governance of the Patriarchate of Aquileia, during which period he sought the allegiance of the Carrara family of Padua, where he resided during the mid-1380s, governing as well the monastery of S Giustina until his death in 1397. In fact, Ciconia could have owed his first contacts with Padua and the Carrara to the cardinal.

The dating of the composer's works and the manuscript sources that carry them also support the hypothesis that Ciconia was in Rome for some period of time in the 1390s, perhaps even until the death of his patron. It is true that most of his securely datable works are from his Paduan years, but at least a few, among them settings of Italian texts, may have been composed, and entered the manuscript tradition, quite early on in Rome and its environs during the 1390s and the early years of the Quattrocento. This hypothesis would, moreover, allow us to account for works otherwise unclear in terms of dating and provenance.

Notable among them is the motet *O virum omnimoda*, one of the most puzzling in the Ciconian canon, clearly intended as a celebration of St Nicholas Peregrinus, patron saint of the southeastern city of Trani. Given the well-circumscribed local veneration of this saint, and the presence in the Roman curia of Trani's bishops in the 1390s, Rome – if not Trani – appears to be the most likely place to have celebrated the tercentenary of his death and/or canonization (1094), possibly prompted by the coincidence of the appointment of the new bishop of Trani, Jacobus Cubellus, in 1394. Another early work may be the troped Gloria *Suscipe Trinitas* (no.7), whose plea to the Trinity to restore Christian unity need not necessarily apply to the threefold Schism; in fact, it appears to be a product of the many early Roman efforts to end the Schism, with roots in rigorous theological reasoning aired by important political and cultural voices – among them that of Philippe d'Alençon (Di Bacco and Nádas, 1998).

A period of Roman residence would also help to explain the reciprocal influence between Ciconia and the papal scribe, singer and composer Antonio Zacara da Teramo – seen in particular in the Gloria-Credo pair nos.3–4, influenced by Zacara's Gloria 'Micinella' and Credo 'Cursor', and in similar contrapuntal and declamatory techniques observed in a number of their Italian songs. Rather than a possibly brief contact between the two composers at Padua at the end of the first decade of the 15th century, occasioned by the movements of the Italian papal chapels in the years surrounding the Council of Pisa, a longer relationship in a common ambience within the city of Rome is entirely consistent with the styles of their compositions and their manuscript distribution. Two examples of musical sources emanating from the orbit of the Roman popes and containing the works of Zacara and Ciconia are the manuscripts *I-GR* 197 and *PL-Wn* 378.

From Rome Ciconia surely moved to Pavia, where he spent some time at the court of Giangaleazzo Visconti; among several works that can be associated with the Visconti, the madrigal *Una panthera* has been dated in May or June 1399, for the visit of Lazzaro Guinigi of Lucca to Pavia to secure an alliance with Giangaleazzo (Nádas and Ziino).

On 11 July 1401 Ciconia was appointed by the archpriest of Padua Cathedral, Francesco Zabarella, to a benefice in the church of S Biagio di Roncalea; three days later Ciconia was also granted a chaplaincy in the cathedral. With the support of Zabarella, a noted legal scholar who later became Archbishop of Florence and an influential cardinal, Ciconia assumed a professional career as a musician, as *cantor et custos* of Padua Cathedral, beginning as early as April 1403 and holding the position until his death. In addition to these positions, in March 1402 the chapter of Padua Cathedral granted Ciconia the office of *mansionarius* and the benefice attached to it. He

was granted other benefices at S Fidenzio in Meliadino (21 June 1404), S Lorenzo in Conselve (by 8 June 1405), S Pietro in Valdastico (1406) and S Giovanni de Ospedaletto (resigned in 1409). It is still not clear whether Ciconia was ever ordained priest or truly became a canon of Padua Cathedral, since in extant documentation both qualifications appear only inconsistently and are sometimes crossed out. In this period Ciconia wrote some outstanding motets and secular songs, for Francesco Zabarella, his most important mentor and patron, and for the Carrara family, the secular and ecclesiastical rulers of the Paduan state. On 10 June 1412 Ciconia witnessed a final document; on 13 July Luca da Lendinara was appointed *cantor* of Padua Cathedral 'per mortem M. Johannis Ciconie'.

2. Music.

(i) Secular works. Ciconia's secular works are diverse in genre (madrigal, virelai, ballata, canon), language (French, Italian, Latin), and above all in the wide range of musical stylistic features. Most survive, many uniquely, in the fragmentary Lucca manuscript (see Nádas and Ziino), which contains repertory from both the Pavian and Paduan courts of the years around 1400 and was probably compiled in Padua during Ciconia's lifetime. Other manuscripts are widely distributed, with often unclear transmission patterns; some of the songs survive in widely differing versions.

Ciconia's authorship is now confirmed for several works previously thought to be doubtful (in Bent and Hallmark, eds., PMFC, xxiv, 1985). New leaves belonging to the 'Mancini' Codex provide an attribution and an incomplete contratenor for *Merçé, o morte*, which brings this piece even closer in style to *O rosa bella* and *Ligiadra donna* (see D. Fallows, review of Nádas and Ziino), with their sequential text repetitions and rhythmic imitations. The new leaves also strengthen the attribution of unascribed pieces (hitherto treated as doubtful) copied below ascribed ones: *Ave vergene*, *Chi vole amar*, *Gli atti col dançar*, *Le ray au soleyl* and *Poy che morir* can now be confirmed; doubt remains about *Amor per ti sempre*. Fallows also very tentatively attributes *O bella rosa* and *Fugir non posso* to Ciconia (Fallows, 1992 and forthcoming). The Boverio fragment (*I-Tn* T.III.2) provides a fragmentary third voice for the still doubtful *Non credo, donna*, unattributed but cited together with three secure Ciconia works in Prudenzani's *Il saporetto*. There is little support for Clercx's proposal of the ballata *O donna crudele*; *Deduto sey* is confirmed as a work of Zacara (Caraci Vela, 1997).

The stylistic range between and even within genres is wide. Most extreme is the contrast between the two French-texted virelais, unlike anything else by Ciconia. *Aler m'en veus* appears also as a Latin contrafactum, *O beatum incendium*. Although the French text seems to be the original, the close unison imitations are musically italianate. By contrast *Sus une fontayne* cultivates the proportional complexities of French notation around 1400, paying homage to Philippus de Caserta by incorporating three-voice quotations from the beginnings of three of his ballades, *En remirant*, *En atendant souffrir* and *De ma dolour*. Avignon had been proposed as the locus of this tribute by Ciconia, but the fountain image was a principal emblem of the Visconti court where both composers spent time. Strohm has shown that Giangaleazzo's court at Pavia (1378–1402) must have been the principal centre for the cultivation of the musical Ars Subtilior in Italy in the late Trecento, the manuscript *I-MOe* α.M.5.24 being its main repository, with connections to the Chantilly Manuscript; it is no longer necessary to assume direct transmission of French repertory through Avignon. The canon *Le ray au soleyl*, unique in style and form, has been dated in the 1390s on the grounds of its references to the heraldry of Giangaleazzo Visconti ('soleyl', 'tortorelle', 'A bon droyt'). Ciconia may have written both *Sus une fontayne* and *Le ray au soleyl* at the Visconti court.

A solution has yet to be found for Ciconia's other canon, *Quod jactatur*, probably written in Padua. Cryptic instructions suggest a canon three-in-one at intervals of a fifth, but unacceptable dissonance arises beyond a two-voice canon.

The ballata *Con lagreme bagnandome* is headed in one manuscript 'Ballata fatta per messer franciescho singnior di padova' (incorrectly reported in most secondary literature). It may be that it was written in honour of Francesco 'il Novello' Carrara of Padua, who died in 1406, when the discredited Carrara family could not be publicly mourned (Nádas and Ziino; Fallows, 1992). (Francesco 'il Vecchio' died a prisoner of Giangaleazzo Visconti in 1393 and was given a magnificent funeral; Ciconia's future patron Zabarella gave the oration, but this may be too early to assume Paduan connections for Ciconia, who was probably in Rome or Pavia then.)

The four Italian madrigals form a stylistically coherent group, with characteristics of the late Trecento madrigal, including fully Italian notation. Several carry textual clues to their provenance: *Una panthera* refers to the armorial beast and mythical founder of the city of Lucca, where Ciconia is not known to have had any associations. Nádas's reading of the text (Nádas and Ziino) interprets references to Mars and Jupiter as to Giangaleazzo Visconti, offering military and civil protection to Lucca (the panther). *Caçando un giorno* and *I cani sono fuora* mix hunting imagery with veiled references possibly to the Carrara family. *Per quella strada* refers to 'un carro . . . abrasato' and 'carro triumphal', the red bullock cart of the arms of the Carrara. It may mark the return of Franceso Carrara 'il Novello' to Padua from exile in 1390 or his receipt of the title 'imperial general' from the Holy Roman Emperor in 1401.

The secular works and especially the madrigals contain many specifically Italian features of notation and rhythm, triplets within the beat and local syncopations, features that could only have been learnt in Italy. In other cases, Italian features of rhythm once present to some degree have been masked by 'translation' into French notational dress, with rhythmic features current in northern Italy about 1400.

Ciconia may have written some of the texts that he set to music, including some or all the motet texts. For texts attributable to poets younger than Ciconia (see Fallows, 1999), the settings would have to date from his last decade, giving further support for a 1406 dating of *Con lagreme* (like *O rosa bella*, which may be by Giustiniani). The beginnings of a chronology emerge from the evidence for text authorship and the pieces for Visconti and the Carrara: *Una panthera*, *Sus une fontayne* and *Le ray au soleyl* must now date from the Visconti court in the late 1390s, *Per quella strada* and perhaps also *Caçando un giorno* and *I cani sono fuora* from Carrara circles from

about 1401 to 1405, *Con lagreme* for the death of Francesco Carrara 'il Novello' in 1406, *O rosa bella* (and maybe also *O bella rosa*) in the Paduan decade. *Ligiadra donna* is probably as late as can be balanced with the birthdate of its poet, Brocardo, and Ciconia's death.

(ii) Motets and Latin contrafacta. The recognition of a distinctively north Italian tradition of motet composition in the 14th century has provided a context and background for Ciconia's motet style (Bent, 1984). The typical Italian motet has two upper voices of equal or nearly equal range, with the same or different texts, and with imitation and interplay between them. They are accompanied by a free tenor, and the final cadence is typically 10-6-12-8 on F or D. One antecedent is the anonymous *Marce marcum* (for the doge Marco Corner, 1365–8; ed. in PMFC, xiii, 1987, no.44), which shares with Ciconia's motets an opening in echo imitation, two equal-range cantus voices with the same text over a freely-composed tenor – features that distinguish them from the French tradition, though a fusion with French features of style and notation was conspicuous in the Veneto in the first third of the 15th century.

The motets nos.12–19 present no problems of authenticity. All are ascribed to Ciconia and/or incorporate his name as supplicant and composer in their texts. Five are unique to the manuscript *I-Bc* Q15. Most are dedicatory or occasional pieces referring to Padua or Venice. *O felix templum jubila* honours Stefano Carrara, illegitimate son of Francesco Carrara 'il Novello' and administrator of the Paduan see from 1396. It may celebrate the dedication of an altar to St Stephen in Padua Cathedral by Stefano Carrara in 1400 (Clercx, 1960), or more likely celebrate or postdate his assumption of the bishopric on 10 April 1402. Two more honour successive bishops of Padua, Albano Michiel (1406: *Albane, misse celitus*) and Pietro Marcello (1409: *Petrum Marcello venetum*). Only in *O felix templum* is there any diminution in the lower parts; the isorhythm is not of a common French kind, as each statement of the talea is followed by a version in diminution (3:1) before the next talea is presented for the same treatment. But overall the second half of this motet, as also of nos.16, 18, 19, 20 and 21, is simply a rhythmic replication of the first half, requiring none of the advance planning of a French motet with tenor diminution. All these motets are conceived from the top parts down, the tenor being a freely-composed accompanying part and not a pre-existing chant tenor. The isorhythmic and non-isorhythmic designations used in the complete edition of Ciconia's works (PMFC, xxiv) imply too strong a link with French techniques, especially for *Doctorum principem*, where a single notated tenor is read successively in different mensurations and hence slightly different rhythms.

The two texts of *Venecie, mundi splendor/Michael, qui Stena domus* honour Venice and Michele Steno, doge from 1400 to 1413. Ciconia's Paduan career weakens the case for this motet being inaugural; it was more likely for Padua's formal surrender to Venice on 3 January 1406. Ciconia composed two motets for his patron Francesco Zabarella. *Ut te per omnes celitus* addressed to Francesco Zabarella's patron saint Francis, intercedes for him as a great teacher and Paduan lawyer, and prays also for the Franciscan order. *Doctorum principem* praises Zabarella directly as 'prince of teachers' and 'nourisher of the clergy', alluding to music. No reason remains for Clercx's datings of these pieces at 1390–97 and 1406–9 respectively, though as the outer limits of Zabarella's teaching career in Padua they must also fall within Ciconia's nearly co-terminous composing career. *O Padua, sidus preclarum* resists dating; it refers to Antenor, the mythical founder of the city, and absence of reference to Venice may suggest that it precedes the 1405 conquest.

One possible exception to the general pattern of the motets' genesis in Padua in the years 1401 to 1412 is *O virum omnimoda*, honouring St Nicholas of Trani (canonized 1094). Also known as Nicholas Pilgrim ('Nicholaus peregrinus' in the motet), he was a pious and simple-minded Greek shepherd boy obsessed with the Kyrie eleison, which he continuously intoned (the 'Miserere nobis, Domine' obsessively repeated in *I-Bu* 2216). A possible occasion for the composition of Ciconia's motet would be the 300th anniversary of St Nicholas's canonization, but this has unexplored implications for the dissemination of Veneto motet style.

Motets nos.20 and 21 are anonymous and incomplete, each having only its second cantus and tenor parts. They have topical and manuscript links to Padua during Ciconia's lifetime and share some features of his style. *Padu. . . serenans* (reading uncertain) honours Andrea Carrara, brother of Stefano, as abbot of S Giustina in Padua, a post that he held in effect from 1402 until his death in 1404. *O proles Hispanie* celebrates St Anthony of Padua. A fragmentary Veneto motet on St Cristina can also be cautiously attributed to Ciconia (Bent, 1984).

Of the three Latin pieces, at least two are contrafacta of songs, and have *ouvert–clos* endings. *O beatum incendium* also survives with the French text *Aler m'en veus*. Earlier hypotheses about the madrigalian *O Petre, Christi discipule*, likewise for two equal low voices without tenor, and with a sacred Latin text, are superseded by the suggestion (in Di Bacco and Nádas, 1998) that it is addressed to Pietro Filargo (antipope Alexander V) on behalf of Pietro Emiliani whom he appointed, at the council of Pisa in 1409, to the bishopric of Vicenza (Bent, 1998).

Clercx's proposed connection between the Gloria-Credo pair nos.3–4 and the anonymous 'motet' *Regina gloriosa* (really a virelai or ballata contrafactum) rested too heavily on the use of a cliché common to many works of the period, leaving no good reason to attribute it to Ciconia.

(iii) Mass settings. All the surviving Mass movements attributed to Ciconia are Glorias and Credos. Glorias outnumber Credos as they do in contemporary sources, which present very few settings of the Kyrie, Sanctus and Agnus. Nos.1–2 and 3–4 form indisputable Gloria-Credo pairs. Nos.1 and 2 share general style, technique and musical material, as well as being adjacent in manuscripts. These attractive movements have equivalent activity and texting in all voice-parts. The unique repetition and hocket of the word 'pax', heard six times after 'Et in terra', may relate to specific curbs on this inflammatory word by the Visconti in 1409 or even to the papal Schism. Musical resemblances of form, tenor and tenor treatment, and manuscript placement link nos.3 and 4; their connection with the Gloria 'Micinella' and Credo 'Cursor' of Antonio Zacara da Teramo was first noted by Layton. Three-voice writing, with or without alternating duets, is the norm for Ciconia's Mass music. The only four-voice pieces are nos.3–4 and no.6; in the latter the contratenor

is contrapuntally and rhythmically ancillary. The Gloria no.5 has undergone interesting revisions to make it more sectional. Its long Amen (present only in *I-Bc* Q15) uses an extra, diminished statement of the lower parts, the only form of isorhythm or diminution in Ciconia's Mass music. The long Amens of nos.1, 2, 3, 5, 6, 7, 8, 9 and 10, some of them unique to *Bc* Q15, all have strongly Ciconian features. Two other pairs (nos.6 and 10; 8 and 11) were accepted by Clercx but are not compelling. The fragmentarily preserved Gloria no.9 (listed as two separate works in *Grove6*) has some connections with the Credo no.10, which has extensively syllabic setting of the text and many madrigalian or depictive features. Some scribal pairings have only a weak musical basis.

An earlier suggestion that no.7, the widely preserved Gloria *Suscipe Trinitas*, may refer to the period of threefold Schism after the council of Pisa (1409) can now be superseded (Di Bacco and Nádas, 1998) by the proposal of an origin in Ciconia's Roman years in the 1390s.

The Mass movements are confined to fewer sources than the secular works and present fewer problems of attribution. Most of them share enough features both to inspire some confidence about their authorship by a single composer, and to discourage the attribution of further anonymous works to Ciconia. Although ascribed to him in its unique source, only the Credo no.11 lacks Ciconia's usual fingerprints (see Bent, 1985).

3. THEORETICAL WORKS. Ciconia's treatise *Nova musica* survives in two manuscripts, both anonymously. A revision of book III, *De proportionibus*, dated 1411, names Ciconia as author. References to a *De arithmetica*, once thought to be a lost work of Ciconia, are actually to the treatise of that name by Boethius.

Nova musica will disappoint those who hope to find links with contemporary compositional practice. The treatise is speculative and deals with the discipline (*ars*) of music. It is resolutely unpractical and non-polyphonic in its orientation, avoiding treatment even of hexachord solmization. Books I to III cite no authorities more recent than Guido of Arezzo, though a heavy dependency on Marchetto's *Lucidarium* is documented by Ellsworth (pp.18–19). *De proportionibus* is dedicated to the singer Giovanni Gasparo da Castelgomberto, and directs the material at practical musicians to the end of avoiding error. In it Marchetto, Franco and Johannes de Muris are wrongly credited with providing signs for proportions and mensurations.

WORKS

Edition: *The Works of Johannes Ciconia*, ed. M. Bent and A. Hallmark, PMFC, xxiv (1985) [cites all previous edns and facs.]

Mass music is arranged in the order of the edition by Bent and Hallmark; motets and songs are listed in alphabetical order.

no. in PMFC xxiv

MASS MOVEMENTS

1–2 Gloria-Credo, 3vv; paired in both *I-Bc* Q15 and *I-TRmp* 87 (*StrohmR* notes similarities to the Gloria by Egardus, ed. in PMFC, xii, 1976, p.21)

3–4 Gloria-Credo, 4vv; T and Ct repetition and diminution, with introductory duo; similarities to Gloria 'Micinella' and Credo 'Cursor' of Zacara (Layton; Bent and Hallmark in PMFC, xxiv); Clercx titled the pair 'Regina gloriosa', but the association with the anonymous Latin song has been rejected (Bent and Hallmark, following Layton)

5 Gloria 'Spiritus et alme', 3vv

6 Gloria 'Spiritus et alme', 4vv; paired in *I-Bc* Q15 with Credo no.10

7 Gloria 'Suscipe Trinitas', 3vv; possibly written in the 1390s, in Rome (Di Bacco and Nádas, 1998)

8 Gloria, 3vv; has musical form *ABCBCD*; paired in *I-Bc* Q15 with Credo no.11

9 Gloria, 3vv, with monophonic introduction

10 Credo, 3vv; paired with Gloria no.6 in *I-Bc* Q15, more plausibly with no.7 in *I-GR*, though stylistic pairings with nos.5 and 9 have been suggested; based on Credo 'festivus', also used for Zacara's Credo 'Deus Deorum' (Ciliberti)

11 Credo, 3vv; paired in *I-Bc* Q15 with Gloria no.8; ascribed to Ciconia in *I-Bc* Q15, but in PMFC, xxiv, as doubtful on stylistic grounds.

MOTETS

freely composed

12 O felix templum jubila, 4vv (?3vv); in honour of Stefano Carrara, Bishop of Padua 1402–5

13 O Padua, sidus preclarum, 3vv; refers to Anthenor, mythical founder of Padua

15 O virum omnimoda/O lux et decus/O beate Nicholae, 4vv (?3vv); possibly written in Rome in 1393–4 for the third centenary of the death of St Nicholas of Trani (Di Bacco and Nádas, 1994)

14 Venecie, mundi splendor/Michael, qui Stena domus, 3vv; honours doge Michele Steno, perhaps 3 January 1406

— [. . . ba]ptizari virgo Cristina, 3vv, inc.; anon. but tentatively attributed to Ciconia and dated *c*1400, with partial edn (Bent, 1984)

with tenor organization

16 Albane, misse celitus/Albanus, doctor maxime, 4vv (?3vv); perhaps for the installation of Albano Michele as Bishop of Padua, 8 March 1406

17 Doctorum principem/Melodia suavissima/Vir mitis, 4vv; in honour of Francesco Zabarella, Archpriest of Padua Cathedral from 1397, perhaps written after the Council of Pisa (1409; Hallmark, 1997)

21 O proles Hispanie, 2vv, inc. (?3vv); honouring St Anthony of Padua; anon., attrib. Ciconia by Plamenac

20 Padu. . . serenans/Pastor bonus, 2vv, inc. (?3vv); apparently in honour of Andrea Carrara, Abbot of S Giustina, Padua, 1402–4; anon.

18 Petrum Marcello venetum/O Petre, antistes inclite, 4vv (?3vv); perhaps for installation of Pietro Marcello as Bishop of Padua, 16 November 1409

19 Ut te per omnes celitus/Ingens alumnus Padue, 4vv (?3vv); in honour of Francesco Zabarella

LATIN SONGS

22 O beatum incendium, 2vv; contrafactum of Aler m'en veus

23 O Petre, Christi discipule, 2vv; perhaps for the coronation of Pietro Filargo as Pope Alexander V in Pisa, July 1409 (Di Bacco and Nádas, 1994), but most likely for the appointment of Pietro Emiliani as Bishop of Vicenza, 12 August 1409 (Bent, 1998)

46 Quod jactatur (canon), 3vv; also ed. in CMM, liii/3 (1972)

24 Regina gloriosa, 3vv; anon., attrib. Ciconia by Clercx, largely on the basis of associations with Gloria-Credo nos.3–4 (rejected by Layton and by Bent, 1985)

MADRIGALS

25 Caçando un giorno vidi una cervetta, 2vv

26 I cani sono fuora per le mosse, 2vv

27 Per quella strada lactea del cielo, 2vv; refers to the Carrara arms (possibly in imitation of Petrarch's 'Quando il sol bagna in mar l'aurato carro'), perhaps for Francesco II Carrara at his appointment as Imperial General in 1401 (Hallmark, 1997)

28 Una panthera in compagnia de Marte, 3vv; perhaps to celebrate a diplomatic meeting between the rulers of Lucca and Pavia in 1399 (Nádas and Ziino)

BALLATAS

37 Amor, per ti sempre ardo, inc., ?2vv (Cantus only survives); anon., attrib. Ciconia by Fischer (review of Clercx, 1960), considered doubtful in PMFC, xxiv

35 Ben che da vui, donna, sia partito, inc., ?2vv (Cantus only survives)

32 Chi nel servir antico me conduce, 3vv

38 Chi vole amar ame con vera fede, 2vv; also ed. in PMFC, xi (1978); in PMFC, xxiv, as doubtful, now confirmed as by Ciconia (found in Mancini Codex in a section of Ciconia's songs)

29 Con lagreme bagnandome nel viso, 2vv; perhaps lamenting the death of Francesco II Carrara (1406) or of his father, Francesco I (1393); text ascribed to Leonardo Giustiniani (*b c*1383; text sources in Fallows, 1999)

30 Dolçe Fortuna, omay rendime pace, 2vv

— Fugir non posso, 2vv; ed. in PMFC, xi (1978), p.76; attrib. Ciconia by Fallows (forthcoming)

43 Gli atti col dançar Francesch'inanzi passa, 3vv; in PMFC, xxiv, as doubtful, now confirmed as by Ciconia; perhaps for Francesco II Carrara or Francesco Zabarella (Nádas and Ziino)

36 Io crido Amor . . . viscida, inc., ?2vv (Cantus only survives)

31 La fiamma del to amor che già me strinze, 2vv; in younger layer of Mancini Codex, so perhaps about 1406

33 Ligiadra donna, che'l mio cor contenti, 3vv (also with alternative Ct by Matteo da Perugia); text by Domizio Brocardo (text sources in Fallows, 1999)

39 Merçé, o morte, o vaga anima mia, 2, 3vv, ed. in PMFC, xi (1978), p.89, also in Nádas and Ziino (1990), p.105; two distinct versions; in PMFC, xxiv, as doubtful but now confirmed as by Ciconia

40 Non credo, donna, che la dolce fiamma, 2, 3vv; ed. in PMFC, xi (1978), p.97; anon., tentative attribution in PMFC, xxiv, on the basis of citation in Prudenzani's *Il saporetto*; fragmentary 3rd voice in *I-Tn* T.III.2

— O bella rosa, 2vv; ed. in PMFC, xi (1978), p.125 (attrib. in Fallows, forthcoming)

34 O rosa bella, o dolçe anima mia, 3vv; text ascribed to Leonardo Giustiniani (text sources in Fallows, 1999)

41 Poy che morir mi convien per to amore, 2vv; in PMFC, xxiv, as doubtful but now confirmed as by Ciconia

42 Deduto sey, 3vv; now definitively ascribed to Antonio Zacara da Teramo (Caraci Vela; Fallows, 1999)

FRENCH SONGS

44 Aler m'en veus en strangne partie (virelai), 2vv; Discantus only survives in unique source, but contrafactum O beatum incendium (no.22) has both voice-parts

— Ave vergene (rondeau), inc., ?3vv (lacks top voice); ed. in Fallows (forthcoming), with suggested date of 1406

47 Le ray au soleyl qui dret som kar meyne (canon), 3vv; also ed. in CMM, liii/3 (1972; with 3 solutions); in PMFC, xxiv, as doubtful but now confirmed as by Ciconia; refers to the arms of Giangaleazzo Visconti (*d* 1402)

45 Sus une fontayne en remirant (virelai), 3vv; also ed. in CMM, liii/1 (1970)

THEORETICAL WRITINGS
all ed. in Ellsworth

Nova musica (Musica nova), *I-Fr* 734, *I-Rvat* Vat.lat.5320; both sources anon., but the work is mentioned as his in De proportionibus (chap.9, 12, 14, 15); perhaps written soon after 1400

De proportionibus, *I-FZc* 117, *I-PIu* 606, *I-Vnm* lat.VIII/85; revision of bk.III of Nova musica; dated 1411; dedicated to Giovanni Gasparo da Castelgomberto, canon of Vicenza

De arithmetica institutione, believed lost but never existed; references to the work in Nova musica (bk.III, chap.19) and De proportionibus (chap.21) are to Boethius's *De arithmetica* (Ellsworth, 5–6)

Cieco, Il. *See* CARISIO, GIOVANNI.

Ciecolino. *See* RIVANI, ANTONIO.

Ciera, Ippolito [Cyera, Hippolito] (*fl* 1546–61). Italian composer. The little that is known of his life derives from archival references and the title-pages of his publications. The earliest definite information, a salary payment for March 1546, names him as a Dominican friar in the choir of Treviso Cathedral; in the same year he was also paid for teaching singing to the novices of the convent of S Nicolò at Treviso. In his volume of madrigals of 1561 he is described as *maestro di cappella* of SS Giovanni e Paolo, Venice.

The large-scale parody mass *Missa 'Ego sum qui sum'*, printed in a volume primarily devoted to masses by Jacquet of Mantua, reveals Ciera to be a follower of the Netherlandish tradition of all-pervading imitative writing. Willaert's influence is evident here as well as in the 1561 book of madrigals (one of which is dedicated to Willaert): here Ciera competently used a variety of techniques, ranging from strict imitation to antiphonal effects and carefully controlled block harmonies; *Giardin felice* demonstrates *note nere* technique.

WORKS

Missa 'Ego sum qui sum', 5vv, in 1555[1]
Motet, Hic est beatissimus, 5vv, in 1554[16]
3 motets, *I-TVd*; 7 others formerly in *TVd*, now lost

Madrigali del laberinto, 4vv (Venice, 1554)
Il primo libro di madrigali, 5vv (Venice, 1561)

PHILIP T. JACKSON

Cifra, Antonio (*b* nr Terracina, 1584; *d* Loreto, 2 Oct 1629). Italian composer. From June 1594 until August 1596 he was a choirboy at S Luigi dei Francesi, Rome,

and was a pupil of G.B. Nanino. He directed the music at the Seminario Romano from 1605 to 1607 and at the Collegio Germanico for about 12 months from the summer of 1608; he was dismissed from the latter post for 'his evil habits with women' and for his neglect of his duties with the choirboys. On 28 October 1609 he became *maestro di cappella* of the Santa Casa, Loreto, a position he occupied for the rest of his life except for the period from 1 March 1622 to 22 June 1626; for the last three years of this four-year period he was *maestro* of S Giovanni in Laterano, Rome. During this period he was again associated with the music at S Luigi dei Francesi, directing one of three choirs at its name day celebrations in August 1625. In January 1626 he performed at S Pietro at a ceremonial Vespers for the translation of the body of St John Chrysostom, along with musicians from many Roman churches: he directed the second choir, while the *maestro* of the Cappella Giulia, Vincenzo Ugolini, directed the first, which was accompanied by Frescobaldi.

Despite his principal appointment at Loreto and the size of his secular output, Cifra was essentially a member of the Roman school of church composers, together with men such as Gregorio Allegri, Paolo Agostini and Benevoli. (Loreto, as a centre of pilgrimage, had strong connections with Rome, and the musical director there was normally a Roman.) He was by far the most prolific composer of this school in the early 17th century. His sacred music is dominated by eight books of concertato motets for two to four voices and organ, some of which were popular enough to run into several editions, but it also includes two volumes of masses as well as a number of motets, psalms and litanies for two or three choirs. The number of his motets published in German anthologies at the time makes him the most important ambassador there of the Roman style. His secular output is divided almost equally between five-part madrigals and *scherzi* for smaller forces and basso continuo.

The essential element of the Roman manner of the early 17th century is traditionalism modified by cautious acknowledgment of modern taste as represented by the concertato style widespread in northern Italy by 1610. The traditional element in Cifra's music is uppermost in his masses, which follow the precepts of Palestrina's style and include many canonic movements, and in his earlier polychoral psalms and litanies, most of which are simple in layout and homophonic in texture. His later polychoral music, which, significantly, was published not in Rome but in Venice, is more modern in outlook, though still conservative for 1629: some of the psalm settings are in a sectional form in which individual verses are allotted to small groups of soloists, while the motet *Angelus ad pastores* has dialogue elements in which solo voices and choral groups answer one another. On the whole the concertato motets are also conservative. They are written in a competent but uninspired post-Viadana idiom, do not exploit the possibilities of the medium and lack graceful ornamentation, though their rhythms are lively enough. Cifra seems to have been far more inventive when setting the Italian words of the *Scherzi sacri*, which are similar in style to his secular *scherzi*: the monodies among them are in effect spiritual solo madrigals, which are quite melodious and declamatory when they are not weighed down by semiquaver runs. Many of these pieces are associated with religious feasts or symbols: the one concerned with the 'angelic salutation', a setting of a text that is a gloss on the biblical narrative, is like a small cantata, including a dialogue and ending with a chorus. One duet is built on the romanesca bass. In his secular *scherzi* Cifra employed this and similar basses more often than any other composer of his day, mainly for duet settings of ottavas. They are rather mechanical and inexpressive, a criticism that can be levelled too at most of the other contents of these volumes, where Cifra no more exploited the possibilities of the medium than he did in his concertato motets. The five-part madrigals show quite deft rhythmic and contrapuntal interplay, though they are mostly conventional in texture: for example he did not add a continuo part until the penultimate book (1621). His somewhat dry, academic side is seen in the first book of ricercares and canzonas, which is thoroughly contrapuntal; the second book, in which the canzonas are based on the preceding ricercares, is more lively.

WORKS

JEROME ROCHE/R

Cifuentes, Pedro (*b* Madrid; *d* Santiago, *c*1769). Spanish composer. He was organist at the royal chapel in Madrid from at least 1734 until 16 March 1745, when he was elected *maestro de capilla* of Santiago Cathedral, a post he held until his death. A large manuscript collection of his music survives (in *E-SC*), including motets for eight voices and instruments, and three Lamentations for Holy Week, two for eight voices with instruments, and one for treble solo with instrumental parts. His music is in general austere, but brilliant writing is used for contrast, particularly in solo sections. (J. López-Calo: *La música en la Catedral de Santiago*, xi (Santiago, 3/1999), 401ff)

JOSÉ LÓPEZ-CALO

Ciglič, Zvonimir (*b* Ljubljana, 20 Feb 1921). Slovene composer and conductor. He studied at the Ljubljana Academy of Music until 1948 with Škerjanc (composition) and Švara (conducting). After serving as conductor of the Sarajevo Opera (1948–9) and director of the Subotica PO and Music School (1955–6), he studied conducting with Lovro von Matačić in Salzburg in 1957. He was orchestral assistant to the Lamoureux Orchestra (1958–9) and then took up teaching posts in Ljubljana.

Ciglič's music takes Wagnerian romanticism and Debussian Impressionism as its starting-point. Typical of the larger, richly Expressionist works are the symphonies with their closely integrated thematic structures. Outstanding also are the more impressionistic symphonic poem *Obrežje plesalk* ('Dancer's Shore') and the Harp Concertino of 1960. The latter's subtle thematic metamorphoses, strong but restrained harmonic language and freely developing forms were exploited in the small number of pieces which date from his later years.

WORKS
(*selective list*)

Orch: Silhuete, 1943; Nocturno, 1944; Finale, 1946; Scherzo, 1946; Sym. [no.1], 1948; Obrežje plesalk [Dancer's Shore], 1952; 2 syms., 1956; Concertino, hp, str, 1960; Vizija [Vision], sym. sketch, 1965

NIALL O'LOUGHLIN

Cigna, Gina [Sens, Genoveffa; Sens, Ginetta] (*b* Angère, Paris, 6 March 1900). Italian soprano of French birth. She studied with Calvé, Darclée and Storchio, and in 1927 made her début at La Scala as Freia, under the name Genoveffa Sens (she married the tenor Maurice Sens in 1923). In 1929, as Gina Cigna, she returned there and sang every season until 1943, establishing herself as a leading Italian dramatic soprano. She was particularly admired as La Gioconda, Turandot and in Verdi; she also took part in important revivals of *Alceste* (1935) and *L'incoronazione di Poppea* (1937) at Florence, and was the Kostelnička in the first performance in Italy of *Jenůfa* (1941, Venice). Cigna made her Covent Garden début as Marguerite in *La damnation de Faust* in 1933, and returned there in 1936, 1937 and 1939. She sang at the Metropolitan (1937–8), and also in San Francisco and Chicago. In 1947, following a car accident, she retired. She was a highly dramatic and musical singer though her voice inclined to hardness. Her pre-war recordings of Norma and Turandot show the physical excitement of her singing and her dramatic involvement. (GV; R. Celletti, R. Vegeto)

HAROLD ROSENTHAL/ALAN BLYTH

Cigna-Santi, Vittorio Amedeo (*b* ?Poirino, nr Turin, *c*1730; *d* after 1795). Italian librettist. Very little is known about his life and activities. Conflicting accounts report his birth as early as 1725, but this is contradicted by later reports of his age. He published only a few known celebratory poems before being appointed principal librettist in the Teatro Regio, Turin, from 1754–5, a post he was to keep for nearly 30 years. Most of the original librettos he wrote for Turin achieved at least modest success outside the city as well, such as *Mitridate re di Ponto*, later set by Mozart for Milan in 1770. His most successful libretto, *Motezuma*, is typical of his dramaturgical style and was adapted and set, after its première in a version by G.F. Majo for Turin in 1765, by Mysliveček, Paisiello, Galuppi,

Sacchini, Anfossi, Insanguine and Zingarelli over the next 16 years (the Zingarelli version was revised and restaged by Haydn in 1785). Cigna-Santi's poetry is clearly less polished and elegant than that of either Zeno or Metastasio, whom he imitates. The choice of Montezuma as a subject is itself telling; influenced by the wave of exotic settings popular in the 1760s and 70s, it concerns a warrior (Cortez) who, by deception and with financial motives, seeks to destroy the kingdom of Montezuma – not a very appropriate Arcadian idea. The usual balance among five to seven roles is also strained, with the three main characters almost entirely dominant. Arias are sometimes overplayed in the drama for simple effects, and motivation for the characters' actions is not always clear. Metastasio found Cigna-Santi's poetry worthy of public praise, as he reported in a letter to Tommaso Filipponi on 27 February 1760. *Alcina e Ruggero*, his last *dramma per musica*, was staged primarily for visual display, with spectacular effects and intricate machines, a kind of production Cigna-Santi later defended. By his own account he spent much of his energy adapting other librettos for local performance. In 1777 he was nominated a 'poeta della società' of the Cavalieri.

WRITINGS

Andromeda (dm), Cocchi, carn. 1755 (Colla, 1771; G. Gazzaniga, 1775, as Perseo ed Andromeda); *Enea nel Lazio* (dm), Traetta, 1760; *Ifigenia in Aulide* (dm), Bertoni, 1762 (C. Franchi, 1766); *Ercole sul Tago* (serenata per musica), L. X. Santos, 1765; *Motezuma* (dm), G.F. Majo, 1765 (Mysliveček, 1771; Paisiello, 1772; Galuppi, 1772; Sacchini, 1775; Anfossi, 1776; Insanguine, 1780; Zingarelli, 1781); *Mitridate re di Ponto* (dm), Q. Gasparini, 1767 (Mozart, 1770); *Issea* (favola pastorale), Pugnani, 1771 (comp. unknown, London, as Apollo e Issea); *Tamas Kouli-Kan nell'India* (dm), Pugnani, 1772 (Guglielmi, 1774); *L'isola di Alcina* (dm), Alessandri, 1775, as Alcina e Ruggero

DALE E. MONSON

Cigrang, Edmond (*b* Diekirch, 7 July 1922; *d* Aix-en-Provence, 29 Sept 1989). Luxembourg composer, musicologist and teacher. He studied piano, harmony and composition at the Zürich Conservatory with Paul Müller and Rudolf Mittelsbach (1946–52), at the Cologne Musikhochschule with Hans Mersmann, Philippe Jarnach and Rudolf Petzold (1952–5) and in Paris with Max Deutsch and André Jolivet (1955–6). He graduated at the Luxembourg Ecole Normale in music education with his thesis *Das Lied als Ausgangspunkt und Mittelpunkt der Musikerziehung in der Normalschule* (1956). He was professor of musical education at the Institut Pédagogique (1964–85) and lecturer in music history, analysis and harmony at the Luxembourg Conservatoire (1954–87). He was elected a member of the Grand-Ducal Institute in 1962, and two years later he was invited by the government to prepare a syllabus for music teaching in primary schools.

Though not numerous, his works represent a turning-point in Luxembourg music history, and he taught most of the new generation of Luxembourg composers (Jeannot Heinen, Claude Lenners, Johny Fritz, Marcel Wengler and Henri Rodesch). His preference was for chamber music, and his essentially personal style cannot be assigned to any particular school. He worked mainly within a polyphonic, polytonal or polymodal idiom in which melody is the point of departure and which is characterized by whole-tone, tetratonic and pentatonic scales and chords.

WORKS

Dramatic: Joseph Kutter (film score, J.-E. Müller, dir. Marcel Franziskus), 1961; Jean Chalop (musical drama, Norbert Weber), 1963

Chevreuille and others]; Musique pour Son et Lumière, orch, 1963: Sigefroi (963), Ermesinde (1244), Créquy (1684); Partita, fl, 1965–6

Vocal: Von Küssen und Trinken (G.-E. Lessing), cycle, male chorus, 1953; 5 japanische Lieder (trans. Manfred Hausmann), 1 female v, fl, cl, 1957; 7 japanische Lieder (trans. Hausmann), 1 female v, ob, 1958; Klavierlieder (P. Henkes), 1v, pf, 1958; Le joueur de flûte, 1v, fl (H. de Régnier and J. Supervielle), 1v, fl, 1959; Klavierlieder (C. Morgenstern and A. Koltz), 1v, pf, 1960–1

PAUL ULVELING

Cikker, Ján (*b* Banská Bystrica, 29 July 1911, *d* Bratislava, 21 Dec 1989). Slovak composer and teacher. He was first taught the piano by his mother, then with Marie Kmoníčková during his studies at the gymnasium in Banská Bystrica (1921–30). He gave occasional solo recitals, and played with the local amateur orchestra. At the same time he studied music theory and worked on his first attempts at composition. In 1930 he was accepted by the Prague Conservatory as a student of composition (with Jaroslav Křička), conducting (with Pavel Dědeček) and the organ (with Bedřich Wiedermann). While studying musicology at the University of Prague (1930–34), he earned his living as a night-club musician. Having successfully completed his studies (1935) he attended Vítězslav Novák's master class, graduating in 1936 with his Symphonic Capriccio (performed the same year by the Czech PO). This was followed by a one-year scholarship in Vienna (1936–7), where he studied conducting with Weingartner at the Music Academy, then by two years in the army (1937–9). In 1939 Cikker took up a post as a teacher of music theory at the Academy of Music and Dramatic Art in Bratislava and, for a short time, he was conductor of the amateur orchestra of the Slovak Philharmonic. In 1944 he became involved in the antifascist movement as an official of the School Administration in Banská Bystrica and as a member of the local radio station of the resistance. In 1945–8 he was dramaturg of the Slovak National Theatre in Bratislava, and in 1949–77 he lectured in composition at the College of Performing Arts of Bratislava, where several outstanding younger Slovak composers were among his pupils. His awards included the title National Artist (1966), the Herder Prize from the University of Vienna (1966) and the UNESCO Prize for Music (1979).

Cikker is one of the founders of modern Slovak music (together with Moyzes and Suchoň) and one of the more frequently staged contemporary European opera composers of the 1960s and 70s. From his native region, which considerably influenced his musical imagination through folk music, he went to Prague, a cultural metropolis and a meeting point for the newest music trends. However, it was Vítězslav Novák, together with Suk representing predominant late Romantic-Impressionist trend in Czech music of the time, who had the decisive effect on Cikker's further development. It was Novák's individual approach to folklore, combining the modality of folksongs with chromatically extended tonality to create a harmonious and coherent whole, that inspired Cikker. In his works between the Sonatina of 1933 and *Spomienky* ('Reminiscences') of 1947 he found an original solution to this problem, using complex chords made of superimposed

3rds. The characteristic features of his compositions from that period include oscillation between lively motoric rhythms (an influence from folkdances) and quiet, sensual sections inspired by Impressionism, particularly apparent in *Leto* ('Summer') and *Spomienky* ('Reminiscences'). At the same time Cikker developed a highly emotional and individual language, indirectly reflecting his personal experiences, especially in the trilogy of symphonic poems *Leto*, *Vojak a matka* ('Soldier and Mother') and *Ráno* ('Morning') and in *Spomienky*, where for the first time he looked back into the past with a nostalgia typical of his later work.

The victory of communism in 1948 meant that the non-communist Cikker was not only expelled from the post of dramaturg, but also forced to write compositions required by the regime, above all for the newly established folklore ensembles (mainly SĽUK, the Slovak Folk Art Collective). In this area he developed in an original way the tradition of folkdance as well as the cantilena of folksong, notably in adaptations for chorus, using simple and yet refined structure and harmony. Cikker's first two operas, remarkably mature and successful in their time, also employ national subjects, although folklorism is not their guiding principle. They are based on the contrast of declamatory vocal parts and elaborate orchestration and frequently make use of, and transform, the vocal themes.

A turning point in terms of composition and of music drama is represented by his opera *Mister Scrooge*. The music of the opera, written while Cikker was seriously ill, shows a stronger inclination towards linear thinking and employs an individual modal language, resembling tone rows with frequent 2nds and 7ths which dominate both the melodic writing and the harmony. At the same time Cikker uses a highly concentrated form of thematic development (employing elements of leitmotif) resulting in a greater unity of the vocal and the orchestral parts. Abandoning traditional operatic procedures he approached an individual dramatic style; *Vzkriesenie* ('Resurrection') represents the climax of this development. It is based on elaborated structures of motifs which in turn create the structure of the story; individual scenes seem to be only loosely linked (in the form of montage), showing the heroes in fatal situations, and thus revealing the existential problems lying behind the depicted episodes. Musical continuity is provided by the orchestra, which, for example in *Resurrection*, stands somewhere between a observer using motifs to comment on the action, and a mysterious metaphysical character in the drama.

In the late 1950s and early 1960s Cikker also wrote a series of monumental symphonic works, transforming polyphony into poly-linearity, combining his modal technique with elements of dodecaphony, and leaving almost completely the sphere of harmony based on a tonal centre, for example in *Blaženi sú mrtvi* ('Blessed are the Dead'), a piece written in memory of his mother, and in *Orchestrálne štúdie k činohre* ('Orchestral Studies to a Drama'), based on sketches for an uncompleted opera based on Friedrich Dürrenmatt's play *Die Physiker*. The same can also be said about the music of *Hra o láske a smrti* ('The Play of Love and Death') in which the realism and the time structure typical of the spoken theatre are impressively broken by the invisible chorus's entries, as well as about other operas of Cikker's, none of which achieved the effect of *Resurrection*, even though each of them contained a number of dramatic innovations. Each of the stories of his operas contains the composer's moral message, evidently religious in *Mister Scrooge* and *Resurrection*, and extending into the sphere of politics in *The Play of Love and Death* and *Coriolanus*.

Cikker's compositions of the 1970s and 80s show a partial simplification of his musical language and an inclination towards retrospection, manifesting itself in a return to folksong adaptations and to programme music (*Epitaf* and *Symphony 1945*, reacting to the events of World War II). He returned to the sketches for the unrealized opera *Physiker* in his orchestral work *Paleta*. His last two operas are of interest as nostalgic and humorous views of human folly.

WORKS
(selective list)

OPERAS
(first performed in Bratislava, Slovak National Theatre, unless otherwise stated)

Juro Jánošík (3, Š. Hoza), 1950–53, 10 Nov 1954
Beg Bajazid [Bey Bajazid] (3 with prol, J. Smrek), 1955–6, 16 Feb 1957
Mister Scrooge (3, Cikker, after C. Dickens: *A Christmas Carol*), 1958–9, as Abend, Nacht und Morgen, Kassel, Stadttheater, 5 Oct 1963
Vzkriesenie [Resurrection] (3, Cikker, after L.N. Tolstoy), 1959–61, Prague, National, 18 May 1962
Hra o láske a smrti [The Play of Love and Death] (1, Cikker, after R. Rolland) 1966–8; Bayerische Staatsoper, 1 Aug 1969
Coriolanus (3, Cikker, after W. Shakespeare), 1970–72, Prague, Smetana, 4 April 1974
Rozsudok [The Verdict] (3, Cikker, after H. von Kleist: *Das Erdbeben in Chili*), 1976–8, 6 Oct 1979
Obliehanie Bystrice [The Siege of Bystrica] (3, Cikker, after K. Mikszáth), 1979–81, 8 Oct 1983
Zo života hmyzu [From the Life of Insects] (3 with prol and epilogue, Cikker, after K. Čapek and J. Čapek), 1983–6, 21 Feb 1987
Antigóna (3, Cikker after Sophocles), 1987–9, unfinished

VOCAL

Choral: Vianočná kantáta [Christmas Cant.], chorus, orch, 1930; Veľkonočná kantáta [Easter Cant.], chorus, orch, 1931; Měsíční květ [Moon Flower], song, op.14, Mez, pf, 1936; Cantus filiorum (cant., V. Reisel), op.17, B, chorus, orch, 1940; O mamičke [About Mother] (V. Beniak, A. Guoth, F. Hečko), song cycle, op.18, Mez/B, pf, 1940; Vojak a matka/Boj [Soldier and Mother/Battle] (A. Žarnov), sym. poem, op.21, spkr, orch, 1943; Zdravica Stalinovi [A Greeting to Stalin] (cant., F. Kráľ), op.30, chorus, male chorus, orch, 1949; Hymnus roľníka [Peasant's Hymn] (V. Erben), Bar, orch, 1950; Tichá noc, svätá noc [Silent Night, Holy Night], arr. chorus, 1967; 10 uspávaniek [10 Lullabies] (folk texts), A, chbr orch, 1973; Óda na radosť [Ode to Joy] (orat, M. Rúfus), S, A, T, B, spkr, chorus, orch, 1982; 2 partizánske zbory [2 Partisan Choruses], 1984; Arrs. of songs by Rachmaninoff, Grechaninov and Borodin

Folksong arrs.: Medzi horami [In the Hills], chorus, 1940; Vianočné koledy [Christmas Carols], chorus, wind qt, 1940; Lúčne spevy a tance [Meadow Songs and Dances], op.31/3, female chorus, orch, 1950; Vyletel vták [The Bird Flew], op.31/2, chorus, orch, 1950; Keď som ja v Žiline [When I was in Žilina], 2 T, orch, 1953; Na Jána [St John's Eve], male chorus, orch, 1954; Vlha, vlha, pekný vták [Bee-Eater, Bee-Eater, the Nice Bird], chorus, 1954; V spomienkach [In Memories], B/Bar, male chorus, orch, 1955; Hučí a stene Dnepr široký [The Wide Dnieper Roars and Groans], male chorus, 1957 [Ukrainian folksong arrs.]; 3 Male Choruses, 1968; 3 choruses, 1970; Chodníčky po horách [Forest Paths], A/B, chbr orch, 1973; Syn môj premilený [My Dear Son], A, male chorus, orch, 1973; Kač, domu kač, chorus, 1975; 5 Slovak Folksongs, A/B, pf, 1975; 3 Slovak Folksongs, chorus, 1975; 3 To moje srdiečko [My Heart], chorus, 1975; 3 Ukrainian Folksongs, male/mixed chorus, 1975; Trebišov to valal [Trebišov, That Village], chorus, 1982

INSTRUMENTAL

Orch: Epitaf, sym. poem, 1931; Prologue symphonique, op.13/3, 1934; Capriccio, op.14/3, 1936; Jarná symfónia [Spring Sym.], op.15, 1937; Leto [Summer], sym. poem, op.19, 1941;

Concertino, op.20, pf, orch, 1942, arr. 2 pf; Slovak Suite, op.22, 1943, arr. 2 pf; Selanka [Idyll] (ballet), op.23, 1944; Ráno [Morning], sym. poem, op.24, 1945–6; Spomienky [Reminiscences], op.25, suite, 5 wind, str, 1947; Vlčie diery [Wolf Traps], op.27, 1948–9 [from film score]; Dupák, op.31/1, 1950; Verbunk, 1952; Hviezdnatá noc [Starry Night], 1954 [arrs. of East Slovakian dances]; Stretnutie [A Meeting], 1954; Dramatic Fantasia, 1956; Variations on a Theme from Verdi's *Un ballo in maschera*, 1962; Blažení sú mŕtvi [Blessed are the Dead], Meditation on a Motet by H. Schütz, 1964; Orchestrálne štúdie k činohre [Orch Studies to a Drama], 1965; Hommage à Beethoven (Coriolan), 1969; Sitnianski rytieri [Knights of Sitno], dance scene, 1969; Variations on a Slovak Folksong, 1970; Keď som bol mladý [When I was Young], 1972; Epitaf (Nad starým zákopom [Over an Old Trench]), 1973; Sym. 1945, 1974; Zemplínsky tanec [Folk dance from Zemplín], 1975; Paleta [Palette], 1981

Chbr and solo inst: Sonata, c, op.11, pf, 1927, orchd 1930 as Sym.; Str Qt, B♭, 1928; Sonatina, op.12/1, pf, 1933, orchd as Symfonietta, op.16/1, 1938; Scherzino, op.12, wind qnt, 1934; Pf Variations, op.14/1, 1935; Str Qt no.1, op.13/2, 1935; Suite, op.13/1, vn, va, 1935; Str Qt no.2, op.14/2, 1936; Dans la solitude, op.16/2, 2 pf pieces, 1940; Scherzo, str qt, 1940; Uspávanka [Lullaby], pf, 1942; Pochod povstalcov [Uprising March], pf, 1944, orchd 1945; 2 skladby pre mládež [2 Pieces for Children], op.27, pf, 1948; Tatranské potoky [Tatra Streams], 3 études, pf, 1954; Čo mi deti rozprávali [What the Children Told Me], aquarelles, pf, 1957, orchd as Akvarely, 1976; Variations on a Slovak Folksong, pf, 1973; Str Qt no.3 'Domovina' [The Native Land], 1986

VLADIMÍR ZVARA

Cilea, Francesco (*b* Palmi, Reggio Calabria, 23 July 1866; *d* Varazze, nr Savona, 20 Nov 1950). Italian composer and teacher. The son of a prominent lawyer, he was intended by his father for the same profession; however, the influence of Francesco Florimo, the famous archivist and friend of Bellini, procured him entry to the Naples Conservatory in 1879, where his teachers included Paolo Serrao, Beniamino Cesi and Giuseppe Martucci, and his fellow pupil Umberto Giordano. There he made rapid progress, becoming a *maestrino* in 1885. His Suite for orchestra (1887) was awarded a government prize and on 9 February 1889, his final year, his opera *Gina* was performed at the conservatory. Despite a poor libretto the editor Sonzogno thought sufficiently well of it to commission from him an opera on a fashionable low-life subject. *La tilda* was given with moderate successs at the Teatro Pagliano, Florence, with Rodolfo Ferrari as conductor and with Fanny Torresani in the title role. Sonzogno included it in his Italian opera season mounted later that year in Vienna, where it earned the gratifying approval of Hanslick. Cilea spent three years on the composition of his next opera, *L'arlesiana*, to a libretto based on Alphonse Daudet's play, for which Bizet had supplied incidental music. The text of Rosa Mamai's aria ('Esser madre è un inferno') was provided by Grazia Pierantoni, the wife of the senator in whose house Cilea was staying at the time. The opera was well received at its première at Sonzogno's Teatro Lirico, Milan, where it helped to launch Caruso on his international career. Not until the following year, however, did *L'arlesiana* achieve its definitive three-act form.

In 1900 Cilea began work on his most famous opera, *Adriana Lecouvreur*, whose subject appealed to him because of its 18th-century ambience and its mixture of comedy and pathos. The première proved another triumph for Caruso as well as for the composer. At a season of operas mounted by Sonzogno at the Théâtre Sarah Bernhardt, Paris, in 1904, Alfred Bruneau singled out *Adriana Lecouvreur* as the worthiest product of the Italian 'giovane scuola'. A projected collaboration with Gabriele D'Annunzio on *Francesca da Rimini* came to nothing owing to Sonzogno's unwillingness to meet the poet's financial demands. In his search for a subject that would offer a choral dimension Cilea turned to *Gloria*, a story of star-crossed lovers set in 14th-century Siena at the time of the siege. Despite the advocacy of Toscanini the opera was cooly received and failed to circulate; nor did a revised version of 1932 to a new text by Ettore Moschini fare substantially better. A last operatic attempt, *Ritorno ad amore*, foundered on Renato Simoni's failure to complete the libretto. From then on Cilea ceased to compose for the stage. His only other large-scale work was the 'Poema sinfonico' *Il canto della vita* for tenor, chorus and orchestra, written to a text by Sem Benelli in commemoration of the Verdi centenary in 1913. The previous year Leopoldo Mugnone had conducted a revival of *L'arlesiana* in Naples, for which he had persuaded the composer to enlarge the part of Vivetta and cut the aria of Rosa Mamai and her scene with L'Innocente. The result so disappointed Cilea that he withdrew the score from circulation for the next 20 years. It was not heard again until a radio transmission in 1932. The Museo Cilea in Palmi contains the manuscript of an unpublished 'Intermezzo arlesiana' dated 1938.

Until his retirement in 1935 Cilea pursued a distinguished career in musical education. He taught harmony and the piano at the Naples Conservatory from (1890–92), and held the chair of harmony and composition at the Istituto Reale (later the Conservatorio Luigi Cherubini) in Florence (1896–1904). In 1913 he assumed the directorship of the Palermo Conservatory, moving to that of the Naples Conservatory, a post which he held for nearly 20 years. He was elected to the Academy in 1938. Though justifiably proud of his record as a teacher, he regarded it as secondary to his operatic career, which he believed to have been blighted by the intrigues of others.

More of an all-round musician than most of his colleagues of the 'giovane scuola', Cilea shows a lighter touch. Besides Bellini, his chief gods were Bach, Beethoven and Chopin. An accomplished pianist, his keyboard writing is always inventive, and several of his pieces composed between the wars show an attempt to come to grips with the styles of Ravel and Casella. If his operas conform to the manner of Mascagni and his school, they never descend to brutal excess. Thematic recurrence plays an important part in them, even though the motifs

themselves are rarely very theatrical. If *Adriana Lecouvreur* remains his most popular opera, largely due to its appeal to the aging prima donna, his best-loved single aria is the 'Lamento di Federico' from *L'arlesiana*, to this day one of the gems of the tenor repertory.

WORKS
(*selective list*)

OPERAS

Gina (3, E. Golisciani), Naples, Conservatory, 9 Feb 1889
La tilda (3, A. Graziani [A. Zanardini]), Florence, Pagliano, 7 April 1892
L'arlesiana (4, L. Marenco, after A. Daudet), Milan, Lirico, 27 Nov 1897, rev. version (3), Lirico, 22 Oct 1898
Adriana Lecouvreur (4, A. Colautti, after E. Scribe and E. Legouvé), Milan, Lirico, 6 Nov 1902
Gloria (3, A. Colautti), Milan, Scala, 15 April 1907; rev. version (E. Moschini), Naples, S Carlo, 20 April 1932

OTHER WORKS

Vocal: Il canto della vita, poema sinfonico (S. Benelli), T, chorus, orch, 1913, rev. as Ode sinfonica (E. Moschini), 1934; 3 vocalizzi da concerto, 1v, pf, 1930; Dolce amor di povertade, song, 1949
Orch: 2 suites, 1887, 1931
Chbr and solo inst: Pf Trio, 1886; Sonata, vc, pf, 1889, rev. 1901; Suite (vecchio stile), pf, 1916; Serenata a dispetto, pf, 1922; Verrà?, Acque correnti, Valle fiorita, pf, 1923; Festa silana, pf, 1930; Risonanza nostalgiche, pf, 1930; Suite, vc, pf, 1937

JULIAN BUDDEN

Cillario, Carlo Felice (*b* S Rafael, Argentina, 7 Feb 1915). Argentine conductor of Italian parentage. He moved with his parents to Italy when eight years old, studied at the Conservatorio di Musica G.B. Martini at Bologna and began his career as a solo violinist, turning to conducting in 1942 at the Odessa Opera. After forming concert orchestras in Italy and Argentina he became increasingly involved with opera, making his British début at Glyndebourne in 1961 (*L'elisir d'amore*) and in the USA at the Chicago Lyric Opera (*La forza del destino*). His Covent Garden début in 1964, with Callas and Gobbi in the Zeffirelli production of *Tosca*, earned him critical approval for his disciplined control and the expressive orchestral playing. Besides frequent engagements with major European and American opera companies (including La Scala, the Metropolitan and San Francisco) he was the music director for the Elizabethan Opera Trust in Sydney, 1970–71, and in 1988 was appointed principal guest conductor and music adviser to Australian Opera. He has also conducted regularly at the Stockholm Royal Opera and at Drottningholm. Mainly working in Italian and French opera, he has been widely praised for his sensitive support for singers and firm orchestral direction. His recordings include *La traviata* (1965, with Scotto and Pavarotti), and the little-known *Caterina Cornaro* and *Gianni di Parigi* of Donizetti.

NOËL GOODWIN

Cillavenia, Francesco. *See* CELLAVENIA, FRANCESCO.

Cima. Italian family of composers and organists. They were active in Milan and Rome in the 17th-century.

(1) Giovanni Paolo Cima (*b* Milan, *c*1570; *d* Milan, 1630). He succeeded Ottavio Bariola as organist of S Maria presso S Celso, Milan, in 1595 and remained in the post until his death, during the plague of 1630. From 1607 to 1611 and from 1614 until his death he also acted as *maestro di cappella* there, although the post was never officially his. He held an important position as the leading composer of the Milanese instrumental school in the early 17th century. The motets of 1599 demonstrate how, after a period of stagnation, due in part to Carlo Borromeo's ideas on sacred music, the contrapuntal *stile osservato* had been restored. Cima's motets, praised by Angleria in 1622, display a predilection for imitative counterpoint and for broad, non-syllabic melodies; ornamental crotchet figures are widely used as well as some elements of the instrumental ricercare. The church music in his 1610 collection is on the whole conservative although the polyphonic writing does give way to some motets for solo voice and basso continuo in a pseudo-monodic style, similar to that of Viadana. The use of ornamentation is also reminiscent of late Renaissance instrumental traditions, rather than of new trends in vocal music. The pieces for several voices are interesting for their use of echo or dialogue structures, for example the eight-voice *Assumpta est Maria*. There is also a four-part mass, which alternates a generally syllabic style and frequent references to the instrumental canzone, with a more conventional polyphonic procedure. It is clear that Cima was more interested, however, in organ and instrumental music. His 1606 compilation points to the distinction between the imitative, motet-like ricercare and the more homophonic canzona with its French rhythms and dance-like strains; at the end Cima appended some instructions on the retuning of a clavichord so as to be able to play in any key at one time. His contributions to Angleria's *Regola del contrapunto* (1622) show that he was also concerned with contrapuntal theory; but his importance lies most of all perhaps in his very early use of the trio sonata medium in the *Sonata a tre* for violin, cornett and continuo in the 1610 *Concerti*, a through-composed work with both thematic integration and considerable virtuosity of style.

WORKS

Il primo libro delli motetti, 4vv (Milan, 1599)
Partito di ricercari, canzoni alla francese (Milan, 1606[15]); ed. in CEKM, xx (1969); 1 ed. in AMI, iii (n.d.)
Concerti ecclesiastici, 1–5, 8vv, Messa, 2 Magnificat e falsi bordoni, 4vv, 6 sonate a 2–4, bc (Milan, 1610[4]); Adiuro vos, edn in Adrio; 1 motet, 5vv, ed. F. Commer, Musica sacra, xiii (Regensburg, 1882)
Vesperae de communi BVM, 5vv, *D-Mbs*
Ricercare et canoni, 2–4vv, in C. Angleria, *La regola del contrapunto, e della musical compositione* (Milan, 1622)
3 bicinia, 1598[13]; 6 motets, 1608[13]; 2 motets, 1610[1]; 2 motets, 1612[3]; 1 capriccio, 1617[2]; 1 motet, 1619[4]; 1 motet, 1620[2]; 2 motets, 1 canzona, 1626[5]; Ricercare e canzoni, *I-Vnm*; 2 contrafacta spirituali in *Il secondo libro della musica di Claudio Monteverde e d'altri autori* (Milan, 1608), mentioned in *VogelB*
Canzoni, consequenze e contrapunti doppi, 2–4vv (Milan, 1609), lost, mentioned in Picinelli, 315

(2) Andrea Cima (*b* Milan; *fl* 1606–27). Brother of (1) Giovanni Paolo Cima. All we know of his life is that he was organist of S Maria Maggiore, Milan, in 1614 and of S Maria della Rosa and S Maria della Grazie, also Milan, in 1627. There is no evidence to support Picinelli's claim that he was later *maestro di cappella* of S Maria Maggiore, Bergamo. His two surviving publications contain motets in an unambitious concertato idiom, two being dialogues for soprano and bass. He also contributed

nine motets and a four-part mass to several anthologies. He belonged to the school of instrumental composers that flourished in Lombardy, as is indicated by his three canzonas (RISM 1606[15] and 1617[2]), each in four parts and suitable as either keyboard or ensemble pieces. His Capriccio for a high instrument and basso continuo, which appears in his brother's *Concerti ecclesiastici* (1610), is one of the first examples of a composition for this combination.

WORKS

Il primo libro delli concerti, 2–4vv (Milan, 1614)
Il secondo libro delli concerti, 2–4vv (Milan, 1627)
1 canzona, 1606[15]; 4 motets, 1 capriccio, 1 sonata, 1610[4]; 1 motet, 1615[13]; 2 motets, 2 canzoni, 1617[2]; 1 mass, 4vv, 2 motets, 1626[5]

(3) **Giovanni Battista Cima** (*b* Milan, 1596; *d* Sondrio, nr Bergamo, *c*1675). Son of (1) Giovanni Paolo Cima. He was organist of S Nazaro Maggiore, Milan, and was succeeded as *maestro di cappella* of Como Cathedral by Alfonso Bamfi in 1641. His later years were spent at Sondrio. The only known works by him are a four-part motet *Ad te Domine clamavi*, included in (2) Andrea Cima's motet collection of 1627 and written in an even simpler style than Andrea's, and a motet for two voices and basso continuo, *Tota pulchra es* (*GB-Lbl*). The second book of *Concerti* for two to four voices (Milan, 1626), mentioned by Picinelli (p.277), is no longer extant.

(4) **Tullio Cima** (*b* Ronciglione, nr Rome, 1596; *d* after 1675). A pupil of Abundio Antonelli, he was a boy chorister at S Giovanni in Laterano, Rome, until 1612. In 1625 he became *maestro di cappella* of the Seminario Romano. He was organist of Perugia Cathedral in 1645 and in 1646 was proposed as *maestro di cappella* there, but the appointment was not taken up. In 1659 he was elected *maestro di cappella* of Rieti Cathedral, but he turned the post down and competed unsuccessfully for the post of *maestro di cappella* of Orvieto Cathedral. He took the degree of Doctor of Law late in life and may have practised as a lawyer. Although his music may lack any particular merit, he was certainly an industrious amateur, producing eight collections, mainly of motets, over his long life. The possibilities of coherent musical structure or of obbligato instrumental participation seem never to have interested him, his melodies are rather dull and syllabic and his ornaments too patterned; the *Beatus vir* of the 1673 psalms, however, avoids such shortcomings. This publication is also interesting for its publisher's preface, which sets out details of a fair business arrangement between composer and publisher, a feature that was evidently all too rare in 17th-century Rome.

WORKS

Sacrae cantiones, Magnificat, litaniis BVM, liber 1, 2–4vv, bc (Rome, 1621)
Motecta, 2–5vv, bc, liber 2 (Rome, 1625)
Motecta, 2–5vv, bc, liber 3 (Rome, 1629)
Salmi per il vespro e 2 Magnificat, 4vv, op.5 (Rome, 1636)
Sacrarum modulationum, 2–5vv, liber 4 (Rome, 1648)
Ecclesiasticae modulationes, 2–3vv, liber 5 (Rome, 1656)
Vespertina psalmodia, Missa, Litanie BVM, 3vv, bc, op.7 (Rome, 1673)
Sacrae modulationes, 2–3vv (Rome, 1675)
3 motets, 1642[1]; 3 pieces, 1643[2]; 1 piece, 1646[2]

JEROME ROCHE/RODOBALDO TIBALDI

Cimador [Cimadoro], **Giambattista** [Giovanni Battista; J.B.] (*b* Venice, 1761; *d* Bath, 27 Feb 1805). Italian composer, singer, violinist and music publisher. Born of a noble family, he studied the violin, cello and piano. In 1789 his *Ati e Cibele*, a *favola per musica* in two short scenes, was performed in Venice. This was soon followed by *Pimmalione*, a monodrama after Rousseau for tenor and orchestra with a small part for soprano, and *Il ratto di Proserpina*. Choron and Fayolle reported that, dissatisfied with *Pimmalione*, Cimador burnt the score and renounced composition. Artaria, however, advertised publication of the full score in 1791 in Vienna and excerpts were published later in London. The work achieved considerable popularity throughout Europe as a concert piece for both male and female singers, being revived as late as 1836. While still in Venice he wrote a double bass concerto for the young virtuoso Dragonetti; the manuscript survives, together with Dragonetti's additional variations on the final Rondo, which he evidently considered too short.

In 1791 Cimador moved to London, where he taught singing and was, as is recorded in *The Gentleman's Magazine*, 'a celebrated vocal performer'. He visited Bath in 1794 with Haydn, who referred to him as a violin virtuoso and composer. On 14 May 1795 *Ati e Cibele* was given its first London performance at the King's Theatre, with pantomime and dances by Noverre, for the benefit of Morichelli, who sang Cibele. Extracts from *Pimmalione* were given there on 8 June 1797, and he appeared as a pianist during the season 1799–1800.

In about 1800 he entered into partnership with the Italian music publisher TEBALDO MONZANI. Together they issued periodical collections of Italian and English vocal music, and, as The Opera Music Warehouse, they published Mozart's great operas, advertising that 'any of the songs, Duetts, Trios, Overtures … may be had Single & the whole of Mozart's Pianoforte Compositions, published in Numbers'. Many of these were arranged or provided with piano accompaniments by Cimador. His arrangement of several Mozart symphonies for flute and strings was allegedly provoked by the refusal of the King's Theatre orchestra to play the works in their original form because of their difficulty; six of these were published by Monzani after Cimador's death. His arrangement of the

Romance from Mozart's Piano Concerto K466 appeared in the *Harmonicon* as late as 1833.

Although Gerber suggested that Cimador patterned himself after Haydn, his compositions owe more to the early works of Mozart. Choron and Fayolle, writing mainly of *Pimmalione*, summed up Cimador as 'a musician of no great scientific acquirement although his works are full of fire and imagination'; Fétis however pronounced the work merely mediocre. The double bass concerto is well scored and in the slow movement shows a gift for beautifully simple and lyrical lines, but had it been written for an instrument with a larger repertory it is doubtful whether it would have been revived.

WORKS

Ati e Cibele (favola per musica, 2, A. Pepoli), Venice, Accademia dei Rinnovati, spr. 1789

Pimmalione (scena drammatica, S.A. Sografi, after J.-J. RODNEY SLATFORD (work-list with MARITA P. McCLYMONDS)

Cimarosa, Domenico (*b* Aversa, 17 Dec 1749; *d* Venice, 11 Jan 1801). Italian composer. He was a central figure in opera, particularly comic opera, of the late 18th century.

1. LIFE. Cimarosa (his name is spelt Cimmarosa on his baptismal certificate) was taken by his parents, a few days after his birth, from Aversa to Naples. His father, Gennaro Cimmarosa, was employed as a stonemason in the construction of the Palazzo Reale di Capodimonte; in the course of work he was killed in a fall. The family lived close to the church of S Severo de' Padri Conventuali, and Cimarosa's mother was able to obtain work as a laundress at the monastery while Domenico was taken into the school. Cimarosa soon attracted the attention of the monastery organist, Father Polcano, who gave him music lessons. He made rapid progress, and was admitted in 1761 to the Conservatorio di S Maria di Loreto. He remained there for 11 years. His teachers were Manna, Sacchini, Fenaroli and Carcais, the *maestro di violino*. Cimarosa became an able violinist and keyboard player, and he was also a gifted singer; after he left the conservatory he had singing lessons from the castrato Giuseppe Aprile. It was, however, mainly as a composer that he established himself while still a student, and by 1770 he, Zingarelli and Giuseppe Giordani were senior students in the *maestro di cappella* class, the class for composers. He may have had further lessons in composition from Piccinni in 1771, when he had left the conservatory.

During his student days Cimarosa composed a number of sacred motets and masses, but with the première in 1772 of his first *commedia per musica*, *Le stravaganze del conte*, performed at the Teatro dei Fiorentini in Naples with the farsetta *Le magie di Merlina e Zoroastro*, his fame as a composer began to spread. Influenced by the tradition of the *commedia dell'arte*, the farsetta, which constituted Act 3 and included characters such as Dottor Balanzoni and Pulcinella, was the first of a number of similar intermezzos and farsettas that he was to write throughout his career. His works soon became popular in Rome, where his comic intermezzos were performed by a cast of five male singers at the Teatro Valle. *Il ritorno di Don Calandrino*, *L'italiana in Londra*, *Le donne rivali*and *Il pittore parigino* were given there between 1778 and 1781. Goethe was quite charmed by *L'impresario in angustie*, which he heard during his visit to Rome in 1787. In his *Italienische Reise* Goethe commented on the humour in the Act 1 finale in which the poet (centre stage) is being criticized by the impresario and the prima donna on one side of the stage, and the composer and the seconda donna on the other. Serious operas, including *Caio Mario* (1780) and *Alessandro nell'Indie* (1781), also had their premières in Rome, at the Teatro delle Dame and the Teatro Argentina. On 10 July 1780 *L'italiana in Londra* was the first of Cimarosa's operas to be given at La Scala in Milan, initiating a tradition of performances of his works that lasted well into the 19th century.

On 29 November 1779 Cimarosa had been appointed supernumerary organist (without pay) of the Neapolitan royal chapel. He was promoted on 28 March 1785 to the position of second organist, with a monthly salary of eight ducats (which continued to be paid to him even during his periods of absence from Naples). From the early 1780s he also held an appointment as *maestro* of

Domenico Cimarosa: engraving by Giovanni Battista Sasso after Antonio Bramati

the Ospedaletto conservatory, Venice; it is not clear exactly when he was appointed, though 1782 is a likely date, as in that year his oratorio *Absalom* was composed for the institution. Several of his opera librettos in the ensuing years (first those of *L'eroe cinese* and *La ballerina amante*, both given in Naples in 1782) refer to his connection with the Ospedaletto, and it would seem that he retained his Venetian post even when absent.

In 1787 Cimarosa accepted the position of *maestro di cappella* at the St Petersburg court of Catherine II, an invitation probably extended at the recommendation of the Duke of Serra Capriola, the ambassador in Russia of the Kingdom of the Two Sicilies. On their way to St Petersburg Cimarosa and his wife visited Livorno as guests of Grand Duke Leopold of Tuscany, who later, as emperor (1790–92), played a role in Cimarosa's successful sojourn in Vienna. At Parma he paid a visit to Duchess Maria Amalia (daughter of Maria Theresa and wife of Ferdinand of the Bourbons), and he spent 24 days in late August and September in Vienna, where he was presented to Joseph II. During this period the emperor repeatedly invited Cimarosa to sing and play for him. All these contacts strengthened his ties with the Viennese court. From Vienna Cimarosa visited Warsaw and finally arrived in St Petersburg on 3 December 1787.

At the court of Catherine II Cimarosa succeeded a line of Italian composers that included Manfredini, Galuppi, Traetta and Sarti. His operas were presented at the Hermitage and the theatre at Gatchina, the sumptuous palaces of the empress. His serious opera *Cleopatra* and two previously written comic operas, *Le donne rivali* and *I due baroni di Rocca Azzurra*, were adjusted for performers in Russia. Shortly after Cimarosa's arrival, however, the empress engaged Martín y Soler as her second *maestro di cappella*. His operas seemed to have met with greater success at the Russian court than Cimarosa's. The magnificence and splendour of Catherine's court began to fade by 1791 when economic crises had forced the empress to release most of the Italian singers. Cimarosa, who could not bear the harshness of the Russian winters, left the court in June 1791. After spending three months in Warsaw, he arrived in Vienna shortly after the death of Joseph II.

It had been known for some time that Cimarosa's contract in Russia was nearing an end and that he was planning to return to Naples because of poor health. Joseph II had intended to employ him as soon as he reached Vienna, and in 1789 a number of Cimarosa's works were given at the Burgtheater in preparation for his return. Between May and September *I due supposti conti*was revived with a new cast, and *I due baroni di Rocca Azzurra*, for which Mozart composed the aria 'Alma grande e nobil core' (K578), was also presented. Upon his arrival in Vienna Cimarosa was appointed Kapellmeister by Leopold II and was commissioned to write an opera, *Il matrimonio segreto*, to a text by Giovanni Bertati based on Colman and Garrick's *The Clandestine Marriage*. The opera, performed at the Burgtheater on 7 February 1792, was so successful that Leopold II ordered that it be repeated that same evening in his private chambers. Cimarosa, whom Joseph Weigl described as having a jovial and friendly personality, enjoyed great popularity among Viennese society and often entertained his hosts by performing at the keyboard. During his two years in Vienna he composed two more operas (*La calamita dei cuori*, which was a failure, and *Amor rende sagace*), and reworked his *Il pittore parigino*.

Cimarosa presumably returned to Naples in spring 1793, between the production of *Amor rende sagace* in Vienna at the beginning of April and that of *I traci amanti* in Naples in mid-June. On 8 November 1796 he was appointed first organist of the royal chapel with a monthly salary of ten ducats. In addition to composing new operas, he reworked *L'italiana in Londra* and *I due baroni*, adding sections in Neapolitan dialect. The most important works written during this last phase of his career were *Le astuzie femminili* (1794) and two serious operas, *Penelope* (1794) and *Gli Orazi ed i Curiazi* (1796), the last for La Fenice in Venice. In the 1790s Italy was experiencing reverberations of the French Revolutionary Wars that shook Europe. In 1796 the French captured Venice. Three years later, liberal leaders under the auspices of the French established the 'Parthenopean Republic' after the Bourbon king was forced to flee Naples. Cimarosa, in sympathy with their cause, composed a patriotic hymn to a text by Luigi Rossi which was sung on 19 May for the ceremonial burning of the royal flag. At the end of June, however, the Parthenopean Republic fell and the Bourbon troops re-entered the city. Cimarosa found himself in a perilous position in view of his republican sympathies; he endeavoured to make amends by paying homage to the Bourbons, composing (at the suggestion of a priest, Gennaro Tanfano) a cantata in praise of Ferdinand IV, performed on 23 September. He composed other works in his efforts to appease the king, but it seems that they merely angered Ferdinand further, and on 9 December 1799 he was arrested. He spent four months in prison, and was spared the death sentence only because of the intervention of powerful friends (among them Cardinal Consalvi, Cardinal Ruffo and Lady Hamilton). On his release from prison Cimarosa returned to Venice, where he was invited to compose a new opera, *Artemisia*. He did not live to complete it, as his health rapidly deteriorated and he died on 11 January 1801. Rumours were rife that he had been poisoned at the instigation of Queen Marie Caroline, and pressure of public opinion forced the government to publish a medical report (on 5 April 1801), which certified that he had died from an internal ailment. Cimarosa was twice married: in 1777 to Costanza Suffi, who died the next year; and later to Gaetana Pallante, who died in 1796.

2. Works. Cimarosa's reputation in his last years, and during the early part of the 19th century, was unparalleled in Italian opera until Rossini. His facility at writing music resulted in the creation of almost 60 stage works, most of which were comic pieces. His operas were performed on all the major European stages, including Prague, Copenhagen, Stockholm, St Petersburg, Hamburg, London and Berlin. His works were particularly popular in Vienna and at Eszterháza. In Vienna, for example, *Le trame deluse* was repeated 16 times in 1787, and *Il pittore parigino* 27 times in Cimarosa's revised version of 1792. At Eszterháza between 1783 and 1790, Haydn conducted performances of 13 operas by Cimarosa, and many of them were given several times. *L'italiana in Londra* was repeated there at least 14 times in five years. Although Cimarosa revised some of his earlier compositions to suit the Neapolitan tastes his music had a broad, international appeal. Some of his operas were still being played in Naples as late as 1811, and his *Gli Orazi ed i Curiazi* and

Il matrimonio segreto were given in Venice throughout the early 19th century.

Cimarosa was also admired by a number of 19th-century commentators. Eugène Delacroix preferred Cimarosa's music to Mozart's, and Stendhal wrote that he would rather be hanged than be forced to state which of the two he preferred. Hanslick praised Cimarosa's wonderful facility, masterly compositional strokes and good taste. Goethe, who first heard Cimarosa's music in Rome, wrote to Schiller in 1788 from Naples, praising one of Cimarosa's operas (probably *Il marito disperato*, performed there as *La gelosia punita*). Upon his return to Weimar Goethe directed performances of *Le trame deluse* and *Il matrimonio segreto*. He also created the pasticcio *Die theatralischen Abenteuer* (1791), from Cimarosa's *L'impresario in angustie*, incorporating parts of Mozart's *Der Schauspieldirektor* in 1797.

Cimarosa's earliest surviving score is a set of instrumental *Partimenti*from 1762. During his years as a student, he wrote mainly sacred works. It was as a comic opera composer, however, that he first established himself, and all his early operas are in that genre. His operas are based on librettos by a number of authors; this accounts for the uneven quality of the texts. Giuseppe Palomba and Giuseppe Maria Diodati furnished the largest number, with 13 and seven respectively. Both librettists created characters who speak in Neapolitan dialect, and Palomba's texts also intermingle broken Spanish and French words with *lazzi* ('tricks') from the *commedia dell'arte*. His plots feature multiple disguises and bizarre intrigues and complications. Cimarosa's *La trame deluse*, a setting of Diodati's text, became one of his most successful operas. The language of *Penelope* is in the dignified style of Metastasio, though by avoiding pomposity and including ensembles Diodati indicated new stylistic tendencies. G.B. Lorenzi, Antonio Sografi, Giuseppe Petrosellini, Angelo Anelli and Giovanni Bertati were among Cimarosa's other librettists. In *Il matrimonio segreto* Bertati provided an excellent plot, devoid of disguises and excessive complications.

Despite the occasionally mediocre quality of the texts, Cimarosa was always able to write music suffused with lightness, elegance and finesse. The orchestration of his earlier works consisted primarily of strings, oboes, horns and trumpets, and only occasionally bassoons and flutes. The orchestra functioned as a vehicle for vocal accompaniment, with the strings providing most of the activity. During his Russian sojourn he began to use clarinets, and his orchestration generally acquired a fuller and richer sonority. This is evident in *Il matrimonio segreto*, where the large orchestra provides colour and exhibits independent motivic and rhythmic material that serves as commentary on the action. Cimarosa seldom wrote stylized da capo arias. His arias are sectional, with contrasting tempos, metre and keys to accommodate changes of mood and situation in the text. This freedom from a structural mould creates the effect of spontaneity and flexibility. The last section of an aria is frequently in a fast tempo in the manner of a cabaletta. Cavatinas also occur frequently.

One of Cimarosa's strengths was the composition of witty and vivacious ensembles. *Il matrimonio segreto*, an ensemble opera in the style of Mozart's *Le nozze di Figaro*, is composed of eight arias, four duets, three trios, a quartet, a quintet and two finales featuring all six characters. Frequently his operas begin with a trio or a quartet, and he excelled at creating large-scale chain finales. Although Cimarosa's characters do not display layers of Mozartian complexity, he was capable of depicting human emotions in a touching but not over-sentimental manner, as in the opening duet 'Cara non dubitar' from *Il matrimonio segreto*.

Cimarosa's harmonic vocabulary is diatonic and unadventurous; the strength of his music lies in the richness of his melodic invention, the brilliance and energy of his rhythmic and melodic motifs and his constantly lively accompaniments. He expanded the parameters of *opera buffa* by creating a genre permeated with sentiment, simplicity, elegance and delicacy. The freshness and vigour of his music was unmatched by his Italian contemporaries.

Cimarosa's instrumental works include concertos, similar in general style to Mozart's. The middle movement of the Harpsichord Concerto in B♭, comprising a 'recitative' and 'aria', attempts to present in purely instrumental terms a dramatic situation involving the concept of a solo voice. There is strong evidence for believing that Cimarosa's many keyboard sonatas, generally known in one-movement form, were originally intended as two- or three-movement pieces. One manuscript (*GB-Lcm* 142) contains a three-movement 'Sonata per il fortepiano', and features of another (*I-Fc*) reveal that certain movements were intended to follow others without a break; these include movements ending in the dominant key, such indications as 'segue Andante', and series of key relationships that suggest multi-movement structures. The movements display a variety of forms, including binary, and several contain passages not unlike those found in Domenico Scarlatti's music; the keyboard range is contained within five octaves, the texture is usually two-part, and melodic interest is generally reserved for the upper line.

JENNIFER E. JOHNSON/GORDANA LAZAREVICH

Cimatore, Michele (*b* *c*1510; *fl* Bologna, 1534–73; *d* after 1587). Italian composer. In 1534 he was elected *novo mastro de canto* at S Petronio, Bologna, to aid the 74-year-old *maestro di cappella* Giovanni Spataro, whom he succeeded in January 1541; he was relieved of his duties, as were all the choristers of the basilica, in December 1547. In 1538 he was chaplain at the altar of S Giovanni Battista at Bologna Cathedral, where he also served as *maestro del canto* between July 1559 and 1571, and as *magister puerorum* in 1571. He returned to S Petronio in 1573 as a chaplain. His musical reputation must have been sound, for he is frequently mentioned as 'famosissimo musico' in contemporary accounts. Although none of his music has survived, Giovan Tomaso Lambertini is known to have copied a book of Cimatore's music for S Petronio in 1546.

Cimbala (Sp.; Eng. *Cimball*). *See under* ORGAN STOP (*Zimbel*).

Cimbaletto. *See* TAMBOURINE.

Cimbalom [kimbalom] (from Gk. *kymbalon*). A Hungarian dulcimer. There are two main types: a small portable one, whose use may be traced back to the 16th century, very similar to English dulcimers; and a large chromatic concert version fitted with a damper pedal, invented by Jozsef V. Schunda in Budapest, in about 1870, and used occasionally in symphonic works (*see* DULCIMER, fig.17). The strings are divided by one or two bridges, in the ratio 3:2 (or 4:3). The range of the later instrument is usually *D* to *e‴*. For a discussion of the instrument's history and repertory, *see* DULCIMER, esp. §6. *See also* HUNGARY, §II, 6(iii), esp. fig.7.

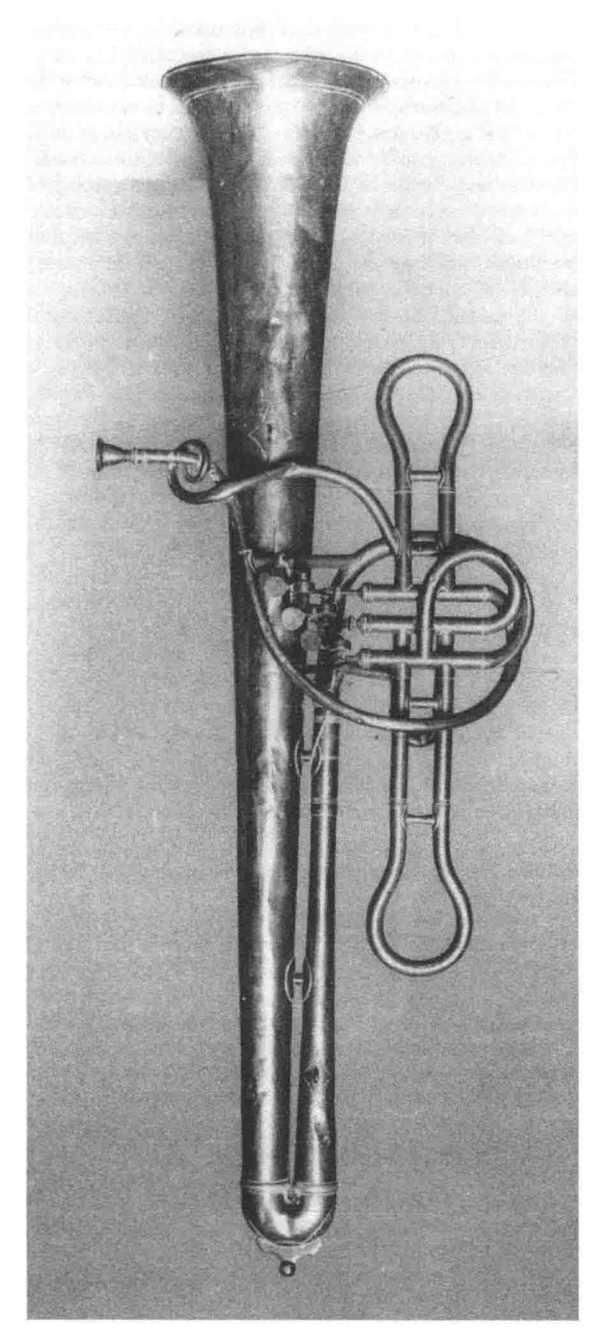
Closely related forms of the dulcimer exist in southern and eastern Europe with names cognate with cimbalom. In Romania, the *ţambal* (*ţimbală*, *ţîmbulă*, *ţimblon*; Moldavia, *ţimbal*) is used in the *taraf* ensemble. Small

instruments, with 20 to 25 courses of strings, are used by country musicians, particularly in the Oltenia, Muntenia and Moldavia regions; town musicians from the whole country use larger ones which allow for 35 groups of strings and a pedal mute. The strings are struck with two mallets, the ends of which are wrapped in cotton wool.

In Greece the term 'tsimbalo' denotes a Hungarian-style cimbalom, now found only rarely, and, more commonly, an instrument similar to the *sandouri* but strung and tuned differently. It is played solo and in ensembles.

In Poland, the *cymbały* is popular in the Rzeszów, Warmia and Mazury areas; instruments have from about 10 to 20 courses of strings. In Belarus the *tsïmbalï* has 12 to 24 courses, with three to eight strings in each. Three sizes of folk instrument exist, with ranges of one and a half to two and a half octaves, and there are four sizes of concert instrument. Similar instruments are also used in Bohemia (*cymbal*), the Ukraine (*tsymbaly*) and in the Baltic countries, where the *cimbole* (Latvia) and *cimbolai* (Lithuania) have 12 to 26 courses, usually double or triple strung, divided by bridges and with a range of up to three octaves.

□



Cimbasso (It.). Term used in Italy since the early 19th century for various bass and double bass lip-reed aerophones.

(1) A type of upright wooden serpent with a large flared bell of brass and between one and four keys. The instrument is peculiar to Italy, differing from the French *basson russe* (*see* RUSSIAN BASSOON) in both bell shape and in the arrangement of keys. Its name may be derived from the abbreviated form of 'corno in basso' ('c. in basso'); variants are encountered, such as simbasso, gimbasso, and even gibas. Produced by makers such as Magazari, Piana (fig.1) and Papalini, the wooden cimbasso replaced the serpent as the lowest member of the brass family in about 1816, making its first appearance at La Scala where it was noticed by Spohr. Paganini was perhaps the first composer to adopt the instrument, in his Violin Concerto no.1 in E♭ (1816); he was followed by many Italian composers, including Donizetti, Bellini and Giovani Pacini. It cannot be stated with certainty that these parts were always played on a true cimbasso; where the instrument was unavailable, the part could have been played on a keyed ophicleide, an instrument known to have been in use at this time despite its absence from contemporary Italian scores. The wooden cimbasso remained popular until at least the mid-1830s.

(2) After about 1835 the term, like the term 'ophicleide' or 'oficleide', tended to be used generically to describe the lowest orchestral brass instruments, which were in a period of fast-developing innovation. The cimbasso required by Verdi in his earliest operas was probably a

2. *Valved ophicleide (cimbasso) by Antonio Apparuti, 1841 (Museo Civico, Modena)*

valved ophicleide, like those being made at the time by Apparuti (fig.2) and Uhlmann. In other orchestras the parts were actually played on euphonium- and tuba-like models, which Italian and Austrian makers more properly called *bombardoni*. This explains why Italian scores of the 1840s often exhibit the eccentric habit of naming a new instrument at the start of each section without making any change to the writing of the part in question (Meucci, 1988–9, appx).

In 1845 Giuseppe Pelitti (1811–65) invented the *pelittone* (patented in Austria in 1847), a contrabass tuba designed to supersede all existing low brass instruments in Italian orchestras; in 1851, he devised the even larger *generale pelittone*. The fashion for ever-increasing bore size and sound was strongly opposed by Verdi in 1881 when he expressed his dissatisfaction with these huge instruments.

(3) In 1881 G.C. Pelitti (1837–1905) created, at Verdi's request, a new low brass instrument, the *trombone basso Verdi*. In spite of its 'basso' epithet, it was in fact a contrabass trombone pitched in B♭ (fig.3; see *Gazzetta Musicale di Milano*, 1881, and Panizza). Verdi scored for this instrument in his subsequent operas, *Otello* (1887) and *Falstaff* (1893); thereafter it was quickly adopted by almost all Italian orchestras (Prout, It. trans., 2/1901). It

3. *Contrabass valve trombone ('cimbasso') by Pupo Pupeschi, Florence, 1920*

gradually became customary to perform all parts ever conceived for the cimbasso on the *trombone basso Verdi*, at least until the bass tuba was adopted in Italy during the 1920s. The dissemination of this trombone, which continued in occasional use in Italy into the late 20th century, obscured the history of the cimbasso before 1881 and affected the nature of the recent revival of the instrument: modern models are trombones frequently pitched in F rather than B♭ whereas in fact no instrument called a cimbasso was a trombone before 1881, neither was it ever pitched in F. *See* TROMBONE, §§4 and 6.

RENATO MEUCCI

Cimello, Giovanthomaso (*b* Monte San Giovanni Campano, nr Arpino, *c*1510; *d* after 1579). Italian composer, teacher, poet and theorist. He was active in Naples during the 1540s, though he seems never to have held a permanent post there. He was attached, perhaps informally, to the entourage of Giovanna d'Aragona: his madrigal volume of 1548 opens with dedicatory poems addressed to her and her sons Fabrizio and Marc'Antonio Colonna. He seems also to have had some connection with the short-lived Accademia dei Sereni (1546–8), composing a madrigal for a comedy staged there in 1548. At some point, perhaps in the 1550s, Cimello was in Rome in the service of Marc'Antonio Colonna. During that time he began a treatise on plainchant reform, and he had some dealings with Annibale Zoilo, to which he later alluded in a rambling letter to Cardinal Guglielmo Sirleto (in *I-Rvat*). In the early 1570s he was in Benevento, teaching grammar and music at the local seminary and doing research on witchcraft in the area; he claimed to have written some collections of poetry (none are known to survive) including a poem called *Le notte delle streghe*. A minor cleric, he was married and had at least one son, who was killed in military service, and a number of grandchildren.

Cimello's autobiographical letter to Cardinal Sirleto, written in 1579, tells a sad story of a struggling musician and poet who never achieved success. He did nonetheless manage to complete two volumes of music and to get them published by Antonio Gardano in Venice. He also had a number of pupils, some of whom acknowledged his value as a teacher; these include the composers Giulio Belli, Giovanni Battista Martelli and Giglio Napoletano. His name was remembered by Neapolitan writers well into the 17th century.

The *Canzone villanesche* (1545), for which Cimello may have written texts as well as music, include some *mascherate*, a battle-piece (*Venimo tre soldati*) and a number of dialect texts. The music, employing *note nere* rhythmic values, is compactly homophonic and makes much use of sesquialtera passages to vary its pace. Cimello's madrigal volume (1548) has a number of distinctive features. The texts are identified by poetic type, and poets' names are given for all texts (they range from Petrarch, Bembo and Ariosto through Neopolitan contemporaries and friends to Cimello himself). The 'necessarie osservanze instromentali, e piu convenevoli avvertenze de toni' of the title-page may refer to some unusual transpositions (one piece has a signature of three flats) and to the relatively high number of written accidentals in the music, both designed to aid in instrumental performance. 21 pieces use the C of *note nere* writing; four are written in ¢, with longer note values; two use a C with an explanatory note that the beat is on the minim, that is, in subduple relation to the ordinary C. *Tempus perfectum* appears once, and so does major prolation, the signature ⋶ making an appearance unusual for the period. This and other details suggest that Cimello meant his madrigal volume as a series of illustrations of pedagogical points, a feature unique in the madrigal literature.

No theoretical works by Cimello were published, but two manuscript treatises attributable to him from internal evidence survive. They contain a series of theoretical topics (with emphasis on features of the mensural system) mixed with anecdotal material, some of it of considerable interest. In these writings as in his madrigal book Cimello reveals himself as an up-to-date musician and musical thinker (the treatises probably date from the 1540s) who was at the same time concerned with preserving traditional knowledge, and as a writer of strongly didactic bent.

WORKS

Canzone villanesche al modo napolitano, 3vv ... libro primo (Venice, 1545); 2 ed. in Cw, viii (1930/*R*)
Di Giovanthom. Cimello, libro primo de canti, 4vv, sopra madrigali & altre rime ... con le piu necessarie osservanze instromentali, e piu convenevole avvertenze di toni accio si possano anchora sonare, et cantare insieme (Venice, 1548)
Alma Redemptoris mater, 4vv, in 1547[7]
2 madrigals, 4vv, in M.A. di Maio, Libro primo di madrigali (Venice, 1551)
Madrigal, Un pastore, in 1577[9], is probably by the Neapolitan printer Filesio Cimelli

DONNA G. CARDAMONE/JAMES HAAR

Cimeno [Cimino], **Donato.** *See* CEMINO, DONATO.

Cimze, Jānis (*b* Rauna, Vidzeme, 3 July 1814; *d* Valka, 22 Oct 1881). Latvian composer and teacher. He laid the foundations of choral singing in Latvia and was the first collector and harmonizer of Latvian folksong melodies. His education took place in Germany, at the Weissenfels Teachers' College (1836–8), where Ernst Hentschel was working, and at Berlin University (1838–9), where he was also a private pupil of Ludwig Erk. He directed the Vidzeme Teachers' Training College (1839–81), first at Valmiera and from 1849 in Valka, following in his educational works the progressive views of Pestalozzi and Diesterweg. His college produced many Latvian and Estonian teachers who also became excellent choral conductors and organists; almost all the founder-members of the Vidzeme Choral Society were pupils of his.

In 1870 Cimze initiated the systematic collection of Latvian folksong melodies, which he also harmonized for four-part male, mixed or children's voices. These choral arrangements, numbering about 350, are published in *Dziesmu rota* ('A Garland of Songs', Rīga 1872–84), in the volumes sub-titled *Lauka puķes* ('Wild Flowers'), while his compilation of German choral songs with Latvian translations are in *Dārza puķes* ('Garden Flowers'). His folksong harmonizations were the first in Latvia and were still subject to foreign influences, especially the German chorale style, although retaining the songs' poetic and artistic spirit. They have been much performed by Latvian choirs. *A Garland of Songs* was republished in an edition by J. Sērmūkslis (Rīga, 1908 and 1914) and in a selected edition by J. Vītoliņš (Rīga, 1973).

JĒKABS VĪTOLIŅŠ

Cincinnati. City in Ohio, USA. Settled in 1788 on the Ohio River, Cincinnati became the first capital of the Northwest Territory in 1790 and was incorporated as a town in 1802. It was named after the Society of Cincinnati, an association of former officers of the Revolutionary Army. By 1840 it was the sixth largest city on the North American continent.

1. EARLY HISTORY. While it was part of the American Frontier, Cincinnati gave support to music through its churches, amateur musicians and education. 1800 is the earliest known date for a singing school. The earliest documented theatrical production, a comic opera *The Poor Soldier*, was performed in 1801 by amateurs of the town (then with a population of 750) and soldiers from Fort Washington. At this same time schools of writing, arithmetic and dance were advertised. By 1811 touring theatre companies and other musical acts began visiting Cincinnati. When a travelling musician, Signor Muscarelli, gave a concert there in 1823 the climax of the evening was an imitation of dogs and cats on the violin. The violinist Joseph Tosso, a former pupil at the Paris Conservatoire who lived in Cincinnati from 1827 to 1887 and played an Amati, made his reputation with *The Arkansaw Traveler*, a well-known 'speciality number' with recitation. He was also the founder of the Eclectic Academy of Music in 1834. Various choral organizations existed briefly during this period, instrumentalists played for dances and minstrel shows and orchestras occasionally performed overtures by Handel or Mozart. The first showboats appeared on the Cincinnati riverfront in 1831.

During the 1840s immigration from Europe, and particularly from Germany, increased sharply, significantly affecting the cultural life of the city. By 1850 half the citizens were European-born and almost 30% of the population was German. In 1849 the German and Swiss singing societies joined with similar ones from Louisville, Kentucky, and Madison, Indiana, to hold a Sängerfest in Cincinnati with a small orchestra and a combined chorus of 118, performing music by C.F. Zoellner, Mozart, Conradin Kreutzer, J.F. Reichardt and F.W. Abt, among others. On this occasion the German Sängerbund of North America was formed. Annual Sängerfests were held thereafter in various cities, with Cincinnati as host again in 1851, 1867 and 1870. By 1870 the chorus had expanded to 2000 members, and the merchants of Cincinnati built for the Sängerfest a wooden exposition hall seating 5000. Brass bands performed for municipal occasions.

2. MAY FESTIVAL. Theodore Thomas visited Cincinnati on his first orchestra tour in 1869 and for several years thereafter. On his 1871 visit he was invited to establish a music festival using choruses from throughout the West. Thomas agreed, and in May 1873 the festival was held in Exposition Hall for one week, using an expanded orchestra of 108 members and a chorus of 800. The festival was made a biennial affair, and Thomas continued as its music director. After the second festival in 1875 a group of citizens raised the money to replace the wooden Exposition Hall with a permanent brick structure. The new Music Hall (capacity 3600) opened with the third May Festival, which was postponed until the completion of the building in 1878. After the fourth festival a permanent May Festival chorus of Cincinnatians was established. The festival became annual in 1967. Next to the Worcester Music Festival (inaugurated in 1858), the Cincinnati May Festival is the oldest music festival in the USA. Music directors succeeding Thomas (1873–1904) were Frank van der Stucken (1906–12, 1923–7), Ernst Kunwald (1914–16), Eugène Ysaÿe (1918–20), Frederick Stock (1929), Eugène Goossens (1931–46), Fritz Busch (1948–50), Josef Krips (1954–60), Max Rudolf (1963–70), Julius Rudel (1971–2), James Levine, who was born in Cincinnati (1974–8), and James Conlon (from 1979).

3. CINCINNATI SYMPHONY ORCHESTRA. The forerunner of the Cincinnati SO, the fifth oldest symphony orchestra in the USA, was the Philharmonic Society, an orchestra of professional musicians which presented three series of concerts between 1857 and 1860. Enthusiasm ebbed until December 1872, when concerts were again held. Under George Brand the orchestra augmented Thomas's orchestra for the May Festival of 1873. In 1894 the Cincinnati Orchestra Association was founded, with stockholders and guarantors, to establish a symphony orchestra; Mrs William Howard Taft was its first president. In the first season as the Cincinnati SO nine concerts were conducted at Music Hall by Frank van der Stucken beginning in January 1895. At the close of its 1906–7 season the Orchestra Association, balking at demands made by the musicians' union, disbanded the orchestra. After a compromise it was reorganized in 1909 with Stokowski as conductor (1909–12). Succeeding conductors were

Kunwald (1912–17), Ysaÿe (1918–22), Reiner (1922–31), Goossens (1931–47), Thor Johnson (1947–58), Rudolf (1958–70), Thomas Schippers (1970–77), Walter Susskind (music adviser, 1977–80), Michael Gielen (1980–86) and Jesús López-Cobos (from 1986). The Cincinnati SO was the first American orchestra to undertake a world tour (1967). The Cincinnati Pops Orchestra was established by the CSO board of trustees in 1977 when Erich Kunzel was named its conductor. Kunzel has built the CPO into one of the world's most active classical pops ensembles performing more than 30 subscription concerts and releasing five record albums a year. The greater Cincinnati area (including Northern Kentucky) have a number of community and chamber orchestras and two youth symphony orchestras.

4. Opera. Opera has been a part of Cincinnati's music tradition since the early performances of amateurs followed by visits of touring companies during the 19th and early 20th centuries. The Cincinnati Opera, the second oldest continuing opera company in the USA, presented its first season (six weeks in the summer of 1920) in the Cincinnati Zoological Gardens band pavilion. Immediate success led to the development of one of the major opera companies in America presenting opera in the summer with internationally known artists. For 51 years the performances were given at the outdoor pavilion of the Zoological Gardens and the company became known as the 'Cincinnati Zoo Opera'. In 1972 the performances were moved to the refurbished Music Hall, continuing the traditional summer season, and adding some spring and autumn productions and student-orientated performances. At least 117 different operas have been presented since the first season. In 1999 the artistic director was Nicholas Muni.

5. Music education. Cincinnati was one of the first American cities to give regular music instruction in the public schools (from around 1845). Timothy B. Mason, son of Lowell Mason, was the first supervisor. In the 1840s and 1850s there were a few music schools and many private music teachers. In 1867 Clara Baur (1835–1912), a pianist and singer who had emigrated from Germany in 1849, founded the Cincinnati Conservatory of Music on the model of the Stuttgart Hochschule für Musik, where she had studied. The conservatory flourished under her direction, and after her death her niece Bertha Baur (1858–1940) continued the direction until her own retirement in 1930, when the Institute of Fine Arts took charge of the conservatory.

The College of Music of Cincinnati was founded in 1878 in Music Hall. Theodore Thomas moved to Cincinnati to be its first director but resigned in 1880 after a dispute with the board of directors. Like the conservatory, the College of Music appointed European musicians to its staff and offered training in performance for both professionals and amateurs, attracting students from all areas of the USA. The college and the conservatory merged in 1955, and in 1962, as CCM, became part of the University of Cincinnati, occupying its own new building in 1967. In 1997 the school had over 170 instructors, including the Tokyo and Amernet String Quartets. The school has about 695 undergraduate and 658 postgraduate students. The library contains about 91, 000 books and scores and 35, 000 recordings, and includes the Harline collection of cinema and television music manuscripts, the Chujoy collection of dance memorabilia, books and periodicals, and the Alexander Zemlinsky collection. Xavier University, the College of Mount St Joseph and Northern Kentucky University also contribute to Cincinnati's music education. The School for Creative and Performing Arts (1973) was founded by the public school system to give the children of Cincinnati an opportunity to focus on their artistic skills while following the regular state required curriculum.

6. Other musical activities. Since the early 19th century when the first theatres, the National Theatre (1837) and Pike's Opera House (1859) were built, Cincinnati has had a number of performance venues for local and touring companies. Music Hall, a brick structure (1878) recognized for its excellent acoustics, today a national historical landmark, remains the primary venue for most major musical performances, and the Taft Theatre continues to be used for a variety of musical events. The J. Ralph Corbett Pavilion, known as the Riverbend Music Center (1984), is an outdoor pavilion with a postmodernist design used by the Cincinnati SO, Cincinnati PO and many touring groups. The Aronoff Centre for the Arts (1995) is a complex of three smaller theatres: the Procter and Gamble, Jarson and Kaplan theatres. The Crown Coliseum (formerly the Riverfront Coliseum), an indoor sports arena, is also used for musical events.

In 1928 the Cincinnati Institute of Fine Arts was established with an endowment of $3·5 million to support the Cincinnati SO and the Art Museum. After World War II the institute launched an annual fund drive, modelled on the community's united drive for social services, to support the Art Museum, the Taft Museum, the Cincinnati SO and the Cincinnati Opera. In 1978 the Fine Arts Fund expanded to include the Contemporary Arts Center, the Cincinnati Ballet, the Playhouse in the Park and the May Festival. Cincinnati was the first city in the USA to inaugurate a fund drive involving the entire business and private community in support of the arts.

Cincinnati's public broadcasting stations, WGUC-FM Radio, founded by Joseph Sagmaster (1960), and WCET-TV, founded by Uberto Neely (1954), contribute to music education in the city.

The Cincinnati Ballet was chartered in 1958, gave its first performance in 1964 and continues to perform traditional and new works. Cincinnati was an important centre of organ building in the 19th century. Two prominent makers of musical instruments, the Baldwin Piano & Organ Co. (founded 1865) and the Rudolph Wurlitzer Co. (1890, maker of the 'Mighty Wurlitzer' theatre organ and later of the jukebox), had their headquarters in the city for many years.

Music publishing flourished in the 19th century, and in the early 1900s the important firm of music engravers and printers Otto Zimmerman & Son was active in Cincinnati; the Willis Music Co. and World Library Publications still carry on the city's publishing tradition. *Church's Musical Visitor* was an influential national periodical in the late 19th century, and the music review *Billboard* was printed in Cincinnati from 1894 to 1982. The Cincinnati Musicians' Protective Union (established 1881) was one of the first trade unions for musicians in the USA and played a leading role in founding the National League of Musicians (1886) and the American Federation of Musicians (1896).

Cincinnati was an important centre of ragtime composing and publishing. More than 110 ragtime works were issued there by publishers who included John Arnold, Great Eastern Publishing Co., the Groene Music Publishing Co., Joseph Krolage Music Publishing Co. and Mentel Bros. Publishing Co. Leading local composers of ragtime included Homer Denny, Henry Fillmore, Albert Gumble, Clarence M. Jones, Louis H. Mentel and Floyd H. Willis. During the 1920s the Vocal-style Company issued player piano rolls. It was one of the first to print the words to popular songs on its rolls, and it also issued rolls by such musicians as Jelly Roll Morton. It was acquired in 1927 by the QRS Company of Chicago.

The city played its part in the development of rock-and-roll with the establishment of King Records in 1945, one of the first companies to record rhythm-and-blues. King was responsible for discovering and promoting the music of James Brown, Clyde McPhatter, Hank Ballard, Bullmoose Jackson, Otis Redding, Bill Doggett and Nina Simon, among others, and continued to be an important factor in popular music until the mid-1960s.

Among the varied personalities associated with the musical life of Cincinnati are Stephen Collins Foster, who wrote many of his early songs while a clerk there between 1846 and 1850; James Monroe Trotter, author of the first account of black American musicians in America (*Music and some Highly Musical People*, 1878), who received his early musical training in the city; Henry Krehbiel, music critic of the *Cincinnati Gazette* from 1874 to 1880 before going on to the *New York Tribune*; the composers and bandmasters Henry Fillmore (who became known as the 'March King' when Sousa's career was in decline), Frank Simon and Herman Bellstedt, jr; and, more recently, Rembert Wurlitzer, the violin authority; Frank Foster, arranger for Count Basie and others; James Levine, conductor; and the philanthropists Patricia and J. Ralph Corbett and Louise Dieterle Nippert.

Cinema organ. A type of pipe organ built between 1911 and 1940 specifically for the accompaniment of silent films and the performance of popular music. In the USA the term 'theater organ' is preferred (for earlier types of organ used in theatres, *see* THEATRE ORGAN (i)). Many characteristics of the cinema organ can be traced to church organs built between 1895 and 1910 in the UK and USA by Robert Hope-Jones (1859–1914), a pioneer of the use of electricity in organs. These included the use of rapid electropneumatic action, remote consoles, numerous couplers and accessories and, in particular, unification. With this economical system, the effect of a 61-pipe rank of another octave was obtained by the addition of 12 pipes to a stop and appropriate electrical connections (*see* EXTENSION ORGAN and ORGAN, §VI, 4). 'Double touch' enabled the organist to play with a different stop arrangement when applying additional pressure to the keys. This permitted the playing of solo and accompaniment on the same manual, and other effects.

The pipes used in cinema organs tended to be built to large scales and placed under high wind pressures. The Tibia Clausa, a stopped wood pipe of hooting flute-like tone originated by Hope-Jones, eventually became the most characteristic tone of the cinema organ. Other favoured stops included those that imitated orchestral instruments. Cinema organs can be differentiated from those of traditional design by the use of a strongly fluctuating wind supply which caused the pipes to speak with an exaggerated vibrato. The powerful pipework, usually hidden behind decorative grilles, was enclosed in Swell boxes which modified both the quantity and quality of tone. Cinema organs were provided with numerous percussion stops such as drums, cymbals and xylophones, as well as such various sound effects ('traps') as bird chirping, police sirens, train whistles, ocean waves and crashing sounds. These stops probably delighted audiences more than any others in the instrument.

Cinema organ consoles were designed with regard to natural arm movements and ease of use. Colour-coded

stop control tabs were arranged in an arc above the manuals in what became known as the 'horseshoe' console (see illustration). The elaborate consoles, themselves, entertained audiences by dramatically rising from the orchestra pit to a thundering fanfare and brilliant illumination.

The prototype of the cinema organ was built under the direction of Hope-Jones at the Wurlitzer firm of North Tonawanda, New York, in 1910. These 'Unit Orchestras' were intended to replace the small instrumental groups serving cinemas and other places of entertainment. The use of a single performer not only reduced labour costs, but proved to be more effective when accompaniment for films had to be improvised. Wurlitzer eventually dominated the manufacture of cinema organs, producing twice as many as its American rivals – the firms of Robert Morton, Barton, Kimball and Möller. Indeed, the term 'Mighty Wurlitzer' became synonymous with the instrument. The industry began a precipitous decline in 1927 with the advent of sound motion pictures. The economic austerities of the 1930s not only curtailed the manufacturing of new instruments, but led to the abandonment of existing organs.

In Britain, however, most of the organists were retained, at first in case the 'talkies' broke down (which they frequently did), but later because theatre owners discovered that ten or 15 minutes of organ playing, with the organist spotlit at the top of the lift, was a welcome contrast to the mechanically reproduced film music. Theatre organ music attained its greatest popularity in Britain through the medium of radio; about 1936 the BBC installed its own four-manual Compton organ, which was as popular as any other radio entertainment. Ultimately, however, the genre foundered in the wake of television in the 1950s and 60s. As cinemas began to be pulled down or rebuilt and the organs were in danger of destruction, societies were formed in the USA and Britain to reinstall instruments in auditoria, restaurants and homes. It is estimated that 7000 cinema organs were built in the USA between 1911 and 1929, accounting for a quarter of total pipe organ production. Notable extant cinema organ locations include the Radio City Music Hall in New York, the Fox Theater in Atlanta, Georgia, and the Paramount Theater in Oakland, California.

DAVID H. FOX

Cinéphonies. A series of short musical films. The conception was that of the violinist Jacques Thibaud and the music critic Emile Vuillermoz, who in 1935 set up the Compagnie des Grands Artistes Internationaux, based in Lyons, to bring their idea to fruition. Thibaud was chairman of the board; Vuillermoz, as director of productions, coined the name 'Cinéphonie'. They called on the services of famous musicians and three film directors, Dimitri Kirsanoff, Max Ophüls and Marcel L'Herbier, to provide visual images for scores either familiar or, as in the case of Szymanowski and Mompou, more innovative. During each piece of music the performer appears on the screen, as well as a visual 'commentary'. In some cases there are two versions: one film showing the performer's technique and another providing illustrations inspired by the same soundtrack. This was not the first time that images had been adapted to accompany existing music (Tchekhanovski, Alexeieff and Tavano had tried it at the beginning of the 1930s) or that performers had been filmed. The new element was the expressly didactic aim of these films, which claimed to provide both a demonstration of the performer's art and a visual explanation of the musical text. The Cinéphonies were usually shown separately, as the first part of a cinema programme, but in 1939 they were screened in New York grouped together under the title of 'The First Film Concert'. Particular critical attention was given to *Jeune fille au jardin* and *Le coin*

Cinema organ by the Wurlitzer Company, Chicago (Granada Theatre [now Gala Club], Tooting, London)

des enfants, shown at the 1936 Venice film festival, where the latter film received a mention. Most of the Cinéphonies have been restored and are held in the Archives du Film of the Centre National de la Cinématographie (Bois-d'Arcy, France). (P. Rougier: 'Emile Vuillermoz et les Cinéphonies', *Cinémémoire*, 1993, pp.186–7)

PHILIPPE ROUGIER

Cinque pas [cinque-pace, cinque pass, sincopas, sink-a-pace] (Fr.: 'five steps'; Ger. *Zinck-Pass*; It. *cinque passi*, *sinqua-pace*). The basic step pattern of the GALLIARD and the French TOURDION. The 'five steps' take six *minimae*, or one *brevis*, of music. The energetic and vigorous *cinque pas* (or *cinque passi*) are found in all the 16th-century Italian dance treatises (for example, Caroso, *Il ballarino*, 1581, and *Nobiltà di dame*, 1600; Negri, *Le gratie d'amore*, 1602) and in the 16th-century French practice as described by Arbeau (*Orchesographie*, 1588). The Italian dancing-masters described many variations of the *cinque passi*, but the basic pattern was: hop on the right leg while kicking out in front with the left foot (one *minima*), step forward on the left foot (one *minima*), bring the right toe under the left heel and kick out the left foot in front again (one *minima*), kick the right foot out in front (one *minima*), then a *cadenza* or large jump while bringing the right foot behind and landing with the left foot in front (two *minimae*). These five movements would then be repeated starting with the opposite foot. Arbeau's simplest *cinque pas* consisted of four alternating kicks (left, right, left, right) and a *saut majeur* (large jump) and the *posture*. More complicated variations involved adding more steps, hops, stamps or *postures* so that the *cadenza* was delayed until the end of the second or third *brevis*. Negri (p.33) suggested that good dancers could add additional quick steps so that, instead of five steps, six, seven, eight or more *passi* were performed to one *brevis* of music. Brief sequences of *cinque passi* were also used in other Italian dances such as the balletto, especially in the sections where one partner was performing solo variations in front of the other.

JENNIFER NEVILE

Cinquième (Fr.: 'fifth'). The fifth part in 17th-century French orchestral music, also QUINTE.

Cinti-Damoreau [née Montalant], **Laure (Cinthie)** (*b* Paris, 6 Feb 1801; *d* Paris, 25 Feb 1863). French soprano. She studied the piano at the Paris Conservatoire and singing with Plantade. Angelica Catalani devised her stage name of Cinti by italianizing her middle name, and she made her operatic début at the Théâtre Italien in *Una cosa rara* (8 January 1816). After the collapse of Catalani's management in 1818, Cinti was re-engaged the following year when a new company was formed at the Théâtre Louvois. There her roles included Cherubino and Rosina, and in 1822 Ebers engaged her for a season at the King's Theatre, London. Her mastery of florid singing, acquired by emulating her colleagues at the Théâtre Italien, led in 1825 to her engagement at the Paris Opéra where she remained until 1835, apart from an interruption in the summer of 1827, when she left to sing in Brussels and married the tenor V.C. Damoreau (1793–1863). She created the principal soprano roles in Rossini's *Le siege Corinthe*, *Moïse*, *Le comte Ory* and *Guillaume Tell*, and in Auber's *La muette de Portici*, and Isabelle in Meyerbeer's *Robert le diable*. Although she was the Opéra's most highly paid singer, she accepted a more attractive offer from the Opéra-Comique, where from 1836 to 1841 she appeared in a succession of new operas by Auber. In 1844 she toured America with the violinist Artôt, and continued to sing in concerts until 1848. She taught singing at the Paris Conservatoire (1833–56) and published a *Méthode de chant* (1849), other singing manuals and some songs. Her voice, outstanding for its purity of tone and intonation, was likened to a perfect piano, and her ornamentation was stylish and varied. She was a Rossini rather than a Meyerbeer singer, lacking Falcon's emotional and dramatic power; but she successfully redirected her career elsewhere when Falcon threatened to eclipse her at the Opéra.

PHILIP ROBINSON

Ciobanu, Ghenadie (*b* Yedinets, 6 April 1957). Moldovan composer and pianist. He completed studies at the Gnesin Institute (Moscow) in 1982 having studied the piano with V. Zhubinskaya and composition with Litinsky. He then graduated, in 1986, from the Musicescu Academy of Music in Kishinev where he studied composition with Zagorschi and, after a career as a concert pianist and professor of piano, went on to become professor of music theory and composition there. He was later appointed visiting (guest) professor of composition at the University of Las Palmas de Gran Canarias, and was also director of the International Summer Courses in Moldova. In 1997 he was appointed Minister of Culture of Moldova. In 1990 he was elected president of the Moldovan Composers' and Musicologists' Union. His music possesses strong links with ancient Moldovan tradition and Byzantine monody; in utilizing these sources as reference points (but without recourse to quotation or stylization) he has introduced new currents into Moldovan music. He has won a number of awards including prizes from UNESCO and the Moldovan state; he became an Honoured Artist of Moldova in 1999. As the founder and artistic director of an ensemble specializing in contemporary music – Ars poetica – and of the Days of New Music international festival, the presenter of the New Music Studio programme on national radio, and the president of the national section of the ISCM, he has done a great deal to promote new music in Moldova.

IRINA SUKHOMLIN

Ciobanu, Gheorghe (*b* Pădureni, Ilfov district, 4 Feb 1909; *d* Bucharest, 29 June 1995). Romanian ethnomusicologist and Byzantine specialist. He studied at the Bucharest Conservatory (1931–8, 1943–5) and worked as a music teacher (1939–52), research assistant at the Bucharest Institute of Folklore (1949–68) and senior lecturer in folklore at the Iaşi Conservatory (1965–71). His research was on early Romanian psalm music. His studies of Romanian folklore did much to solve questions about popular modes and methods of versification, and contributed greatly to the history of folk collections and popular music. He received the doctorate from Cluj in 1972 for his study of Clejani musicians; he was awarded the prize of the Romanian Academy (1957, 1978) and of the Romanian Composers' Union (1969, 1974, 1977, 1979, 1987).

VIOREL COSMA

Ciobanu, Maia (*b* Bucharest, 5 May 1952). Romanian composer. After attending the George Enescu Lyceum she studied composition with Marbe and Dan Constantinescu at the Bucharest Academy (1971–5), winning the academy's composition prize in 1971. In 1980 Ciobanu attended classes in Darmstadt. She began to teach music at her high school and at the Academy of Theatre and Film in Bucharest. In 1992 she founded the contemporary instrumental group *Alternative*, which she directs. Ciobanu's compositional style is informed by a desire to move away from conventional models by renewing the available means of expression, often involving the use of percussive and electronic resources. Her music is harmonically diverse and rich in ostinato and rhythmic impetus. Her study of the relationship between sound and movement has resulted in scores of great choreographic potential, for example *Trei Sculpturi* for string quartet (1981), in which Ciobanu pays homage to the sculptor Constantin Brancusi and intertwines a recitation of a text by the poet Lucian Blaga.

OCTAVIAN COSMA

Ciomac, Emanoil (*b* Botoşani, 2 Feb 1890; *d* Bucharest, 13 June 1962). Romanian writer on music and critic. He studied music history and the violin at the Iaşi Conservatory (1906–8), and at the Leipzig Conservatory (1912–14) with Arnold Schering. He studied law in Paris, taking the doctorate at the Sorbonne. He taught music history at the Pro-Arte Conservatory in Bucharest (1936–9) and became director of the Enescu PO (1945–7). Ciomac wrote criticism and scholarly articles for numerous periodicals and also made Romanian translations of oratorio and opera librettos, including *Ariadne auf Naxos*, *Prince Igor*, Gounod's *Faust*, and Enescu's *Oedipe*. An excellent orator, he was much in demand as a lecturer in Romania and throughout Europe, and became one of the most respected Romanian teachers of the first half of the 20th century.

VIOREL COSMA

Ciortea, Tudor (*b* Braşov, 28 Nov/10 Dec 1903; *d* Bucharest, 13 Oct 1982). Romanian composer. He studied in Braşov with Dima, Rudolf Lassel and Paul Richter, in Cluj with Ilie Sibianu, in Brussels with Joseph Jongen and in Paris with Imbert, Dukas and Boulanger. While in Brussels he graduated in law at the university; on his return to Romania he was made professor of modes at the Bucharest Conservatory, a position he held from 1949 to 1973. All his music is based on Transylvanian folk music; the *Maramureş Suite* and the Suite on Folktunes make use of the music of the Banate, Bihor and Tîrnava riverbanks. Ciortea has been influenced by the melody of this music, but more particularly by the rhythmic formulae of folkdance. Some of his pieces display a rustic humour which may be ironically satirical, as in *Isprăvile lui Păcală* ('Păcală's Deeds'), or youthful and jocular. The highly varied expression of his piano suites sometimes has a pictorial or programmatic basis, but his songs have been chiefly responsible for establishing his reputation. In these pieces a flowing vocal line, founded on folk modes and hinting at pentatonic motifs, is supported by the discreet harmonies of a remarkable piano accompaniment.

VIOREL COSMA

Ciphering (Fr. *Cornent*; Ger. *Heulen*). The sounding of an organ pipe without a key being depressed, due to mechanical fault or damage. The word is of unknown origin: 'Sypher' was used in the LECKINGFIELD PROVERBS *c*1520; 'cipher' was used by Burney with reference to the Haarlem organ in 1773 (*The Present State of Music in Germany, the Netherlands, and the United Provinces*) when, like Joachim Hess (*Luister van het orgel*, 1772), he noted that the extra mechanism enabling the organist to block wind from a chest was useful 'in case of a cipher'. Ciphering should not be confused with 'running', i.e. the leaking of wind from one groove or channel to another, audible only when a neighbouring key is depressed. Common reasons for ciphering will be found in a faulty PALLET (dust preventing full closure, a pallet being dislodged, warped, damp or catching on guide pins), pallet spring (out of position, too weak, broken), action (tight or entangling tracker, damaged backfall, jammed, bent or rusty pull-down), SLIDER (loose, warped), or key (warped, stuck) and, in non-mechanical actions, failures at various critical points (contacts, relays, key-springs, inert pneumatics, etc.).

PETER WILLIAMS

Cipolla, Francesco (*fl* Naples and London, 1784–*c*1800). Italian composer. In 1784 and Carnival 1785 he was associated with the Teatro Nuovo, Naples, providing additional music for Cimarosa's *Il barone burlato* (a revival of *Il pittore parigino*) and Salieri's *La scuola de' gelosi*. He then worked until at least 1786 at the Teatro del Fondo. Florimo named him as the composer of two operas performed there, *Telemaco nella isola di Calipso* (1785) and *Polifemo* (1786), but the librettos call him only the director. As no composer and no other performances are known for either of these works, Cipolla probably arranged the music used in them. His oratorio *La figlia di Gefte*, which is said by Ferrari to have been composed in collaboration with Millico and also contains some arias by Cimarosa, was performed at the Fondo in 1785 (according to Florimo) and in 1786 (according to Ferrari). In 1787 Cipolla was music director of the

production of Tarchi's *Ariarate* at the S Carlo. The Rosa Satiro Cipolla who substituted for the *seconda donna* on that occasion was perhaps a member of his family. According to Fétis, the *Indice de' spettacoli teatrali* indicates that Cipolla remained connected with Neapolitan theatres until at least 1791. He was in London as a singing teacher by 1794, when he published there the first of his 11 vocal collections. These range over most of the varieties of music sung by the cultivated salon amateur of the time, from the two cantatas op.1, which consist of elaborate scenes of recitatives, arias and duets with highly ornamented vocal lines in the late-Neapolitan operatic style, to single arias both comic and serious (the texts of all those in op.6, for example, are arias by Metastasio) and simple canzonets. The keyboard preludes of op.4 are improvisatory introductions to songs.

WORKS

only those extant; all published in London

2 Italian Cantatas, op.1 (1794); 6 Italian Canzonets, op.2 (*c*1795); 6 Italian & English Canzonetts, op.3 (*c*1798); 6 Italian Canzonets ... with 21 Preludes, op.4 (1799); 6 Italian Canzonets, op.5 (1800); 4 Italian Airs and 2 Cavatinas, op.6 (*c*1799); 6 Italian Trios, op.7 (*c*1799); 12 Italian Canzonets, op.8 (*c*1799); 6 Italian Canzonetts, op.9 (*c*1800); 4 Italian Rondos and 1 Duett with Recitatives, op.10 (*c*1800); 6 Italian Canzonets, op.11 (*c*1800)

DENIS ARNOLD

Cipra, Milo (*b* Vareš, 13 Oct 1906; *d* Zagreb, 9 July 1985). Croatian composer. He read German and philosophy at Zagreb University before graduating from Blagoje Bersa's composition class at the Zagreb Academy of Music (1933). At first a high school teacher, Cipra was a lecturer at the academy from 1941 to 1977. His early works are neo-classical in style and reveal the influence of folk music in their frequent changes of metre, use of modality, and formal unity based on motivic development. In works subsequent to the Fourth String Quartet (1939), and until the mid-1950s, the influence of folklore diminishes, and form becomes the by-product of thematic duality and its development. *Kantata o čovjeku* ('Cantata on Man', 1958) – a celebration of man as the supreme being – brings certain changes to the composer's technique: the tonal progressions are new and the form of the work is no longer dependent on tried and tested developmental procedures. In *Sunčev put* ('The Path of the Sun', 1959), a series of 12 movements named after the signs of the zodiac, Cipra uses a modified 12-note technique whereby symbolism and visual symmetries determine pitch. These procedures are also used in later works. One of his finest works of this period is the Fifth Quartet (1972); based on the four-note set A–B♭–C–D (the last two representing Debussy's initials), it quotes from works by Debussy and Beethoven and employs aleatory devices inspired by Stockhausen's theory of musical time as expressed in '... wie die Zeit vergeht ...'.

Circle of fifths (Ger. *Quintenzirkel*). The arrangement of the tonics of the 12 major or minor keys by ascending or descending perfect 5ths, thus making a closed circle:

C–G–D–A–E–B–F♯ = G♭–D♭–A♭–E♭–B♭–F–C

Such an arrangement is dependent on an ENHARMONIC relationship somewhere in the circle; this is usually reckoned at F♯/G♭ for the major keys and at D♯/E♭ for the minor keys. Normally the system of EQUAL TEMPERAMENT is assumed for the circle of 5ths, with every note having an infinite number of enharmonic equivalents (B♯ = C = D♭♭), though it is possible to use a tuning system in which certain 5ths are greater than the 12th part of the circle (e.g. pure 5ths) and others are commensurately smaller, so that the octave is still a closed circle. But in PYTHAGOREAN INTONATION, the system based entirely on pure 5ths, the 'circle' is open, since this system does not admit enharmonic equivalents. In the arrangement C–G–D–A–E–B–F♯–C♯–G♯–D♯–A♯–E♯–B♯, if all the 5ths are pure, then B♯ will be slightly higher than C. For this reason the arrangement of 5ths in the Pythagorean system can be represented by a spiral or coil, but not by a closed circle.

The circle of 5ths was first described by Heinichen in *Der General-bass* (1728), and has been used by theorists as a way of illustrating the relative harmonic 'remoteness' of one key from another, that is, the number of 5ths by which two notes are separated along the circle. This method of reckoning works well for the three primary harmonic functions – tonic, subdominant and dominant – but is at odds with the belief that supertonic relationships (e.g. between C and D, in C major), which are only two perfect 5ths 'wide', are in fact harmonically more remote than mediant relationships, which are three or four perfect 5ths wide.

Of the few compositions that circumnavigate the circle of 5ths, the two preludes 'through all the major keys' by Beethoven (op.39, ?1789) are the most famous.

Circolo mezzo (It.). A turn. *See* ORNAMENTS, §8.

Cirillo [Cerilli], **Francesco** (*b* Grumo Nevano, nr Naples, 4 Feb 1623; *d* after 1667). Italian composer and singer. He came from the 'Terra di Lavoro', where the *comici dell'arte* of Campania traditionally originated. At the age of 12 he was sent to Rome. According to his marriage contract of 5 June 1654 he had then been in Naples for about three years; he must have worked there with the Febiarmonici, a group of singers from northern Italy who produced the first operas given at Naples. A contract of June 1655 mentions him among the members of the 'Accademia de' musici, detta de' Febi Armonici'. This group may have included some of the earlier company, although they now (from April 1654) performed in the first public opera house at Naples, the Teatro S Bartolomeo, rather than in the royal palace, where the viceroy, Count d'Oñate, had sponsored the earliest Neapolitan opera performances.

Among the earliest operas given at S Bartolomeo were *Orontea regina d'Egitto* in 1654, 'arricchita di nuova musica da Francesco Cerilli Napolitano' (Allacci), and *Il ratto d'Elena* (to a libretto by Gennaro Paolella) in January 1655, one of the first originally written for Naples, also with music by Cirillo. The latter is heavily dependent on Venetian models (the theme is comparable to that of Giulio Strozzi's libretto *La finta pazza*) but with an excessive number of arias and canzonettas. Cirillo presumably continued to work for the opera in Naples for several years, probably more as a music director and arranger of operas imported from Venice than as a composer. He sang the baritone roles of Dario and Nicarco in *Statira* (1666) and the tenor or comic falsetto part of the *vecchia* Ceffea in *Scipione* (1667), both by Cavalli.

The Neapolitan *Orontea* (score in *I-Nc*) bears no musical relationship to that of Antonio Cesti (see Osthoff, Stalnaker, and Walker 1984), which was supposed for a long time to have been set and performed in Venice in 1649. It now seems clear that Cesti's *Orontea* originated in Innsbruck in 1656, whereas the original Venetian setting, now lost, may have been by Lucio, the composer of another opera performed at Naples in 1654, *Gli amori d'Alessandro Magno* (see Walker 1972 and 1984). Thus it is impossible to ascertain whether the Neapolitan *Orontea* contains any music from the Venetian *Orontea* or was entirely reset by Cirillo. Cirillo's importance as the 'primo operista napoletano' rests primarily on certain forms of theatrical production and his role in the selection of repertory. His musical style is rather superficial and rudimentary compared with that current at Venice, to judge from the few scenes of *Orontea* that, because they correspond to changes in the Venetian text, are surely his.

LORENZO BIANCONI

Cirlerus, Stephanus. *See* ZIRLER, STEPHAN.

Cirot, Noel. *See* CYBOT, NOEL.

Cirri, Giovanni Battista (*b* Forlì, 1 Oct 1724; *d* Forlì, 11 June 1808). Italian cellist and composer. He studied with his brother Ignazio (1711–87), organist at Forlì Cathedral from 1759, and composer of 12 organ sonatas, op.1 (London, 1770) and six sonatas for harpsichord with violin accompaniment, op.2 (London, *c*1772), and Giovanni Balzani, organist at the church of the Madonna del Fuoco. He was admitted to holy orders in 1739 but pursued a varied musical career. He was at first attached to the basilica of S Petronio, Bologna, as a composer and cellist, and may have studied with Padre Martini. From 1759 he was a member of the Accademia Filarmonica; in that year he met the Duke of York in Forlì. Subsequently he began to travel. He was in Paris during the early 1760s, where his first works were published and a 'symphony' performed at the Concert Spirituel on 5 April 1763. In 1764 he settled in London, where he was employed as a chamber musician to the Duke of York and director of music for the Duke of Gloucester. His first public appearance in London, on 16 May, was as accompanist to the violinist Marcella. He played solos at the eight-year-old Mozart's first public concert in London (Spring Gardens, St James's, 5 June 1764) as well as at his final appearance (13 May 1765). In addition to his duties for the nobility, Cirri was a popular soloist and accompanist. He participated in the Bach-Abel concerts, performed concertos during the intervals of operas and oratorios, and assisted in numerous benefit concerts. Most of his publications date from this phase of his career, the dedications testifying to his patronage by the English nobility and aristocracy. His address in about 1770, as given on his *Deux quattuors*, was in Greek Street, Soho. In 1780 he returned to Forlì to help his ailing brother at the cathedral, though he often played away from Forlì, and in 1782 was principal cello at the Teatro dei Fiorentini, Naples. In 1787 he succeeded his brother as *maestro di cappella* at Forlì Cathedral.

Cirri's compositions demonstrate skilful harmonic and structural organization within intimate chamber forms, his obbligato cello parts of the 1760s and 70s reflecting the increasing attractiveness and acceptance of the instrument in a melodic role. While emphasizing tunefulness over technical display, his solo writing employs comfortable use of the upper registers, with scale, arpeggio and string-crossing figurations based on stationary, block hand positions.

OWAIN EDWARDS/VALERIE WALDEN

Ciruelo, Pedro (*b* Daroca; *d* Salamanca, 4 Nov 1548). Spanish theorist. He studied philosophy, theology and mathematics at the universities of Alcalá de Henares and Salamanca and then in Paris, where he became a professor of philosophy and mathematics; there he published his *Liber arithmeticae practicae qui dicitur algorithmus* (1505) and a commentary on the *Sphera mundi* of Juan de Sacro Bustos (1508). On 15 January 1510 he took up a chair at Alcalá de Henares University at the invitation of Cardinal Cisneros. In this post he taught theology, philosophy and music and published his greatest work, *Cursus quatuor mathematicarum artium liberalium* (1516), which was reprinted several times. This book contains his treatise on music, which is of little value: it is basically a version, with brief commentaries, of Faber Stapulensis's *Elementa musices* (1496), itself largely based on the Boethian tradition. Ciruelo, moreover, limited himself to theoretical elucidations without any reference to practice or to real musical problems, unlike the great Spanish theorists of the time, who consciously involved themselves with practical problems. Thus Ciruelo's reputation as a theorist is far greater than his actual merit.

JOSÉ LÓPEZ-CALO

Cirullo, Giovanni Antonio (*b* Andria, nr Bari; *fl* *c*1595–1609). Italian composer. The dedications of his surviving works suggest that he was active at Venice, 1597–8, and Andria, 1607–9. He published at least six books of madrigals between about 1595 and 1609, of which two are now missing and only one – the second – survives complete. The madrigals in the second book, which includes settings of Guarini and Tasso, are said to be expressive and adventurous in harmony, but the two madrigals in an anthology (RISM 1616[10]) lack such interest and are very conventional in style.

Cisilino, Siro (*b* Mereto di Tomba, Udine, 4 Dec 1903; *d* Pantianicco, Udine, 4 March 1987). Italian musicologist and composer. He studied harmony and counterpoint with Dom Roussel at the Udine Seminary from 1914 and musicology and classical polyphony with Raffaele Casimiri in Rome; he was greatly influenced by his meeting with Charles van den Borren. After taking holy orders (1927) he scored about 600 collections of polyphonic music. His main musicological work was transcribing in modern notation Renaissance Venetian polyphony and related music; his transcriptions include the complete works of Asola, Baccusi, Bianciardi, Contino, Croce, Donato, Gastoldi, Ingegneri, Isnardi, Jacquet of Mantua, Lambardi, Luzzaschi, Nasco, Ponzio, Ruffo, Ippolito Sabino, Varotto, Zarlino and Zucchini, as well as many anthologies of both sacred and secular music. His transcriptions and the photographic reproductions of the originals are in the Istituto di Musica of the Cini Foundation, Venice.

His compositions include polyphonic settings of liturgical texts in modal style (e.g. *Missa ... Regina coeli ad 4 voces inaequales*, Bologna, 1935), and polyphonic arrangements of *villotte friulane*, with melodies taken from oral tradition. A complete list of his compositions, editions and transcriptions, and related bibliographical references, compiled by F. Colussi and others, can be found in *Rassegna veneta di studi musicali* (vols. vii–viii, 1991–2, pp.7–45). He was a member of the Academy of Arts and Letters of Udine, and the Accademia dei Sepolti of Volterra.

Cisneros, Eleonora de [Broadfoot, Eleanor] (*b* Brooklyn, NY, 1 Nov 1878; *d* New York, 3 Feb 1934). American mezzo-soprano. She studied with Francesco Fanciulli and Adeline Murio-Celli in New York and sang for Jean de Reszke, who arranged for her to sing at the Metropolitan Opera. During the 1899–1900 season she performed Rossweise and Amneris. She went to Paris for further studies with Angelo Tabadello and at Turin in 1902 sang Brünnhilde, Ortrud, Venus, Dalila and Amneris. From 1904 to 1908 she sang regularly at Covent Garden. At La Scala she created the role of Candia in Alberto Franchetti's *La figlia di Iorio* in 1906; she also sang in the first performances there of *The Queen of Spades* (1906), *Salome* (1906) and *Elektra* (1909). She claimed to be the first American singer to perform at Bayreuth, during the 1908 season. From 1906 to 1908 she was a leading singer at Hammerstein's Manhattan Opera House and then appeared with the Chicago-Philadelphia Opera Company until 1916. She continued to sing, mostly in Europe, into the 1920s, but after making tours on behalf of the war effort during World War I her career suffered. With a large, statuesque bearing and a voice of remarkable volume and range, she was able to sing such dramatic soprano roles as Santuzza, Gioconda and Kundry, as well as mezzo-soprano and alto roles including Carmen, Laura (*La Gioconda*), Urbain (*Les Huguenots*) and Azucena.

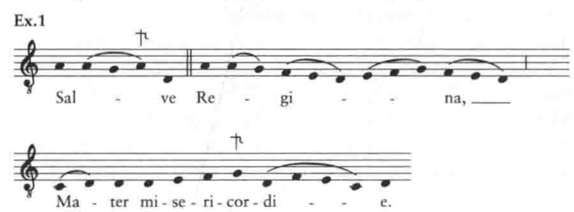
Cistercian monks. The White Monks, or Cistercians, came into being at an important turning-point in the history of Western monasticism, when a wave of reform was sweeping across Europe. The founders of the order were a group of hermits living in the Forest of Colan in Burgundy. In 1075, under the leadership of St Robert, they settled at Molesme, where their way of life was similar to that of the Camaldolese. Although recruits flocked to the monastery, many of the monks grew dissatisfied with the lack of definition of the life. 21 of them, including some of the original hermits, finally left Molesme in 1098 to make a fresh start in Cîteaux, a remote and desolate spot south of Dijon. They chose a life of silence and seclusion in the exact observance of the Rule of St Benedict. To make this possible they dispensed with the embellishments that had gradually been added over the centuries. Simplicity and restraint in architecture and liturgy became the outward characteristics of the Cistercian tradition.

Life at the new monastery began to take shape under Robert's successors, Alberic and Stephen Harding. In 1112 Bernard, later the founder and Abbot of Clairvaux, entered Cîteaux with a band of 30 young friends and relations.

With the accent on manual labour, the Cistercians undertook the cultivation of vast areas of hitherto untilled land, and to do this they instituted the life of the lay brothers. Another important innovation of the White Monks was their unified structure in the relationship between founding monasteries and daughter houses, described in a remarkable document, the *Carta caritatis* ('Charter of charity') of St Stephen Harding. All the houses were to remain in close contact with Cîteaux. The Abbot of Cîteaux was the representative head, although he had no personal right to exercise the power of government. The general chapter, meeting annually at Cîteaux, had the duty of maintaining uniform discipline. Every daughter abbey had an annual visitation by the abbot of its founding mother, and Cîteaux itself was to be visited by the abbots of its first four daughter houses. The *Carta caritatis* was approved by Pope Callistus II in 1119.



After a precarious start, the order developed rapidly, spreading all over western Europe. The first English house was Waverley (1128), soon followed by Rievaulx (1132). The order's spiritual fervour and austere observance influenced other medieval orders, notably the Premonstratensians and the Dominicans. It was unable, however, to maintain its pristine vigour and a decline set in after the 13th century. This was followed by a series of partial reforms, then, in the closing years of the 16th century, the first move towards a 'Strict Observance' was made in France. During the 17th century the two Observances, the Strict and the Common, existed side by side. After the French Revolution a single house of the Strict Observance survived to perpetuate that reform: it was established in Switzerland just in time, a daughter house of La Trappe, that austere foundation of the Abbot de Rancé (1626–1700). From this single Swiss house descends the so-called Trappist Order. Today the Cistercians count various different groupings, or congregations, the most important being those of the Strict Observance, or Trappists, and those of the Common Observance.

Cistercian liturgical life began with an 80-year period of reform undertaken in three successive stages. The founders of Cîteaux naturally took as the basis of their daily Office the texts and music of the Benedictine service books used at Molesme. But the Office was purged of many accretions (psalms, prayers, litanies) not strictly in accordance with the prescriptions of St Benedict. Sometimes strict obedience to the letter of the Rule resulted in peculiar interpretations, such as the adoption of a single Lauds antiphon instead of the traditional five, the continuation of the alleluia after Septuagesima, or the singing of ferial instead of festal psalms on feast days. Through a misinterpretation of St Benedict's terminology, the hymns were limited to a meagre selection from a Milanese source supposed by the reformers to have been written by St Ambrose himself.

In a similar quest for truth, the founding fathers sent scribes to Metz, which they considered to be the home of the most 'authentic', or authoritative, music for the Office – that representing the purest Gregorian tradition. What they brought back to Cîteaux must have sounded strange

to Burgundian ears. The monks persevered in using the Metz version for some years, but shortly before 1147 it was decided to revise both texts and music. A commission of experts was set up under the leadership of St Bernard. Their reform consisted mainly in bringing the old Metz tradition more in line with the living chant tradition of the cultural background of the early Cistercians themselves. The results of their labours show that this living tradition carried more weight than respected theories about plainchant contained in the treatises of the order. Nevertheless, certain freer-ranging melodies, such as the mode-5 gradual *Christus factus est*, were to be strictly confined to the amibitus of the mode. The reformers introduced some new texts and melodies, including the incomparable *Salve regina* (ex.1). Many hymn tunes were

Ex.1

revised and others newly composed, among them the splendid melodies *Magnum salutis gaudium* and *Jam Christus astra ascenderat*. A number of non-Milanese hymns were introduced, including *Conditor alme siderum* and *Vexilla regis*.

The new antiphoner was sent out to the houses in 1147, with a prologue by St Bernard and a little chant treatise *Cantus quem Cisterciensis*. The third and final stage of the reform followed between 1175 and 1182/3. Some further alterations were made, amounting to little more than minor textual emendations.

Although the reformed chant became compulsory, appeals for uniformity had sometimes to be made by general chapters. Performance was to be simple, with no falsetto, ornamentation or other extravagances; it is clear, however, that these injunctions were not always obeyed. Permission for installing organs had to be sought from the general chapter. Polyphony, until quite recently, was never tolerated by the order, although certain houses did sometimes try to introduce it, notably the British abbeys of Dore and Tintern, where three- and four-part singing had to be suppressed in 1217.

Cithrinchen [bell guittern] (Ger. *Hamburger Cithrinchen*). A type of CITTERN with a unique bell-like shape. It appeared in the second half of the 17th century, retaining many important structural characteristics of the earlier cittern, such as the very shallow soundbox tapering from the back of the neck to the bottom of the instrument. It also has the traditional cittern neck, half of which is cut away to provide a channel along which the player can slide his or her thumb, thereby ensuring stability when his or her left hand is required to make rapid shifts in position up and down the neck. As on older citterns, there were 18 chromatically placed frets inlaid into the fingerboard. It was normally played with a plectrum.

The cithrinchen is especially associated with Hamburg and its famous instrument maker Joachim Tielke, who made the earliest surviving cithrinchen (dated 1676; Royal College of Music, London). It is often assumed that Tielke invented the design and, indeed, the earliest representation of a cithrinchen is carved into the back of the pegbox of one of Tielke's viols from about 1669 (Hellwig, 91). However, several contemporary Hamburg makers, such as Johann Kopp or his son Hinrich, could have been the original designer. The bell-shaped design (see illustration) gradually became popular among many other northern European makers, particularly in Scandinavia.

Typically, the cithrinchen had five double courses of metal strings tuned in unisons and with intervals of (from the lowest-pitched course to the highest) major 3rd–minor 3rd–major 3rd–4th. This pattern is unlike any earlier one for the cittern, but is used in all the cithrinchen's surviving music scores. The earliest reference to specific pitches is Vockerod (1718), who gives as the normal tuning: *f–a–c′–e′–a′*. He also gives *d–g–c′–e′–a′* and *f–b♭–d′–f′–b♭* as two unusual tunings. The vibrating string lengths of surviving Tielke instruments range from 36 cm to 38 cm, and would be suitable for the pitches mentioned. In modern literature, a tuning a fourth lower of *c–e–g–b–e′*

Cithrinchen, probably by Joachim Tielke, Hamburg, c1700 (Victoria and Albert Museum, London)

is commonly given without documentation, and it is suspected that this is an error originating with writers as early as Kinsky and Wolf (1919). A late source (MS, 1722, *S-L*, Wenster G30) documents a six-course 'cittringen' tuned: *c–f–a–c′–e′–a′* and *A–d–a–b–e′–a′*. Modern writings cite a tuning of *E–G–B–d–f♯–b–d′* (given in *D-Bsb* Mus.ms.40275, dated 1679–80) as being for cithrinchen, but the interval pattern is atypical and the pitches are too low for the instrument, unless the intended instrument is an unusually large one, examples of which do not survive. More likely, this is a lute tuning requiring the use of only seven courses, since the interval arrangement of the first six courses is found in several 17th-century lute sources.

Music for the instrument was written in five-line French lute tablature. In the surviving tablatures the notes are arranged on consecutive strings with no gaps in the chords (the normal cittern pattern), implying the use of a plectrum. Only four manuscripts for the cithrinchen survive: two now in *PL-Kj* (Mus.ms.40267, dated *c*1700, and Mus.ms.40622, dated 1664–80); *S-L* Wenster G30 (see above); and one compiled by Margaretha Ölgaard von Alefelt (*D-Hs*, Ms.M.A/2488, dated 1736). This last source contains many hymn settings and dances. Another manuscript, *D-Hs* Mus.ND VI 3241 (*c*1700), was destroyed in 1944; together with former Mus.ms.40267 it was a major source of the small amount of extant music from the Hamburg Opera's first season (1678). The

scarcity of tablature for the cithrinchen is perhaps explained by Kremberg's suggestion that a five-course cithrinchen played with the fingers could be used to perform guitar music – a practice that was apparently common in the Netherlands. The 17th-century guitar had five courses and used five-line tablature; hence, any cithrinchen retuned like the guitar and played with the fingers instead of with a plectrum could have performed much of the Baroque guitar repertory.

The popularity of the cithrinchen is attested to by a fairly large number of surviving instruments made not only in Hamburg, but in several northern centres. To judge by James Talbot's manuscript (*GB-Och* Mus.1187, *c*1695), it is possible that the instrument was known somewhat in England. He gives measurements for a 'Bell Guittern (so called from the shape of the Belly)', which he describes as 'a kind of Contratenor or 2nd Treble to the Cittern it carries 18 Fretts and 5 double Courses tis much of the same size with Cittern'. In Germanic areas, from the mid-18th century, the instrument seems to have become merged with a folk instrument (*Zister*; *Thüringer Waldzither*) employing more chord-oriented tunings similar to the ENGLISH GUITAR and the French 'cistre' or 'guitare allemande'. The latter term may refer to a German cithrinchen prototype. The distinctive bell-shaped design and the use of cithrinchen tuning seems to have become obsolete by this time.

Citkowitz, Israel (*b* Skierniewice, Poland, 6 Feb 1909; *d* London, 4 May 1974). American composer and critic. He was brought to the USA at the age of three and became an American citizen. He studied with Copland and Sessions in New York, and from 1927 to 1931 with Boulanger in Paris. In 1932 his String Quartet was performed at the first Festival of Contemporary American Music at Yaddo. During the 1930s he published considerable criticism of new music, especially in *Modern Music* and *Musical Mercury*; his essay 'The Role of Heinrich Schenker' (MM, xi, 1933–4, pp.18–23) was probably the first in English to treat that theorist. In 1939 he was appointed teacher of counterpoint and composition at the Dalcroze School of Music in New York. In 1969 he moved to London. Although not a prolific composer, he gained some recognition for his choral and chamber music. He had a special gift for text setting, and lyrical qualities also dominate his instrumental music.

Citola [Sp.]. *See* CITTERN.

Citole (Fr. *citole*; Ger. *Zitôl*; It. *cetra*, *cetera*, *cetula*; Sp. *cítola*). A plucked lute of the Middle Ages, particularly the period 1200–1350, related to the FIDDLE. It evolved into the CITTERN in the 15th century. It was mistakenly called GITTERN by Galpin, and is still referred to as such in many modern works. There is an early 14th-century example of a citole in the British Museum (fig.1).

1. Structure. 2. History.

1. STRUCTURE. The body, neck and pegbox were made from one piece of wood, as in the medieval fiddle and gittern. The belly outline shows considerable variety, but there are four common types: (1) the 'spade-fiddle' shape, with the shoulders swept upwards to form points (e.g. the carving at the Baptistry of Parma); (2) the 'fiddle' shape, an oval with sides either straight or slightly waisted; (3) the 'holly-leaf' shape, with sides forming points at the intersections of six concave curves or straight lines; and (4) the 'shouldered' shape, with the lower part rounded as in the second type and the upper part forming shoulders as in the third. All types usually have a protuberance at the bottom to which the strings are attached.

The pegbox is either bent back from the neck at an angle varying from a few degrees to a right-angle, or curved forwards from the neck, terminating in an animal's head. The bent-back pegbox may take three forms: a solid board, circular or straight-sided; a circular box hollowed from underneath with pegs inserted from the top and strings passing underneath (as on many fiddles); or a narrow, straight-sided box with pegs inserted laterally (as on the British Museum citole and on instruments with a sickle-shaped pegbox like the gittern). The forward-curving pegbox appears in manuscript illustrations (notably the Queen Mary, Peterborough and Lisle psalters) without a clear indication of constructional details, but not in sculpture. It is possible that the manuscript illustrations are distorted representations of the bent-back, sickle-shaped pegbox: similar distortions occur in some depictions of the gittern.

The bent-back pegbox is sometimes reinforced by a bracket or arm connecting it to the body, or by a triangle of wood between it and the neck, as in the Ormesby Psalter. Some citoles have a 'filled-in' neck, where the whole area between pegbox and body is a solid mass, with a hole for the player's thumb (figs.1 and 2*a*). On some instruments with 'filled-in' neck the sides of the body taper sharply; on others the taper is much more

1. Medieval citole, English, c1290–1330 (British Museum, London)

gradual, or the sides begin to taper only at the bottom end.

The soundboard appears more or less flat, although the British Museum citole was fitted with a convex one at some later date. There is usually one central, circular soundhole (as on many plucked instruments) with a decorative rose, or two lateral soundholes of varying shapes (as on the fiddle). Very occasionally a second central soundhole is shown (e.g. in the carving on the west front of St Maurice at Vienne). Some citoles shown in Spanish manuscripts have small marks on the belly which might indicate additional soundholes, but could equally well be decorative inlays.

The bridge is occasionally in the middle of the soundboard between two lateral soundholes (e.g. in the Angel Choir at Lincoln Cathedral and at Bazas in south-west France), as is common on the fiddle, but much more often it is close to the bottom end, as on the lute and gittern. The bridge was sometimes incorporated in the tailpiece (see Remnant and Marks, 1980).

The strings, usually four but sometimes three or five, are attached either directly to a projection at the lower end of the body or indirectly via a tailpiece like that of the fiddle. The small circle visible in some pictures (e.g. fig.2*a*) may represent a metal ring linking the strings to a thong passed around the projection. The strings were made of sheep gut (according to a not wholly reliable reference in *Le bon berger*, written in 1379 but surviving only in later adaptations). Tinctoris, on the other hand, described an instrument with metal strings (*De inventione*, c1487):

2. (a) Angel with citole: miniature from the Psalter of Robert de Lisle, English, c1310–before 1339 (GB-Lbl Ar.83, f.134v); (b) man playing ?citole: miniature from the Stuttgart Psalter, French, c820 (D-Sl Bibl. fol.23, f.125r)

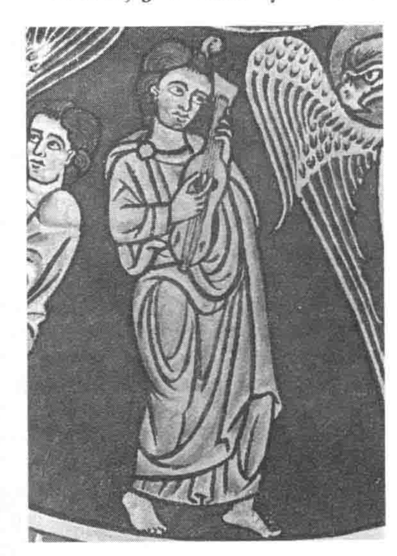
'Yet another derivative of the lyra is the instrument called *cetula* by the Italians, who invented it. It has four brass or steel strings usually tuned: a tone, a fourth, and back again a tone, and it is played with a quill'. However, this instrument is probably the Renaissance cittern rather than the citole.

In depictions from the 13th century onwards, the fingerboard of the citole is higher than the belly and extends on to it, but this is not the case in earlier representations, such as the above-mentioned carving at Parma and the Beatus manuscript illustrations. Up to six frets are usually shown in manuscripts and stained glass, but these are absent in sculptures, with the notable exception of the Parma example. Here the frets stand proud of the fingerboard, suggesting that they are bars of wood, as described much later by Tinctoris on what was probably the cittern: 'Since the cetula is flat, it is fitted with certain wooden elevations on the neck, arranged proportionately, and known as frets. The strings are pressed against these by the fingers to make a higher or a lower note'. However, the frets shown in manuscripts and stained glass look more like tied-on, gut frets, so it is possible that wooden frets were unique to Italy.

The plectrum is large, apparently of bone or ivory, and sometimes carved at the upper end into an ornamental shape such as a trefoil. It recalls the pecten of the Roman kithara, and might represent a survival, or revival, of classical usage. One drawing (*B-Br* 21069, f.39*r*) shows a cord attaching the plectrum to the neck of the citole, just as the medieval harp's tuning-key is sometimes attached.

2. History. The origins of the citole are obscure, and the evidence seems to lead in two different directions. On the one hand, Winternitz saw it as deriving from the classical kithara: a fingerboard would have been added, as in the 9th-century Vivian Bible of Charles the Bald (*F-Pn* lat.1, f.215*v*) and the 9th- or 10th-century Utrecht Psalter (*NL-Uu* 32), and the 'wings' or pointed extremities of some citoles would represent the atrophied arms of the kithara. On the other hand, the 'shouldered' shape without wings, as depicted in Spanish sources (e.g. fig.3) might be traced back to that found in the 9th-century Stuttgart Psalter (*D-Sl* Bibl. fol.23; fig.2*b*): this type, which bears little resemblance to the kithara and must be related to the fiddle, may derive from some oriental necked instrument such as the 1st-century example at Ayrtam in Uzbekistan (*see* Guitar, fig.2). However, the similarity of body outline does not necessarily prove that the Ayrtam instrument is a direct ancestor of the citole.

An argument against both these derivations is that there are no signs of continuous evolution of the citole but, rather, an obvious gap of over 200 years between the three Carolingian manuscripts of the 9th–10th centuries and the iconographical evidence from around 1200 onwards (the sculpture at Parma is dated *c*1198, and no Spanish depiction, in sculpture or in manuscripts, can be dated with certainty earlier than the late 12th century). Furthermore, the citole's name cannot be traced back any earlier. In contrast, representations of the fiddle and references to it are frequent throughout the 12th century and possibly earlier, so if the citole evolved from a Carolingian instrument, why was it absent during this period?



One possible solution to this problem of a 'missing link' is to interpret some of the illustrations in Beatus Apocalypse manuscripts (9th–13th centuries) as representing citoles. In one late example (fig.4) the instruments are obviously citoles with 'fiddle'-shaped bodies. Two have pegboxes that are clearly the bent-back type, seen sideways on. Similar pegboxes can be found in earlier manuscripts (e.g. the 10th-century *US-NYpm* 644, f.174*v*); one might even hypothesize that the T-shaped pegboxes so often seen in such illustrations are also the same type, represented slightly differently. However, all these pegboxes could also be interpreted as belonging to lutes, and the oval or pear-shaped bodies usually associated with them have often been taken as such. The evidence, in short, is inconclusive, because the representations are so stylized; one cannot state with any certainty that the instruments shown in the earlier manuscripts are citoles. Nevertheless, the possibility cannot be excluded, and one might therefore have to envisage the early citole with an oval or pear-shaped body, such as the three-string plucked instrument shown on the cover of the 8th-century Dagulf Psalter (in the Louvre), which also appears in the late 10th-century psalter of Ivrea and the early 11th-century psalter at Amiens (Bachmann, 1969, pls.17 and 18). In other words, the earlier Beatus illustrations do not necessarily lead back to the kithara or to the instruments of the Stuttgart Psalter, but to a third type. It is probably wise to accept that the citole may have had several different body-shapes at various periods of its history and to be prepared to consider certain pear-shaped plucked instruments of the 13th and 14th centuries (e.g. that shown in fig.5) as possible citoles.

3. Citole (left) and unidentified plucked instrument (sometimes conjectured to be a guitarra moresca): miniature from the 'Cantigas de Santa María', Spanish, c1270–90 (E-E b.I.2, f.147r)

In the period 1200–1350, by contrast, evidence for the citole is reasonably plentiful and shows that it spread northwards from the Mediterranean. Whether Italy or Spain was the starting-point for this expansion is not certain. Italian origin is suggested by the Parma sculpture, by the instrument's name and by a statement by Tinctoris regarding its invention, yet each of these items of evidence presents problems. Benedetto Antelami's work at Parma provides the earliest datable sculpture of a citole, and one of the finest. If its body-shape and fret-design were found elsewhere, it would strengthen claims for Italian origin.

4. Three citole players: details from a Beatus manuscript, late 12th or early 13th century (GB-Mr Lat.8, f.89r)

The same 'spade-fiddle' shape occurs in a 14th-century Italian Bible (Remnant and Marks, 1980, pl.67), but the only similar example (i.e. in body-shape alone) outside Italy is at Cogges (ibid., pl.66).

The second item of evidence is linguistic: the term 'citola' found in Provençal and Spanish has two features less typical of these languages then they are of Italian, namely the presence of 't' between two vowels, and (in Spanish, at least) the stress falling on the first of three syllables. However, these features might also be the result of a learned influence, and furthermore it is the word 'cetra' or 'cetera', not 'citola', that occurs in medieval Italian literature. Yet, strangely, Tinctoris referred to 'the instrument called *cetula* by the Italians, who invented it': if one concludes from this that 'cet(e)ra' was not the only Italian name, why is 'cetula' not attested in literature?

Finally, as to Tinctoris's statement that the instrument was invented by the Italians, this most probably refers to the development that took place in the 15th century and transformed the citole into an early form of the cittern. Nonetheless, it is strange that he described it as an instrument unfashionable among the nobility, when other 15th-century evidence suggests (see below) that it enjoyed a much higher status: 'The *cetula* is used only in Italy by rustics to accompany light songs and to lead dance music'. It is just possible, but highly unlikely, that Tinctoris could be referring to the old citole in its decline and that he was unaware that a new instrument had evolved. At all events, there is no positive justification for saying that his remark about the invention of the *cetula* refers to the origin of the citole. It would seem, therefore, that there is no firm evidence that it was from Italy that the citole spread to the rest of western Europe.

Spain, on the other hand, obviously cultivated the citole widely, and seems the most likely starting-point for its northward migration. There is the same variety in bodyshapes as is soon found elsewhere: the waisted 'fiddle' shape in a Beatus manuscript (fig.4) of the late 12th or early 13th century; the 'holly-leaf' shape at Carboeiro (? late 12th century); and the 'shouldered' shape in a sculpture (dated 1238–66) in the Palacio de Gelmírez at Santiago, and also in 13th-century manuscripts such as the *Cantigas de Santa María* (E-E b.1.2; fig.3), dated *c*1270–90. The names of three citole players at the Castilian court in the 13th century are known, two of them (Lourenzo and Citola) under Alfonso el Sabio, for whom the *Cantigas* manuscripts were compiled. Literary references are not lacking, and include two mentions of the citole being played by shepherds; this shows that it had spread throughout Spanish society and was not confined to courts.

In France the first reference to the citole occurs in the late 12th-century Provençal poem *Daurel et Beton*.

5. Three-string plucked instrument (?citole): vault boss, 1215–25 (St Serge, Angers)

Further north, the citole makes its appearance in French (i.e. *langue d'oïl*) literature around 1230, and by the end of the 13th century it is common throughout France. The poet Giles li Muisis recalled how in his childhood (around 1280) he saw Parisian students making merry with citoles as they left their colleges, and the Rôle de la Taille, a list of Parisian tradespeople drawn up in 1292, includes four *citoleeurs* (citole makers or players). French manuscripts, sculptures and wall-paintings of the 13th and 14th centuries depict citoles of the same three shapes as those found in Spain. An interesting variation occurs as the instrument travels north: the corners or shoulders develop into large protuberances or 'wings', sometimes of trefoil shape, in some French, German and English examples.

Around 1275 the citole occurs in German literature and remains until about 1325. Cologne Cathedral has a carving of a 'holly-leaf' citole dated *c*1320, and Strasbourg Cathedral no fewer than three of basically 'holly-leaf' shape (one with 'wings'), dated slightly earlier.

In England the citole appears with particular frequency in sculptures and manuscript illustrations of around 1300–40, suggesting a real fashion for the instrument. Also, the unique surviving citole was made in England during this period. Dating from before this are carvings in Westminster Abbey and in the Angel Choir of Lincoln Cathedral (begun 1255). At the beginning of the 14th century the popularity of the citole coincided with a period of fine manuscript-production and church-building, which may partly account for the large number of representations. Still, even these do not compare in number with those of fiddles and harps, so the citole's popularity must not be exaggerated. Only one citoler is listed among the 92 musicians at the Feast of Westminster in 1306 (as against 26 harpers and 13 fiddlers), and only two appear in the Wardrobe Books between then and 1326 (see Bullock-Davies, 34). Despite the favour which the citole obviously enjoyed in England for a brief time, it does not seem ever to have become really commonplace.

Signs of a decline can be seen in the second half of the 14th century, as representations become rare. There are two sculptures, at Gloucester Cathedral (after 1350) and Vienne (late 14th century), and one manuscript illustration, in the *Petites heures* of Jean, Duke of Berry (*c*1388). Then the citole seems to disappear from the visual arts, doubtless displaced by the gittern, which resembles it in size and in the number of strings and was by then very popular. In literary references the word 'citole' is mainly used to denote the kithara of antiquity, as if it were by then a thing of the past. Thus, Chaucer referred to it only in *The Knight's Tale* (*c*1385; set in antiquity), where it is held by the statue of Venus.

In Spain, however, the citole appears to have remained in use much longer. At the court of Navarre, payments were made on 9 August 1412 and 13 June 1413 to Arnaut Guillem de Hursua, *juglar de cítola*. An interesting aspect of the citole is revealed by two further payments to the same Arnaut Guillem on 27 and 29 June 1413 as a player of the *violla darco*: one man is recorded as playing both instruments, in the same month. The citole and bowed fiddle are known to have been associated because they are often mentioned together in poetry and depicted together in art, sometimes with identical details of construction (e.g. frets), as if they formed matching pairs. Equipping the fiddle with frets (a comparative rarity except in association with the citole) would certainly have made it easier for musicians to play both instruments.

The revival of the citole in the form of the CITTERN began in Italy in the 15th century (for examples of cittern-like instruments of this period see Winternitz, 1967). Like the earlier Italian citoles, early citterns have 'wings' swept upwards (rather than sideways, as in examples in France, England and Germany), but they differ in that the body is more almond-shaped and the wooden frets are no longer widely spaced but normally touch one another and slope to form leading edges. Another new feature is that some of the frets extend sideways beyond the edge of the neck. It must undoubtedly be to this instrument that Tinctoris, writing around 1487, referred in the passages quoted above, yet his statement that it was played only by shepherds conflicts with the impression of its status created by these depictions: it is shown to be fit for the gods Mercury and Apollo, for Musica and for angels, and is included among items reflecting the pursuits of a learned and prestigious duke. Far from being relegated to rusticity, the new instrument was part of the intellectual revolution known as the Renaissance.

A comparison of the 16th-century cittern with the citole shows that many features still survive: a fretted fingerboard extending on to the belly; tapering body-depth (found on some citoles but not all); a beast's head on the pegbox; and a hook on the back, which is a relic of the piece which once connected it to the body and enclosed the player's thumb. The scrolls at the base of the neck of the cittern may derive from the citole's 'wings'. The flat pegboxes, shown in 15th-century depictions, that form an angle with the neck and have pegs inserted from the top resemble those of many citoles from the Parma example onwards; and the pegboxes that have a central peak and two sloping faces, found in 16th-century citterns, find forerunners in Spanish citoles of the 13th century.

LAURENCE WRIGHT

Citra. A term applied to the ENGLISH GUITAR until about 1800.

Citron, Marcia J(udith) (*b* Brooklyn, NY, 24 Dec 1945). American musicologist. She graduated from Brooklyn College, CUNY, with a BA in music in 1966. Her graduate studies were undertaken at the University of North Carolina, Chapel Hill, where she studied with William S. Newman and received the MA (1968) and PhD (1971). She began her academic career as an instructor at Roosevelt University (1970–71); she was an assistant professor at Virginia Commonwealth University (1971–3)

and Brooklyn College (1973–6). In 1976 she joined the faculty of Rice University, where she was made professor of musicology in 1992. She joined the editorial board of the journal *Women and Music* in 1995.

Citron's interests in the area of historical musicology include canon formation and 19th-century music, but much of her writing deals with gender issues and women composers, particularly Fanny Mendelssohn and Cécile Chaminade. Her book *Gender and the Musical Canon* (1993) has received much critical acclaim; in her later publications she has examined opera in film.

PAULA MORGAN

Citron, Pierre (*b* Paris, 19 April 1919). French musicologist. He studied at the Sorbonne (1936–9, licence ès lettres 1938, agrégation 1946, doctorat ès lettres 1961). Most of his career has been devoted to teaching, in secondary education (1942–57) and then in higher education, in the faculty of arts at Clermont-Ferrand (1963–9) and at the Sorbonne (1969) and the New Sorbonne, Paris III (1970–83); he was also *chargé de recherche* at the CNRS (1957–60) and director of studies at the Institut Français in London (1960–63).

Citron's work involves literature as much as musicology, and deals mainly with the 19th and 20th centuries (e.g. *La poésie de Paris dans la littérature française de Rousseau à Baudelaire* (Paris, 1961), the subject of his doctoral dissertation). In addition to the works of Balzac, Mallarmé and Giono he has edited Berlioz's *Mémoires* and the *Correspondance générale*, and has written monographs on Couperin and Bartók, which, although literary in their approach, are scrupulously documented and have considerable musicological value.

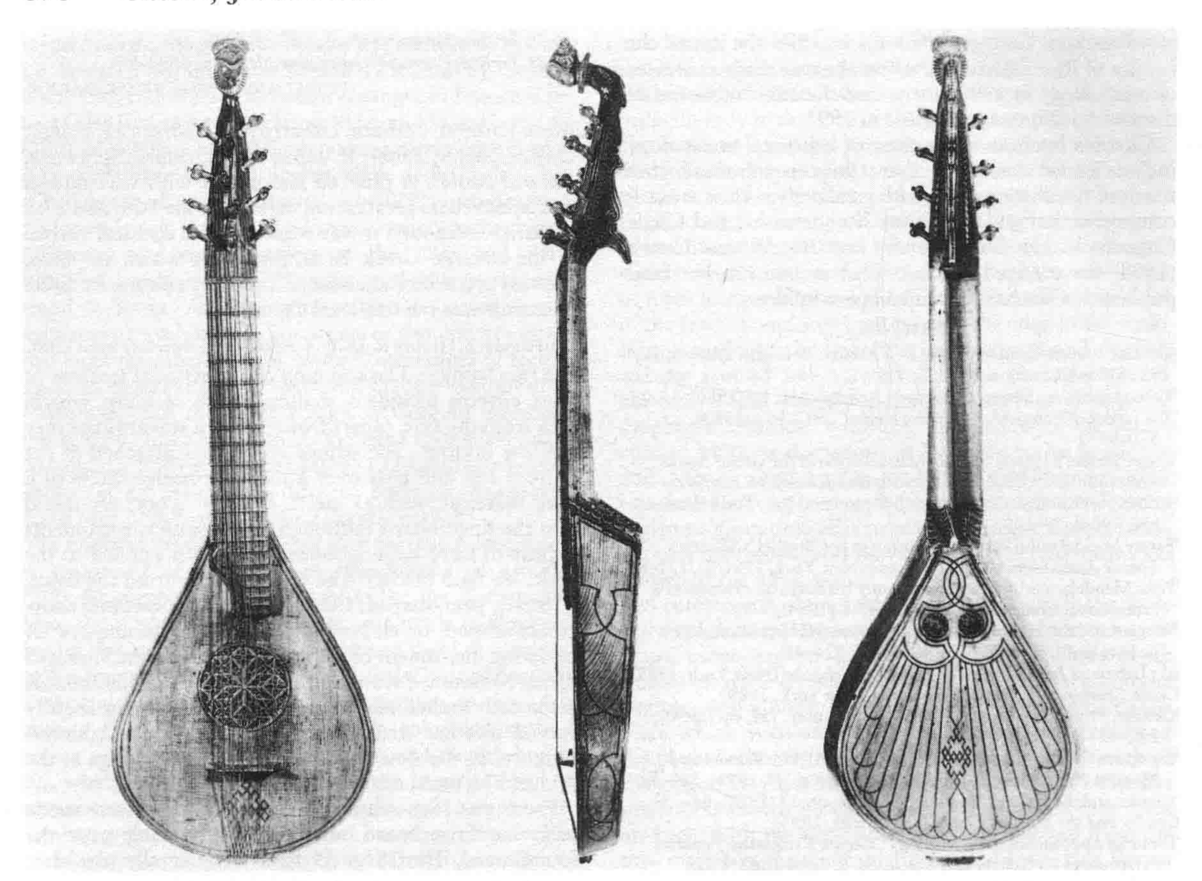
CHRISTIANE SPIETH-WEISSENBACHER

Cittern [cithren, cittharn, citharen] (Fr. *cistre*; Ger. *Cither, Cythar, Zister, Zitter*; It. *cetra, cetera, cetara*; Sp. *citara, cithara, citola*). A plucked instrument with wire strings that achieved its greatest importance in the 16th and 17th centuries. Although it was regarded as a classical revival of the ancient Greek KITHARA (from which its name derives) in Italian Renaissance humanist culture, its direct precursor was the medieval CITOLE.



1. Structure. 2. History to 1500. 3. History and repertory from 1500.

1. STRUCTURE. The common constructional features of most citterns include a shallow depth of body, which, seen from the side, tapers from the neck towards the very shallow bottom. The strings are always attached at the bottom end and pass over a movable bridge. Frets of a hard material, such as metal, bone or ivory, are inlaid into the fingerboard (although 15th-century instruments appear to have large wooden projections applied to the neck; see fig.3 below). The body, as seen from the front, is usually pear-shaped, although pictures sometimes show guitar-shaped, or elaborately festooned instruments. (A surviving instrument of the latter shape is in the Shrine to Music Museum, Vermillion, South Dakota.) Soundboards are usually arched as a result of being glued to the slightly curved internal strut or struts, which act as counter-supports to the downward pressure of the strings at the bridge. The back, also, is slightly convex.

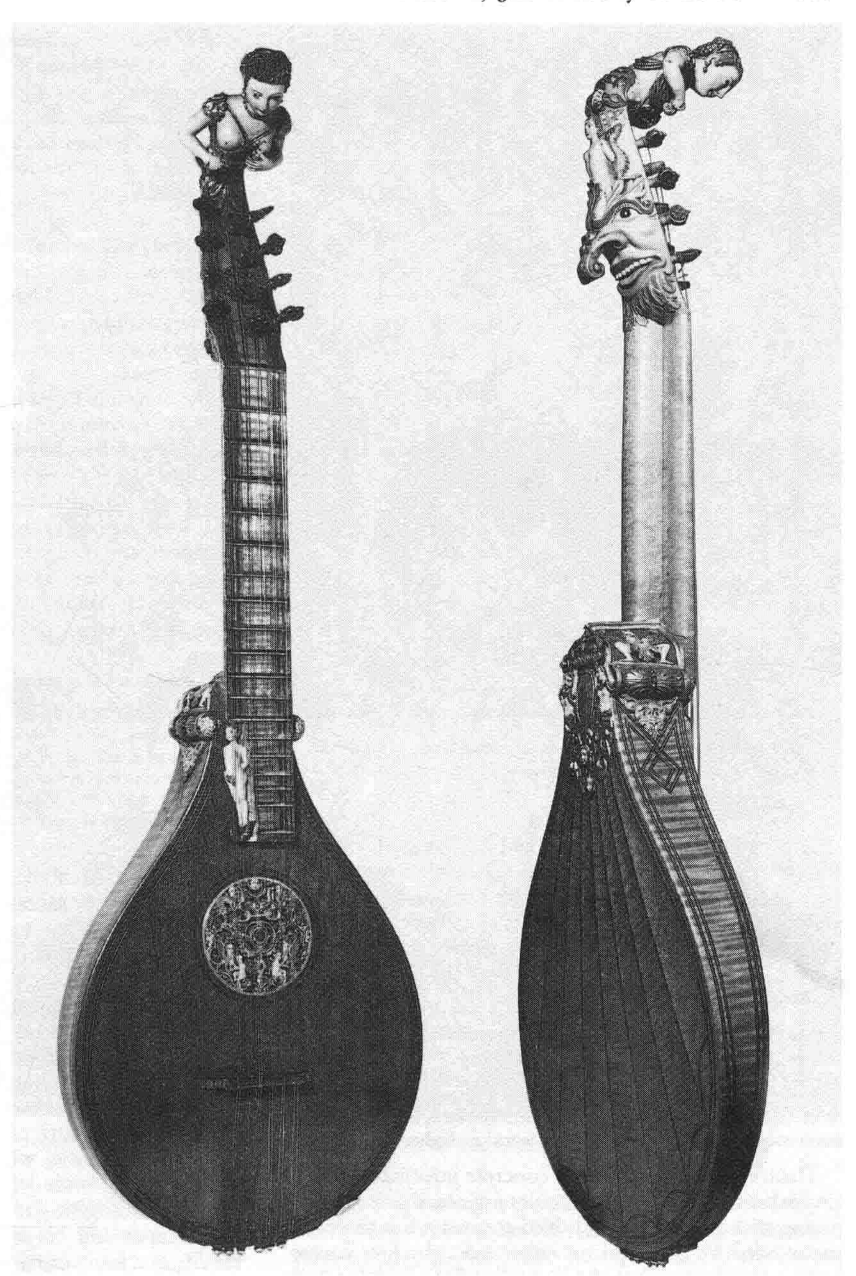
From the 16th-century onwards, citterns were made with the fingerboard raised and projecting over the soundboard. The 18 or 19 frets were usually placed in tapered slots and secured with hardwood wedges so that they projected just above the fingerboard, with the wooden areas between them slightly scalloped. These features were designed to ensure the accuracy of intonation needed for strings of brass and iron wire. The neck is commonly half cut away from behind the fingerboard on the bass side to form a channel along which the left-hand thumb can slide. This enables the player to execute the rapid shifting to high positions required in much of the cittern's solo repertory.

Decorative features common to many citterns include small scrolls or half-round columns carved or glued to the points where the neck and sides meet. These appear to be vestiges of the protruberances which, on 15th-centry (and earlier) instruments, were intended to suggest a classical kithara shape. The back of the peghead typically is formed to include a large, hook-shaped protruberance from which the instrument can be hung. It is normal to have an ornamental 'rose', which, often, is intricately carved in a gothic style from hardwood backed with pierced parchment. The rose is set into the soundboard, not cut from it as on a lute.

Other constructional features divide citterns into types. In Italian instruments (with some exceptions), pegs are fitted from the front into a solid wood stock at the top of the neck. North European and English instruments usually have a slightly curved pegbox with the pegs inserted laterally. The body, neck and peghead of many Italian citterns are all carved from one piece of wood, with the soundboard and fingerboard glued on separately. The sides of the body taper from neck to bottom and also slope outwards from the back towards the soundboard, giving the instrument a 'frying pan' appearance (fig.1).

1. Italian cittern of the earlier type (marked 'Iovanni Salvatori' on the back), 16th century, with body, neck and pegboard made from a single piece of wood (Musée de la Musique, Paris)

This type is usually found with a small, slotted extension to the bottom end of the body, through which the strings are hitched. The outline of the soundboard has a very rounded lower portion, with the upper portion sides nearly straight. Sometimes the back and sides are constructed from separate pieces of wood attached to a separate neck and peghead unit, in the tradition of violin-making.

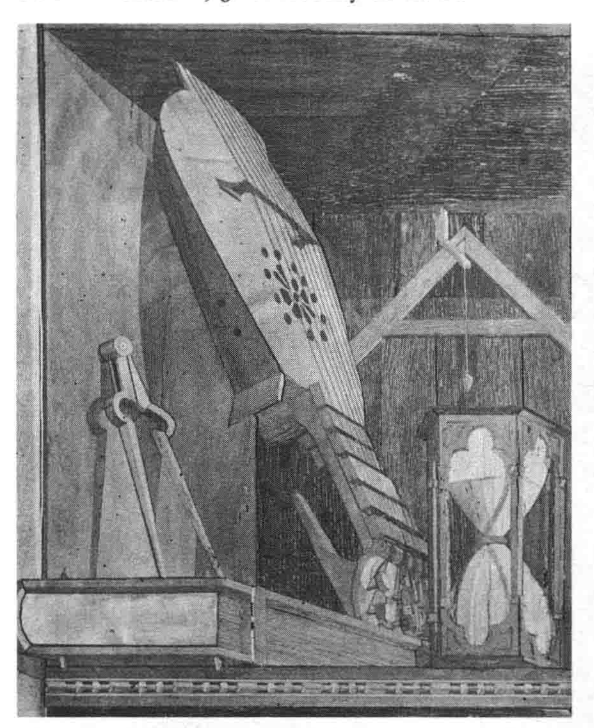


Another type seems to have developed in the instrument-making centre of Brescia during the 1560s, and is exemplified by the instruments of Girolamo di Virchi (*b* *c*1523; *d* after 1574), G.P. Maggini (*c*1581–*c*1632) and Gasparo da Salo (1540–1609). The soundboard is much more curved and pear-shaped and the sides and back are always made of separate pieces, the sides perpendicular to the front and back; the strings are attached to metal or ivory pins or buttons inserted in the bottom end (fig.2).

Italian citterns are predominantly six-course instruments, the courses either double or a combination of double and single. In the later 16th century the larger CETERONE with up to 14 courses appeared; it was used for playing continuo. Citterns in the French and Flemish traditions are mostly of four courses, double first and second and triple (two upper octave strings and one fundamental) third and fourth. In England, four double courses were common, though some octave stringing and tripling is encountered. The fretting varied widely, with various combinations of partial and complete frets traversing the fingerboard in accordance with various temperament systems (Grijp, 1981 and Forrester, *LSJ*, 1983). This partially diatonic or mixed fretting is found on many Italian citterns, but is unequivocally required for the French and Flemish repertory. A completely chromatic fretting is found on instruments after the middle of the 16th century, and seems linked particularly to the Brescian school of instrument making. Many tuning systems were used, usually, though not always, featuring re-entrant patterns.

Citterns varied considerably in size, with vibrating string lengths on surviving instruments ranging from 38 cm to 62 cm, with the majority between 42 cm and 49 cm.

2. HISTORY TO 1500. The cittern seems to have been a direct development, in 15th-century Italy, of the citole, with which it shares many physical features: the tapering body, a fretted fingerboard extending on to the soundboard, a human or animal head ornamenting the peghead, the 'wings' at the base of the neck, and strings attached at the bottom of the body. But new features and refinements of the older instrument developed rapidly: although there are no surviving instruments from this period, there are iconographic sources, including *intarsie* and one documentary source, to help in the reconstruction of the early cittern.



A very early example appears in a Neapolitan school miniature from a late 14th-century manuscript of Seneca's tragedies (Testi, 1969, pl. opp. p.147). Two instruments

2. Cittern by Girolamo di Virchi, Brescia, 1574 (Kunsthistorisches Museum, Vienna)

are shown with almond-shaped soundboards, six large frets, animal heads carved on the pegheads, and a slotted stringholder at the bottom; one is being played with a plectrum. Other details, such as the stringing, are not clear. A singing-gallery (1431–8), sculpted by Luca della Robbia for Florence Cathedral, now in the Museo dell'Opera del Duomo, has a pair of citterns played by two women in Greco-Roman attire (see Winternitz, pl.13). The instruments have oval soundboards, 'wings' projecting from the bases of the necks, strings attached to a slotted end fastener, five courses of double strings, nine pegs, human heads on the pegheads, and a new, distinctive arrangement of the frets. These appear to be five in number; they are rather large and chunky lengths of wood attached to the surface of the neck (or slotted into it), which diminish in height, step fashion, from first to fifth (fig.3). The ends of the frets on the bass side extend prominently beyond the neck itself, and diminish in length from first to last. Their number and size suggest a strictly diatonic fretting, while the free-standing ends of each suggest that they can be removed or adjusted into various interval patterns, as required by different modes. These 'block frets' became a common feature of the early cittern.

The instrument is often depicted in a classical or mythical context. Citterns with block frets are shown in Agostino di Duccio's sculptures (1449–56) of Greek gods in the church of S Francesco, Rimini (see Winternitz, pls.4–5). The printed *tarocchi* cards (*c*1467), once attributed to Andrea Mantegna (British Museum), include two representations of Terpsichore playing a guitar-shaped instrument with block frets and end-fastened strings.

3. Cittern with wooden frets: detail of intarsia, Italian, c1480, from the Palazzo Ducale, Gubbio (Metropolitan Museum of Art, New York)

The association of the cittern with learning, philosophy and science is shown in various Italian *intarsie* of the late 15th and early 16th centuries (fig.3). In these, instruments with block frets, pronounced wings and many of the now-expected features are depicted. The composer and theorist Johannes Tinctoris seems to be describing this very type of instrument in *De Inventione* (*c*1487):

Yet another derivative of the lyra is the instrument called *cetula* by the Italians, who invented it. It has four brass or steel strings usually tuned: a tone, a fourth and back again a tone, and it is played with a quill. Since the cetula is flat, it is fitted with certain wooden elevations on the neck, arranged proportionately, and known as frets. The strings are pressed against these by the fingers to make a higher or lower note.

Tinctoris provides the first concrete information on a cittern tuning. His wording implies a distinctive re-entrant tuning with the second and third courses a fourth apart, surrounded by a second on either side, the first course being a tone higher than the second, and the fourth a tone higher than the third. Surprisingly, this arrangement is required in a Spanish cittern tablature manuscript from as late as the early 18th century.

3. History and repertory from 1500. Beginning in the 16th century there is a wealth of information about the cittern, and a considerable amount of published music. Lanfranco's tuning chart of 1533 gives a relative tuning by intervals, but not specific pitches. Assuming the top course to be *e′*, as it usually is in subsequent sources, the result is *a–c′–b–gg′–d′d′–e′*. The six-course tuning has a mixture of single and double stringing, and the specific pitches were confirmed by Cerone (1613), who used Lanfranco as the basis of his information. He also gave pitches a fifth lower, presumably for a larger instrument. The overall open-string tuning comprises a hexachord starting on *g*. This tuning seems to have been common, though only two sources require it (Vincenti, 1602; MS, *c*1620, see §4 below). Both of these also require a mixed fretting with, among other chromatic and diatonic intervals, a whole tone between the third and fourth frets. Almost all Italian sources for six-course citterns feature the same tuning for the top four courses, with variants for the fifth and sixth.

Italian music for a fully chromatic instrument first appeared in a Phalèse and Bellère print of 1570. It requires only four courses, tuned as the top four courses of Lanfranco's chart. The use of a four-, rather than a six-course instrument corresponds to northern usage, but the anonymous canzonettas and dances are italianate in all other aspects.

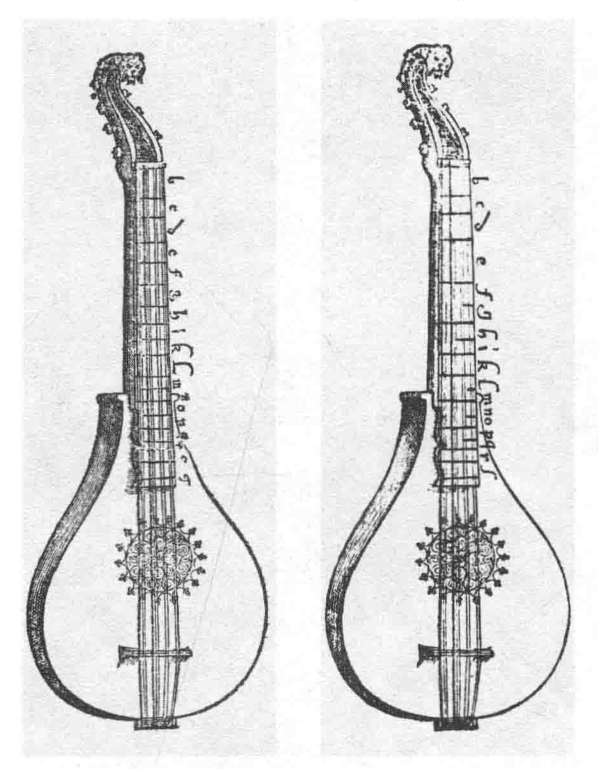
The first Italian publication of cittern music was Paolo Virchi's *Il primo libro di tabolatura di citthara* (1574). It calls for a fully chromatic six-course instrument tuned *dd–ff–bb–gg–d′d′–e′e′*. Virchi demanded considerable technical virtuosity. His music is of the highest quality and includes fantasias, intabulations of *canzoni* by Merulo, settings of vocal music for solo cittern and tenor voice with cittern, as well as some pavans and galliards. He also included two pieces for a seven-course instrument, extending the range down to *G*. It was clearly Virchi's intention to improve and refine the cittern. The dedication to *Il primo libro* reads:

The citthara has always stood in some consideration among people because, being played with a quill, it has a lively and pleasant tone and because it has well-ordered proportion and differs little from such instruments as the lute and harpsichord, which have already attained perfection. But it is only now that the citthara begins to delight such noble personages as the Duke of Bavaria and Archduke Ferdinand of the Tyrol.

The same Archduke Ferdinand provides us with a unique and most satisfying connection between a music source and the very instrument on which it was played. The sole surviving copy of Paolo's book, likely to have been Ferdinand's own copy, is now in the Österreichische Nationalbibliothek, Vienna. In the year of its publication, Ferdinand commissioned a cittern from Paolo's father, the famed maker Girolamo di Virchi. Ferdinand's cittern, too, now resides in Vienna, where it is one of the treasures of the Kunsthistorisches Museum (fig.2). The instrument, with its string length of 44 cm, presumably was used to play Paolo's music, which demands the same virtuoso technique and wide left-hand stretches as later English music by Holborne and Robinson.

In France and northern Europe the cittern was used mainly as a four-course instrument. The earliest surviving tutor, Le Roy and Ballard's *Breve et facile instruction* (1565), called for the following tuning and stringing (assuming a top course as *e′*): *aa′a′– gg′g′–d′d′–e′e′*. Le Roy's and several other tablature sources, for example Viaera (1564) and Vreedmann (1568), often idiomatically intabulate the melodic material onto the third and fourth courses, both of which are triple strung and in octaves (a fact frequently overlooked by modern editors). The tablatures require mixed fretting (Le Roy's illustration of a cittern was used in other books, but with variant fretting patterns; in Mersenne (1636–7) it is fully chromatic: see fig.5). The repertory comprises much the same sort of music (dances, vocal intabulations and a few fantasias) as is found in contemporary lute books.

Published music for cittern in Germany is represented by Sixt Kargel, beginning in 1569 with two volumes now lost. One of them, *Renovata Cythara*, is found in three



4. Cittern and double-headed lute: detail from 'The Duet' by Jan Miense Molenaer, c1635 (National Gallery, London)

later editions, the last from 1580. It requires the tuning, stringing and fretting arrangement of Le Roy and Vreedman, and includes the latter's playing instructions both in the original Latin and in German translation. Kargel, together with J.D. Lais, published *Toppel Cythar* in 1575 (reprinted 1578). This toppel cythar (double cittern) is a six-course instrument with an expanded open string range requiring a completely chromatic fingerboard (see Tyler, p.25). The tuning is *bb–Gg–dd′–gg–d′d′–e′*, which is unique in that the top four courses are not in the typical re-entrant pattern of almost all other cittern tablatures. The music is of high quality and comprises a fantasia, Italian and German dances, and intabulations of madrigals, chansons and lieder by Lassus, Arcadelt, Rore, Senfl and others.

The cittern continued to be popular in Germany in the 17th century. Praetorius suggested using citterns to double certain parts in his vocal publication *Polyhymnia* (1619), playing from single-line staff notation. A later 17th-century German development is a small, bell-shaped instrument, known as the CITHRINCHEN, which does not use re-entrant tuning and has its own repertory, but which retains most of the classic characteristics of the cittern. Indeed, in south Germany and the German-speaking areas of Switzerland the cittern remained in use until the early 20th century, although with triadic tunings similar to those of the ENGLISH GUITAR. The late instrument often retained some of the constructional features of earlier citterns and was used in traditional music. The names for it vary: *Bergzither*, *Bergmannszither*, *Zister*, *Zitter*, *Sister* and, from the mid-19th century and the 20th, *Waldzither*, *Thüringer Waldzither*, *Lutherzither*, *Wartburlaute* etc. (Michel).

In England cittern music can be traced back to the mid-16th century in the 'Mulliner Book' which, in addition to music for other instruments, contains eight pieces for four-course cittern and one piece for five-course cittern. The tablatures require the tuning of Le Roy, but with a chromatic fretting. The first published music was an English translation (1568, now lost) of Le Roy's tutor of

5. Cittern with diatonic fretting (left) from Le Roy and Ballard's 'Breve et facile instruction' (1565), and cittern with chromatic fretting (right) from Mersenne's 'Harmonie universelle' (1636–7)

1565. But the Italian influence proved stronger than the French, for the tuning *bb–gg–d′d′–e′e′* (the top four courses of Italian citterns) became standard in England. There is some evidence that the third course occasionally might have been tripled and that, in some cases, octave stringing may have been employed. Normally, fretting was completely chromatic.

The manuscripts copied by Mathew Holmes (*c*1595–7) contain cittern music of a very high quality and which requires considerable technical skill. A few pieces from Paolo Virchi's 1574 book are copied into one of them, as well as some excellent works by Robinson, Holborne and others. Anthony Holborne's *The Cittharn Schoole* was published in 1597 and Thomas Robinson's *New Citharen Lessons* in 1609. The music in these two books represents the highest point in English writing for the instrument.

The demanding left-hand stretches required for the music of Holborne, Robinson and others has led to the suggestion (Abbott and Segerman, 1975) that players in England used a small instrument tuned an octave higher to *b′b′–g′g′–d″d″–e″e″*. But although Praetorius (1618) claimed to have heard an Englishman play a very small cittern with the tuning *f′f′–a′a′*(*b′b′*)*–d″d″–g″g″*, there is no existing documentation anywhere for a very small cittern with the *e″* pitch level. Further, the tuning of the very small cittern that Praetorius heard is unique and unprecedented for a cittern, although it is similar to one of the tunings for the Italian mandolino (*see* MANDOLIN, §2). And Virchi's music, which requires the same stretches, is most likely to have been played on the normal-sized cittern, with the pitch level at *e′*.

From around the second quarter of the 17th century in England, the high standards set by Holborne and Robinson are no longer found, and the cittern seems to be associated solely with undemanding popular music (fig.6). By the mid-17th century, the instrument was being restrung, tuned like a four-course guitar, played with the right-hand fingers instead of a plectrum and called a gittern. This use of the term should not be confused with that of the 16th and early 17th century when it referred to the four-course guitar (*see* GUITAR, §3).

Another English wire-strung instrument is the English guitar, developed in the mid-18th century. But this instrument differs from the cittern structurally, has a triadic tuning and is played with the fingers. Although it is the custom today, this instrument should not be called a cittern.

SOURCES OF CITTERN MUSIC

The following list is arranged to show the development of cittern music and includes both solo and ensemble sources (mostly in tablature).

PRINTED BOOKS

J. S. Schlumberger: *Cythare germanice tabulature* (?Mainz, 1525 or 1532) [lost]
A. Le Roy: *Briefve et facile instruction* (Paris, 1551) [lost]
G. Morlaye: *Quatriesme livre* (Paris, 1552)
S. Vreedman: *Carmina quae cythara . . . Liber I* (Leuven, 1563) [lost]
A. Le Roy: *Second livre de cistre* (Paris, 1564)
F. Viaera: *Nova et elegantissima in cythara* (Leuven, 1564)
A. Le Roy and R. Ballard: *Breve et facile instruction* (Paris, 1565)
S. Vreedman: *Nova longeque elegantissima cithara* (Leuven, 1568)
J. Rowbotham: *The Breffe and Playne Instruction* (London, 1568) [lost]
S. Kargel: *Carmina italica* (Mainz, 1569) [lost]
S. Kargel: *Renovata cythara* (Mainz, 1569) [lost]
S. Vreedman: *Carminum quae cythara* (Leuven, 1569)
S. Gorlier: *Livre de tabulature de cistre* (Lyons, 1560s) [lost]
A. Le Roy: *Troisieme livre de cistre* (Paris, 1560s) [lost]
P. Phalèse and J. Bellère: *Hortulus cytharae* (Leuven and Antwerp, 1570)
P. Virchi: *Il primo libro di tabolatura di citthara* (Venice, 1574)
S. Kargel: *Renovata cythara* (Strasbourg, 1575) [lost]
S. Kargel and J.D. Lais: *Toppel cythar* (Strasbourg, 1575) [lost]
P. Phalèse: *Hortulus cytharae* (Leuven, 1575) [lost]
Jardinet de cistre (?Paris, 1575) [lost]
S. Kargel: *Renovata cythara* (Strasbourg, 1578)
S. Kargel and J.D. Lais: *Toppel cythar* (Strasbourg, 1578)
S. Kargel: *Renovata cythara* (Strasbourg, 1580)
A. Brambilla: *Anleitung die Zither zu spielen* (1582) [lost]
P. Phalèse and J. Bellère: *Hortulus citharae* (Antwerp, 1582)
J. Bellère: *Le jardinet du cistre* (Antwerp, 1592) [lost]
W. Barley: *A New Booke of Citterne Lessons* (London, 1593) [lost]
J. Danter: *A Moste Perfect and True Instruction* (London, ?1593) [lost]
A. Holborne: *The Cittharn Schoole* (London, 1597)
R. Alison: *The Psalmes of David in Meter* (London, 1599)
T. Morley: *The First Booke of Consort Lessons* (London, 1599)
J.P. Sweelinck: *Niew chyterboek* (?Amsterdam, 1602) [lost]
G. Vincenti: *Secondo libra d'intavolatura di citara* (Venice, 1602)
T. Robinson: *New Citharen Lessons* (London, 1609)
P. Rosseter: *Lessons for Consort* (London, 1609)
T. Morley: *The First Booke of Consort Lessons* (London, 1611)
W. Leighton: *The Teares or Lamentacions of a Sorrowfull Soule* (London, 1614)
P.P. Melli: *Intavolatura di liuto attiorbato, libro quarto* (Venice, 1616)
M. Praetorius: *Polyhymnia caduceatrix* (Wolfenbüttel, 1619)
A. Valerius: *Neder-landtsche Gedenck-Clanck* (Harlem, 1626)
M. Mersenne: *Harmonie universelle* (Paris, 1636–7)
A. Kircher: *Musurgia universalis* (Rome, 1650)
J. Playford: *A Booke of New Lessons for the Cithern & Gittern* (London, 1652)
J. Playford: *Cithren and Gittern Lessons* (London, 1659) [lost]
J. Playford: *Musick's Delight on the Cithren* (London, 1666)

MANUSCRIPTS

Mulliner Book, after 1558, *GB-Lbl* Add.30513 (French tablature, four- and five-course; also incl. two pieces for gittern)
Willoughby MS [formerly cited as Lord Middleton's Lutebook], *c*1575, *GB-NO* mi LM 16 (French tablature, four-course; incl. eight cittern pieces)
*c*1580, *F-Pn* F.C. Rés. 1109 (French tablature, four-course; MS leaves in Aristotle, *De moribus, quae etica* (Paris, 1576), for lute with eight cittern and five guitar pieces)
Dallis Lutebook, after 1583 *IRL-Dtc* D.3.30/I (French tablature, four-course; incl. one cittern piece and tuning table)
'Schone Psalm und Geistliche Lieder auf der Cither', Sammenhammer MS, 1590, *PL-Tm* J.4⁰.34²-102682 (Italian tablature, four-course)
Walsingham Consort MS, *c*1590, *US-OAm* (French tablature, four-course; consort partbook)
*c*1590, *US-Cn* vm 1734.5.G37 (French tablature, six-course; German provenance)
'Tablatur Buch auff der Cythar. Johannes Georgius Hertzogk u Sachssen', *c*1592–1605, former *D-Dl* Mus.J.3 7 (destroyed 1944) (French tablature, six-course)
M. Holmes MS, *c*1595, *GB-Cu* Dd.4.23 (French tablature, four-course, solos and consort parts; Italian tablature, six-course, three pieces from Virchi, 1574)
M. Holmes MS, before 1595, *GB-Cu* Dd.14.24 (French tablature, four-course; consort parts)
late 16th century, *CZ-Bsa*, MS cited in Wolf, 1919, p.146 as in the library of Fürst in Dietrichstein, Mikulov (French tablature, six-course; also contains lute music)
'Tablature Buch auff dem Instrument, Christianus Hertzogk zu Sachssen', late 16th century, *D-Dl* J.307ᵐ (French tablature, six-course)
Matthew Otley's cittern book, *c*1600–50 *US-CAward*, sold at Sotheby's, London, 1977 (French tablature, four-course; solos)
1607–23, *I-Nc* 7664 (Italian lute tablature containing six pieces for a six-course 'cetra')
Nauclerus MS, *c*1607–20, *D-Bsb* Mus.40141 (French lute tablature, four-course; with four cittern pieces)
after 1609, MS additions to T. Robinson: *New Citharen Lessons* (London, 1609, *GB-Lbl* K.2.D.2 (French tablature, four-course; two pieces)
*c*1620, Italian MS, *GB-Lspencer* (French tablature, six-course cittern, lute and five-course guitar)
*c*1629, MS additions to T. Robinson: *New Citharen Lessons* (London, 1609), *J-Tn* BM-4540-ne (French tablature, four-course; twenty-two pieces)
after *c*1653, *GB-Lbl* Add.4388 (two English pieces in a music treatise) (French tablature, four-course)
mid-17th century, MS additions to J.T. Freigins: *Paedagogus* (Basle, 1582), *GB-Cjc* G.13.28 (French tablature, four-course; six pieces)
Boteler Cittern Book, mid-17th century, *US-CAward* (formerly *GB-BEcr* D.D.7/2) (French tablature, four-course)
John Ridout's Commonplace Book, mid-17th century, *US-CAward* (French tablature, four-course; solos and grounds)
Millar/McAlman MS, mid-17th century *GB-En* 9477 (French tablature, four-course; vocal music with six cittern pieces; possible finger technique)
Robert Edwards Commonplace Book, mid-17th century, *GB-En* 9450 (formerly Panmure 11) (French tablature, four-course; with twenty-three cittern pieces)
Early 18th century, Spanish MS with playing instructions (item no.592 in catalogue 956, Maggs Bros. Ltd, London, 1974) (Italian tablature, four-course)

JAMES TYLER

City of Birmingham Symphony Orchestra (CBSO). Birmingham orchestra formed as the Birmingham Symphony Orchestra in about 1907, given its present name in 1948. *See* BIRMINGHAM, §5.

City of London Sinfonia (CLS). London orchestra founded in 1971 by RICHARD HICKOX. It was called the Richard Hickox Orchestra until 1979. *See also* LONDON, §VII, 3.

Ciuciura, Leoncjusz (*b* Grodzisk Mazowiecki, 22 July 1930). Polish composer. In 1960 he graduated from the Warsaw Conservatory, where he had studied composition with Szeligowski. In 1961 he won the prize of the Polish Composers' Union Competition (for *Canti al fresco*), and a year later the Prague International Composers' Competition (for the Concertino da camera). He was co-founder of the Polish section of Jeunesses Musicales (1958–62) and chief editor of the music publishers Carmina Academica. In 1998 he was awarded the Medal 2000 from the International Biographical Centre Cambridge for his contribution to contemporary music. Ciuciura's idiosyncratic style combines sound, movement, visual effects and theatre. Conceived in open forms or an original 'spiral' design, his scores accommodate a wide margin of freedom to the extent that performers are left to decide instrumentation and duration in addition to pitch content. *Creatoria I*, for instance, is scored for 'any instrument or chamber ensemble' and has a time-frame of between six and 14 minutes. His aesthetic centres on each performance being regarded as an updated version of an existing work.

WORKS
(*selective list*)

Suita warmińsko-mazurska, vv, chorus, 1960; Canti al fresco (K.I. Galczyński), 9 female vv, ens, 1961; Concertino da camera, chbr orch, 1961; Ornamenti, fl, cl, bn, str orch, 1963 Emergenza, 2 chbr orchs, 3 conds., composer, 1963; Penetracje, 4 orch groups, 4 cond., composer, 1963; Spirale I (T. Różewicz), 1v, perc, Warsaw, 1968; Spirale II, variable ens, Warsaw, 1972; Fonodiagra, fl, ob, cl, vn, trbn, perc, hp, 1967; songs, incid music

Other open forms, incl. Cretoria, Incidenti, In infinitum, Intarsio, Recontre

Principal publisher: PWM

Ciuntu, Paul (*b* Roman, 1866; *d* Bucharest, 29 Dec 1918). Romanian composer, pianist, teacher and conductor. After studying at the Leipzig Conservatory with Jadassohn (1886–91) and in Lwów with Karol Mikuli, he became conductor at the Rostock Opera and in Goslar. He also taught in these cities and at the conservatories of Bucharest and Brunswick, where he became director. He made some appearances in Germany as a pianist. His compositions (some manuscripts of which are in *RO-Ba*) include a symphony in A minor (1897), a piano trio, a piano quintet, songs and choral pieces.

ROMEO GHIRCOIAŞIU

Čiurlionis, Mikolajus Konstantinas (*b* Varėna, southern Lithuania, 10/22 Sept 1875; *d* Pustelnik-Minski, nr Warsaw, 28 March/10 April 1910). Lithuanian painter and composer. About two years after his birth, his family moved to Druskininkai, a spa town on the Nemunas river, where his father was appointed church organist and remained for the rest of his life. From the age of four, Mikolayus played the piano by ear and by seven could read music fluently. In 1889, he was sent to Plungė where he studied at the orchestral school founded by Prince Michał Ogiński who, having noted the boy's outstanding abilities, paid for him to enter the Warsaw Conservatory in 1894. There, he initially studied the piano with

Sygietyński (who was, besides, an influential critic and novelist), and later entered Noskowski's composition class. Warsaw offered Čiurlionis the opportunity to hear the works of Wagner and become acquainted with the writing of Hugo, Ibsen, Merezhkovsky, Nietzsche, Poe, Przybyszewski and Wilde. In Warsaw he met Eugeniusz Morawski, a young Polish composer with an interest in modernist and symbolist art who became Čiurlionis's closest friend. (Čiurlionis fell in love with Morawski's sister Maria but entered a deep depression when her father would not permit her to marry him.) He composed the cantata *De profundis* for his graduation from the conservatory in 1899 and was subsequently offered the directorship of a newly founded music school in Lublin. But Čiurlionis turned down this offer, preferring instead to devote more time to composition – his first major work *Miške* ('In the Forest') was written in 1900 and won first prize in a competition organized by Count Zamoiski; its performance, however, was cancelled because its composer was not Polish. He then entered the Leipzig Conservatory in 1901, studying with Jadassohn and then Reinecke. Although Čiurlionis valued Reinecke's insistence on the acquisition of a sound technique through the studying of Classical works, he soon found his conservative attitudes stifling. Despite the death of his benefactor Prince Ogiński, Čiurlionis managed to complete his second course of studies and returned home to Druskininkai in the summer of 1902. Back in Warsaw, he continued to refuse regular employment and instead earned money from private lessons. Around this time, the urge to paint took a stronger hold on him; when the Warsaw School for Fine Arts opened in 1904 both Čiurlionis and Morawski enrolled.

In 1905 Čiurlionis travelled to the Caucasus and the landscape there had a profound effect on him. Equally, the revolutionary turmoil which erupted in Russia during that year caused him to reflect on his own national identity and on the political situation in Lithuania. This new consciousness developed into an active concern for Lithuanian culture; by the time he finally returned to the country and settled in Vilnius in the autumn of 1907, he had already organized the First Lithuanian Art Exhibition where 33 of his works were shown. He instilled his nationalist feelings into his own family: his father lost his job because the Polish pastor approved of neither his organist's newly found passion for speaking the Lithuanian language (instead of the Polish preferred by the Lithuanian middle and upper classes), nor of the interest aroused in the local population by the family's singing of Lithuanian folksongs. Čiurlionis conducted the choir of the society Vilniaus Kanklės, the first officially sanctioned organization devoted to Lithuanian music, and became involved in plans to create a centre of Lithuanian culture in Vilnius. He met Sofija Kymantaitė, a woman ten years his junior who also had a passion for the development of a national culture. She agreed to teach him Lithuanian (he had previously been embarrassed by his lack of fluency) and eventually became his wife. Meanwhile, Čiurlionis painted rapidly, organized a second exhibition and made plans with Sofija for an opera entitled *Jūratė* based on a myth concerning a queen of the Baltic Sea. Just as Aleksandr Blok and his wife identified themselves with characters from Wagner's *Ring*, Čiurlionis and Sofija saw themselves as incarnations of figures from Lithuanian folklore, namely Kastitys and Jūratė. In the autumn of 1908 he went to St Petersburg where he was warmly received by the *Mir iskusstva* artists and Mtsislav Dobuzhinsky in particular. They were entranced by what they perceived to be Čiurlionis's attempts to depict music in painting on cycles of canvasses with names such as *Sonata of the Stars*. He was joined by Sofija early in 1909 and flung himself into the cultural life of the Russian capital: several of his works were heard in February 1909 in one of the Evenings of Contemporary Music in a programme containing works by Medtner and Skryabin, while his paintings were seen in a salon organized by the Union of Russian Artists. He was acclaimed as an original by members of the Russian symbolist movement who regarded him as a long-lost relative for a variety of reasons. After spending the summer in Druskininkai, he returned to St Petersburg where he slowly sank into depression. By the end of the year he was found by a friend completely oblivious to the world. He was sent back to Druskininkai and despite a temporary improvement he lapsed into deeper apathy. Ironically, his work was by then receiving greater acclaim: he was elected into the revived *Mir iskusstva* group in 1910 and his admirers sent money for his care in a sanatorium near Warsaw. While walking in woods he caught a cold that developed into pneumonia. He died in April 1911 having never seen his daughter Danutė, born 11 months earlier.

That Čiurlionis spent his creative life in three main places – his student years in Warsaw (and Leipzig), his short but significant Lithuanian period and his final years in St Petersburg prior to his collapse – is symbolized in the phases of and influences on his creative development and in a consideration of the significance of his work as a whole. During his years in Warsaw Chopin's music was heard everywhere and this led to Čiurlionis forming a piano style that, while being the starting point for the modernist experiments of his contemporaries Skryabin and Szymanowski, was to a certain extent rooted in folklore. But Čiurlionis shared with these two other composers an apprenticeship during the years in which west European symbolism and modernism were taking roots in eastern Europe and Russia. One of the perpetual paradoxes presented by Čiurlionis is that while he is regarded as the founder of both Lithuanian painting and music, and while he employed Lithuanian folk motifs in his work in both genres, he is nonetheless an artist of cosmopolitan sympathies and his work is symptomatic of trends that operated in not only those Russian and Polish artistic circles with which he had contact but were also in evidence in Germany, France, Britain, Scandinavia and America.

Čiurlionis's years in Lithuania had greater historical significance than other periods of his life; even though he never succeeded in establishing a centre for Lithuanian culture, his activities in Vilnius were responsible for his subsequent near sanctification in the country. His symbolic adoption of the Lithuanian language was reflected in his interest in the folksong and art of the country. He wrote that 'the unaccustomed ear of the foreigner is struck at first by a great deal of . . . monotony of rhythm [which] is one of the most peculiar and . . . beautiful features of our songs. [. . .] They have a simple melody that does not embrace even the whole octave and is often limited to four or five notes, and their rhythm is even simpler, consisting of notes of two durations or, frequently, of just one' (quoted in Landsbergis, 1992). These views on

Lithuanian folksong in fact articulate the stylistic features of much of his own music. Čiurlionis made a large number of arrangements of folksongs for chorus and for solo piano in which the folk material is scarcely developed. However, the extent to which he used folksong in his other compositions is hard to define: although he hesitated to employ actual folksongs directly in his compositions, like Bartók and Enescu he absorbed the essential qualities of the material to such an extent that all those characteristics identified above are also hallmarks of his mature style. Even in early works such as the *Keturi preliudai*, op.7, in which a harmonic and textural idiom close to that of Chopin is employed, the lapidary yet melancholic essence of Lithuanian folksong – the presence of which is also signalled by drones and terse, unresolved melodic fragments – leaves a marked impression. Likewise, Čiurlionis's growing fascination with ostinati and repeated patterns of pitches can thus be traced to the nature of Lithuanian folksong: the widespread employment of rhythmic ostinati and the use of 'series' of between six and nine pitches (often derived from a name) in a passacaglia manner – and thus in a melodic ostinato – both point towards the outward simplicity of the folksong that surrounded the composer at Druskininkai. The intonation of Lithuanian folksong as absorbed into his mature style is one element that lends Čiurlionis's work its melodic, harmonic and phrasal singularity. Likewise, Lithuanian folk art informed much of his painting on a variety of levels: while actual depiction of the iconography of folk art is not very common – even if it figures prominently in better-known works such as *Lietuviškos kapinės* ('A Graveyard in Žemaitija: Lithuanian Graveyard') alongside Japanese influences – many other works pay homage to the legendary, mystical and animist elements of Lithuanian tradition.

That Čiurlionis should be drawn to St Petersburg, the fermentation pot of Russian Symbolism, was almost inevitable considering his activity in two different artistic realms, his penchant for a mythicized and highly symbolic presentation of nature, and the long-established cultural links between Lithuania and the northern Russian city. His later paintings inhabit the same visionary but nebulous twilight world that informed the work of artists as diverse as Vrubel′, Somov, Kuznetsov and Bakst. It is known that Skryabin was impressed by his painting and that Stravinsky bought a canvas in 1908. Čiurlionis's musical language, however, was distinct from that of most Russian composers and had developed along a highly personalized trajectory since around 1903. Nevertheless, what it did share in common with traditional Russian methods was a tendency to avoid Germanic development of themes in favour of a diversive, constant variation method similar to the varied repetition formula initiated by Glinka in his *Kamarinskaya*.

From around 1904, Čiurlionis had employed an increasingly polyphonic language which was notable for a high degree of chromaticism. However, this chromaticism is not of the usual variety (as found in the harmony of Wagner and Strauss, for example) but is brought about sometimes by the presence of chromatic scales in supporting polyphonic lines (initially in *In the Forest* and in many subsequent pieces including the *Besacas* variations), and at others by the independent (and, again, often stepwise) linear progression of voices. Atonal harmony often results from one of or a combination of these factors; atonal structures arise when ostinati are played off against each other resulting in harmonic progressions which, while not necessarily dissonant, are far removed from tonal procedure. This paradox lends much of Čiurlionis's later work an unearthly, unexpected nature. Much has been made of Čiurlionis's supposed use of quasi-serial methods and atonal harmony, not to mention the presence of abstract forms in his painting and supposed synaesthetic translation between his paintings and compositions. After all, that an artist of his imaginative powers should not experiment in these comparable – though not necessarily parallel – avenues is surely more, rather than less, predictable. Although discussions of these specific features of his style have clouded some evaluation of his work, his experimental and radical character, as well as his fantastical and national persuasion, are all refracted in his work as a painter and composer as well as in the pieces of verse and prose he left in notebooks at his death.

For all the criticisms of his desultory technique, Čiurlionis expressed in his paintings and music not only his extraordinary personal sensibility to nature and a strangely illuminated, mythical world; despite his alien nature, he actually epitomized many of the aesthetic concerns of Symbolism and Modernism, and, possibly unwittingly, came to symbolize the starting point of professional art in Lithuania. At its most effective, Čiurlionis's music is notable for a disarming gestural simplicity, is charming in its unexpected and original melodic or harmonic turns, and is comparable to that of Musorgsky, Janáček and Stanchinsky in its naïve, folksong-inspired directness. Above all, Čiurlionis 'had the rare gift of concentrating multiple and very varied ideas into very little pictorial space and very little musical time' (Landsbergis, 1986). Čiurlionis's protean nature as an artist is exemplified by comparisons with figures as diverse as Blake and Klee; that he was admired by Rolland, Sartre, Messiaen, Ivanov, Skryabin, Stravinsky, Eisenstein and Gor′ky is further testament to his uniqueness.

WORKS

Choral: De profundis, cant., chorus, orch, 1899–1900; Kyrie, Gloria, Sanctus, chorus, *c*1902; other choruses, over 60 folksong arrs.

Orch: Miške [In the Forest], sym poem., 1900; Polonaise, ww, 1900; Sym., 1901–02 [sketches for 1 movt only]; Kestutis, ov., 1902 [in pf reduction]; Jūra [The Sea], sym. poem, 1903–07; Creation of the World, 1907, [sketches only]; Dies irae, sym., Lithuanian Pastoral Sym., 1910–11 [sketches only]

Chbr: Theme and Variations, b, str qt, 1898; Fugues, G, f♯, str qt, 1898, 1899; Fugue, d, str trio, 1899; Str Qt, c, 1901–2 [only 3 movts extant]; Canons, c, B♭, str qt, 1902; Str Trio, 1902

Pf: Pieces: Sonata, F, 1898; Tema ir 20 variacijos, 1898; 4 pjesės: Preliudas, Humoreska, Mazurka, Preliudas, op.3, 1899; 2 pjesės: Noktiurnas, Preliudas, op.4, 1899; 2 pjesės: Preliudas, Noktiurnas, op.6, 1901; 4 preliudai, op.7, 1901; 2 pjesės: Mazurka, Preliudas, op.8, 1901; 4 polifonines pjesės: Kanonas, Kanonas, Fugeta, Fuga, op.9, 1902; 3 preliudai, op.11, 1902 [no.2 entitled Dainelė]; 2 pjesės: Preliudas, Postliudija, op.12, 1903; 2 preliudia, op.13, 1903; 3 preliudai, op.14, 1903; Tema 'Sefaa Esec' ir 6 variacijos, op.15, 1904; 4 preliudai op.16, 1904 [no.4 entitled Epizod iš simf. poemos Jūra]; 3 pjesės: Preliudas/Otche nash [Our Father], Ruduo, Preliudas rusu liaudės dainos tema, op.17, 1904; 16 Lithuanian Folksongs, 1904–08; Tema 'Besacas' ir 3 variacijos, op.18, 1905; 3 preliudai viena tema [3 Preludes on One Theme], op.20, 1905; 3 pjeses: Preliudas, Basso ostinato, Lakštingala [The Nightingale], op.19; op.21, 1905–06; 4 preliudai, op.21, 1906 [nos.2–3 form 2 preliudai viena tema]; 5 preliudai, op.22, 1906; 4 preliudai, op.26, 1907; 4 preliudai, op.27, 1907; Marios [The Sea], cycle of landscapes, op.28, 1908; 2 Pjesės: Preliudas, fugeta, op.29, 1908; 3 preliudai, op.30, 1908; 4 preliudai, op.31, 1908; 2 pjesės, op.32,

1909; 6 preliudai, op.33, 1909 [no.3 based on Lithuanian folksong Motule mano]; Fuga, op.34, 1909
Songs, organ pieces incl. 20 Preludes and Fugues, 1897–1904

JONATHAN POWELL

Čiurlionytė, Jadvyga (*b* Druskininkai, 17 Dec 1899; *d* Vilnius, 1992). Lithuanian ethnomusicologist. The youngest daughter of the organist Konstantinas Čiurlionis and sister of the composer Mikolajus Konstantinas Čiurlionis (1875–1911), she studied at the Leipzig Conservatory (1920–23) and graduated from the Stern Conservatory in Berlin (1925). She took a *Kandidat* degree at the Leningrad Conservatory with a dissertation on Lithuanian folk music (1962), and was awarded a doctorate by the conservatory in 1969 for her contributions to folk-music research. From 1937 to 1941 she carried out research at the Lithuanian Folklore Archives, and in 1940 published the first classification of Lithuanian folk melodies. She worked at the ethnological institute of the Lithuanian Academy of Sciences (1941–52), taught at the Lithuanian Conservatory from 1946 and was appointed professor in 1969. She wrote a number of analytical articles on Lithuanian folk music, and is considered the founder of research on Lithuanian musical folklore and the principal authority on the subject of her day. She also prepared a number of editions of her brother's works.

JOACHIM BRAUN

Cividale, Antonio da. *See* ANTONIUS DE CIVITATE AUSTRIE.

Cividale del Friuli. Italian town. A small town in northern Italy, near the Slovenian and Austrian borders, it is of Roman origin and is one of the most important Langobard establishments in Italy. Cividale's significance for the history of music lies mainly in the liturgical and paraliturgical polyphonic activity connected with its collegiate church of S Maria Assunta, where the Aquileian rite was used with some local variations. By the 13th century a *scolasticus* was entrusted with the teaching and practice of music; the post was superseded in 1338 by the appointment of a cantor from among the canons. Liturgical manuscripts of local origin (in the Museo Archeologico Nazionale) contain 12 examples of early two-part polyphony (*cantus planus binatim*) to be sung on major feasts; among them is the Easter *Benedicamus* trope 'Submersus jacet Pharao' found only in Cividale sources and known to have been performed there as late as 1960. Equally important was the tradition of liturgical drama, four examples of which survive among the same manuscripts. Among other examples of two-part polyphony, in black mensural notation, is an 'Et in terra pax' by Antonius de Civitate Austrie; manuscript XXIV contains the four Passions transcribed in *cantus fractus* notation by the local canon, Comuzio della Campagnolla, who signed and dated his work (1448). Some fragments from an early 15th-century polyphonic manuscript (with pieces by Philippus de Caserta, Jacob de Senleches and Zachara da Teramo) may be associated with the presence in Cividale of the papal court and of the council in 1409; archival documents show, on the other hand, that throughout the 15th century, and even later, polyphonic singing was entrusted to four *mansionarii* from the chapter, and that only at the end of the century was a *maestro di cappella* appointed, the post being held by such musicians as Guglielmus Marescot and the printer and composer Gerard de Lisa.

The frottola composer Filippo de Lurano was *maestro di cappella* in Cividale from 1512 to 1515; manuscript LIX, a collection of sacred Renaissance polyphony, probably dates from this time, while manuscript LIII, containing polyphonic masses probably derived from contemporary printed volumes, is slightly later. Giovanni Ferretti was *maestro di cappella* from 1589 to 1596, while the main figure in the Baroque period was Giovanni Sebenico (active in Cividale 1660–63 and 1693–1705). During the 19th century two active supporters of the Cecilian movement were *maestri di cappella* in Cividale, G.B. Candotti (1832–76) and Jacopo Tomadini (1876–83).

PIERLUIGI PETROBELLI

Civil, Alan (*b* Northampton, 13 June 1929; *d* London, 19 March 1989). English horn player. He studied in London with Aubrey Brain and in Hamburg with Willy von Stemm. He was principal horn of the RPO (1952–5), co-principal of the Philharmonia Orchestra (1955–7) and, after Dennis Brain's death, principal (1957–66), and principal horn of BBC SO (1966–88). He was also a member of the London Wind Players, the Music Group of London and the London Wind Quintet. His solo repertory included the major horn concertos, many of which he recorded, and he performed in Europe, the USA and Asia. He was a professor at the RCM from 1966 until his death. His compositions include a wind quintet and a symphony for brass and percussion. For orchestral repertory Civil played a modern German Alexander double horn, on which his tone was full but mellow; for solo and chamber work he used a single B♭ model on which he developed a light elegant tone, a clear and sensitive articulation and a direct classical approach. Civil also played early music on natural horns from his own collection. He avowed that practising on the old French type of instrument, such as Aubrey Brain had played, was essential to his preserving stylistic authenticity on the more powerful but less characterful shorter-tubed German horn of today. He was made an OBE in 1985.

NIALL O'LOUGHLIN

Civita, Davit da [Civita, Davit] (*fl* 1616). Italian composer. He was one of only a few Jewish composers of art music in the 16th and early 17th centuries. It is not clear whether the name Civita refers to his place of birth (Cividale) or his surname, although the latter seems more probable. He appears to have had connections with Mantua and may have lived there. This assumption is supported by the dedication of his only publication, *Premitie armoniche* (Venice, 1616; ed. D. Harrán, *Fragmenta polyphonica judaica*, Jerusalem, forthcoming), to the Duke of Mantua, Francesco Gonzaga, and the presence in Mantua of several other Civitas, possibly from the same family, as well as by an archival document that records the death of his daughter, aged six, in 1630. Civita's name does not, however, appear in court registers. Civita wrote in the dedication to *Premitie armoniche* that he composed the work while still 'a young man of little intelligence'. The collection consists of 17 three-voice madrigals, similar in style to canzonettas, but with continuo. Eight works set texts by Ansaldo Cebà, Guarini, Marino, Tasso and Rinuccini.

Clabon, Krzysztof [Clabonius, Christophorus]. *See* KLABON, KRZYSZTOF.

Clagget [Claget], **Charles** (*b* Waterford, 1740; *d* ?London, *c* 1795). Irish violinist and inventor. Nothing is known of Clagget before around 1760 when, together with his brother WALTER CLAGGET, he published his *40 Lessons and 12 Songs for Citra or Guitar* and a set of violin duets in Edinburgh. He was leader of the orchestra at Smock Alley Theatre in Dublin from 1762 to 1764. In 1763 he was appointed director of the concerts at the Great Britain Street (later Rotunda) Gardens, a position he held until 1767 and again in 1769. During this period he also led the orchestra at Crow Street Theatre, where a number of benefit concerts were held on his behalf. In 1770 he became leader at the new theatre in Capel Street. He then left Dublin, becoming leader in Liverpool (1771–3) and in Manchester (1773–5) before settling in London in 1776.

In Dublin he had performed at concerts on new or unusual instruments, and after settling in London he largely devoted his attention to the development and invention of musical instruments, concerning himself especially with tuning and temperament. In 1776 he took out a patent for improvements to 'the violin and other instruments played on finger boards . . . which make it nearly impossible to play out of tune'. His patent of 1788 for 'certain new methods of constructing and tuning musical instruments' included the 'teliochordon' (a keyboard instrument with 39 keys to the octave), tuning-forks adjustable to different pitches, and the 'uniting together two French horns or trumpets in such manner that the same mouth-piece may be applied to either of them instantaneously . . . as the music may require'.

This 'cromatic trumpet' was the most significant of his inventions. Clagget described it in more detail, if somewhat unclearly, along with the 'Aiuton, or Ever-tuned Organ', in his *Musical Phaenomena* of 1793. A more lucid description of the 'cromatic trumpet' had appeared

in 1789 in the journal of the Königliche Böhmische Gesellschaft der Wissenschaften, and it was mentioned in Gerber's article on the horn of the same year. Clagget's invention, in which two trumpets or horns pitched a semitone apart were combined using a primitive finger-operated valve, marked the first attempt to make a brass instrument chromatic through the combination of two tubes of different length. Although a number of public performances on 'cromatic horns' were given in London and Bath, and notice of Clagget's invention was taken in Germany, practical difficulties precluded the adoption of his innovative ideas, and his chromatic trumpet (as also his other inventions) were soon forgotten.

BARRA R. BOYDELL

Clagget [Claget, Claggett, Claggitt], **Walter** (*b* ?Waterford, *c*1741; *d* ?1798). Irish composer and instrumentalist, presumably brother of Charles Clagget. About 1760 the Claggets published jointly in Edinburgh a set of *Six Duets for Two Violins*, 'intended to improve and entertain practitioners'. Walter probably left shortly afterwards for London, where he published a number of works from 1762. Between 1763 and about 1771 he was in Dublin where he was engaged as a cellist in various theatre orchestras. In 1766 he was appointed to the band at the Great Britain Street Gardens, of which Charles Clagget was director, at double the amount paid to the rank and file players. Appearing at numerous concerts organized by his elder brother he seems to have become involved in the latter's interest in novel instrumental sounds. In a series at the Fishamble Street Great Musick Hall in June 1766 the unusual instruments featured in the advertisement included the musical glasses: 'Several Sets (of which) are prepared and to be disposed of by Mr. Walter Claget'. In May 1767 his comic opera *The Power of Sympathy, or The Innocent Lovers* was given in Dublin, and in March 1771 he wrote new accompaniments for a revival of Garrick's *Cymon* there. He then returned to London and in February 1784 applied for membership of the Royal Society of Musicians, sponsored by Robert Munro. In his application he stated that he was then 42 and had been a professional musician since the age of seven; he played 'on a great variety of instruments, viz. the Violin, Violoncello, Tennor, Double Bass, Oboe, German Flute, Clarinet etc.', and played at Covent Garden during the winter at a weekly salary of £2 and in summer at 'the theatre in the Haymarket' for £2 8s. He composed music for two stage works in London; the publication of his last two works in Edinburgh, around 1794–5, suggests that he may have returned there in the last years of his life.

WORKS

STAGE

The Power of Sympathy, or The Innocent Lovers (comic op), Dublin, Smock Alley, May 1767
Accompaniments for Cymon (D. Garrick), Dublin, 4 March 1771, music by M. Arne
If fortune when smiling could make us amends: a new song (London, *c*1780)
The Cabinet of Fancy, or Evening's Exhibition (farce, G.A. Stevens), London, Haymarket, 1780
The Dumb Cake, or The Regions of Fancy (pantomime), London, Covent Garden, 1787

INSTRUMENTAL

6 Duets ... Intended to Improve and Entertain Practitioners, 2 vn (Edinburgh, *c*1760), collab. C. Clagget
The Comic Tunes in The Witches, or Harlequin Cherokee, as ... Performed at the Theatre Royal in Drury Lane, vn/fl/hpd (London, 1762)
6 Solos and 6 Scots Airs with Variations, vn/vc, hpd (London, 1763)
6 Solos, 2 vc (London, *c*1763)
A Favourite Overture, hpd (London, *c*1770)
18 Duets ... Composed from the Most Favourite Airs, vn/vc, vc (London, *c*1785)
A Set of 24 Duetts ... Made from the Most Celebrated Airs in the English Operas, Haydn's Works etc. 2 fl/ob/vn (London, *c*1790)
6 Easy Solos, vc, bc, op.4 (London, n.d.)
A New Medley Overture Consisting Entirely of Scots Tunes and 36 ... Scots Airs ... all with Variations for 2 vn/(2 fl, vc)/pf (Edinburgh, *c*1794), cited in *BUCEM*
36 Intire New Airs in 8 parts ... adapted for pf (Edinburgh, *c*1795)

Cláirseach. Irish name for the harp (cognate with the Scottish Gaelic *clàrsach*). The term is documented from the mid-15th century onwards; variant forms include *clarseach*, *clarsech* and *clarseth*. 'Cláirseach' occurs frequently in Scottish and English documents, where it presumably denoted the contemporary Celtic harp, Irish or Scottish, as distinct from the mainland European forms. During the 16th century the small low-headed Irish harps were superseded by large low-headed harps. In Irish, therefore, 'cláirseach' may have denoted the large variety as distinct from the smaller; this had been called 'cruit', the old Irish lyre name which had been transferred to the frame harp centuries earlier. Literally, 'cláirseach' means 'little flat thing'; the satirical use of an opposite characteristic plus a diminutive is typically Celtic. In the 17th century 'cláirseach' and 'cruit' seem to have been interchangeable; for example, in the poem attributed to Fear Flatha O Gnim (*fl c*1600) addressed to the harper Nicholas Dall Pierse, they are used synonymously. According to Edward Bunting, in Ireland in 1792 'cláirseach' was an unspecific harp name, low- and high-headed forms being differentiated as *crom cruit* and *cinnard cruit*. Modern neo-Celtic harps with hand-turned tangents to produce chromatic notes are now often called 'cláirseach'.

For details of the history of the harp in Ireland, *see* HARP, §V, 1(i–ii); *see also* IRISH HARP (i).

JOAN RIMMER

Clamatione (It.). A PORTAMENTO up to the first note of a passage from a 3rd or 4th below. *See* ORNAMENTS, §1 and PORTAMENTO (i) and (ii).

Clamores. Chants sung on certain feasts at Mass in the Mozarabic rite; *see* MOZARABIC CHANT, §4(vi).

Clapham, John (*b* Letchworth, Herts., 31 July 1908; *d* Stanton Drew, nr Bristol, 9 Nov 1992). English musicologist. After studying the cello with Douglas Cameron and harmony and counterpoint with Macpherson at the RAM (1927–31) he became an external student of George Oldroyd at London University, where he took the BMus (1934) and the DMus (1946). He studied the cello privately with Ivor James and the double bass with Eugene Cruft (1937–9) before working as a programme engineer at the BBC (1939–41). After the war he was lecturer at the University College of Wales, Aberystwyth (1946–62) and a member of the University College of Wales Ensemble (1946–59), and senior lecturer (1962–9) and reader (1969–73) at Edinburgh University. Clapham's scholarly career as an expert on Dvořák began comparatively late but was pursued devotedly into advanced age. His two books and many articles on the composer make available in English the fruits of Šourek's large-scale biography as well as presenting Clapham's own particular interest in sketch research and historical studies of Dvořák's time in England and America. He worked closely with Jarmil Burghauser and was with him co-author of the bibliography in the second edition of Burghauser's Dvořák's thematic catalogue (1997).

JOHN TYRRELL

Clapisson, (Antonin [Antoine-]**) Louis** (*b* Naples, 15 Sept 1808; *d* Paris,19 March 1866). French composer, curator and teacher. His paternal grandfather was a wind instrument maker at Lyons and his father a professional horn player who played principal horn at the Teatro S Carlo, Naples, and led the military band for Murat (King of Naples during the First Empire) in the early 19th century. As a result of political and military events at the end of the Empire, the Clapisson family returned to France and settled in about 1815 in Bordeaux, where the father was appointed principal horn at the Grand Théâtre and Louis began his musical studies, particularly of the violin. Soon he was making concert tours in the south of France. On returning to Bordeaux he studied harmony and became a first violin in the Grand Théâtre orchestra. He then went to Paris, entering the Conservatoire on 18 June 1830 for violin lessons with Habeneck; he gained a *second prix* in 1833 and also studied counterpoint and fugue with Antoine Reicha. At the same time he earned money playing first violin at the Théâtre Italien and, through his teacher's recommendation, second violin at the Opéra from 1 January 1832. Shortly afterwards he began writing songs (many of which evoke a fantasized Middle Ages, as was then fashionable) and comic chansonnettes. Several of these became popular immediately. He had a brilliant official career: he was made a Chevalier of the Légion d'Honneur in 1847, and a member of the Institut in 1854, where he succeeded F. Halévy, despite the candidature of Berlioz. He also became a member of the Academia Imperial das Bellas Artes, Rio de Janeiro, and was appointed professor of harmony at the Paris Conservatoire in 1862.

Apart from an unsuccessful attempt at serious opera with *Jeanne la folle* (given eight performances at the Opéra), Clapisson was essentially a composer of *opéra comique*. Initially known in the salons for his nocturnes in several parts, he hoped to make his name at the Opéra-Comique, where his first work, *La figurante*, attracted much attention and had 46 performances. Despite some promising experiences, for instance with *La perruche*, which had 132 performances between 1840 and 1845, his works (most of them in one act) have not kept their place in the repertory, not even *Gibby la cornemuse*, which was received with critical acclaim and had 35 performances. After the disaster of *Les mystères d'Udolphe* (six performances), Clapisson moved to the Théâtre Lyrique, where he was successful with *La promise* in 1854 (60 performances) and in particular with *La fanchonnette* in 1856, a work which had over 100 performances during the season. The score owed some of its success to its interpretation by Caroline Carvalho, whose vocalization was greatly admired.

Clapisson's style, which may at first have seemed too sophisticated with its convoluted harmonies, is notable for its modulations and above all for its use of much-inflected tonalities, chromatic grace notes (never changing the key) and orchestration often praised for its purity. However, he simplified his manner, quickly becoming dated, and never managed to free himself from conventional forms and dance-like structures. His melodic writing is divided between popular melodies and vocalises. He was fascinated by musical instruments and assembled a remarkable collection. A decree of 29 March 1861 appointed him 'Curator of the collection of musical instruments constituting part of the property of the Conservatoire'. 230 items from his own collection were acquired by the state for the Conservatoire in 1861, and the museum opened its doors to the public on 17 November 1864.

JOSIANE BRAN-RICCI/HERVÉ LACOMBE

Clapp, Philip Greeley (*b* Boston, MA, 4 Aug 1888; *d* Iowa City, IA, 9 April 1954). American composer and teacher. He studied composition, chiefly with Walter R. Spalding, at Harvard (BA 1908, MA 1909, PhD 1911). In Europe, 1909–11, he conducted research on aesthetics at the British Museum, studied composition and conducting with Max von Schillings in Stuttgart, and acted as special music correspondent for the *Boston Evening Transcript*, a position he held until 1919. An important influence on Clapp was his association with Muck, who made it possible for him to conduct the Boston SO in his First and Third Symphonies. In 1919, after holding numerous short-term teaching or administrative positions, he was appointed professor and head of the music department at the University of Iowa, where he remained until his death. The Bruckner Society of America awarded him the Bruckner Medal of Honor in 1940 and the Mahler Medal of Honor in 1942. Clapp's harmony derives directly from that of Wagner, Mahler, Strauss and Debussy; his orchestration is remarkably clear, and his textures are generally homophonic, particularly in the symphonies. Many of his works are programmatic, such as Symphony no.6, subtitled *Golden Gate*, and Symphony no.9, *The Pioneers*. He favoured established forms, often treating themes cyclically.

WORKS

Ops: The Taming of the Shrew (Clapp, after W. Shakespeare), 1945–8; The Flaming Brand (Clapp), 1949–53

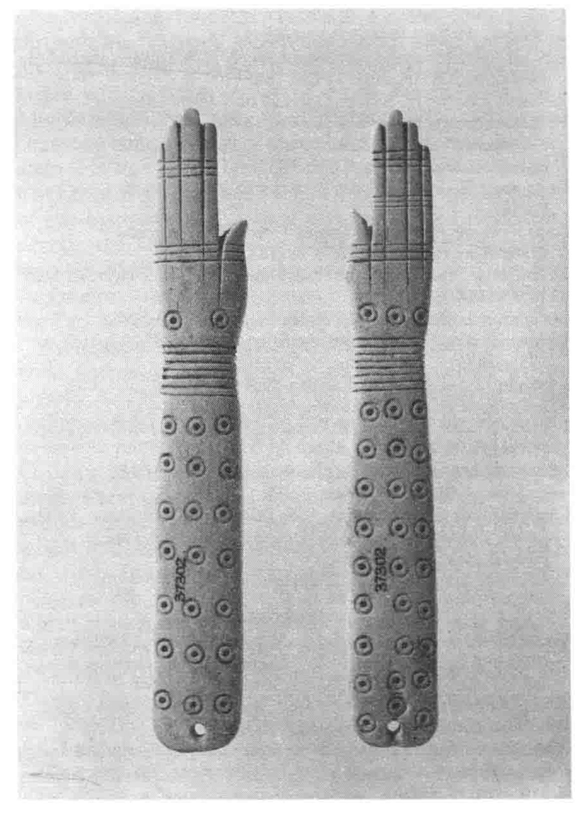
DOROTHY REGINA HOLCOMB/MICHAEL MECKNA

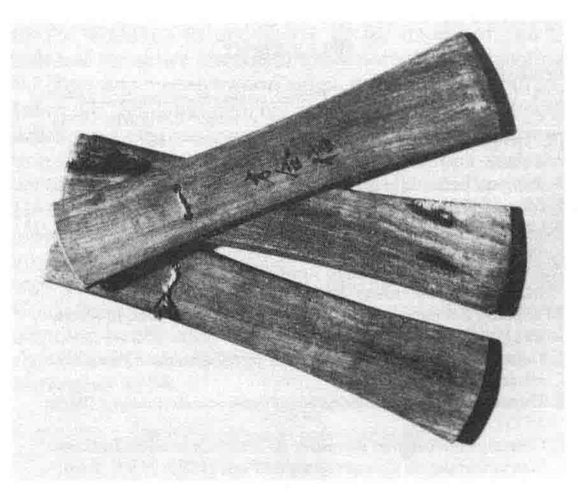
Clappers. Concussion idiophones consisting of two or more objects in the form of sticks, plaques or vessels of wood, bone, ivory, nutshells, marine shells, etc. (For details of the Hornbostel-Sachs classification *see* IDIOPHONE.) They may be hinged together at one end, or two may be hinged to a central piece. Specimens from prehistoric times onwards differ little from those still used by certain tribal groups (fig.1). Among the few instruments of the Australian aborigines are clappers in the form of clapsticks and boomerangs. This suggests the early use of weapons and missiles as clappers and possibly (with the rattle) as the first substitute for such pre-instrumental music as stamping, hand-clapping and body slapping.

Prehistoric rock drawings of dancing figures and pottery of the 4th millennium in Egypt may depict clappers with



1. Clapping sticks used to accompany dance, Sa'a village, Malaita, Solomon Islands, 1974

curved blades held in one hand. Actual instruments, decorated with animal heads or bearded human heads, survive from Dynasty I (*c*3100–2890 BCE). In Mesopotamia clappers are attested slightly later. Inlaid work of the Mesilim period (*c*2700–2600 BCE) features clappers held in one hand or with one component of the instrument in each hand. A contemporary seal from Ur shows a dancer accompanied by the lyre, while attendants clash curved sticks. Concussion sticks are represented in Egyptian tomb scenes of the Old Kingdom (*c*2686–2181 BCE), where they accompany dance groups; the sticks are held in each hand and clapped together, as was usually the case in Egypt. Clappers were also employed to speed agricultural work. In the Old Kingdom tomb of Nefer, for instance, grapes are trod to the rhythm provided by clappers; in the mastaba of Neferirtenef harvesters work to a similar accompaniment. Clappers appear in religious scenes: priests sometimes played them at a funeral; and they featured prominently in dances performed to the honour of the cow-goddess Hathor, who was associated with music and fertility. There are numerous examples of clappers in museums (see Sachs; Hickmann; Anderson; Ziegler). Egyptian examples are usually of bone (ivory) or wood and are either straight or curved. There are exquisitely carved specimens in the shape of the human hand and forearm (fig.2), and frequently the head of Hathor is featured. Other ancient Egyptian forms include hollow wooden clappers resembling Spanish castanets and small cymbals supported on a long forked handle, both from the Roman period.



Ancient Greek clappers or krotala (Lat. CROTALA) were chiefly of wood and made in various forms. On a Greek vase dated *c*500 BCE Eros is seen playing boot-shaped krotala which are joined at one end. Similar instruments, in most cases played by women, are seen on other Greek vases of the same period. The Greek *kroupalon* (or *kroupezion*; Lat. *scabellum*), a clapper-like instrument consisting of a loose wooden sole attached like a sandal to the player's foot, served as a timekeeper in ancient Greece. It is seen in an elaborate form on a marble statue of the Hellenistic period (3rd century BCE) worn by a satyr who is also playing cymbals (for illustration *see* SCABELLUM).

In East Asia clappers have played, and continue to play, an important part in religious and secular life, e.g. those used by Chinese temple singers in the form of a fan comprising a number of flat bamboo strips joined at one end, and those consisting of two pieces of wood hinged at the base. In the Chinese classical and court orchestra clappers were used by the conductor as a time indicator. Other Chinese clappers include the *paiban* (commonly three pieces of wood hinged as castanets; fig.3), metal clappers resembling double castanets and concussion sticks of many descriptions.

In Japan clappers are prominent instruments in court and theatre music. The *shakubyōshi*, two small wooden

2. Pair of ivory clappers, Egyptian, c2000 BCE (British Museum, London)

3. Chinese paiban (Royal Museum of Scotland, Edinburgh)

clappers, are used similarly to the Chinese types. Clappers resembling castanets are found in the *yotsudake*, four short pieces of bamboo. *Hyōshigi*, made of two rectangular blocks of wood, are used in kabuki and bunraku theatre to announce the start of the play, and thereafter to accompany and to emphasize confusion in the stage action. The *hyōboshi* and similar concussion sticks are used by fire watchers, itinerant jugglers, street entertainers and street vendors. Street vendors in particular use individual and easily recognizable rhythms.

Various forms of clappers, some with distinct features, are found in India. These include castanets of wood with bells, *ciplā*, and metal clappers, *cimṭā* (*see* KARTĀL).

In Europe there is firm evidence of the use of clappers from the 9th century CE. A V-shaped clapper with small discs or tong-cymbals secured to the open ends of the strips appears in the 9th-century Bible of Charles the Bald. Clappers without a jingling contrivance are illustrated in an Anglo-Saxon psalter dated 1015, and in 11th- and 13th-century Spanish manuscripts. The terms 'tablettes' and 'cliquettes' in medieval (and later) French sources generally refer to clappers.

Clappers were used as instruments of music in the Baroque era. Mersenne (*Harmonie universelle*, 1636–7) spoke approvingly of 'the little bones and small wooden sticks ... which one can manipulate in such a fast and agile way'. Clappers in the form of marrow bones and cleavers were integral instruments in the music of the butchers of England and Scotland, and pairs of BONES, along with clappers formed from household implements such as pairs of tablespoons ('spoons'), are still common in the British Isles. (In Shakespeare's *A Midsummer Night's Dream*, Bottom remarks: 'I have a reasonable good ear in music: let us have the tongs and the bones'.) Clappers of this description were associated with burlesque music, and the simple music of children and the poorer classes. In addition to their use as musical instruments, clappers were used as bird scarers, by nightwatchmen and by lepers who were obliged to sound them as a warning of their approach. (The biblical leper Lazarus has frequently been depicted shaking a pair of small clappers.)

A form of clapsticks is seen in the staves of the English Morris men, and a relic of the marrow bones and cleavers in the 'nigger bones' (knicky-knackers) used in the original American minstrel bands.

An interesting clapper-like instrument of Neapolitan origin is the *triccaballacca* (from *tricca-vallacca*), consisting in most cases of three percussive mallets inserted in a wooden frame. The centre mallet is fixed and the outer ones are free. The free mallets are struck against the central piece in a variety of rhythms in folk music.

In musical literature a clapper is used as an effect instrument or dynamically. In *Elektra*, Strauss wrote for *Holzklapper* to signify the crack of a whip (in which context the term 'claquettes' is also used); Mahler scored for *Holzklapper* in his Sixth Symphony (see also WHIP). Concussion sticks in the form of CLAVES are frequently requested by composers.

JAMES BLADES, ROBERT ANDERSON

Clapton, Eric [Clapp, Eric Patrick] (*b* Ripley, Surrey, 30 March 1945). English blues-rock guitarist. Until 1966, when he formed CREAM, he was a blues purist, and blues has played a central role in his career; many would argue that he was at his best in this music.

After a brief time with the Yardbirds, Clapton established himself as a gifted interpreter of the blues in John Mayall's Bluesbreakers between 1965 and 1966 and achieved popular acclaim around London. Clapton's playing on *Bluesbreakers - John Mayall with Eric Clapton* (Decca, 1966) is remarkable, notably the opening riff and tasteful contrapuntal lines he weaves around Mayall's vocal in Otis Rush's 'All your Love', the guitar instrumental 'Hideaway' and the virtuoso solo in 'Have you Heard'. This was the first blues-rock album to be dominated by the guitar. While blues was always important to Clapton, he set aside his purist aesthetic when he left Mayall, not devoting a full album to the genre again until *From the Cradle* (Duck, 1994). With Cream, he moved towards a style that was influential in shaping both hard and progressive rock, continuing his virtuoso solo work in such pieces as *White Room*, the studio and live versions of *Spoonful* and especially *Crossroads*.

Clapton became weary of what he considered to be directionless displays of virtuosity in Cream; influenced especially by music of the Band, with members of which he later collaborated on *No Reason to Cry* (RSO, 1976), he sought to create music focussed on cooperative playing and songwriting, as on his début solo album, *Eric Clapton* (Polydor, 1970). After a period of seclusion because of heroin addiction (1970–73), he continued in this manner, beginning with the generally quiet *461 Ocean Boulevard* (RSO, 1973). Derek and the Dominos' *Layla and Other Assorted Love Songs* (Polydor, 1970) is an exception to this trend, with virtuoso performances on such pieces as 'Key to the Highway' and 'Why does love got to be so sad', among others.

Clapton's greatest legacy has been as an electric guitar player, although he also plays the acoustic instrument. He is primarily interested in melody, rather than rhythm playing, and his style is derived from welding together and embellishing blues phrases he heard in the music of Freddie King, Muddy Waters and others. His playing is marked by technical precision, especially evident in fast passages which he plays cleanly, with an effortless accuracy that earned him the nickname 'Slowhand' from the Yardbirds' manager, Giorgio Gomelsky. He was never particularly interested in experimenting with various guitar effects, although he was influenced by Hendrix's use of wah-wah and fuzz (especially apparent on Cream's *Disraeli Gears*) and was using feedback extensively, even before Hendrix. He developed a distinctive sound which he called 'woman tone', produced on his Gibson Les Paul by removing the bass on the tone control and turning the volume up full. This can be heard on any number of Cream songs, including *I feel free*. After his days with Cream his preference for the Fender Stratocaster over the Gibson changed his sound significantly.

A fair portion of Clapton's recorded output has been given to his covers of other songwriters' works: one side of him has been more concerned with interpreting than composing, which has had the benefit of introducing a wide audience not only to blues, but to material from other styles such as reggae (with his cover of Bob Marley's 'I shot the sheriff' from *461 Ocean Boulevard*). This role as an interpreter also made him shy away from the limelight after Cream, touring with that band's opening act, Delaney and Bonnie, then creating Blind Faith, in which he was really a sideman to Steve Winwood, and Derek and the Dominos, the name of which concealed his identity. Nevertheless, he has often shone as a composer, many times in collaboration with another musician, such as in *Badge*, which he wrote with George Harrison. He composed several important songs with Bobby Whitlock on the pivotal *Layla and Other Assorted Love Songs*; this album also included 'Layla', a collaboration with Duane Allman and Jim Gordon that is considered one of rock's most significant musical statements. He has also written many memorable songs on his own, among them the powerful ballads *Presence of the Lord*, *Wonderful Tonight* and *Tears in Heaven*. He was a reluctant singer until his first solo album, after which he has always sung lead vocal or has shared vocals with, for example, Bobby Whitlock or Yvonne Elliman, to great effect.

In addition to his own albums, Clapton has worked throughout his career as a session musician with numerous artists and he has contributed music to several films.

Clarabella. *See under* ORGAN STOP.

Clari, Giovanni Carlo Maria (*b* Pisa, 27 Sept 1677; *d* Pisa, 16 May 1754). Italian composer and instrumentalist. He was the son of Constantino Clari, a violinist at the church of the Cavalieri di S Stefano in Pisa. Teofilo Macchetti, *maestro di cappella* of Pisa Cathedral, who referred to him as 'Carlino', was possibly his teacher. Clari studied for four years with Paolo Colonna in Bologna, finishing his studies in 1695, the year his opera *Il savio delirante* was performed at the Teatro Pubblico there. For the following eight years he worked freelance, mainly in Pisa and Florence, and in 1697 he was elected to membership of the Accademia Filarmonica of Bologna. His father asked Lorenzo Cattani, *maestro di cappella* of S Stefano dei Cavalieri in Pisa, to engage him as a regular member of the *cappella*, but he was not taken on. It was only through Clari's contacts with the Medici family in Florence, as a protégé of Prince Ferdinando in particular, that he was eventually appointed *maestro di cappella* of Pistoia Cathedral in 1703. There he composed much liturgical music and most of his oratorios. His relationship with the cathedral hierarchy was always troubled and he was constantly in need of the support and intervention of Prince Ferdinando to hold on to his post. After the latter's death in 1713 relations deteriorated further, with the clergy aiming criticism at the way he ran the music school. An election was normally called every three years to confirm his appointment; in 1720 the vote went against him. He was given only temporary, one-year contracts until he left to become *maestro di cappella* of Pisa Cathedral in 1723. Popular with the aristocracy of Pistoia for at least a decade after his departure, he returned to the city several times a year to direct and compose music for various important social events (see Grundy Fanelli). Clari remained in Pisa, producing a wealth of religious music, until his death in 1754. He was buried in a pauper's grave: rumour had it that he had squandered all his money.

Clari's many pupils included G.G. Brunetti, Orazio Mei, Francesco Zanetti and Paolo Fabbrini. He composed no purely instrumental music and all his work was for local needs. Nevertheless, he kept abreast of current trends. In the oratorios he used accompanied recitative, shortened da capo arias and truncated arias more often than many of his contemporaries. Many aria accompaniments are for concerto grosso forces. The liturgical music, with antiphonal effects, covers all the offices and ranges from pieces with simple organ accompaniment to others for string ensemble; some of Clari's works for celebrative occasions also have parts for one or two wind instruments: oboe, horns or trumpets. Several pieces for Pistoia have parts written for the virtuoso trombonist Domenico Manfredini.

Clari's most famous compositions, cited frequently in works of later theorists as fine examples of the genre, are his vocal chamber duets and trios. There are copies, both manuscript and printed, in libraries all over Europe. Probably they were written for his pupils to sing, especially in view of the fact that the vocal range tends to be more restricted than in his other works. The chamber works show a charming combination of didactic exercise and delightful melody. By the 19th century Clari had been all but forgotten. His fame now rests almost entirely on the six duets that Handel incorporated into his own *Theodora* (1750).

Claribel Flute [Claribel]. *See under* ORGAN STOP.

Clarin (Ger.). A register of the trumpet. *See* CLARINO.

Clarín (Sp.). (1) Spanish term for various types of trumpet. In the Middle Ages and Renaissance the word denoted a short, straight trumpet. During the Baroque period the term was applied to the folded trumpet when the instrument was used in art music. It was pitched in D (and C) in Royal Chapel scores until the advent of multiple crooks. The term continued in use during the 19th century; the keyed trumpet, for example, was known as the *clarín de llaves*. Subsequently the term was restricted to army use and, strictly speaking applies to the natural cavalry trumpet, although under the influence of the French term *clairon* it is sometimes applied loosely to the bugle (*corneta*). The instrument is used particularly in cavalry formations to embellish the calls of the *trompeta*.

(2) A valveless trumpet of Oaxaca, Mexico.

(3) A side-blown, straight trumpet up to 2 metres long, similar to the ERKE, used in Peru, Ecuador and Chile. The Peruvian instrument has a body made of a single piece of bamboo and a calabash or metal bell. Played in open spaces, it is used to animate religious festivals and communal labour (particularly wheat-threshing in Cajamarca). In Chile it joins with the *putu* (natural-horn trumpet) and *chorimori* (bell rattle) to accompany the archaic ritual music of the Atacameño people of the Atacamá Desert. For further discussion of the term, *see* CLARINO.

Clarinet (Fr. *clarinette*; Ger. *Klarinette*; It. *clarinetto*). Generic term for a wind instrument sounded by a single beating reed; in the system of Hornbostel and Sachs such an instrument is classified as an AEROPHONE: reedpipe, with a reed consisting of a single percussion lamella. The clarinet of Western art music (from which the generic term is taken) is of essentially cylindrical bore and is made in a variety of sizes and tonalities; the soprano instrument pitched in B♭, with the 'Boehm system' of keywork and fingering, is the most widely used today (see §II below).

See also ORGAN STOP.

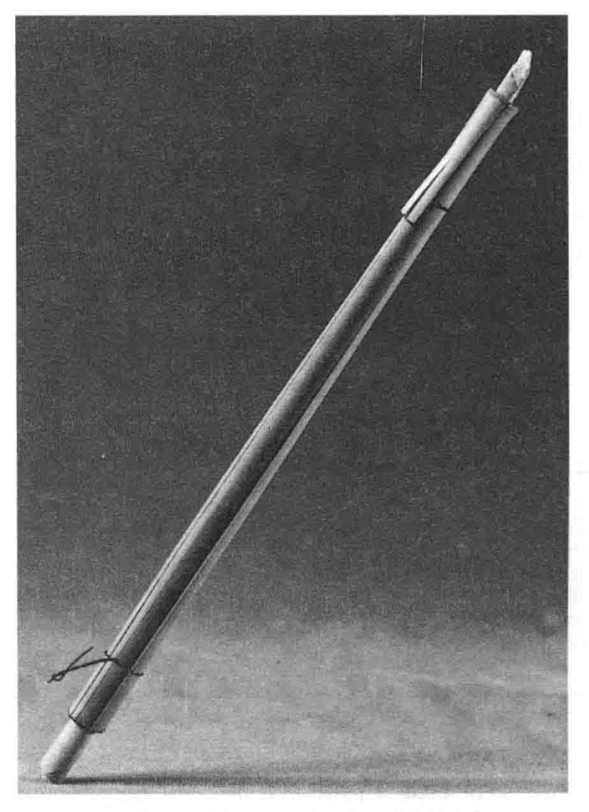
I. General. II. The clarinet of Western art music.

I. General

1. Introduction. 2. Single clarinets. 3. Multiple clarinets. 4. Hornpipes. 5. Transverse clarinets.

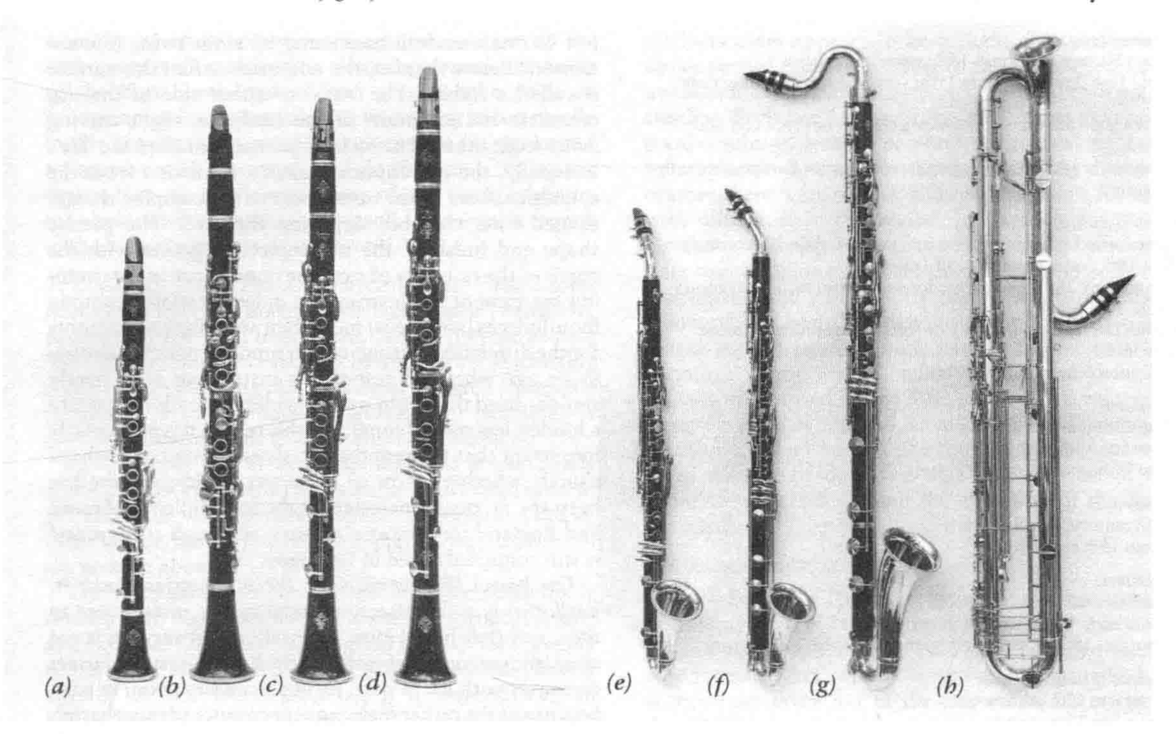
1. INTRODUCTION. A clarinet consists of a closed tube with a single beating reed; such instruments are widely distributed and exist in a variety of forms. The tube is usually cylindrical, but occasionally funnel-shaped or ending in a bell. A clarinet may be idioglot, with the reed cut from the material of the tube itself and left attached at one end (the reed is sometimes held slightly away from the tube by a hair or straw inserted across the slit at the base) or heteroglot, with the reed, often made of a different material, tied or otherwise fastened on. An idioglot reed may be up-cut (with the reed cut upwards) or down-cut towards the top of the tube, with the vibrating end facing the bottom of the tube.

2. SINGLE CLARINETS. Instruments consisting of a single tube have been used, generally as pastoral instruments, in Central Asia, the Baltic countries, the Balkans, Greece, Hungary, North Africa, South and South-east Asia and South America. Most are idioglot instruments made of naturally cylindrical material: wood, bone, quill or stalks of straw or reed in northern areas; stalks of rice or bamboo in South and South-east Asia; bone, cane or gourd in Latin America. A chalumeau described by Trichet (*c*1640) was a rustic pipe made from a wheat stalk with a reed cut into its upper surface. Clarinets sounding a single note are found in South America and on the west coast of North America. Others produce a range of notes through the use of finger-holes or by other means. A form of the Lithuanian *birbynė* is an idioglot instrument of straw, quill, etc. with a reed cut into the tube near the top and one to three finger-holes; the *balaban* of the Uzbek and Tajik peoples is a wooden cylinder with a single reed inserted into the head. The *ole-ole* of North Sumatra has a rice-stalk reed with slits which expand when blown to produce a small range of pitches; the large conical resonator is made of bamboo or strips of coconut leaf. On the *pega* of Latvia the length of the



vibrating tongue is varied by the player and the open end stopped and unstopped. A few types (e.g. the *chamada do carnaval* of Portugal) consist of an animal horn into the top of which a mouthpiece with a single reed is inserted. The Western orchestral clarinet and other members of its family, including the modern Hungarian TÁROGATÓ and the Greek *klarino*, are single clarinets with keywork and heteroglot reeds.

3. MULTIPLE CLARINETS. Clarinets with more than one tube are found in North Africa, Nigeria, the Near East, the Balkans and eastern Europe, Central Asia, South Asia and South-east Asia. On some double clarinets, one of the pipes is a drone; on others, both pipes are melodic, but tuned slightly differently to create beats. They are characteristically played using the technique of circular breathing. One of the best known is the PŪNGĪ, the 'snake-charmer's pipe' of South Asia. It has a bottle gourd wind cap from which emerge two small pipes of wood, cane, etc. with idioglot reeds. One is a drone pipe with several tuning-holes (the unused ones sealed with wax), the other is the playing pipe; a few have a second drone of metal. The neck of the gourd serves as a mouthpiece and the player employs circular breathing, with the cheeks puffed out to serve as an air reservoir. The *muralī* of Pakistan, Gujarat and Rajasthan is a double clarinet with a long wooden tube, through which the player blows into a wood or gourd wind cap; the two cylindrical pipes, one with six finger-holes, the other a drone, are glued together and the instrument is played in virtuoso style, the player covering a range of over two octaves. The MIJWIZ and related instruments of the Islamic world, possibly descended from the ancient Greek aulos, consist of two parallel pipes of equal length, made of reed or metal. Each pipe generally has six finger-holes and a thumb-hole, and one is tuned slightly higher than the other; the reeds are down-cut and placed completely inside the player's mouth. Formerly played by shepherds, it is now played by professional performers for festivals. A single melody is played in unison on both pipes. Another common type is represented by the Egyptian ARGHŪL; it is made of bamboo and has a drone pipe and a melody pipe with five or six finger-holes. The *launeddas* of Sardinia is a triple clarinet with a drone and two playing pipes, one for the higher notes and one for the lower. A piece of wax at the lower end of each tube allows the production of quarter tones. Some double clarinets also exist in bagpipe versions (e.g. the *diple* of Bosnia and Herzogovina).



4. HORNPIPES. A hornpipe may be a single instrument or a double instrument with parallel pipes. Each pipe ends in a horn bell, and there is often a ring of horn around the reed. The instrument was known in medieval Europe and until the 18th century or so in England, Scotland (STOCK-AND-HORN) and Wales (PIBGORN). Instruments of this family remain in use on the Iberian peninsula and in the Baltic countries. A type of Lithuanian *birbynė* has a reed attached to a cow horn or to a cylinder of wood with a bell of birch-bark or horn; the latter is made in several sizes and is used in traditional music ensembles. The Basque *alboka* is a double-reed hornpipe. Bag hornpipes are known in Central Asia, Russia and south from the Volga region to the Greek islands, the Balkans, North Africa and India (*see* HORNPIPE (i)).

5. TRANSVERSE CLARINETS. Transverse clarinets are so-called because the position of the reed requires the instrument to be held horizontally. They are mainly found in West Africa (the only known instance of such instruments outside Africa is the *caña de millo* of Colombia) throughout the savanna region, from Senegambia to Chad. They are made from a stem of sorghum from which the pulp has either been pulled with a piece of wire (as among the Angas people of Nigeria), or pushed out with a metal rod (among the Berom of Nigeria) or with a stick of henna shrub (the Hausa of Nigeria and Niger). Small clarinets consist of a single internode, and larger ones of two internodes; others are intermediate in length. Short versions include the clarinet of the Kilba people, Nigeria (23 cm), the Hausa *tilboro* (30 cm), the *tsiriki* of the Kebbi, Nigeria (35 cm), the *tilibartci* of the Fali, Cameroon (40 cm), and the *veng-kung* of the Angas (35 to 40 cm). Longer clarinets include the Hausa *damalgo* (50 cm), and in Nigeria the Dakakari *k'cindo* (60 cm) and the Berom *gworitod* (63 cm).

All are idioglot with a single beating reed consisting of a thin strip cut from the stem about a third or a quarter of the distance from one end (fig.1). For example, the reed of the Hausa *tilboro* is 5 cm long and 5 mm wide. Some have a tuning noose (a piece of thread wound loosely round the reed) with which the player controls its movement. Short instruments conform to this pattern, for example, the *tunturu* of the Maninka people of Mali, the *leru* of the Dogon of Mali, the Fali *tilibartci* of Cameroon, and, within Nigeria, the Angas *vengkung*, Cham *birong*, Duka *otwah*, Gunga *hitiribo*, Hausa *tilboro*, Kebbi *tsiriki*, Kambari *kungagiwa*, Kilba *ligaliga* and Nupe *binakun*. Larger instruments have either one end inserted into a small calabash resonator (about 8 cm in diameter),

1. Transverse clarinet of the Dogon people, Mali (Musée de l'Homme, Paris)

2. The modern clarinet family (Boehm system except (b)): (a) sopranino in E♭; (b) soprano in B♭ (Schmidt-Kolbe system; note that reed is tied on with twine); (c), (d) sopranos in B♭ and A; (e) alto in E♭; (f) basset-horn in F; (g) bass in B♭; (h) contrabass in B♭; all by G. Leblanc, Paris, except (b) by Fritz Wurlitzer, Erlbach

with up to four holes (1 cm) cut in the surface (Hausa *damalgo*), or both ends inserted into calabash resonators (for example, the clarinet of the Bassari people of Togo), or, more commonly, both ends inserted into whole calabashes with side windows (*See* BURKINA FASO fig.3): the *boū-kām* or *bumpa* of the Bisa people, Upper Volta, the *k'cindo* of the Dakakari and the *tukpolo* of the Gwari, Nigeria.

In more recent times resonators have been made of cow horn or discarded torch heads. When the instrument has no resonators, differences in pitch are obtained by closing the open end with the hand (as among the Fali and Kilba peoples), the index finger of the left hand (Hausa *tilboro*) or the thumb of the right (Zamfara Hausa *tagalabu*, Kebbi Hausa *tsiriki*), according to the playing position. Instruments with calabash resonators usually have a finger-hole at the distal end which may be stopped by the left thumb, as with the Hausa *damalgo*. All versions are played in an approximate horizontal position with the reed brought up to the mouth in such a way that it can be made to vibrate by both blowing and sucking.

Most instruments are made by boys or young men, usually by copying old models. The maker is usually owner and performer. The most common time of performance is either during or after harvest (November–December), when material is plentiful, and during the remainder of the dry season. Most performance is outdoors: the Dogon people of Mali regard the clarinet as a shepherd's instrument; the Teda of Tibesti, Chad, allegedly acquired their clarinets from Fezzan shepherds; among the Songhai of Mali and Niger, solo performance on the *dilliara* is by children; and Kilba boys in Nigeria use theirs while herding goats. Most performances are solo, though these may alternate with a number of players performing together, as among the Berom and Hausa, where, on moonlit nights, groups of young men play for dancing and entertainment of the young men of the town in front of the chief's palace. While most performance is for enjoyment, Lela players use the *k'cindo* to praise people, the Zamfara Hausa call the names of their friends and girl-friends, and Berom groups perform, with scraper accompaniment, at special times of rejoicing. It is extremely common for the transverse clarinet to be used for speech-imitation; the player imitates the syllable-tones of the language on the instrument.

II. The clarinet of Western art music

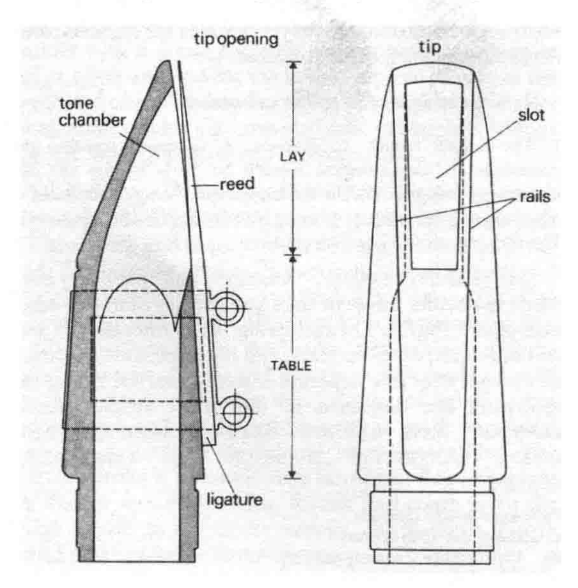
1. THE CLARINET FAMILY. Clarinets have probably been made in a wider range of sizes and pitches than any other instrument (fig.2). The following list is intended to give an impression of this variety, and of the periods and areas of currency for the separate instruments. Of these, the following are discussed in individual articles: ALTO CLARINET, BASS CLARINET, BASSET CLARINET, BASSET-HORN, CLARINETTE D'AMOUR and CONTRABASS CLARINET.

Piccolo or octave clarinets
C ?Italy, mid-19th century
B♭ 19th century, ? mainly military
A early 19th century; rare
A♭ from early 19th century; chiefly military, especially in Hungary and Italy; also in 20th-century clarinet choirs

Sopranino clarinets
G late 18th century to mid-19th; especially Austria
F early 18th century to early 19th; very widespread military use
E late 18th century to mid-19th; rare
E♭ from late 18th century, replacing clarinet in F; military and orchestral
D from early 18th century; more rare in western Europe after early 19th century

Soprano clarinets
C from early 18th century; becoming more rare in 20th century
B late 18th century to early 19th; rare
B♭ from early 18th century; predominant from mid-18th century
A from 18th century
A♭ mid-18th century to mid-19th, often as clarinette d'amour
G from mid-18th century, often at first as clarinette d'amour; rare – virtually obsolete except in Turkey

Basset-horns
G late 18th century (rare)
F from late 18th century
D late 18th century (rare)



Alto clarinets
F 19th century, especially early
E♭ from 19th century

Bass clarinets
C late 18th century to early 20th
B♭ from early 19th century
A from late 19th century; rare by the end of the 20th century

Contrabass (pedal) clarinets
E♭ from late 19th century
B♭ from late 19th century

2. STRUCTURE. The clarinet is generally made in five separate parts: mouthpiece, barrel, upper or left-hand joint, lower or right-hand joint (the two 'joints' constituting the 'body'), and bell. These sections are fitted together by tenon-and-socket connections, the seal being effected by lightly greased cork. Occasionally, and more especially in the smaller clarinets, the body is made in one piece rather than divided into parts ('joints'). A fully assembled B♭ clarinet is about 66 cm long.

The mouthpiece (fig.3; Fr. *bec*; Ger. *Mundstück;* It. *bocchino*) is tapered on the upper side to fit in the player's mouth. The underside has a slot, over which the reed vibrates, being secured against it by a metal ligature or

3. *Diagram of the clarinet mouthpiece: (left) in profile; (right) from the front, with the reed removed*

(on German-made instruments) by stout twine (*Spannschnur*). Below the slot, the underside is flat; this surface is called a 'table'. The 'rails' to either side of the slot constrain the vibration of the reed; the slight curving away from the reed at their upper ends is called the 'lay'. Internally, the mouthpiece makes a transition from the cylindrical bore of the instrument to the complex wedge-shaped tone chamber opposing the reed. The precise shape and finish of the mouthpiece, together with the curve of the rails, are of extreme importance in determining the tone of the instrument; indeed, variation among mouthpieces (and reeds) more than anything else accounts for the differences of tone-colour among good clarinettists in an age when the rest of the instrument is so nearly standardized the world over (a wider lay tends to produce a louder, less refined tone). For this reason it is particularly important that the mouthpiece should preserve its shape exactly whether warm or cool, wet or dry; ebonite has been the favoured material for the mouthpiece in France and England for almost a century, although cocus wood is still commonly used in Germany.

The barrel (Fr. *barril*; Ger. *Birne*; Austrian *Fassl*; It. *barilotto*) is a short section coupling the mouthpiece to the upper (left-hand) joint. Precisely why it survives is not clear (the patent specification of the Boehm-system clarinet dispenses with it): in part, through conservatism; in part, because of the rather inelegant appearance of most barrel-less clarinets; and perhaps in part to provide an easily replaceable section to take the strain (and possible resultant cracks) from excessive contrasts of moisture and warmth near the mouthpiece. Most players make small adjustments to the pitch during performance by slightly separating the barrel and upper joint at the tenon, while many possess two barrels of slightly different lengths for the same purpose.

The upper and lower joints carry all the finger-holes and keywork and the greater part of the bore. At the lower end the funnel-shaped bell serves to radiate the sound of the lowest few notes. Over most of the range, however, the sound is radiated almost entirely through the side holes rather than the bell. The weight of the instrument is taken by the right thumb, supporting a projection (thumb-rest) on the underside of the lower joint. The fingers and the left thumb control the seven open holes and 17 keys on a standard instrument. Much of the keywork is interconnected and in particular there is a connection (Fr. *correspondance*) between the upper and lower joints which requires correct alignment in assembling the instrument.

The favoured material for the clarinet since the mid-20th century has been the heavy African blackwood *Dalbergia melanoxylon.* Also in the second half of the century, suitable plastics were developed from which numbers of lower-priced instruments have been made; metal clarinets have been made from the 19th century onwards and are widespread in the USA and in Italy. At the end of the 20th century the diminishing reserves of the slow-growing African blackwood resulted in efforts being made to make better-quality clarinets from other materials or from a wood-based composite (the Buffet-Crampon 'Greenline' clarinet).

While the bore of the clarinet is essentially cylindrical, there are deviations at the lower and upper end; these are for tuning purposes and are measured in hundredths of a millimetre. The overall form of the bore is critical and

must be carefully preserved, and proper care of the instrument is thus important. Also important is the finish of the bore: both makers and players take pride in producing and in maintaining or improving it. It is chiefly in this respect that a good instrument can be recognized to improve with use; work by A.H. Benade (C1976) has shown that the subtle smoothing of any sharp edges on tone holes and tenons that may result from regular wiping of the bore is surprisingly important.

3. COMPASS, REGISTERS AND INTONATION. The lowest note of the standard Boehm-system clarinet is (written) *e*, sounding *d* for a B♭ instrument. A few players possess 'Full Boehm' clarinets extended by about 5 cm and having a key for *e*♭ (sounding *d*♭); that note, required from time to time by a few composers (Mahler, for example), is otherwise unattainable (*but see* BASSET CLARINET).

At the upper end of the range the limit is less clearly defined. Most tutors for the instrument give fingerings to *c''''* and some virtuosos are prepared to perform a 3rd or more higher, but many orchestral players would prefer to see nothing above *g'''*.

The compass of the clarinet has long been commonly divided into four registers: chalumeau, throat, clarinet and extreme. The chalumeau register corresponds roughly to the range of the former CHALUMEAU, from the lowest note of the instrument to about *g'* (produced with all fingers and left thumb removed). The clarinet register, which mainly comprises the (overblown) 12ths above this series, from *b'* to *c'''*, has also been called the 'clarion' or 'clarino' register (Walther, discussing the clarinet in 1732, wrote that it 'sounded from afar rather like a trumpet'). The chalumeau and clarinet registers are separated by a region of slightly less interesting timbre, the throat register (also called 'break' or 'intermediate'). The chalumeau register is tonally the most distinctive, being characterized by a marked predominance of odd-numbered partials in the tone, which is often described as 'hollow'.

In the extreme (or acute) register the relationship between fingering and the note produced becomes progressively less obvious. From *c♯'''* to *f'''* the notes can be seen as 5th harmonics of corresponding fingerings from *a* to *c♯'* in the chalumeau; above this point a large range of possible fingerings becomes available, and the lips are as important as the fingers in achieving a particular note.

In the manufacture of clarinets the chief difficulty lies in the maintenance of precise 12ths between the chalumeau and clarinet registers. The width of these 12ths is controlled mainly by the cones at the top and bottom of the bore. Intonation within each register may be refined by subtle alterations to the tone-hole size, and by undercutting or 'fraising' the tone holes.

At the bottom of the bore there is a transition from a cylinder to the widely flaring cone of the bell. In early clarinets, and almost to the end of the 18th century, the transition was rather sharp and was situated below the lowest tone hole. By the first quarter of the 19th century makers, especially in France, were controlling intonation by making a conical section as far up as the fourth hole above the bell, using different reamers to produce the desired effect. There is still appreciable variation in the length and extremity of this cone among instruments of different manufacture.

At the top of the clarinet, the shape of the mouthpiece bore, the barrel and the top few centimetres of the body can all be used to control intonation. In the earliest clarinets there appears to be a slight contraction in the upper part of the bore leading to the mouthpiece (this in instruments where mouthpiece and barrel are not separate entities). Such late 18th-century instruments as survive in good condition seem to be purely cylindrical right to the mouthpiece tone chamber. By the beginning of the 19th century there were several different traditions for coping with difficulties in this region. In Dresden, for example Grenser apparently evolved the rather short barrel with a bore over a millimetre wider than that of the body of the instrument, and with a fairly sharp gradation in the top tenon of the body. French instruments (with a much longer barrel) seem to have had a rather less extreme variation in the region, while in England (where the mouthpiece carried a very long tenon) the bore seems to have remained cylindrical, as in the earlier clarinets. The mouthpieces and barrels of extant early clarinets are so often missing or damaged that it is difficult to make confident statements about the evolution of this part of the bore.

4. ORGANOLOGICAL HISTORY.

(i) Early history. The invention of the clarinet, about the beginning of the 18th century, is usually ascribed to Johann Christoph Denner of Nuremberg, an excellent woodwind maker whose fame would be assured even without the invention of the clarinet to his credit. The details of its early history have been confused through widespread uncertainty as to what exactly constitutes a clarinet, as distinct from a chalumeau, in the interval when the two instruments co-existed. However, the musical difference between the two seems quite clear. The clarinet was designed to operate in the clarinet register (and later, above it); it was rather unsatisfactory in the chalumeau register. The chalumeau, on the other hand, was designed to have a good chalumeau register and to rise to the clarinet register scarcely if at all. Whether composers actually used the names consistently in this sense is a question on which there is considerable room for speculation. However, it is clear that the single innovation which would constitute 'inventing' the clarinet is the devising of the 'speaker key', the key operated by the left thumb, which opens a small hole some way up the bore, causing the instrument to sound easily the 12ths of the notes in the chalumeau register. Who invented this is not known for certain. The well-known instrument by J.C. Denner in Munich (Bayerisches Nationalmuseum 136.Mu.K20; fig.4*a*) is not a clarinet but a chalumeau. The status of an incomplete three-key instrument bearing his mark at the University of California, Berkeley is uncertain. Three clarinets by his son, Jacob Denner, are known to be extant. The earliest known Nuremberg records of the clarinet date from 1710 when Jacob Denner made a quotation which included prices for both clarinets and chalumeaux in a total of 23 woodwind.

Of the three clarinets by Jacob Denner mentioned (Staatliche Hochschule für Musik und Darstellende Kunst, Berlin; Brussels Conservatory; Germanisches Nationalmuseum, Nuremberg, fig.4*b*), all have two keys; two are pitched in C and one is in D. Two more in D have been missing from Nuremberg since World War II. Denner clarinets are characterized by a large bore – about that of a modern B♭ clarinet – and as wide a mouthpiece. Later in the century instruments of D pitch were built with a smaller bore, favouring the higher part of the range, and with a very much narrower mouthpiece, for example the

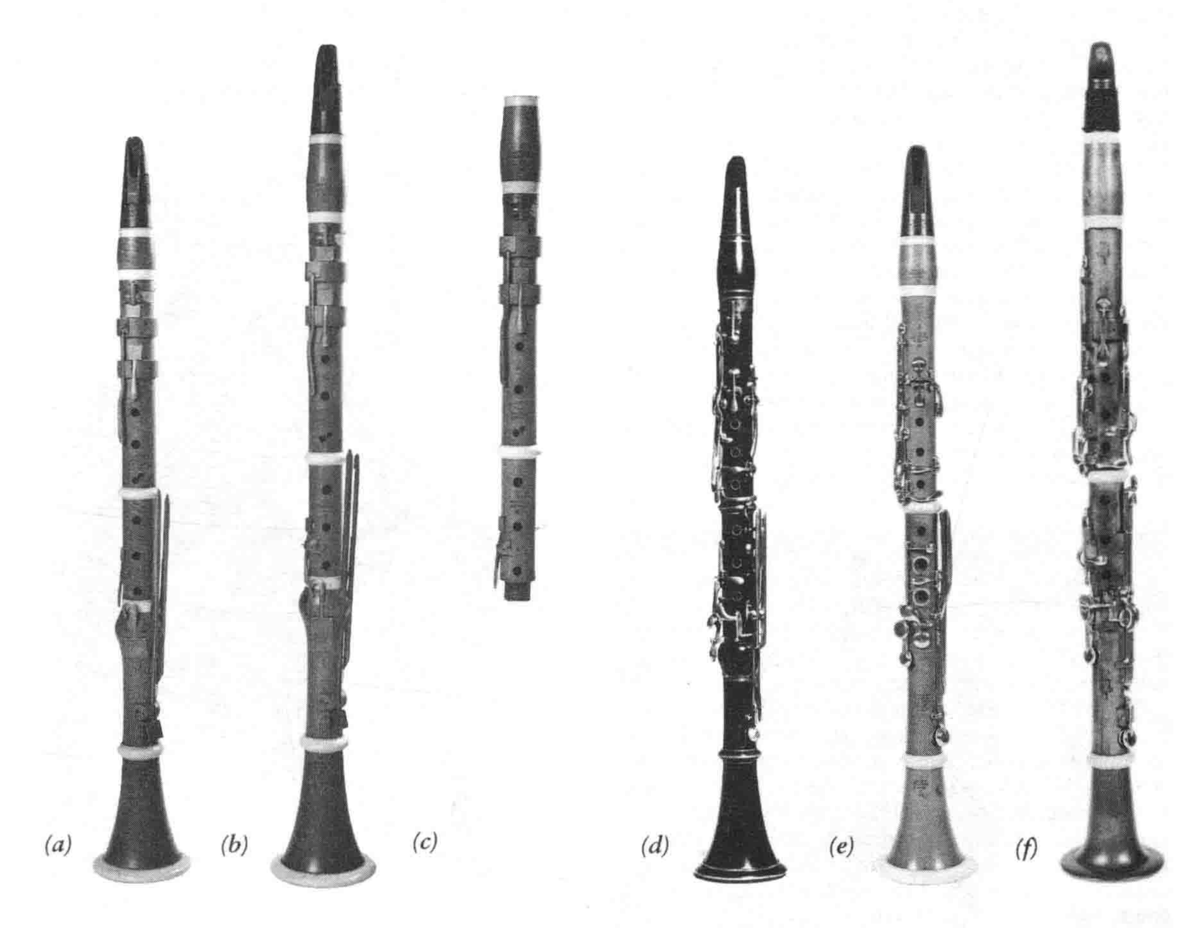
Baur, Vienna, c1760; (e) with four keys, in A, by G.-A. Rottenburgh (ii), Brussels, c1760; (f) with five keys, in C, by John Hale, London, c1785 ((a) Bayerisches Nationalmuseum, Munich; (b)–(d) Germanisches Nationalmuseum, Nuremberg; (e), (f) private collection)

instrument by Zencker (fig.4*c*). The attribution of any improvements to the clarinet during the 18th century to particular individuals is unsubstantiated, and the extant, good instruments from this period are at present poorly documented.

The bottom note of the two-key instrument was *f*. If the hole for the right fourth finger on the foot joint was doubled, opening one of the holes would yield an *f*♯, from which point an ascending chromatic sequence of acceptable quality might have been obtainable, with the assistance of liberal 'lipping', to *g*′ (all fingers off). Opening the front key would give *a*′, and opening the rear in addition *b*♭′ or *b*♮′. A key for *g*♯′ was added only at the beginning of the 19th century, but early tutors refer to the speaker key as the *g*♯′ key; opening the speaker key alone could produce a *g*♯′, though it is not known from when this practice dates. The early fingering chart by Majer (B1732) gives no *g*♯′, but the chart is somewhat curious and may well be unreliable, at least as far as expert clarinet playing is concerned.

From *c*″ onwards, a chromatic sequence (rather better in tune) would be obtained by repeating the same series of fingerings with the speaker key open. The concertos by J.M. Molter for D clarinet go up to *g*‴, and there is no particular difficulty in fingering the two-key clarinet that high. The *b*′ at the break is difficult: it could not have been satisfactorily obtained either by lipping down the *c*″ or by lipping up the *b*♭′. Molter, significantly, did not use that note.

The next technical development was the addition of an extended bell and a third, open-standing key which extended the range downwards a semitone and, more importantly, provided the missing *b*′ at the bottom of the clarinet register. Fig. 4*d* shows a fine three-key clarinet by R. Baur of Vienna. The third key was operated by the thumb of the lower hand. There are two alternative holes (not twinned) for the lower-hand fourth finger, so that the instrument was playable with right or left hand uppermost. The unwanted hole would have been filled with wax or with a peg. The bore is about 13·5 mm, and the instrument plays well to *g*‴. A pair of clarinettes d'amour in Vienna by the same maker, and of similar construction, testify to the next step in the clarinet's history. On these instruments an extra section has been added to the thumb-key by another maker or repairer so that, when the foot joint is turned around, the key is within reach of the left-hand fourth finger. The redundant hole is now at the rear, and may be permanently blocked.



A fourth key to provide *a*♭ and *e*♭″ was also added about the middle of the 18th century by some makers (fig.4*e*). A number of clarinettes d'amour had a 'fish tail' key for those notes, thus retaining the option of right or left hand uppermost (e.g. Nuremberg, Germanisches Nationalmuseum, MIR 761), but by this time the tradition of left hand uppermost was becoming established. A fifth

key, for *f♯* and *c♯''*, completed the clarinet in the form in which it first achieved widespread use in the last quarter of the 18th century. (In France the *f♯/c♯''* key was added earlier than the *a♭/e♭''* key.) Fig.4*f* shows such an instrument, with the type of keywork available to the average musician playing the clarinet in Classical symphonies etc. as well as in the popular wind bands of central Europe, and in military bands, where the clarinet became firmly established well before the end of the 18th century.

By this time the roots of the different characteristics of the clarinet in various parts of Europe can be discerned, although comparisons are hampered by the lack of dated specimens. It is only for developments in England that a detailed history of the instrument has been written for the last quarter of the 18th century; there, curiously, it appears that the five-key clarinet had entirely supplanted more primitive versions by 1770, whereas on the Continent even distinguished and innovating makers such as August Grenser were making four-key instruments later than this. The mouthpiece and barrel had still not been separated. In England the separation seems to have been introduced from about 1785 in order to provide a long tuning-slide; elsewhere, the separation may have occurred about the same time, but as only a short tenon was provided the motive is unclear.

Clarinets in C and B♭ are particularly abundant from this period. For orchestral use the almost universal custom, at least in continental Europe, was to use alternative top joints (*pièces de rechange*) for B♭ and A (fig. 5*a*). Where a B♮ instrument was needed an alternative joint would be added to the C clarinet, and (less commonly) alternative pieces were available to lower an E♭ clarinet to D. Although not an ideal procedure, it was a convenient compromise. The most expensive piece of the instrument is the lowest part, with thicker wood (for the bell) and three keys. The inconvenience of providing a clarinet in A is greatly mitigated if all that need be substituted are the two middle joints. (An English instrument by Astor in the Bate Collection, Oxford, with alternative pieces for C, B♭ and A, if genuine, can hardly have been acceptable with respect to intonation.)

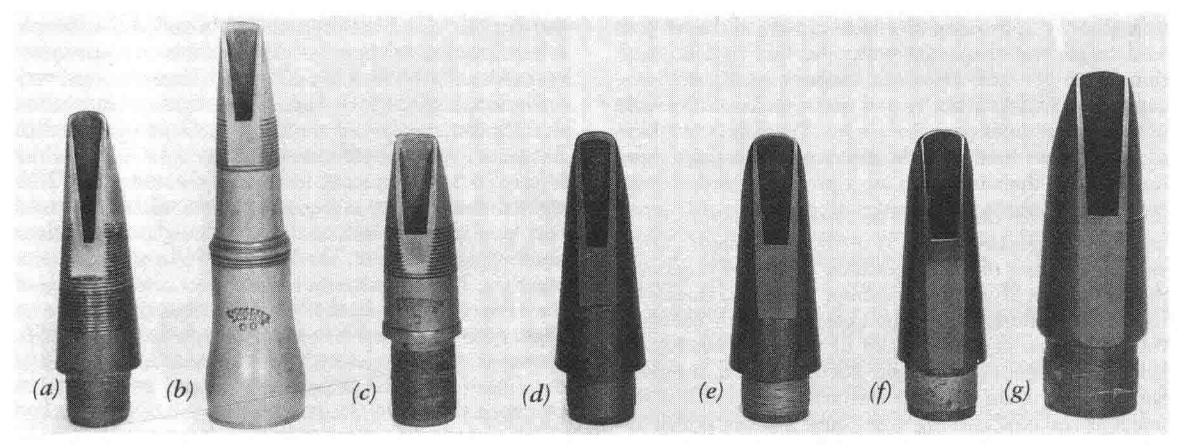
Instruments of this type are generally excellent in the clarinet register but possess serious weaknesses in the chalumeau register. The cross-fingered *c♯'* and *e♭'* are particularly unsatisfactory, although a skilled player with a good instrument could produce the whole chromatic range. Trills, though regarded as rather important and invariably enumerated in full in instrumental tutors of the 19th century, were available only on a few notes. In England, at least, the next key to be added to the instrument (just before 1790) was a trill key *a'/b'*, and

5. 19th-century clarinets: (a) with seven keys, in C and B♭ (and pièce de rechange for conversion to A), by J.F. Simiot, Lyons, patented 1808; (b) with 19 keys, in B♭ (pièce de rechange for A not shown), by J.F. Simiot, Lyons, 1827; (c) with 12 keys and two rings, in C, by Piatet et Benoit, Lyons, c1840; (d) with 15 keys, in A, by J.W. Horak, Prague, second half of the 19th century ((b) Rendall Collection, Edinburgh University Collection of Historic Musical Instruments; remainder private collection)

into the 19th century additional keys were widely regarded primarily as aids to trilling.

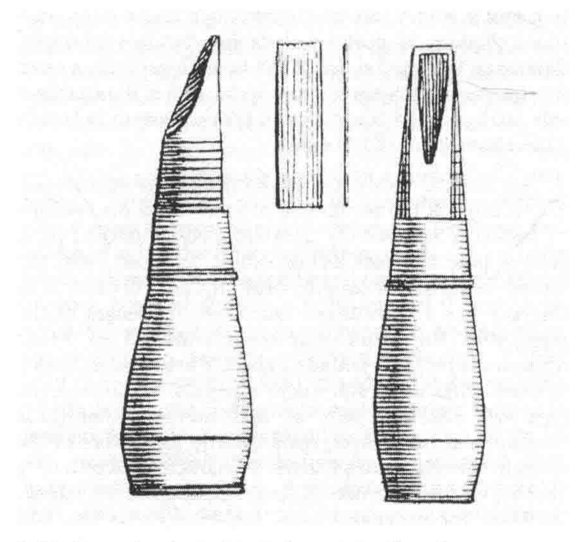
The English instruments of the late 18th century were probably tonally similar to continental instruments of two or more decades earlier. The Bohemian clarinet of Mozart's time had already evolved somewhat further than in other countries. From the mechanical point of view we find a sixth key was known to Jan Karel Rohn as early as 1768 when his *Nomenclator artifex, et mechanismus* was published in Prague. Thus the developments made by Stadler and Lotz may well have built on something somewhat more advanced than the five-key clarinet. From the tonal point of view, the rather larger tone holes in the Bohemian clarinets, especially at the lower end of the instrument, led to a fuller tone in the chalumeau register that was exploited more effectively by Mozart than by his predecessors.

Much significant innovation took place around the first decade of the 19th century, most noticeably the addition of more keys. In France, Xavier Lefèvre is credited with the invention, about 1790, of a sixth key, the cross *c*♯′/*g*♯″ for the left fourth finger. It seems highly probable that players elsewhere had added this key independently at about the same time or earlier; it required much less imagination than the bold downward extension of range conceived by Anton Stadler (*see* BASSET CLARINET). Simiot of Lyons is credited with the next innovations in France; fig.*5a* shows his 1808 model. With a 15 mm bore and relatively large tone holes, this instrument has an excellent tone throughout its range. Whereas much of the innovation at this time consisted merely in the random addition of poorly placed and mechanically inefficient keys, Simiot's improvements testify to a fine maker with a really inventive mind: an ingenious mechanism for opening a speaker-hole at the front of the instrument, where it is less susceptible to blockage by water; a brass tube in the left thumb-hole for the same purpose; a tuning-slide of thin brass between the barrel and the body; a mark indicating the position to which the bell should be drawn out when using the A *pièce de rechange*. The side key on the lower joint, giving a good *b* in the chalumeau register, and hence a good G major arpeggio, is a particularly important addition. The same maker was responsible for what is arguably the finest surviving clarinet from the first half of the 19th century, in the Rendall collection (fig.*5b*).



The most influential player at this time was Iwan Müller, who initiated developments first in Vienna and later in Paris. Müller's famous tutor (B1825, dedicated to George IV) illustrates a clarinet with 13 keys, two of which had extra levers to be operated by the right thumb. He had an enormous influence, and the 13-key instrument (later, with the ring-keys or *brille* added by Sax) became the standard instrument for most clarinettists until the early part of the 20th century. Müller's ideas were taken up in England, where Thomas Lindsay Willman also recommended two thumb-branches. These, however, are clumsy and difficult to operate; few instruments with them survive. Again it was Simiot who devised a practical key for the right (weight-bearing) thumb, a hinge that can be activated without taking weight off the thumb. Simiot's thumb-key had the added advantage of being operable in conjunction with a thumb-rest.

(ii) The mouthpiece and reed. Study of the development of the reed and mouthpiece is hampered by the surprisingly small number of good clarinets in public collections which possess a demonstrably, or even possibly, original mouthpiece. The most important development in playing technique since the 18th century has been the gradual transition from a style of playing with the reed on the upper lip to the present, almost universal, style of playing with the reed on the lower lip. If one is to judge from the positioning of the maker's stamp on the mouthpiece, by far the majority of instruments made during the first half of the 19th century were intended to be played reed uppermost. However, as there was no demonstrable change in mouthpiece design or even in the shape of the lay to accompany the change of playing style, it is impossible to say which instruments were actually used reed uppermost.

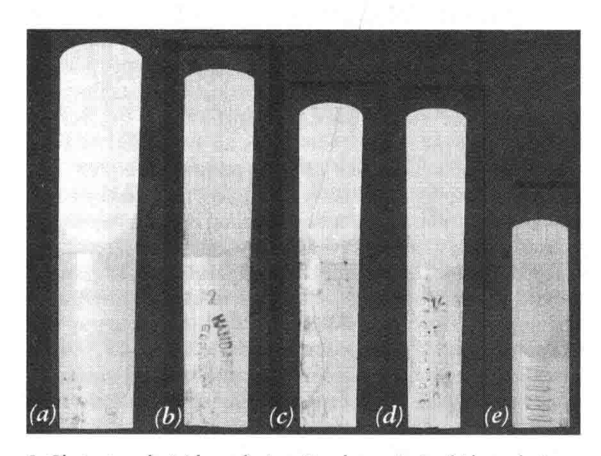


The earliest text to recommend that the reed should be placed on the lower lip is the little-known one by Berg (B1782). Müller's tutor makes a similar recommendation. J.G.H. Backofen (B2/1824) noted that about 50% of players at that time used each method. The Paris Conservatoire changed officially to reed-below in 1831. Willman, in England, retained the reed-uppermost style (fig.6) to the end of his life (1840) and it is likely that in England this remained the more common style through the first half of the century. Fig.7 compares typical mouthpieces from France, England and Germany at this time with the late 19th-century French/Belgian style which spread in association with the Albert and later the Boehm clarinets of Louis-August Buffet. The early mouthpieces had tapered profiles and rather narrow slots, and they carried narrow, rather short reeds. (Indeed, in England

6. Thomas Lindsay Willman: lithograph from his 'A Complete Instruction Book for the Clarinet' (London, 1825); note the lever for the right thumb, and that Willman played with the reed on his upper lip

7. *Clarinet mouthpieces: (a) by G.-A.-J. Rottenburg, Brussels, c1760 (slot was similar to fig.8, but has been modified); (b) by T. Collier, London, c1780 (mouthpiece integral with barrel); (c) by W. Milhouse, London, c1800 (long tenon found only on English clarinets of that time); (d) unnamed, German, c1820; (e) by Piatet et Benoit, Lyons, c1850 (typical German and French examples of the early 19th century); (f) by E.J. Albert, Brussels, c1900 (similar to the modern mouthpiece, with wide slot, narrow rails and tip, and curved lay); (g) by Wilhelm Heckel, Biebrich am Rhein, c1930 (for a bass clarinet); (a)–(d) and (g) designed for reed tied on with twine*

8. *Clarinet reed and mouthpiece (front view and profile): engraving from Diderot and D'Alembert's 'L'encyclopédie' (1751–65)*



particularly the length of table on which the reed could be tied was inconveniently short.) Accompanying the gradual widening of the slot, the tapering of the upper side towards the tip became less acute, and the upper side became more rounded in cross-section (fig.7*a* shows a typical wedge shape that disappeared before 1800). The Viennese mouthpiece, throughout the century, retained a narrower slot than did the English or French. (Fig.8 shows an 18th-century French mouthpiece.)

The metal screw ligature invented by Müller was introduced near the beginning of the 19th century, although most mouthpieces were styled for tying until about 1850 (in Germany the metal ligature is still unpopular). Even then, they were at first made with a step at the bottom of a short length of table, limiting the length of reed to about 5·5 cm, though soon afterwards the table was taken right down the length of the mouthpiece and longer reeds were used.

Mouthpieces in early clarinets were regarded as the top section of the instrument rather than as separate entities, and were made of the same wood as the rest of the instrument (box or fruitwood). As soon as the concept of a separate mouthpiece became established, makers started using more resistant materials so as to reduce the effect of moisture on the shape of the lay. Harder woods were tried, and some (for example Simon Hermstedt) made their lays of metal; other makers constructed mouthpieces of ivory, glass, metal etc. Ebonite was introduced only in the last quarter of the 19th century, and by the mid-20th century was almost universal. Today plastics are also widely used.

Little research has been done on the vital shape of the lay. Perhaps the only safe generalization to be made is that until well into the 20th century there was very little curvature on the lay at the tip end.

A few early reeds exist, distributed among various collections. Remarkably, a reed which may date from the time of the instrument's use survives with one Jacob Denner clarinet (see fig.4*b* above). To modern eyes it is extraordinarily wide (as is the mouthpiece) and thick; this is consistent with the earliest instructions for reed making, which show no tapering of the thickness of the reed towards the tip. Fig.9*e* shows a typical early 19th-century

9. *Clarinet reeds: (a) bass clarinet, Vandoren, Paris; (b) bass clarinet, German; (c) clarinet, Vandoren, Paris; (d) clarinet, German; (e) clarinet, English, c1840*

English reed, approximating more closely to the modern reed in general shape. Interestingly, this reed is much thinner at the heel than are modern reeds, with the consequence that the active part of the reed includes some of the harder outer part of the cane. Possibly it would as a result have been a little more water-resistant, and longer-lived, than a modern mass-produced reed.

(iii) The Boehm clarinet. The clarinet known today in the English-speaking world as the Boehm-system clarinet was the product of a collaboration (*c*1839–43) between the clarinettist Hyacinthe Eléonore Klosé and the maker L-A. Buffet . Buffet had some experience with Theobald Boehm's flutes and used some of the same mechanical principles in the new clarinet. Boehm himself, however, had nothing to do with the clarinet's design and it was not constructed according to the same acoustical ideals as the flute; in fact the inherent mechanical difficulties in making a satisfactory clarinet have largely dissuaded makers from attempting to mould the clarinet to an acoustical ideal.

The new clarinet was named *clarinette à anneaux mobiles* and it was the ring-keys (*brille*; as in the early Boehm flutes) that overcame the chief mechanical difficulties. About the same time (*c*1840), Adolphe Sax also used ring-keys to improve the clarinet. The difference between the two approaches was that Sax used rings to improve the Müller clarinet while retaining the same system of fingering, whereas Klosé used them to eliminate the limitation of cross-fingering altogether. On clarinets with Sax's rings, with the left-hand holes closed, closing the right-hand first finger-hole produced a good *b*♮, and the first and third together a good *b*♭. Klosé achieved a good *b*♭ with the first finger alone and a good *b*♮ with the second; analogous changes are made on the upper joint.

Buffet is credited with the introduction of the needle spring now used for all keys other than those with extremely short pivoting axles. Interestingly, virtually the only immediately detectable mechanical difference between his earliest instruments and those made today is an increase in the number of these needle springs (from four in the earliest example known to 11 in a typical modern instrument). Acoustically, the chief change has been a slight reduction in hole size. A few of the tone holes on the first Boehm clarinets were excessively large, perhaps through the influence of the Boehm flute in which large holes were regarded as an ideal.

The only modification of Klosé's clarinet that has wide currency is the so-called 'Full Boehm', which incorporates four improvements: a seventh ring, adding a cross-fingered *e*♭′/*b*♭″ to the range (this was introduced by Buffet-Crampon in the 1870s, based on an invention of Paul Goumas); an 'articulated' *c*♯′/*g*♯″, permitting a *b*/*c*♯′ and *f*♯″/*g*♯″ trill to be made perfectly; an *e*♭, required by some composers, and convenient in enabling A clarinet parts to be transposed at sight on the B♭ instrument; an alternative *a*♭/*e*♭″ lever for the left-hand fourth finger, slightly easing certain kinds of passage. The Full Boehm is noticeably heavier than the 'plain' Boehm but is nonetheless popular in some quarters, and especially in Italy. In the 1970s two modifications to the Boehm system attracted sufficient interest to have become available commercially: the Mazzeo system (see Mazzeo, D1980) and the McIntyre system. For several years after the appearance of the Klosé- or Boehm-system clarinets, makers continued to experiment with improvements to Müller's system, and instruments using that system (often called the 'Simple system') remained popular. Müller- system instruments manufactured by Eugène Albert of Brussels were very well made and allegedly had a better tone and intonation than Boehm models of the time. In Germany Heinrich Baermann encouraged development and Oscar Oehler improved the instrument further; at the end of the 20th century the majority of German players still used a model very similar to Oehler's final one, although modifications continued to be made. The Schmidt-Kolbe system instrument (fig.2*b*) represents one of the later developments of the Oehler system. In the late 20th century there was a slight revival of interest in the Oehler system in the USA. However, in countries such as Switzerland, Slovakia and the Czech Republic it had lost ground to the Boehm system, although in Germany it was still difficult to find employment with a Boehm-system clarinet. Although the Oehler system is undoubtedly less satisfactory for ease of fingering, and is not so well designed from an engineering point of view, it offers very significant advantages in terms of tone and intonation. Carl Baermann's treatise (B1864–75), the most comprehensive of the 19th century, is useful for this instrument although there have been some changes in practice since his day (for example, Baermann favoured sliding a left-hand finger on to a cross key on the instrument's upper joint, rather than using a side key). A good tutor for the Oehler system is Jettel's *Klarinettenschule* (B1949–50).

5. Acoustics, mode of operation and fingering. The clarinet is unique among modern wind instruments in behaving acoustically as a stopped cylindrical pipe. Such a pipe has two distinguishing features. First, the lowest frequency of sound vibration that will cause it to resonate has a wavelength four times the length of the pipe, with the result that the clarinet in its lower (chalumeau) register sounds an octave lower than do flute or oboe notes using equivalent pipe-lengths. Second, the pipe will resonate only at odd harmonics of these fundamental resonances; consequently the timbre of the notes in the chalumeau register is characterized by a near absence of even harmonics, and, because the resonances available for overblowing to higher registers are odd harmonics of the notes in the chalumeau register, a rather more complex fingering system than for other woodwind instruments is required, particularly to bridge the 12th instead of the usual octave at the first overblowing level.

Like other woodwind instruments, the clarinet operates as a coupled system, the coupling being between the resonating air column, whose resonant frequency is determined by the configuration of closed and open finger-holes, and the reed-lip complex. The latter also acts as a valve, admitting energy from the player's higher-pressure mouth cavity. In loud playing, the reed closes the end of the tube completely for part of each cycle of vibration, while in very quiet playing the tip of the reed oscillates almost sinusoidally without contacting the tip of the mouthpiece at all. In such a coupled system, energy must be fed in at the appropriate part of each cycle for the vibration in the tube to be sustained. For this to occur, the natural frequency of the reed-lip system must be higher than the frequency at which the whole system is vibrating. This means that, even if the correct fingering is selected for a very high note, the note can be produced only if the lips are able to control the reed so that its natural vibrating frequency is high enough: the player

achieves this control mainly by his or her ability to vary the position on the lay where the reed makes contact, thus varying the length of reed that is actually vibrating. The stiffness or strength of the reed selected by the player is also important, since it determines the restoring forces acting when a particular length of reed is in operation. The strength of the reed also determines the amount of muscular effort needed to keep it in a particular configuration. A soft reed may be less tiring to use, and may respond well in the lower part of the instrument's range, but there may be no position on the lay which enables it to produce the highest notes. (The acoustics of the clarinet, and especially the operation of the reed, have been discussed in some detail by Worman, C1971.)

As the (B♭) clarinet plays successive semitones from *f* (sounding *e♭* = 156) to *b♭′* (sounding *a♭′* = 415), the distance from the tip of the mouthpiece to the highest open hole is diminished from 54 to 16 cm. Free-air wavelengths for these frequencies extend from 221 to 83 cm at room temperature. The discrepancy between the air-column lengths, and one quarter of the corresponding free-air wavelengths, is due to several factors: the mouthpiece is not a continuation of the cylindrical bore of the instrument, neither is it completely closed; the tone hole defining the lower end of the resonating air column is rather small in relation to the bore of the tube; the bore as a whole is not smooth, but is punctuated at irregular intervals by the closed tone holes, each of which constitutes a bump in the bore with a slightly absorbent surface (the pad); and the air in the instrument is warmed above room temperature, and moistened, by the player's breath. Taking these factors into account, a satisfactory relationship between fingering and note produced may be evolved. For each fingering in this part of the range, the acoustic behaviour of the instrument may be understood by obtaining a resonance curve (see Backus, C1969, 2/1977, and ACOUSTICS, §IV). In addition to the resonance which determines the fundamental sounding frequency, well-marked resonances around its 3rd and 5th harmonics are present. When the instrument is sounded, these harmonics in particular, of the many generated by the reed, excite the air column to resonance and so are particularly prominent in the tone-colour of the clarinet. Although the 2nd and 4th harmonics are also generated they are scarcely perceptible since they do not coincide with any resonance in the air column.

The operation of the speaker key (or register key) may be understood as follows: when it is opened the lowest resonance is a broad, low resonance associated with the distance from the mouthpiece to the open speaker-key hole. Because this is a very small hole, with no venting from nearby holes, it is difficult or impossible to induce the air column to resonate at this frequency. The next resonance is a sharp one at the same frequency as the second resonance which was present before the speaker key was opened, that is to say at the 3rd harmonic of the note previously sounded (a 12th above). It is at this frequency that the air column resonates freely. When the instrument is sounding in this mode (the clarinet register), the disposition of higher resonances is not particularly important, and consequently the tone does not possess the same distinctive quality as that of the chalumeau register. Both odd and even partials are present.

Analysis of the fingering for higher notes is not particularly illuminating, although some of the fingerings may be easily comprehended in terms of 5th and higher harmonics of equivalents in the chalumeau register.

Although the predominance of odd harmonics in the chalumeau register tone is quite different from the tonal spectrum of any other instrument, it is hardly sufficient to explain all the characteristics of clarinet tone. Work by Benade and his colleagues has shown that the most important feature in determining the tone of the clarinet is the cut-off frequency. In a clarinet tube there is a marked drop in resonance at about 1500 cycles per second, the so-called cut-off frequency. That figure is determined primarily by the array of open holes which radiate the sound or, when all holes are closed, by the design of the bell. Although this observation does not have any immediate meaning for a non-physicist, it explains certain features of clarinet tone that could not be comprehended by simple analogies with stopped organ pipes. In particular it is easy to perceive that the pre-Boehm clarinet, with rather small tone holes spaced about 2 cm apart, should have very different characteristics from the Boehm instrument carrying tone holes every centimetre or so. The lesser tonal differences between the modern German-system clarinet and the Boehm can be explained on a similar basis. Both the tone of particular notes, and the intonation in moving between registers, are critically dependent on the exact relationship between the resonances. If the second prominent resonance is not exactly a 12th above the fundamental, the resonance will not be adequately excited by the relevant partial in the reed motion, resulting in a duller tone. Moreover when the lower resonance is shifted by opening the speaker key, the instrument will rise to a note in the clarinet register not exactly a 12th higher. The maker has two means of combatting such deficiencies. Deficiencies affecting only a single note can be tackled by adjusting the shape of the tone hole – most commonly by fraising, or undercutting, the hole. Deficiencies affecting several adjacent notes may be tackled by subtle adjustments to the bore. In most modern clarinets the bore widens out in the lower joint towards the bell, and in many there is also an expansion towards the mouthpiece. In both these regions skilled makers can exercise a substantial amount of control over the final characteristics of the clarinet (see Gibson, C1994). Many early clarinets have suffered a contraction at the tenons resulting from the effects of excessive pressure and moisture on the wood over long periods, and cannot function satisfactorily unless the bore is restored to its original dimensions.

6. MUSICAL HISTORY.

(i) The 18th century. The earliest mention of the clarinet by that name is in an order dated 1710 for a pair of clarinets (along with oboes, flutes and chalumeaux) from the maker Jacob Denner of Nuremberg. The earliest music written for the clarinet has been investigated by Rice (D1992). Two anonymous collections of airs for pairs of chalumeaux, trumpets, oboes, violins, flutes, clarinets or horns were advertised in Amsterdam between 1712 and 1715. Vivaldi may have used the B♭ clarinet as early as 1716, in *Juditha triumphans*, although other interpretations are possible for the 'clareni' specified. Certainly he used the instrument somewhat later in the concertos p73/RV560, p74/RV559 and p84/RV556, writing genuine clarinet parts ranging from *g* to *c‴*, suitable for the two-key C clarinet (the note *b′* does not appear).

In the 1740s J.M. Molter composed six concertos for the D clarinet which exploited the clarinet and acute registers fully, extending to g‴ and scarcely exploring the chalumeau at all apart from passages where leaps between chalumeau and clarinet registers (such as Mozart and subsequent composers exploited so effectively) appear, perhaps for the first time. The narrowing of bore and mouthpiece exemplified by the contrast between instruments by Denner and Zencker (fig.4 above) must have contributed to the ease with which such a high-lying part could be played. Apart from the questionable 'clareni' mentioned above, all the established early clarinet parts are suitable for two-key instruments in C or D, consistent with surviving instruments. It is possible that the lower-pitched clarinets in B♭ and A that are standard today did not appear before about 1750.

In 1765 F.X. Pokorny composed an interesting pair of concertos, in E♭ for 'first clarinet' and in B♭ for 'second clarinet'. The 'second' player would have needed great expertise to produce satisfactory intonation in the chalumeau register; plainly the concerto in B♭ was composed for a specialist in this part of the instrument's range. It seems not unlikely that he would have had an instrument adjusted to provide good intonation in the chalumeau register as a primary desideratum.

Handel seems to have written at least twice for the clarinet. The Overture in D for two clarinets and horn is in the Fitzwilliam Museum, Cambridge (if a complete piece, this may have been written for 'Mr Charles, his wife and son', as suggested by Weston, D1971); he also used two chalumeaux in the opera *Riccardo Primo* (1727), and a later copy (*c*1744–5) of the opera *Tamerlano* (1724) shows the original cornett parts replaced by clarinets.

The clarinet came into widespread use only after the middle of the 18th century, although there is sporadic evidence of its use earlier. 'Mr Charles' appeared in Dublin in 1742 and in London, Edinburgh and elsewhere during the next two decades. He was a performer on both the clarinet and the chalumeau (as well as on his first instrument, the horn, and on the oboe d'amore). It is likely that his influence led to the spread of the clarinet in England. Although the earliest known English instrument is dated 1770, there is evidence that clarinets were being made and advertised for sale from the 1750s; in the list of Samuel Shaw-Helier's instruments is a pair of clarinets by Caleb Gedney, Thomas Stanesby (ii)'s successor. Two English players (Mr Habgood and Mr Pearson) performed in 1758. Burney reported favourably on what he deemed the first appearance of clarinets in the opera orchestra, in J.C. Bach's *Orione* (1763); Arne had already used them in the English operas *Thomas and Sally* (1760) and *Artaxerxes* (1762).

In France, the instrument was used in Rameau's *Zoroastre* (1749) and *Acante et Céphise* (1751). Gossec favoured the clarinet and was particularly responsible for its spread. There are no known French clarinets from this period, however; I. Scherer, maker of two-key clarinets, worked not in Paris, as was once believed, but in Bützbach. The 'Lutherie' section of the *Encyclopédie* of Diderot and D'Alembert describes and illustrates the two-key clarinet of the 1760s, and it is only in the supplement (1776) that a more elaborate instrument, with four keys, is similarly treated, with the writer also mentioning a clarinettist's having recently passed through Berlin with a six-key instrument.

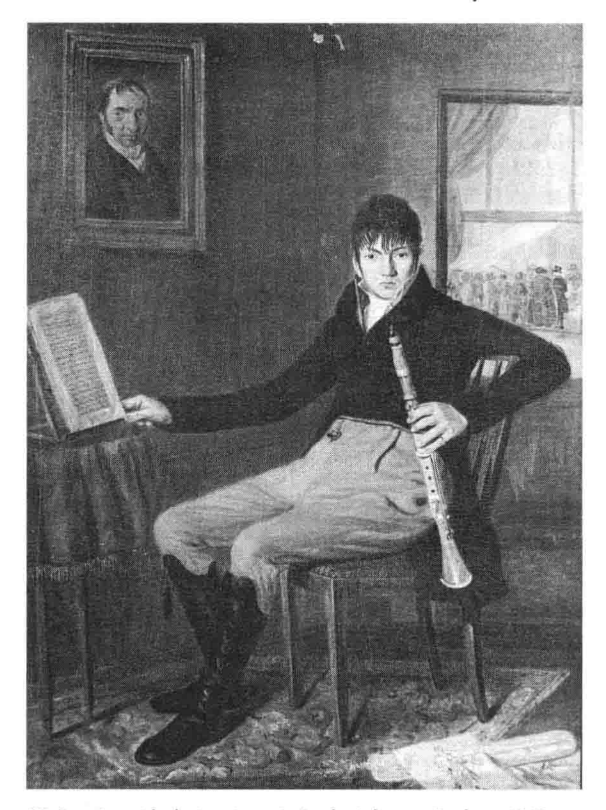
The Mannheim orchestra deserves much of the credit for popularizing the orchestral use of the clarinet. It seems that there were two clarinettists in the orchestra from 1758, but if the attribution of a clarinet concerto to Johann Stamitz, who died in 1757, is correct, there must have been good players even earlier. Christian Cannabich, C.J. Toeschi and Carl Stamitz made fairly extensive use of clarinets in their orchestral writing, although in the 1760s the instrument is usually specified only as an alternative to flute, oboe or both. By the 1780s it had become widespread, although there certainly remained orchestras lacking in clarinets; Mozart's famous remark in a letter to his father after visiting Mannheim (1778) underlines this: 'Alas, if only we also had clarinets'.

Soon after this Mozart did have clarinets, played by Anton Stadler and his brother Johann. However, he had become acquainted with the instrument as early as 1764 in London, through copying C.F. Abel's Symphony op.7 no.6. His own first use of the instrument is in the Divertimento K 113 (strings, two clarinets and two horns), composed in 1771 in Milan. Here the clarinet parts are very straightforward, as would suit orchestral players of the time, suggesting a five-key instrument. The divertimentos K166/159*d* and K186/159*b* of 1773 are a little more demanding.

Mozart did not use the clarinet in the full orchestra until the 1780s and then only sparingly. *Idomeneo* requires clarinets in A, B♭, B and C and from then on every opera (except the fragment *Lo sposo deluso*) makes extensive use of the instrument. The Kyrie K341/368*a* is the only piece of church music using clarinets (in A; the Requiem uses two basset-horns). Of the symphonies, only the Paris K297/300*a* and K543 were composed with clarinet parts though they were later added to the Haffner K385 and to K550. Only three of the piano concertos (K482, 488 and 491) require clarinets.

The pieces by which Mozart changed the course of the clarinet's history are those composed for Anton Stadler: the so-called 'Kegelstatt Trio' k498 (for clarinet, viola and piano), the Quintet K581 and the Concerto K622. Obbligato parts for Stadler on both clarinet and basset-horn also occur in *La clemenza di Tito* (K621). Apart from the trio, these clarinet parts were all intended for Stadler's basset clarinet. The original solo part in the concerto frequently descended to *c*, and there are good reasons to suppose that the clarinet part in the quintet did so too (a contemporary manuscript, *A-Wn* 39981, shows notes available only on the basset clarinet). The part for B♭ clarinet in *La clemenza di Tito* descends to *c*. The trio has a relatively straightforward part with virtually all the melodic writing in the clarinet register, and only occasional arpeggios in the chalumeau. However, the other pieces, as well as the serenades K375, K388/384*a* and K361/370*a*, and the Quintet K452 for piano and wind, were clearly written for a clarinet possessing a full and satisfactory chalumeau register. It is this aspect in particular of Mozart's writing for the clarinet (and Stadler's playing of it) that is so important: from then on the clarinet was expected to be equally beautiful and fluent over the whole of its wide range.

Apart from Mozart's compositions, the majority of the extant clarinet music from this period to about 1790 is in the wind ensemble repertory, music written for the



Harmoniemusik that was available to play at every large establishment in Europe. Many of these groups, prototypes of the military band in its developed form, contained clarinets from the 1750s, and indeed the clarinettists for many early orchestral performances were drawn from their ranks. In Prussia, Frederick the Great specified an octet of two each of clarinets, oboes, horns and bassoons in 1763, and at about the same time such a combination was established in France. In England the Royal Regiment of Artillery consisted in 1762 of eight men who were required (as is the modern military bandmaster) to be expert on a variety of instruments; the complement of instruments, provided by the regiment, included 'four hautbois or clarinets'. It would have been for such groups that the many wind octets, by Haydn, Rosetti (Rössler), Mysliveček, Krommer and innumerable others were written, as well as the more lasting pieces by Beethoven and the many occasional pieces for various combinations by Mozart.

Late 18th-century French composers often used the clarinet in chamber music for various combinations, and as a solo instrument in *symphonies concertantes*.

(ii) The 19th century. The most intense technical development of the clarinet came early in the 19th century. It coincided with the collaboration between Spohr and the clarinettist Hermstedt; with that between both Weber and Mendelssohn and the clarinettist Heinrich Baermann; and with the influences of Iwan Müller, T.L. Willman and the composer and player B.H. Crusell. Performance of Spohr's first concerto for clarinet was unthinkable without a clarinet with at least 13 keys, as Spohr explained in the introduction to the first edition in 1812. Spohr composed four clarinet concertos as well as several smaller pieces, all for Hermstedt. Weber composed his first clarinet concerto for Baermann in 1811, and later in the same year his second concerto. He wrote a number of other works for clarinet, including a quintet with strings (1815). Like Stadler with Mozart, these players drew from Weber and Spohr idiomatic writing exploiting the instrument's new possibilities.

In addition to those few who are immortalized through their influence on great composers, innumerable virtuoso clarinettists travelled through Europe: Kroll (D1965, Eng. trans., enlarged, 1968) lists over 50, with a large number of minor composers producing appropriate works for performance in varied circumstances in large and small towns. In addition to concertos (including double concertos such as that for two clarinets by Krommer), sets of variations and potpourris on popular operas were used to lighten the diet and give opportunity for additional virtuosity.

The clarinet was now a regular member of the orchestra, playing an important role in the wind section. Clarinets in C, B♭ and A were all frequently specified, the choice being determined primarily by the tonality of the piece. Although the virtuosos equipped themselves with instruments having additional keys, orchestral players probably played on five- or six-key clarinets for the symphonies of Beethoven and Schubert, and so preferred not to play in remote tonalities. However, the parts written now exploited the beauty of the clarinet as well as, or instead of, its brilliance. Whereas in Mannheim the clarinets had as often as not been silent in slow movements, now they stood an equal chance with the other woodwind when it came to a lyrical passage: a significant commentary on the instrument's development. Neat articulation, long elegant phrases, wide-ranging arpeggios and Alberti bass passages were required of them. Indeed the clarinet, together with the horns, became associated with a particularly romantic kind of expressive writing.

10. Interior with clarinettist: painting by Johannes Reekers, 1813 (Frans Halsmuseum, Haarlem)

Although the selection of an A, B♭ or C clarinet was made largely on the basis of key signature, it was about 1800 that the tone-colour of each instrument began to take on well-defined characteristics, and in particular that the tone of the C clarinet became rather distinct from that of the B♭. The warmth that the instrument now acquired, particularly but not exclusively in the chalumeau register, affected the C clarinet far less. To this extent, it is perhaps less valid to play C clarinet parts on the B♭ clarinet today than to play A clarinet parts on the B♭ instrument. The extent to which composers consciously exploited the distinction has not been seriously investigated, but a case in point is Schubert's use of a C clarinet in one movement of the Octet (1824), which cannot be justified solely in terms of key and must imply an intended change in timbre.

Until the time of Berlioz, higher-pitched clarinets than that in C did not reappear in the orchestra. The D clarinet had almost disappeared with the coming of clarinet specialists in the 1780s, although it had been the first instrument used both in the orchestra and in the military wind bands. By 1800 the expanded bands included clarinets in C and in high F; both Beethoven and Mendelssohn composed for the high F clarinet in their works for band, but not in orchestral music. Beethoven evidently imagined a highly competent player for the high F clarinet as the part rises to *a‴* and contains solo

passages. In the orchestra he does not extend the clarinet's range beyond *g'''*, and only rarely as high as that (as in the trio of the minuet in Symphony no.8).

In military bands clarinets in F and C were gradually replaced by those in E♭ and B♭ between about 1815 and 1825, so that when Berlioz turned his imagination to the clarinet group the high-pitched member he chose for the *Symphonie fantastique* (1830) was the E♭. In France, England and the USA the E♭ clarinet has since then been to a varying extent regarded as an available option to composers. East of France, clarinets in E♭ and D were specified with almost equal frequency; Strauss, Mahler, Stravinsky, Wagner and others expected the player to change from D to E♭ when his neighbour changed from A to B♭, plainly for convenience of key.

The situation with regard to the clarinet in C is also complicated by geographical factors. In England, few players seem to have retained C clarinets when the time came in the early 20th century to replace the old 'high-pitch' clarinets built to *a'* = 452 by a set built to *a'* = 440. Just about this time in Germany, Richard Strauss was exploiting the tonal difference between members of the clarinet family more meticulously than had anyone before; he used the C clarinet as a distinct sound to be contrasted with, alternately, the E♭ or D clarinets a little higher in pitch, and with the A or B♭ clarinets a little lower. Smetana and Dvořák are among the other composers whose use of the C clarinet is directed towards a different timbre, while it is quite clear from an examination of Dvořák's work that he alternated the instruments in A and B♭ for key convenience only, regarding them as identical in timbre.

Relatively few composers followed Mozart's lead in writing chamber music for the clarinet, although it continued to be used in Harmoniemusik. Beethoven supplied a Trio op.11 for clarinet, cello and piano, and used the instrument effectively in his Quintet op.16 for piano and wind instruments as well as in other works. Brahms made two major contributions to the repertory in his Trio op.114 for clarinet, cello and piano and his Quintet op.115 for clarinet and strings.

Among the earliest compositions for clarinet and piano were sonatas by Vanhal, Franz Danzi, Hoffmeister and Xavier Lefèvre. The first well-known piece in this genre was Weber's Grand Duo Concertant of 1815–16. Later in the century, Schumann composed three Phantasiestücke (op.73) and Brahms two substantial sonatas (op.120). Early in the 20th century came Reger's three sonatas op.49 nos.1 and 2 and op.107, Saint-Saëns's Sonata op.167 and Debussy's *Première rhapsodie* for clarinet and piano or orchestra.

During the 19th century gypsy musicians abetted the diffusion of various forms of the Western clarinet throughout eastern Europe, the Balkans and the Middle East. In Turkey, for example, E♭, B♭ and A clarinets were introduced into the palace band of Mahmud II (1808–39) and the low G instrument was particularly favoured for Turkish tunes (see Picken, E1975, p.511). The military band and the jazz band have since continued to carry the clarinet throughout the non-Western world.

(iii) The 20th century. As with other wind instruments, technical demands on the player increased considerably in the 20th century, first in orchestral parts, then in concertos and other solo and chamber works. The talents of specific players continued to encourage composers to extend the technique of the instrument. Notable in this connection are the clarinettists Aage Oxenvad (for whom Nielsen wrote his concerto), Benny Goodman (Bartók's *Contrasts* and concertos by Hindemith and Copland), Frederick Thurston (Bliss's quintet and various English concertos), Gervase de Peyer (Musgrave's concerto) and Alan Hacker (Peter Maxwell Davies's *Hymnos*). Some outstanding 20th-century chamber works, such as Schoenberg's *Pierrot lunaire* and Stravinsky's *The Soldier's Tale*, exploit the instrument's versatility and distinctive sound.

The B♭ clarinet once played a primary role in ragtime and jazz ensembles, although its significance waned greatly after about 1945, except in so-called traditional or Dixieland jazz. It is generally played with a wide vibrato and with distinctive glissandos and portamentos. The virtuoso achievements of early jazz clarinettists were considerable: Sidney Bechet drew high praise from Ansermet, and Benny Goodman, as mentioned above, was sought out by several composers. Other important jazz clarinettists include Jimmie Noone, PeeWee Russell, Artie Shaw, Barney Bigard, Woody Herman and Jimmy Giuffre. Extended 20th-century compositions using the clarinet in imitation of jazz include Gershwin's *Rhapsody in Blue*, Stravinsky's *Ebony Concerto* and Bernstein's *Prelude, Fugue and Riffs*. Music by such composers as Holst and Persichetti for the military or symphonic band (in which there are more clarinets than any other instrument) is also worthy of mention.

New attitudes to wind writing in general and the clarinet in particular were fostered by an increasing interest in sounds outside the instrument's normal spectrum and upward range. Flutter-tonguing (e.g. in Berg's Four Pieces op.5), glissandos (often used in jazz) and quarter-tones were used early in the trend, which came to include a full range of fingered microtones, many new variations of tone-colour (both of these using aspects of cross-fingering), and a hitherto unused phenomenon, MULTIPHONICS (Bartolozzi, B1967, and Heiss, B1968–9, represent first attempts to catalogue and classify the new techniques). The pioneering in multiphonics was done by a number of players but particularly important was the contribution of the clarinettist Detalmo Corneti, working with Bartolozzi (using a clarinet extended to *e*♭). They exploited the fact that by employing certain complex fingerings, usually involving the opening of holes in the tube at unorthodox places, it is possible to produce a number of different sounds simultaneously. It is often essential for the player to adopt an unusual embouchure. The resulting 'chords' consist of a number of upper partials, some out of tune, in groupings that are normally only discovered empirically. Because of the difficulty of fingering and blowing these chords, and their inherent instability and unreliability, players have been somewhat reluctant to use them to any great extent, and most composers lack the necessary technical knowledge to specify them. However, players such as Alan Hacker have done much towards making such techniques an important part of modern clarinet playing.

Historical clarinets began to receive attention from performers in the early 1970s, somewhat later than other instruments: before this time the use of period instruments had been focussed on the Baroque and earlier periods. In 1970 Alan Hacker founded The Music Party in order to explore the use of early clarinets in chamber music. Both he and Hans Rudolf Stalder recorded the concerto by

Johann Stamitz using 18th-century clarinets, and since then many other players including Hans Deinzer, Eric Hoeprich, Colin Lawson, Charles Neidlich, Antony Pay and Keith Puddy have performed and recorded using 18th- and 19th-century clarinets. In 1990 Keith Puddy recorded Brahms's two sonatas on the clarinets oin which Mühlfeld had first performed them, and by the late 1990s clarinettists were enriching their range of sound by using instruments from the 1920s and 30s in a historically informed manner.

JANET K. PAGE (I, 1–4), K.A. GOURLAY/ROGER BLENCH (I, 5), NICHOLAS SHACKLETON (II)

Clarinette d'amour. A late 18th-century member of the clarinet family (*see* CLARINET, §II, 1; it is classified as an AEROPHONE). It was usually pitched in A♭, G or F, and was distinguished by a globular or pear-shaped bell with a narrow opening (*Liebesfuss*). A fair proportion of surviving examples appear to be originally three-key instruments that have been modernized by the addition of an extra key or two. Some later instruments with five or more keys also survive, but very few were made after about 1810.

The early instruments usually had a short, curved brass crook between the mouthpiece and the body of the instrument. They were straight-bodied in contrast to contemporary basset-horns, which were curved. The history of the lower-pitched clarinets is poorly known but there exist a number of three-key examples, some of which probably date back to 1760 or even earlier. On the basis of surviving specimens their history cannot be separated from that of the clarinets in B♭ and A that appeared at about the same time. On the other hand the lack of surviving specimens does not exclude the possibility that such larger instruments, either as chalumeaux or as clarinets, existed throughout the 18th century.

Clarinettes d'amour: (a) by F. Lehner, German, c1760 (Städtisches Museum, Brunswick); (b) South German, c1760 (Germanisches Nationalmuseum, Nuremberg)

Very little music is known that explicitly specifies the clarinette d'amour, and it may be more appropriate to regard the term as making a visual distinction (recognizing that lower-pitched clarinets were built with globular bells) rather than a functional one. Early sources also use the name *douce clarinet* or simply clarinet in G. In his treatise of 1764 Valentin Roeser states that clarinets in G are rare because one can play in that key using clarinets of other sizes; on the other hand he commends the sweet tone of the instrument, and it is probably on that account that instruments were purchased. The earliest documented use of the instrument is Gossec's *Missa pro defunctis*, first performed in 1760.

NICHOLAS SHACKLETON

Clarino [clairon, clarion etc.]. The high register of a trumpet; in its variant forms, the term also designates a kind of trumpet. During the 12th and 13th centuries 'clario', 'clarone' and 'clarasius' figure as instruments in glossaries, chronicles and similar writings, in some instances being equivalent to the 'tuba' (the long straight trumpet), but in others implying a different form. 'Claro' and 'clario' are derived from *clarus* (Lat.: 'clear', 'penetrating', 'loud', 'shrill'); 'clarasius' is also derived from

clarus, but the origin of the ending '-asius' is not certain. (Heyde's derivation from *classicum* has no philological support.) If a trumpet is made shorter and given a narrower bore, its tone will become clearer and more penetrating. Thus 'claro' etc. may have been shorter than the tuba, a hypothesis contradicted, however, in many sources. The precise meaning of these terms may never be understood completely.

From the medieval Latin *clario* and *claro*, the French form 'claron' was developed, and in the 14th century such forms as 'clairin', 'clarin', 'clerain', 'clerin', 'clairon' (with the diminutives 'claroncel', 'claronchiel' etc.) began to appear. 'Clairon' became the most common of these. Very often clairon and trompette (or the like) are mentioned in pairs, suggesting two distinct instrument forms. In 1468, for example, Margaret of York was greeted 'à son de trompes et de clarons'. Since pictorial sources from the same period show trumpets of different sizes, long and short, zigzag and straight, it is possible that the short forms were in fact the clairon etc., as they must have given the most penetrating and shrill sound. In 1606 Nicot wrote that the clairon formerly served as a treble to a group of trumpets and had a narrower bore, but it now meant the high notes on the trumpet (any trumpet). From 1822 the clairon was a conical-bore instrument in the French army, related to the flugelhorn but with a narrower mouthpipe; during the 1830s it was fitted with keys and somewhat later with valves, but it still exists as a natural instrument as well.

Terms like 'clarioune', 'claryon' and 'clarion' appeared after 1325 in England, these forms being derived from the French. Chaucer spoke in the *Knightes Tale* of 'Pypes, trompes, nakers, clariounes, That in the bataille blowen blody sounes'. In the *Squyr of Lowe Degre* he mentioned the 'claryon clere' – a shrill or clear, hence probably a short, trumpet. The records of the Goldsmiths' Company of London show that in 1391, 1420 and about 1510 the clarion was lighter than the trumpet (in a ratio of 7:10). In that case, the clarion was either shorter and narrower-bored or of a thinner metal than the trumpet, or a combination of both. Cotgrave (*Dictionarie of the French and English Tongues*, 1611/*R*) wrote that it was a small and straight trumpet with an acute sound, and Burney defined the clarion as an octave trumpet. (Other comparisons between clarion and trumpet – in a translation from Vegetius, *c*1420, and that of the historian Horman, 1529 – can be disregarded, as Baines pointed out, since they merely represent efforts to translate Latin into English.)

In Spain the instruments 'clarín' and 'clarón' (Catalan 'clarí' and 'claron') appeared around 1400. The terms were taken over from the French, and probably meant a short trumpet. In 1611 Covarrubias (*Tesoro de la lengua castellana o española*) wrote that clarín was a 'trompetilla' (little trumpet) playing the high part in trumpet ensembles. This is impossible, for as a small trumpet it could not play melodies but at best could only repeat the sounds of the other trumpets a 5th or an octave higher. However, he also stated that clarín could be interpreted as the high register of the trumpet. During the 16th century it should have meant both an instrument and a treble part on the ordinary trumpet (as in France). In Portugal 'clarim' has designated the trumpet, without any connotation of register, since the 17th century.

During the 16th century the term 'chiarina' (also 'chiarino') appeared in Italy as the name for a high and shrill trumpet or trumpet part. The word is derived from the French 'clarin' and 'clairon'. The high and clear trumpet part could also be called 'claretto' (from the French *claret*: 'clear'). According to Bendinelli's tutor for the trumpet (1614, based on material compiled in the 1580s and 90s) the term 'claretto' was old-fashioned towards 1600, and he designated the highest part in the trumpet ensemble with the term 'clarino' (also spelt 'chlarino'). This term was also used by Monteverdi in the Toccata to his *Orfeo* (published in 1609).

In Germany the instrument 'clareta' is met during the 15th century and the first half of the 16th. According to the woodcuts in Virdung (*Musica getutscht*, 1511/*R*) it should be a trumpet of a narrower bore than the field trumpet, a fact which should yield a more acute tone (cf Nicot above). 'Claret' (again derived from the French) could also mean a high, clear or shrill trumpet part, and was then called 'Claret-Stimme'. During the second half of the 16th century the Germans began to use the term 'clarin' for a high trumpet part, but 'claret' as a designation of a trumpet part existed into the 17th century. The first documented appearance of the term 'clarin' as a trumpet register is dated 2 April 1561, when a 'Clarin-Trumeter' played in Annaberg (now Annaberg-Buchholz), Saxony. Praetorius (2/1619) wrote that 'clarien' (or 'clarin') was the highest, or treble, part on the trumpet. In his setting of *In dulci jubilo* (1619) he referred to the two highest trumpet parts as first and second 'clarien' (in the register *c″–a″*).

'Clarin' appears to be a short form of 'clarino'; however, in 1600 an Italian composer, trumpeter and cornettist, Alessandro Orologio, who served in Germany and Austria, stated that 'clarin' was the German word for the highest trumpet part. This makes it difficult to believe that 'clarino' was a common term among Italian trumpeters around 1600. It seems more probable that German trumpeters had taken over the term from Spain when the German empire and Spain were united under Charles V. Italian trumpeters working in Germany then made 'clarín' into an Italian word by adding the ending '-o', possibly with 'chiarina' or 'chiarino' as a model.

The term 'clarino' never took root in Italy to designate high trumpet part(s); despite the example of Bendinelli and Monteverdi, later Italian composers did not use the term at all. (Some sonatas for two trumpets, in *I-MOe*, are labelled Clarino 1 and 2, but they are most probably of German origin.) The virtuoso Fantini did not use the word in his method of 1638: he wrote instead of the 'soprano' register. The Bologna school of composers (Cazzati, Gabrielli, Torelli and others), as well as Stradella, A. Scarlatti, Vivaldi etc., all used the term 'tromba'. It is true that various German theorists, beginning with Mattheson (*Das neu-eröffnete Orchestre*, 1713/*R*), stated that 'clarino' was an Italian alternative for 'tromba'. However, they may have meant it as a variant of 'chiarina', a shorter and shriller trumpet, since from before the middle of the 18th century (Vivaldi) clarino meant the clarinet in Italy; the term is still used today in the vernacular.

In England composers indicated parts for 'trumpet' or 'tromba', and in France for 'trompette', while in Spain the term 'clarín' designated the treble trumpet part(s) from the late 16th century to the early 19th. Thus it was only in Spain and in Germanic countries (as well as in Poland, the Netherlands and Scandinavia) that the terms

'clarin' and 'clarino' were used during the 17th, 18th and early 19th centuries to denote a treble trumpet part.

After the middle of the 17th century German composers gradually began to use the Italian form 'clarino'. In two-part trumpet writing, the parts were generally labelled Clarino 1 and 2, Clarino 1 ascending at first to *a″* or *c‴*, sometimes *d‴*, but in solo parts from about 1720 (especially in C major) to *e‴*, *f‴* and *g‴*, Clarino 2 ascending to *g″*, *a″* or even *c‴*. During the 16th and early 17th centuries the clarin(o) part did not descend below *c″*, but after 1650 composers more frequently wrote lower notes in the clarino parts, [*b′*,] *g′*, *e′*, *c′*, later even *g*. J.E. Altenburg (1795) thus defined the clarino part as a 'melody which is played for the most part in the octave above *c″* and is consequently high and clear'. That terminology continued up to the first decades of the 19th century; Albrechtsberger (*Gründliche Anweisung zur Composition*, 1790/*R*) advocated the nomenclature, and it was still used by Beethoven, Schubert and others. The third part was called 'principale' (for the designation of the lower parts *see* PRINCIPALE). Some composers, however, including J.S. Bach, simply called all the parts 'tromba'. In only two works did he write Clarino 1, 2 and Principale: in the parts to the Missa (Kyrie, Gloria) of the B minor Mass and at the beginning of the first chorus of Cantata no.205 (but at other places in that work he wrote 'trombe'). His copyists, however, labelled the trumpet parts 'Clarino 1, 2' and 'Principale' more frequently. Some composers and copyists called all parts 'clarino', even true principale parts.

Beginning with Wagner, composers began to prefer German for musical terms from about 1840, and thus wrote 'Trompete'. The vernacular was in fact already used by Telemann from the 1730s, a usage followed by C.P.E. Bach when he went to Hamburg in 1768, but it did not become common until after 1850.

The term 'clarin playing' (*Clarinblasen*) meant to play a melody on the trumpet in the register from *c″* and upwards, with a soft and melodious, singing tone, as distinct from 'principale playing' (*Principalblasen*), which meant to play with a powerful, blasting tone. Thus clarin playing was not necessarily synonymous with a high, florid, virtuoso part, only implying these characteristics. This is why Classical composers (Haydn, Mozart, Beethoven, Schubert and others) could label their trumpet parts Clarino 1 and 2. Haydn called the solo keyed trumpet part in his trumpet concerto 'Clarino solo' as it is a clarin part, and as there was no law decreeing that clarin playing could be done only on the natural trumpet. Thus Lachner called the two valved trumpet parts in his A♭ Andante for brass instruments (1833) Clarino 1 and 2.

The modern word 'Clarintrompete' to denote a natural trumpet was devised by H.L. Eichborn in 1881 and has since been repeated, in English as 'clarin trumpet' or 'clarino trumpet'. The coiled reconstruction of a late Baroque trumpet manufactured by Helmut Finke has similarly been misnamed 'clarino'. Since these terms were not in use during the period 1550–1830 to designate the natural trumpet in its folded form or in any other shape, but rather to denote a treble register or a treble part on the trumpet (or possibly a short, high-pitched natural trumpet), they should be treated with reserve, and the neutral term 'natural trumpet' preferred. High virtuoso horn parts from the late Baroque and Classical periods have also been called 'clarino horn' ('Clarinohorn', 'Clarinhorn') parts and the playing of them 'clarin playing' (*Clarinblasen* or even *Clarinohornblasen*). These incorrect terms are designations from the 20th century and for the same reason should be treated with caution.

Clarion (iii) (Ger.). *See under* ORGAN STOP.

Clark, (Thomas) Edward (*b* Newcastle upon Tyne, 10 May 1888; *d* London, 30 April 1962). English music administrator and conductor. He grew up in an environment that strongly encouraged music-making. After leaving school he toured the Continent, studying in Paris and meeting Debussy, Ravel and Roussel. In 1909 he moved to Berlin and took conducting lessons from Oskar Fried while working as a *Musical Times* correspondent. He met Schoenberg and Webern in October 1910 and studied with the former between 1911 and 1914, becoming a member of his circle. Clark's plans to remain in Germany were thwarted when war was declared; he was interned at Ruhleben camp near Berlin until 1917. Returning to England, he found conducting opportunities, assisting Ansermet and Boult with the Ballets Russes London seasons. In 1921 he conducted his own series of orchestral concerts in London, exploring new music by British and continental composers. These projects were financially unsuccessful, and in August 1924 he joined the BBC, soon becoming Musical Director of the Newcastle station. His imaginative ideas transformed music broadcasting in the region.

In January 1927 Clark transferred to London, where he became a programme builder and conducted studio broadcasts. Due to his unusual interests and wide-ranging

European contacts, he distinctively shaped BBC music programming in the interwar years. In particular, the BBC Concerts of Contemporary Music, aired from 1926 to 1939, brought to British listeners the latest works by Stravinsky, Bartók, Hindemith and the Second Viennese School, as well as English composers such as Vaughan Williams, Bridge and Van Dieren, often performed by the composers themselves or their advocates. Clark contributed to the ingenious structuring of the new BBC SO in 1929. He also served on the committee recommending British works to the ISCM international jury, and was the music director of the Arts Theatre Club in London. In 1936 his integrity was questioned concerning the use of BBC funds during a business trip. Infuriated in his turn by alterations to programmes he had devised for a BBC SO tour, he resigned from the Music Department. Although he occasionally worked as a consultant programme builder, gave broadcast talks and conducted for the BBC subsequently, Clark never again worked for the corporation (or indeed anywhere else) full-time.

In 1942 he married the composer Elisabeth Lutyens. He continued to work as a freelance conductor and devoted himself to promoting new music, serving the ISCM as secretary and president (1936–52) and acting as chairman of the London Contemporary Music Centre (1947–52) and music adviser to the Institute for Contemporary Arts (from its inception in 1948). In 1955 he brought a slander suit against the composer Benjamin Frankel claiming that Frankel had falsely accused him of embezzling ISCM funds. The lack of administrative skills that plagued Clark throughout his professional life caused many to undervalue his contribution: his passion for new music, innovatory programming, and positions in leading new-music organizations, particularly the BBC during its formative years, had a profound impact on British music-making in the 20th century.

JENNIFER DOCTOR

Clark, Frederick Scotson (*b* London, 16 Nov 1840; *d* London, 5 July 1883). English organist, composer and teacher of Irish descent. His mother (a pupil of Chopin), Sergent (organist of Notre Dame, Paris) and E.J. Hopkins formed his remarkable powers of execution on both the piano and the organ (with which he represented his country at the 1878 Paris Exhibition), before a period of study with Sterndale, Bennett and Goss at the Royal Academy of Music instilled an equal ease in composition. Remaining in London as an organist, he published in 1858 a *Method for the Harmonium* and before taking up his appointment at Exeter College, Oxford, in 1865, he founded what was later to become the London Organ School. He gained the Oxford BMus in 1867, completed his training for the priesthood and, after a brief stay in Leipzig, was in charge of the Lutheran church in Stuttgart, returning to London in 1873. Of his over 500 piano, harmonium and organ pieces, the latter (including 48 voluntaries) are the most important.

ROBIN LANGLEY

Clark, Graham (Ronald) (*b* Littleborough, Lancs., 10 Nov 1941). English tenor. At first a sports teacher, he studied with Bruce Boyce, then in 1973 took small roles in *The Gambler* and *A Life for the Tsar* at Wexford. In 1975 he joined Scottish Opera, singing Brighella (*Ariadne auf Naxos*), Malcolm, Jaquino, Ernesto, Pedrillo, the Italian Singer (*Rosenkavalier*), Zorn and David (*Die Meistersinger*). He performed the title role in the British première of Ginastera's *Bomarzo* for the ENO (1976), followed by Rinuccio, Ramiro, Almaviva, Hoffmann, Rodolfo and, for Opera North, Count Ory. Realizing that conventionally romantic parts were not for him, Clark took roles at the ENO such as the Pretender (*Boris Godunov*), Hermann (*Queen of Spades*), Aleksey (*The Gambler*), Busoni's Mephistopheles, Don Juan (Dargomïzhsky's *The Stone Guest*) and Mr Brouček. He sang for 12 consecutive seasons at Bayreuth (1981–92), as David, the Young Sailor and Melot, Loge and Mime. Having made his Metropolitan début in 1985 as Števa (*Jenůfa*), he created Bégéarss in Corigliano's *The Ghosts of Versailles* in 1991; other Metropolitan roles include Herod, Captain Vere, which he also sang at Covent Garden (1995), and Albert Gregor. In 1991–2 he sang the Producer (Berio's *Un re in ascolto*) at Opéra-Bastille and the Painter (*Lulu*) and Captain (*Wozzeck*) at the Théâtre du Châtelet, Paris, and Basilio and Vašek in Chicago. A superb, athletic actor with a strong, penetrating voice and exceptionally clear diction, he excels particularly as Mime in *Siegfried*, which he sang at Covent Garden in 1995, and as Loge, and has made vivid recordings of both roles.

ELIZABETH FORBES

Clark, Jeremiah. *See* CLARKE, JEREMIAH (i) or (ii).

Clark, Petula (*b* Epsom, 15 Nov 1932). English pop and musical theatre singer. She achieved success as a child singer and actor in England, and by the late 1950s she had become equally well known in France where her bright contralto found favour in hit recordings such as *Romeo* and *My Friend the Sea*. Clark frequently recorded versions of songs in two or more different languages, including *Chariot*, which in English became *I Will Follow Him*, and *Sailor*, an adaptation with English lyrics by Norman Newell of the German song *Seemann*. In 1967 she made recordings of Charles Chaplin's *This is my Song*, the theme for his film *A Countess from Hong Kong*, in separate English, French, German and Italian versions. Between 1964 and 1967 she recorded a series of contemporary pop ballads written and orchestrated by Tony Hatch and Jackie Trent: *Downtown*, *I know a place*, *I couldn't live without your love* and *Don't sleep in the subway*. She was the subject of an essay by the pianist Glenn Gould who defined her voice as 'fiercely loyal to its one great octave, indulging none but the most circumspect slides and filigree . . .' ('The Search for Petula Clark', *The Glenn Gould Reader*, ed. T. Page, New York, 1984).

As an actress in dramas and musical comedy, Clark's principal roles were in the films *Finian's Rainbow* (1968) and *Goodbye Mr Chips* (1969) and on stage in the London revival of *The Sound of Music* (1981), the Broadway production of Willy Russell's musical *Blood*

Brothers (1993) and in the London production of *Sunset Boulevard* (1995).

DAVE LAING

Clark, Thomas (*b* Canterbury, bap. 5 Feb 1775; *d* Canterbury, 30 May 1859). English psalmodist and cordwainer. He was one of the most prolific nonconformist composers of the Gallery period, and was particularly influential as the compiler of early Sunday School collections. His music is full of vitality with strong rhythms and melodies, though rather conservative in harmonization. Repeating and fuging passages are common, and settings for country choirs include instrumental symphonies. Although he produced over 25 volumes of psalmody, he is remembered for one tune, 'Cranbrook', originally set to 'Grace 'tis a charming sound' in his first book of 1805, and now sung to the Yorkshire words 'On Ilkla Moor baht 'at'. A full account of his career is given in W. Harvey: *Thomas Clark of Canterbury* (Whitstable, 1983).

WORKS
(*selective list*)

all published in London

A Sett of Psalm and Hymn Tunes ... Composed in a Familiar Style (1805) [another 11 sets pubd; no copy of the 10th apparently survives]
A Set of Psalm Tunes with Symphonies and an Instrumental Bass Adapted for the Use of Parochial or Country Choirs (?1806) [another 8 sets pubd]
David's Harp: a Series of Original Tunes (1843)
Arrs.: The Union Tune Book (1837); The Union Harmonist (1841); The Seraphim, or Sacred Harmonist: a Collection of Original and Select Pieces (1843)

SALLY DRAGE

Clarke, (James) Hamilton (Siree) (*b* Birmingham, 25 Jan 1840; *d* Banstead, 9 July 1912). English conductor, organist and composer. After holding appointments in Ireland and at Queen's College, Oxford, he succeeded Sullivan at St Peter's, Cranley Gardens, in 1872. He then became conductor at several London theatres and provided incidental music for Henry Irving's Lyceum productions. He also toured with the D'Oyly Carte Opera Company and for a time was principal conductor of the Carl Rosa Opera Company. From 1889 to 1891 he took charge of the Victorian National Orchestra (Melbourne) and was made inspector of Australian army bands. On his return to England he resumed theatrical work until ill-health obliged him to retire prematurely. Clarke was a prolific composer of church music, organ solos, songs, operettas and orchestral works. An expert arranger, he scored some of Sullivan's overtures; he also published a useful *Manual of Orchestration* (London, 1888) as well as some fiction and music criticism.

E.D. MACKERNESS

Clarke, Henry Leland [Fairbanks, J.] (*b* Dover, NH, 9 March 1907; *d* 30 March 1992). American composer and scholar. His father was a Unitarian minister in Saco, Maine (1914–44), where Clarke studied the piano, organ and violin, and began composing. His studies at Harvard University (1924–9, 1931–2, 1944–7) included a course in composition with Gustav Holst and culminated in a dissertation on John Blow. He also studied in Paris with Boulanger (1929–31) and in New York and Bennington, Vermont, with Hans Weisse and Otto Luening (1932–8). He taught at Bennington College, Westminster Choir College, Vassar College, UCLA and the University of Washington, Seattle (1958–77), from which he retired as professor emeritus.

A distinctive treatment of scales is present in several of Clarke's works from the 1950s. *Monograph* for orchestra (1952) is restricted to the pitches C, D♯, E, F, G, A♭; *Six Characters* for piano, the Third Quartet and *A Game that Two can Play* adhere to various other restrictions. His essay 'Musical Scales *ad hoc* and *ad hominem*' (*Journal of Aesthetics and Art Criticism*, xviii (1959–60), 472–4) discusses the principle involved in these pieces and in a wide range of other styles, from folksong to Alexander Tcherepnin and John Verrall. More original and characteristic of his style is the technique that Clarke calls 'wordtones, that is, assigning a specific pitch in the melody to each word of the text and returning to that particular pitch every time the text returns to that particular word'. This was first used unsystematically in the Cummings song *When any Mortal* (1960), becoming fully developed in the opera *Lysistrata* and many shorter works such as the cycle *William Penn Fruits of Solitude*. In *Lysistrata* the wordtones help to underline the perennial elements of satire, farce, suspense, radical hope and complex heroism.

The function of calculated limitation in Clarke's compositions serves as a foil to the free harmonies and declamatory rhythms that openly present his political and religious concerns, and comment wryly on human character. He was a member of the COMPOSERS' COLLECTIVE OF NEW YORK and used the pseudonym 'J. Fairbanks' for songs written for the group. The wit and wisdom of his compositions and his essays (which appear in various journals and Festschriften) are as indigenous and independent as those of Charles Ives, though more urbane and concise.

WILLIAM W. AUSTIN

Clarke, Herbert (Lincoln) (*b* Woburn, MA, 12 Sept 1867; *d* Long Beach, CA, 30 Jan 1945). American cornet player and bandmaster. He was the best-known cornetist of his time, associated as a soloist with Sousa's Band (1893–1917, and making many recordings from 1899) and with Gilmore's Band (1892, and in its reorganized form under Victor Herbert, 1893–8). He played second trumpet (on cornet) with the New York PO during December 1898, and first trumpet (on trumpet) with the Metropolitan Opera during the beginning of the following season. From 1913 to 1915 he was cornet tester for the C.G. Conn Co. In 1916 he developed a medium-length Holton-Clarke model cornet with the Holton Co., with which he was formally associated in 1917–18. He was later a bandmaster, in Huntsville, Ontario (1918–23), and with the Long Beach (California) Municipal Band (1923–43).

Although Clarke was self-taught, he gained a considerable reputation as a teacher, beginning with the development of his own method of diaphragmatic breathing in 1906–7. Besides revising the Arban method, he issued *Technical Studies for the Cornet* (1912), based on breath control and finger–tongue coordination, which is still widely used.

EDWARD H. TARR

Clarke, Hugh Archibald (*b* Toronto, 15 Aug 1839; *d* Philadelphia, 16 Dec 1927). American conductor, educationist and composer. He was trained by his father, James Paton Clarke. In 1859 he went to Philadelphia, where he remained for the rest of his life, serving as organist of several churches in succession. He also conducted the Abt Male Chorus. In 1875 the University of Pennsylvania appointed him professor of music (one of the first in the USA), and he held that post until his death. He was awarded an honorary doctorate in 1886. His textbooks, especially *A System of Harmony*, were widely used for many years, although they had become outdated by the end of his life. He made several unsuccessful attempts to develop a music typewriter. His works include incidental music, choral works, piano pieces and songs. His daughter Helen Archibald Clarke (1860–1926), author, editor and founder of the periodical *Poet Lore*, was also an amateur composer.

BRUCE CARR/R

Clarke, James (*b* London, 15 Oct 1957). English composer. After studying at the University of Southampton, and City University, London, he was awarded a Finnish government scholarship to study composition in Helsinki with Meriläinen. In 1979 he founded an influential London-based new music group, Suoraan, but for much of his career his work has attracted most attention beyond the British Isles, including significant performances at the International Gaudeamus Music Week in the ISCM World Music Days. At the 1992 Darmstadt summer course he was awarded the Kranichsteiner Prize for composition.

From 1994 to 1997 he was composer-in-residence at Queen's University, Belfast, where, as artistic director of the Sonorities Festival of new music, his programmes were notable for their advocacy of recent music from the rest of Europe. Clarke's own work is often aurally abrasive, pushing instruments to timbral extremes; he argues that 'it is not the role of new art gently to massage the ears'. Dualities abound: ensembles split apart to form opposing fractions; forms often divide, the second part sometimes (as in *La violenza delle idee*, 1991) a fractured attempt to re-create the first, sometimes (as in *Independence*, 1988) a distillation of the first. Early works evolve from silence by a process of gradual accretion and assembly; in *Broken* (1988) and subsequent works the fundamental metaphor is that of *de*composition, the creative process leaving its trace on a body of possible material like acid biting into an etching plate.

CHRISTOPHER FOX

Clarke, James P(aton) (*b* ?Edinburgh, 1807 or 1808; *d* Toronto, 27 Aug 1877). Canadian composer and music teacher of Scottish birth. The identity of his father, a musician, is not clear; the Edinburgh organist William Clarke appears more likely than John Clarke-Whitfeld. Clarke studied singing with Domenico Crivelli and became an exponent of Logier's system of piano teaching. While a church musician in Glasgow he edited *Parochial Psalmody* (2/1831) and, with A. Thomson, *The Choir* (1835), and contributed songs to several publications. In 1835 he moved to Canada, and is said to have farmed at Elora (Upper Canada, now Ontario). He was an organist in Hamilton (1844–5), edited *Canadian Church Psalmody* (Toronto, 1845), then in 1845 went to Toronto where he became prominent as a teacher, composer, organist (at St James's Cathedral, 1848–9) and leader of musical societies. In 1846 he obtained the BMus from King's College (later the University of Toronto), the first such degree earned in Canada and probably in North America. In 1872 he was appointed conductor of the revived Philharmonic Society and retired after a performance of *Messiah* on 28 February 1873. Clarke contributed several songs to *The Anglo-American Magazine* (Toronto, 1852–3). His song cycle *Lays of the Maple Leaf* (Toronto, 1853) was the longest Canadian composition yet published; its deliberate simplicity and freshness are typical of Clarke's songs 'in the popular tone'. A versatile musician, he also invented an organ with glass tubes. His best-known pupil was his son, Hugh Archibald Clarke (1839–1927). 12 of his compositions are included in *The Canadian Musical Heritage*.

HELMUT KALLMANN

Clarke [Clark, Clerk], **Jeremiah (i)** (*b c*1674; *d* London, 1 Dec 1707). English composer and organist. He was a leading composer of the generation immediately junior to Purcell. Though mainly remembered as a writer for the church, he composed in several other genres besides; he wrote the so-called Trumpet Voluntary, his best-known piece.

1. Life. Nothing is known of Clarke's origins. E.H. Fellowes (*Organists and Masters of the Choristers of St George's Chapel in Windsor Castle*, London, 1940, p.50) noticed the inscription 'Iere: Clarke' crudely cut in the north arcade of St George's Chapel, Windsor, and drew attention to the fact that various persons named Clark or Clarke were members of the choir there in the 17th and 18th centuries. The date of this inscription, which Fellowes thought to be 1683, is by no means clear, however, and any deductions from it are speculative and problematic. The earliest known fact of Clarke's career is that he was a chorister of the Chapel Royal at the time of the coronation of James II in 1685. By April 1692 his voice had changed, for in that month the Lord Chamberlain's records refer to him as 'late child' of the Chapel Royal.

Clarke's first appointment was as organist of Winchester College. A note (*GB-Lbl* Add.30934) in the hand of William Croft refers to Clarke's *Come, come along for a dance and a song* as having been composed while he was organist there, and this identifies him as the 'Mr. Clarke' entered in the college 'Long Rolls' annually from 1692 to 1695. He had left Winchester by the time the next 'Long Roll' was compiled in 1696, and the next we know of him is that on 6 June 1699 he was formally appointed a vicar-choral of St Paul's Cathedral, London. His predecessor, Isaac Blackwell, had also functioned as organist, and it was evidently in this capacity that Clarke was given the keys to the organ loft there at least three months prior to his formal appointment. In November 1703 it was resolved to appoint him also almoner and Master of the Choristers in place of Blow, though he was not officially confirmed in that office until January 1704. There is obviously no truth in the statement (*Grove 1–5*) that he became organist of St Paul's in 1695, nor did he become Master of the Choristers in 1693 as stated by Hawkins. It is not impossible, however, that he assisted Blow, his former master, at St Paul's in the latter capacity after leaving Winchester College.

On 7 July 1700 Clarke and his former fellow pupil Croft were sworn in as Gentlemen-extraordinary of the Chapel Royal with a joint reversion of an organist's place, which fell vacant on 15 May 1704 by the death of Francis Pigott, whereupon Clarke and Croft were sworn in as joint organists. All the indications are that Clarke shot himself on 1 December 1707 while mentally deranged (the outcome, it was said, of an unhappy love affair). He was buried in the crypt of St Paul's six days later. There are gossipy references to his demise in Ned Ward's *The London Spy*; in *The London Terrae Filius* (v, 1708); and in two broadsheets, *A Sad and Dismal Account of the Sudden and Untimely Death of Mr. Jeremiah Clarke* (*GB-Lbl*) and *A Full and True Account of Mr. Jeremiah Clerk* (*US-SM*), both published within a week or so of the event.

2. Works. Clarke composed church music, odes, songs and incidental music for the theatre, and harpsichord pieces. Among his anthems are several celebrating significant events of the times: for example *Praise the Lord, O Jerusalem*, for the coronation of Queen Anne (1702); *I will love thee, O Lord my strength* (second setting), for the forcing of the French lines at Tirlemont in 1705, sung at St Paul's in the presence of the queen; and *The Lord is my strength*, on the victory at Ramillies (1706). His odes mark not only events at court but also a number of other interesting occasions. *Come, come along for a dance and a song* was written in memory of Henry Purcell and first performed at Drury Lane Theatre early in 1696. The work contains a good deal of finely expressive music, most notably perhaps that with which a shepherd interrupts the opening scene of rustic merrymaking with the news of Strephon's (i.e. Purcell's) death; and later there is also a strikingly original instrumental movement for trumpets and drums, recorders and strings entitled 'Mr. Purcell's Farewell'. His lavishly scored setting of part of Richard Crashaw's *A Song on the Glorious Assumption of the Blessed Virgin* (*Hark, she's called, the parting hour is come*), probably written a year or two earlier, has a blatantly Catholic text that is so curiously at odds with the political climate of the time that it is difficult to

imagine where and when it might have been performed. This piece and *Come, come along* both have trumpet parts which require notes normally reckoned to be unavailable on natural instruments of the period. *Now Albion, raise thy drooping head*, an ode 'on His Majesty's happy Deliverance', must obviously belong to the spring of 1696, when a Jacobite plot against the king was exposed and quickly suppressed. The following year, Clarke composed the first-ever setting of Dryden's ode on St Cecilia's day, *Alexander's Feast*, later set by Handel, but the music, alas, has not survived. Also dating from 1697 are *Tell the world* (in celebration of the Peace of Ryswick) and a 'new pastoral on the Peace', sung at York Buildings on 20 December, which may well be the ode *Pay your thanks*. *No more, great rulers of the sky*, an ode for 'ye Gentlemen of ye Island of Barbadoes and prform'd to them att Stationers Hall', would seem to commemorate the great storm that hit London and the southern countries of England on 27 November 1703 and did much damage.

On the title-page of *A Choice Collection of Ayres for the Harpsichord* (RISM 1700[10]) Clarke is described as 'Composer of the Musick used in the Theatre Royal [Drury Lane]', and he was very active in this world from about 1696, when he provided songs for plays by George Powell (*The Cornish Comedy*) and Motteux (*Love's a Jest*). His most substantial contribution in this area is the setting of 'The Four Seasons, or Love in Every Age', the concluding masque ('interlude') in Motteux's *The Island Princess*, a highly successful 'opera' written in collaboration with Richard Leveridge and Daniel Purcell and first performed at Drury Lane in February 1699.

According to Philip Hayes, whose father studied under William Hine (a pupil of Clarke's), Clarke 'was esteemed the most Elegant player of Church Music in the Kingdom' and 'his mind was naturally of a melancholy cast' (*GB-Lbl* Add.33235). If so, this is not reflected in his music, which in general is tuneful, pleasing and effective. He had a gift for melodious writing and for clean and direct instrumental music, which accounts for his success in the theatre and for the appeal of his harpsichord music. The tune of his song *The bonny grey-eyed morn* did duty in *The Beggar's Opera* for ''Tis woman that seduces all mankind'. At its best his church music has a slight and agreeable charm, but it strikes no deeper note; some of it is of little interest, and the tradition of the full anthem virtually passed him by. The anthem *How long wilt thou forget me*, substantially for treble solo, with a brief homophonic chorus at the end, shows him at his best: it is melodious, expressive of the text (if not with any depth), admirably written for the voices, and displays a quality which, if one compares it with Blow and Purcell, might almost be called *galant*.

His own harpsichord music, one small volume of which was published in 1711 under the supervision of his brother-in-law, Charles King (who succeeded him as almoner and Master of the Choristers at St Paul's), is so shapely and attractive as to cause one modern authority to describe him, in this area at any rate, as 'the most seriously under-rated *petit-maître* of his generation' (J. Caldwell: *English Keyboard Music before the Nineteenth Century*, Oxford, 1973, p.222). The 'Trumpet Voluntary', the tune by which Clarke seems destined to be forever remembered (and which has been played at countless 20th-century wedding ceremonies), owes its popularity to an arrangement for trumpet, organ and drums made by Sir Henry Wood and ascribed by him to Purcell. This is now known to have been a harpsichord piece entitled *The Prince of Denmark's March*, which Clarke contributed to *A Choice Collection of Ayres* (RISM 1700[10]). As it also survives in a suite of pieces for wind instruments by Clarke (*GB-Lbl* Add.30839 and 39565–7), it may even be that, unlike many similar harpsichord pieces written in imitation of the trumpet style, it actually began life as a piece for trumpet and wind ensemble.

WATKINS SHAW(text), CHRISTOPHER POWELL (work-list)/H. DIACK JOHNSTONE

Clarke [Clark], **Jeremiah (ii)** (*b* Worcester, *c*1743; *d* Bromsgrove, 11 May 1809). English composer and organist. His father was a lay clerk of Worcester Cathedral. His *Eight Songs with Instrumental Parts* was published from Worcester in 1763. Subsequently he moved to Birmingham, as organist of St Philip's church (1765–1803); he was also active there as a violinist and harpsichordist. He returned to Worcester, as cathedral organist, 1806–7. An obituary notice in *Berrow's Worcester Journal* indicates that he was a bachelor of music (probably of Oxford, 1799). His publications (all printed in London) consist of songs with orchestra, and sonatas for keyboard, two violins and cello. The strathspey reels attributed to him in *BUCEM* and RISM are in fact by one John Clark and two manuscript keyboard pieces ascribed to Jeremiah 'Clark' and 'Clarke' respectively (in *GB-Cfm* Mus.668) are unlikely to be his work; the former, in F major, is an expanded version of an anonymous 'Scots Ground' published in Bremner's *Harpsichord and Spinnet Miscellany* (Edinburgh, 1761).

WATKINS SHAW/GERALD GIFFORD

Clarke, John. *See* CLARKE-WHITFELD, JOHN.

Clarke, Kenny [Kenneth] **(Spearman)** [Klook; Klook-mop; Salaam, Liaquat Ali] (*b* Pittsburgh, 9 Jan 1914; *d* Montreuil-sous-Bois, nr Paris, 26 Jan 1985). American jazz drummer and bandleader. He played in Pittsburgh with fellow black jazz musician Roy Eldridge, in St Louis with the Jeter-Pillars Orchestra and in New York with Claude Hopkins. While a member of Teddy Hill's group (1939–40) he and his fellow sideman Dizzy Gillespie began to experiment with new rhythmic conceptions. In the early 1940s he was in the house band at Minton's Playhouse, Harlem, where his association with Gillespie, Thelonious Monk, Charlie Christian, Bud Powell and others in an extraordinary series of jam sessions led to the

development of the many innovative improvisational techniques that characterized the bop style. Clarke's nicknames Klook and Klook-mop were given to him because he observed the then novel practice of interjecting off-beat accents ('klook' and 'klook-mop') on the snare and bass drum against the steady pulse. Among Clarke's compositions are the well-known *Salt Peanuts* (written with Gillespie) and *Epistrophy* (with Monk; 1946, Swing).

After military service in Europe (1943–6), Clarke returned to the USA and recorded with Gillespie, Tadd Dameron, Fats Navarro and many others. In 1951 he became a founding member of the Milt Jackson Quartet, the forerunner of the Modern Jazz Quartet, and played with the group until 1955.

In the mid-1950s he also made numerous recordings with Miles Davis (including *Airegin*, on the album *Miles Davis Quintet*, 1954, Prst.). Clarke moved in 1956 to Paris, where he worked with several groups, notably Powell's trio (1959–62). From 1960 to 1973, with Francy Boland, he led the Clarke-Boland Octet and the Clarke-Boland Big Band. He played with Davis again on the soundtrack of the film *Ascenseur pour l'échafaud* (1957), appeared in *Les liaisons dangereuses* (1959), and wrote music for *On n'enterre pas dimanche* (1959) and *La rivière du hibou* (1961). Although he made occasional concert tours of the USA, he continued to perform, record and teach in Europe until his death.

Clarke was an innovator in shifting the steady 4/4 pulse from the bass drum to the ride cymbal, thereby allowing the use of the bass and snare drum for independent counter-rhythms in support of the improvising musicians. This resulted in a polyrhythmic background that complemented the asymmetrical phrasing of the soloists, an ideal that became standard for modern jazz drumming.

OLLY WILSON

Clarke [Friskin], **Rebecca (Thacher)** [Helferich] (*b* Harrow, nr London, 27 Aug 1886; *d* New York, 13 Oct 1979). English composer and viola player of German-American parentage.

1. Life. Born and raised in England, with a German mother and an American father, Clarke spent much of her adulthood in the United States and she claimed both English and American nationality. Her late-Victorian childhood and, in particular, her father's cruelty, are described in her memoir written in 1969–73. But it is also clear that her family was artistically inclined and her musical studies were encouraged. Clarke enrolled at the RAM in 1903, where she studied the violin. She was abruptly withdrawn from the institution in 1905, when her harmony teacher, Percy Miles, proposed marriage. In 1907 she began a composition course at the RCM, where she was Stanford's first female student. Again, she was unable to finish her studies, as her father suddenly banished her from the family home.

To support herself, Clarke embarked on an active performing career as a violist, and in 1912 she became one of the first female musicians in a fully professional (and formerly male) ensemble, when Henry Wood admitted her to the Queen's Hall orchestra. In 1916 she began a US residency that included extensive travel, concertizing and visits with her two brothers. With cellist May Mukle, she performed extensively in Hawaii in 1918–1919 and on a round-the-world tour of the British colonies in 1923.

During these years Clarke achieved fame as a composer with her Viola Sonata (1919) and Piano Trio (1921), both runners up in competitions that were part of the Berkshire (Mass.) Festival of Chamber Music, sponsored by the American patron Elizabeth Sprague Coolidge. Coolidge commissioned the Rhapsody for Cello and Piano in 1923, making Clarke the only woman composer the famous Maecenas supported.

Clarke settled in London in 1924, where she performed as a soloist and ensemble player with musicians including Myra Hess, Adila Fachiri, André Mangeot, Gordon Bryan, Adolphe Hallis, Guilhermina Suggia and Mukle. In 1927 the English Ensemble was formed, a piano quartet made up of Clarke, Marjorie Hayward, Kathleen Long and Mukle. Clarke also performed as a soloist and ensemble musician in BBC broadcasts, and made several recordings. The quantity of her compositional output decreased in the late 1920s and 30s, possibly because of the discouragement she faced as a composer.

With the onset of World War II, Clarke found herself in the USA, where she lived alternately with her two

Rebecca Clarke

brothers and their families. During this period she returned to composing. Her productivity ended, however, when she accepted a position as a nanny in 1942. In a note preserved in a scrapbook of the 1942 ISCM conference (Berkeley, CA), Clarke describes the Prelude, Allegro and Pastorale she had written for the festival, and also mentions her modest circumstances of employment. She was particularly proud that her work was included, as she was one of only three British composers represented and, as she and others noted, the only woman.

In the early 1940s Clarke became reacquainted with James Friskin, a member of the piano department at the Juilliard School, whom she had first known as a student at the RCM; the couple married in 1944. Her last compositional projects include *God Made a Tree* (1954), an arrangement of her song *Down by the Salley Gardens* and, around her 90th birthday, revisions of earlier scores, including *Cortège* and *The Tiger*.

2. WORKS. Clarke's earliest compositions anticipate her study at the RCM. Several songs are of the parlour variety, an idiom she later parodied in *The Aspidistra* (1929). Standing apart from these, *Shiv* (1904) and *Nach einem Regen* (?1906) are perfectly sculpted miniatures. Gervase Elwes made *Shy One* (?1912) part of his repertory. *June Twilight* (1925) and *The Seal Man* (1922) were dedicated to John Goss. *The Tiger* (1929–33), relentlessly revised during her romantic entanglement with him, is her darkest song; its swirling chromaticism borders on Expressionism. *The Seal Man*, one of her favourite compositions, demonstrates her interest in atmospheric effects within large-scale structures, and dramatic, declamatory vocal writing. Her setting of Psalm xci (1921), the weightiest of her choral works, features melodic use of augmented 2nds as well as unison singing.

Clarke's shorter solo pieces, written for herself or her friends to play, can be compared to similar works by Frank Bridge or Arnold Bax. *Morpheus* (1917–18), for example, develops a single melody through colouristic devices such as pentatonic glissandos on the piano and artificial harmonics on the violin. Her best known works, the Viola Sonata (1919) and the Piano Trio (1921), are powerful and expansive examples of post-Romantic sonata form influenced by the German tradition. The clarity of texture and Impressionist vocabulary of these pieces suggest comparisons with Franck and Debussy. One contemporary report implies that during the anonymous Coolidge competition, some judges mistakenly identified the Viola Sonata as written by Ravel, while *The Daily Telegraph* supposed 'Rebecca Clarke' to be a pseudonym for Ernest Bloch.

Later chamber works include two pieces for string quartet. Sections of *Comodo et amabile* (1924) feature a buoyant lilting melody that surrounds a constructivist interior made up of short motifs, polymetric rhythms, polytonal harmonies and taut contrapuntal writing. The intense *Poem* (1926) merges a single pervasive motif with the harmony and texture of Debussy, fusing French colour with German depth. The Prelude, Allegro and Pastorale for clarinet and viola (1941) explores a neo-classical idiom. With its driving momentum, the Allegro can be compared to Stravinsky. The poignant melody of the Pastorale is emphasized by a stark undulating accompaniment. The *Dumka* (?1941), with its unusual scoring for violin, viola and piano, was probably written for Clarke and family members to play. It not only employs the 3 + 2 rhythms used in Dvořák's trio of the same name, but also incorporates other gestures reminiscent of Eastern European folk music. Clarke was both familiar with Bartók's music and editing a book on Martinů at the time of its composition.

Much of Clarke's music was never published and remains the property of her estate. Her difficulties in publishing the Piano Trio, documented in her diaries, may have discouraged her from pursuing publication of later works. Although she has been identified as among the most important British composers of the interwar years, a complete understanding of her significance will only be reached when more of her music is available for study. The Viola Sonata has been recorded many times, and the Piano Trio and many songs are also available on recordings. The publication in 1998 and 1999 of three of her many heretofore unpublished works raise hope of wider availability of more of her work in the future.

LIANE CURTIS

Clarke, Robert (*b* Coney Weston, Suffolk, 1816; *d* New Moston, nr Manchester, 24 Aug 1882). English inventor of the PENNYWHISTLE and founder of the Clarke Tinwhistle Co. *See also* TIN WHISTLE.

Clarke, Stanley (M.) (*b* Philadelphia, 30 June 1951). American jazz fusion bass guitarist and bandleader. He first played the accordion, but quickly changed to the violin, then the cello and the double bass, before taking up the bass guitar, which he played in rhythm and blues and rock bands at school. In 1971 he played the double bass and the bass guitar with Pharoah Sanders and Joe Henderson. While touring and recording with Stan Getz the following year, he became a founder-member of Chick Corea's group Return to Forever; from this time he concentrated on playing the electric instrument, and recorded eight albums with the band, as well as his own disc, *School Days* (1976, Nemperor). After leaving in 1977, Clarke initiated several projects as a leader, playing with both jazz musicians and rock groups. His single *Sweet Baby* (1981, Epic), made with the keyboard player George Duke, reached the US top 20, and in 1983 he toured the USA with Return to Forever. In the late 1980s and early 90s he recorded two albums with Animal Logic, a rock group including the singer Deborah Holland and the drummer Stewart Copeland (of the Police), and in 1991 he toured around Europe in a jazz quartet with Herbie Hancock and Wayne Shorter. His principal activities continue to be in pop, rock and rap music, including numerous contributions to film and television soundtracks.

Clarke plays rapid, precise bass lines, and is well known for his slapping style which produces a stinging attack and a sound rich in treble frequencies that enlivens his syncopated phrases. In the early 1970s, a few years before the emergence of Jaco Pastorius, Clarke was the pioneering exponent of the bass guitar as a melodic instrument in jazz fusion styles.

CATHERINE COLLINS/R

Clarke, Stephen (*b* Durham, *c*1735; *d* Edinburgh, 6 Aug 1797). Scottish composer and organist. He was regarded as the best organist of his generation in Scotland. It is not known exactly when he settled in Edinburgh; he became organist at the New Episcopal Chapel, Cowgate, when it opened in 1771, and was resident continuo player at the Edinburgh Musical Society concerts from about the same time. He was also a folksong enthusiast, and is known to have collected a song from one Geikie, an Edinburgh barber, around 1775; and he undertook the harmonization of the first five volumes (1787–96) of *The Scots Musical Museum*, the famous folksong collection edited by Burns. Clarke became a close friend of Burns and corresponded with him on musical matters.

Clarke's compositions are competent but unimaginative. None was published until he was about 55, and then only for the educational market. Some ambiguous entries in the Edinburgh Musical Society programmes (*GB-Eu*), for example for 23 June 1769, may refer to performances of earlier, unpublished, and now lost harpsichord concertos. His *Museum* harmonizations are laudable in not forcing the tunes into inappropriate harmonic situations, but are sometimes plain to the point of dullness.

WORKS

DAVID JOHNSON

Clarke, William (*b* Edinburgh, *c*1775; *d* Edinburgh, 1820). Scottish composer and organist, son of STEPHEN CLARKE. He took over his father's post as organist at the New Episcopal Chapel, Cowgate, in Edinburgh, and completed the harmonizations for the sixth and last volume of *The Scots Musical Museum*. He was also an excellent keyboard player (described as 'a professor of the piano of much celebrity' in Sainsbury's *Dictionary* of 1824) and appeared at an early age playing piano solos in public.

William Clarke's compositions belong to a later generation than his father's: the best of them is probably the Violin and Piano Sonata in F, op.1 no.3 (1802), whose sonata-form first movement contains dramatic surprises intelligently imitated from Haydn. Clarke had inadequate training and his later works are disappointing; his organ

voluntaries contain several illiterate fugues, and the word-setting in his Scott songs is weak, although these are suitably expressive in mood.

WORKS

3 Sonatas, pf, vn, op.1 (London, 1802)
3 Easy Duets, pf, 4 hands, op.2 (Edinburgh, *c*1805)
Sonata, pf, vn, op.3 (Edinburgh, *c*1805)
12 Voluntaries, org/pf (Edinburgh, *c*1810)
3 Songs (W. Scott) (Edinburgh, *c*1810)
Clarke's Collection of Favourite Airs, pf (Edinburgh, *c*1815)
Other songs; pf arrangements, etc.

DAVID JOHNSON

Clarke-Whitfeld [Clarke], **John** (*b* Gloucester, 13 Dec 1770; *d* Holmer, nr Hereford, 22 Feb 1836). English organist and composer. He studied music at Oxford (against his family's wishes) under Philip Hayes. He was organist at Ludlow parish church, 1789, then at Armagh Cathedral, 1794, where his 'irresponsibility and extravagance' got him into bad odour with the authorities. Next he was Master of the Choristers at St Patrick's and Christ Church cathedrals, Dublin, 1798; organist of Trinity and St John's colleges, Cambridge, 1799; and organist of Hereford Cathedral, 1820. He was pensioned off by the Hereford chapter in 1833, having become incapacitated by paralysis. He took the BMus degree at Oxford (1793), honorary MusD at Dublin (1795) and MusD at Cambridge (1799, incorporated at Oxford, 1810). In 1821 he was appointed professor of music at Cambridge; he held that position until his death, though he was non-resident and inactive. Only one candidate, Edward Hodges, presented himself for a music degree during Clarke-Whitfeld's 15-year tenure. In 1814 on the death of his uncle, Henry F. Whitfeld, he assumed his mother's maiden name Whitfeld but he failed to benefit from the uncle's estate, 'owing to a Chancery Suit, and the unfeeling conduct of a relative', as he put it in a letter to Sir Walter Scott.

Clarke-Whitfeld was a solid and thoroughly trained church musician of a conservative type. He continued the 18th-century tradition of cathedral music into the 19th century, with a touch of Haydn's influence. He was progessive in one respect: he published much of the music he had composed or edited with fully written-out organ accompaniments, where figured basses had previously been usual. He was one of the most respected cathedral musicians of his generation, but none of his music has survived in common use today. His twin oratorios, *The Crucifixion* and *The Resurrection*, were among those that continued to preserve the Handelian manner. In his songs and glees he showed understanding of the romantic poets especially Scott and Byron, with whom he was acquainted. A few of his songs (such as *Here's the vow she falsely swore*, *One struggle more* and *What voice is this?*) rise well above the mediocrity of the contemporary English ballad. He did much useful editing of the oratorios and choral music of Handel, Purcell, Arne and many earlier English composers.

WORKS

5 Morning Services; 6 Communion Services, incl. 3 for S, S, B; 10 Evening Services; 27 anthems; 50 chants: most pubd in his Cathedral Music, i–iv (London, 1800–37)
The Crucifixion, perf. Hereford, 1822; The Resurrection, perf. Hereford, 1825
Over 50 songs, 3 ed. in MB, xliii (1979); 66 glees

EDITIONS

Fifteen Favorite Anthems, i–ii (London, 1805)
The Vocal Works of ... Handel, arr. org/pf, i–vi (London, 1805–8)
A Selection of Single & Double Chants, i–ii (London, 1810)

NICHOLAS TEMPERLEY

Claro (Valdés), Samuel (*b* Santiago de Chile, 31 July 1934; *d* Santiago, 10 Oct 1994). Chilean musicologist. He studied composition and musicology at the University of Chile under Alfonso Letelier and Juan Orrego-Salas (taking the licentiate in 1960 with *Acústica y sonido musical*), and privately under Lucila Césped; he also studied musicology under Lang, Edward Lippman and Ernest Sanders at Columbia University (MA 1964), and composition and electro-acoustic music under Beeson, Luening and Ussachevsky. Subsequently he was professor of musicology at the University of Chile (1964–82), where he was also secretary of the music faculty and editor of *Revista musical chilena* (1964–8, 1981). At the University of Chile he directed the Institute of Musical Research (1968–70) and was dean of the faculty of music and performing arts (1973–6). In the 1980s he transferred his instructional and research activities to the Catholic University of Chile where he remained until the end of his life. He was vice-rector there (1985–90). He was a member of the Chilean Academy of History and a corresponding member of the Spanish Royal Academy of History. His main areas of research were Hispanic-American colonial music and Chilean 19th- and 20th-century music. He catalogued, transcribed and published valuable primary sources from various South American archives, and was awarded a Guggenheim Foundation Fellowship (1975–6) to study the role of music in 16th- and 17th-century Latin American society. He also discussed in several publications the necessity to conceptualize Latin American historical musicology as an inter-disciplinary field of study. Late in life he gave convincing evidence of this integrative view of musicology with the publication of his book (1994) on the *cueca*, the foremost national dance and music. Claro's career in his multiple activities contributed substantially to the development of musicology in Chile.

GERARD BÉHAGUE

Claron (Sp.). *See under* ORGAN STOP.

Clarone (It.). *See* BASS CLARINET.

Clàrsach. Scottish Gaelic term for the Celtic harp, cognate with the Irish CLÁIRSEACH (*see also* HARP, §V, 2 and IRISH HARP (i)). Variant forms include *clarseach*, *clarsech* and *clarseth*.

The term 'clàrsach' appears to derive from *clàr* (a board or plank, presumably referring to the soundboard). The modern instrument stands about one metre high. The resonator was traditionally cut from solid wood: hornbeam, sycamore or willow. The neck, joining the soundboard to the forepillar, is curved rather than upright. The strings, formerly made of brass and played with the nails, are now made of gut and played with the flesh of the thumb and the first three fingers. The range is from *E♭* to *g‴* and the instrument is tuned to the scale of E♭ major. It has a blade mechanism for pitch alteration which operates on each string singly.

The instrument stands on the floor or on a small wooden support; the player sits on a low stool. Unlike the Irish *cláirseach*, which was supported on the player's left shoulder, the Scottish *clàrsach* is supported on the right shoulder. Historic examples of the instrument are the 'Lamont' and 'Queen Mary' harps in the Scottish National Museum of Antiquities, Edinburgh; both probably date from the 15th century. Scottish history recounts the prowess of many harpers, including the early 15th-century poet-king James I, but the only one about whom much is known is Roderick Morison (1656–1713/14), a blind harper who studied the instrument in Ireland and was employed at Dunvegan Castle, Skye. Some extant melodies are speculatively associated with him. It is clear that the harper traditionally accompanied bardic poetry even if some of the surviving airs appear to have been purely instrumental. During the 18th century harp playing died out in Scotland but was revived towards the end of the 19th; the first instruments used in the Clàrsach Competition (founded in 1892 in the Scots Gaelic Mod) were made in England.

In the 1930s the 'highland hump' (or harmonic curve) was introduced into the crossbar by Briggs of Glasgow; this afforded increased string-length in the treble. More recent developments include the staving of the back of the resonator and the extension of the range to C – innovations made by Mark Norris of Peebles in the interests of increased resonance. Norris has also designed and manufactured a mechanism which adjusts string pitch by a semitone, using a forked disc which exerts equal pressure from either side of each string. This innovation permits changes of tonality without a loss of string alignment and with minimal loss of sonority. It also facilitates experimental pitch bending and rapid changes of tonality.

RONALD STEVENSON

Clarseath [clarsech, clarseth]. *See* CLÁIRSEACH.

Clash, the. English punk rock group. Its principal members were Joe Strummer (John Mellors; *b* Ankara, 21 Aug 1952; vocals and electric guitar), Mick Jones (*b* London, 26 June 1955; electric guitar), Paul Simonon (*b* London, 1956; bass guitar) and Nicky 'Topper' Headon (*b* Dover, 1956; drums). With such early songs as *White Riot* (1977) and *London's burning* (1977), the Clash was the politically militant face of the British punk rock movement. The group's approach was built around Jones's crisp guitar phrasing and the pointed sloganizing of Strummer's lyrics delivered by their composer in a staccato, Cockney-flavoured recitative. Between 1977 and 1982 Strummer and Jones composed, performed and recorded dozens of incisive songs, using musical ideas from reggae and rockabilly as well as punk. Among the most outstanding were *English Civil War* (1978), *Tommy Gun* (1978), *Train in Vain* (1979) and *Rock the Casbah* (1980), which was written by Headon. The Clash dissolved in 1982 after a dispute between Strummer and Jones, who subsequently formed the group Big Audio Dynamite (BAD). Strummer later composed scores for the films *Walker* (1987) and *Permanent Record* (1988).

DAVE LAING

Classical. A term which, along with its related forms, 'classic', 'classicism', 'classicistic' etc., has been applied to a wide variety of music from different cultures. It evolved from the Latin *classicus* (a taxpayer, later also a writer, of the highest class) through the French *classique* into English 'classical' and German *Klassik*. In one of the earliest definitions (R. Cotgrave: *Dictionarie of the French and English Tongues*, 1611), *classique* is translated as 'classical, formall, orderlie, in due or fit ranke; also, approved, authenticall, chiefe, principall'. The two parts of this definition will be retained here and glossed as (i) formal discipline, (ii) model of excellence, supplemented by (iii) that which has to do with Greek or Latin antiquity (*Dictionnaire de l'Académie*, 1694), and (iv) that which is opposed to 'romantic', the latter understood as morbid and unruly (Goethe, 1829). Of the various meanings, (ii) has had the widest currency over the longest time. In this general sense, for example, Forkel recommended J.S. Bach's main keyboard works as 'klassisch' (1802, rendered in the English translation of 1820 as 'classical'). Generic excellence accounts for the similar labelling of Josquin's motets, Palestrina's masses, Couperin's suites, Corelli's concertos, Handel's oratorios and Schubert's lieder – though as Finscher has observed (1966), the term is properly reserved for works in genres ample enough in scope and developmental possibilities to be susceptible of 'classical' fulfilment.

In the early modern era, it was more often in the first two senses enumerated above that the terms 'classic' and 'classical' were applied with regard to literature and art, with analogies to Greek and Roman culture only gradually coming to the fore. This was especially true as regards music (e.g. Scacchi, 1643; Schütz, 1648), for which no antique heritage was known to survive (see Nägeli, 1826). As Weber has shown (1992), it was in 18th-century England that 'classical' first came to stand for a particular canon of works in performance, distinct from other music in terms primarily of quality, but also to some extent age (the Concert of Ancient Music generally restricted offerings to pieces written more than two decades earlier). Civic ritual, religion and moral activism figured significantly in this novel construction of musical taste, converging notably in the cult of Handel. On the Continent, where canonic concert repertories were slower to develop (or were not entirely public, as with the Viennese concert series organized by Gottfried van Swieten during the 1780s and Raphael Georg Kiesewetter during the 1810s), 'classical' music continued up to the end of the 18th century to be understood mainly in its traditional senses – as when Constanze Mozart deemed the value of her late husband's compositional fragments equal to that of 'fragments of classical authors' (letter of 1 March 1800). The composer's biographer Niemetschek, in positing the 'classical worth' of Mozart's music, had earlier written (1797, rev. 1808) that 'The masterpieces of the Romans and Greeks please more and more through repeated reading, and as one's taste is refined – the same is true for both expert and amateur with respect to the hearing of Mozart's music'. For Spazier (1800), too, a classical work of music was one that 'must gain from each [new] analysis'.

1. The Viennese 'Classical' idiom. 2. Earlier 'classicisms'. 3. Neo-classicism, Romantic classicism.

1. The Viennese 'Classical' idiom. Well into the 19th century, many partisans of 'classical' music, continental as well as British, defined their preferred repertory negatively, in opposition to mere virtuoso display, Romantic music, Rossini and other 'trumpery'. But by the 1830s 'classical' music was coming increasingly to be identified specifically with the 'Viennese classics' composed by Haydn, Mozart and Beethoven, and it is to these that the term-complex usually refers when encountered without further qualification in more recent writings on music. The notion that these works constituted a 'classical period' or 'school' arose among German writers in the 19th century, in part by analogy with the *Weimarer Klassik* created by Goethe and, to a lesser extent, Schiller. Kiesewetter (1834) referred to 'the German or (perhaps more rightly) ... the Viennese school', and other writers followed his lead. (His limitation of this school to Mozart and Haydn was endorsed by Finscher (*MGG2*), who cited Beethoven's slowness in approaching the genres in which they excelled, among other factors.) The explicit linkage of 'Viennese' with 'classical' was codified in the early 20th-century writings of Sandberger, Adler and Wilhelm Fischer, along with explanatory schemes regarding its evolution. Blume extended the boundaries of this putative period back to the middle of the 18th century and forward to include all Schubert's works, weakening any conception of a closely knit or precisely defined movement: he specifically denied the possibility of stylistic unity within the period between the deaths of Bach and Beethoven. Rosen restricted what he called the 'classical style' mainly to the instrumental works of the mature Haydn and Mozart, and of Beethoven. In this view, for which Finscher found early 19th-century documentation (e.g. Wendt, 1831, 1836), there was a stylistic period that stretched from Haydn's obbligato homophony, achieved in the 1770s and capped by the op.33 quartets, to the threshold of Beethoven's last period, when the 'classical' forms are supposed to be overstepped or disintegrating.

That there was a 'classical idiom' shared by Haydn, Mozart and, to an extent, Beethoven is more generally agreed than is the existence of a 'classical period' (*IMSCR VIII: New York 1961*). If applied to the music exclusively of these three composers, or to the historical phenomenon of their posthumous reputations, the appellation 'classical idiom' is justified; in describing music generally during these composers' lifetimes, it is perhaps better to speak of a 'Viennese' or 'Austro-Bohemian' school (with analogous terms for other local traditions), rather than of a diluted 'classical period'. Some writers of the time, such as John Marsh, distinguished only between the 'modern' style and all that came before it. Haydn's central role in the refinement and propagation of this new style is manifest (see Koch, 1793, and Marsh, 1796), despite his early geographic isolation, and differences of opinion concerning the date by which his works display full mastery. Haydn's abandonment during the 1770s of certain more local or personal features of his style – possibly connected with the wider circulation of his music in print – was followed by his achievement of an individual synthesis of pleasing tunefulness (the *galant* style) with the learned devices of counterpoint he had previously used somewhat forcedly and selfconsciously (the op.20 quartets) – though Webster (1991) has pointed to fundamental continuities of technique between the composer's music in this and later periods. By about 1775 Haydn had put behind him, for the most part, the mannerisms of 'Empfindsamkeit' – though this idiom still retained some utility for certain

types of keyboard and chamber music – and the obsessive pathos of *Sturm und Drang*, and assimilated in his own language the fantasy qualities, 'redende [speaking] Thematik' and developmental skills of C.P.E. Bach. Mozart followed Haydn closely in the 1770s in his quartets and symphonies, and the dedication of the six quartets to Haydn speaks eloquently enough of their close relationship. Other elements in the synthesis achieved by both are use of dynamics and orchestral colour in a thematic way (perhaps a legacy of the Mannheim School); use of rhythm, particularly harmonic rhythm, to articulate large-scale forms; use of modulation to build longer arches of tension and release; and the witty and typically Austrian mixture of comic and serious traits (pilloried by north German critics, who held firm against any alloying of the *opera seria* style by that of *opera buffa*). During the 1780s Haydn's instrumental works were very widely printed and diffused. His language had become understood (as he told Mozart when he set out for England) by all the world. This universality, which Mozart also achieved, especially with his concertos and operas, deserves to be called 'classical' even under the most precise definition (ii above).

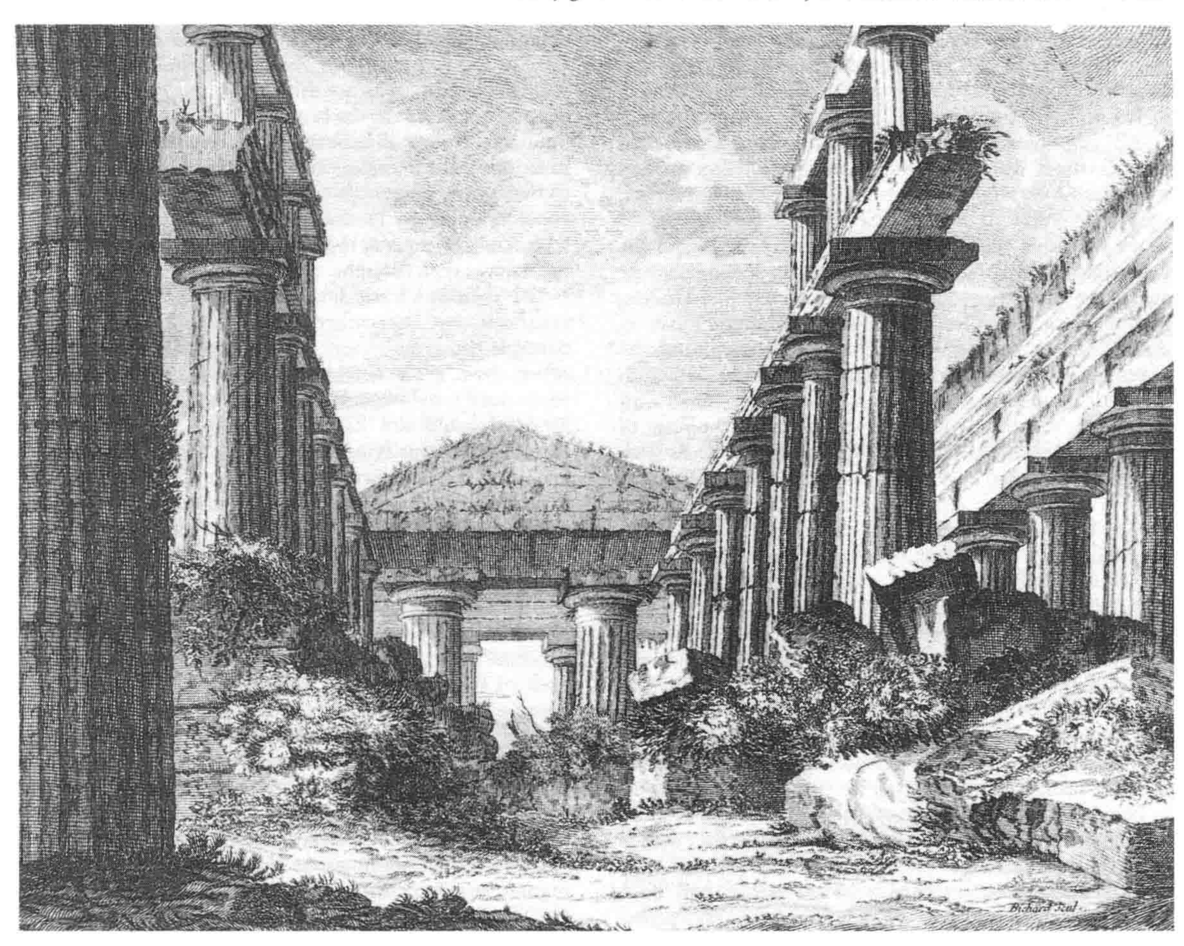
A strong case may also be made for both composers on grounds of formal discipline (i). Their high technical skill is patent. Sovereign ease of writing, learning lightly worn, happiness in remaining within certain conventions or at least not straying too far from them – conventions that were bound to please and aid the public – these mark what Henri Peyre called the 'classical' attitude. Peyre posited further that the 'classical' artist, regardless of the field or period, worked in complicity with his public, attempting to fulfil its expectations, and was not afraid to be pleasing or to submit to society's conditions. Haydn had more success, initially, in pleasing a very wide public, than did Mozart, but from the latter's own words it is known that he wrote for 'all kinds of ears – tin ears excepted'. In this easy relationship with the expectations of the consumer lies one explanation for the fecundity of Mozart and Haydn, for the hundreds of works with which they enriched all genres (absolute mastery of every genre makes Mozart in this sense the last of the universal composers). Colossal productivity such as theirs presupposes a down-to-earth, workmanlike approach to the craft. Mozart once described, in typically earthy language, how he wrote music ('as sows piddle'). A similar fecundity was enjoyed by Boccherini, Clementi, Gossec and many other masters of the time. Haydn's acceptance of certain conventions did not prevent his symphonies from being received by his contemporaries as highly original, and so dramatic in nature that they seemed literally to speak. Grétry (*Mémoires*, 1789) urged them as models for opera composers, and marvelled at Haydn's unique ability to get so much out of a single motif. In 1806 specific and detailed programmes were published for both Haydn's Drumroll Symphony (Momigny) and Mozart's Symphony K543 (August Apel, in poetic form), dramatizing these works even further.

Gerber summed up Haydn's symphonic style in his *Lexicon* (1790):

> Everything speaks when his orchestra begins to play. Each subordinate voice, which in the works of other composers would be merely insignificant, often becomes with him a decisive principal part. He commands every refinement, even if it comes from the Gothic period of the grey contrapuntists. But as soon as Haydn prepares it for our ear it assumes a pleasing character in place of its former stiffness. He possesses the great art of making his music oftentimes seem familiar; thus, despite all the contrapuntal refinements therein, he becomes popular and pleasing to every musician.

Haydn's reliance on actual folk melodies has been shown in relatively few cases, but touches of local colour enliven the fabric of his music from the earliest divertimento-style works to *The Seasons*. His art was popular by intention, and was so received. Mozart too was aware of seeking a middle ground between what was too difficult for the public and what was easy and threadbare (letter of 28 December 1782). Beethoven stood close to both at first, compositionally and in his aim of pleasing a wide public (especially in his works involving the piano); in orchestral style he took up where Haydn left off. The wave of music from Revolutionary France also had a powerful impact upon him and helps account for the exalted moral tone, the extra-musical messages that play an increasing role in his art from the 'Eroica' Symphony onwards. Whether the mature master tended more towards the 'classical' or 'romantic' has been, and will be, long debated. The circumspection or self-possession (*Besonnenheit*) that Hoffmann found in his mature works, and the degree to which his last compositions in particular are preoccupied with the premises of musical language itself, betray the deep roots of his manner in the music of Haydn and Mozart. His style of life marked him as a romantic in the eyes of his contemporaries, who also noted quite early his 'tendency towards the mysterious and gloomy' in music (Ignaz Ritter von Seyfried, 1799). By turning increasingly inward, away from the public, in his last years Beethoven strayed from one of the ideals of 'classical' art: ease of communication. In the Jean Paul sense he appeared to be a 'romantic' artist, wild, extravagant, boundless, isolated and possessing the other traits then coming into fashion with the young German *littérateurs*. But this means little because anything they perceived as imaginative, deeply moving and colourful, including the music of Haydn and Mozart, automatically became 'romantic' (e.g. E.T.A. Hoffmann). One measure of the distance in attitude travelled beyond Mozart and Haydn is Beethoven's decreasing productivity, matching his increasing selfconsciousness about being original – the necessity for every work to be a universe unto itself, born of struggle and speaking an individual expressive language. Perhaps this striving for the ultra-expressive can usefully be contrasted with a 'classical' attitude of genuine modesty and willing restraint, personal and artistic. One suspects that Mozart would have reacted to Beethoven at his most 'pathetic' the way he did to the Klopstock style, which he found 'sublime, beautiful, anything you like, but too exaggerated and pompous for my delicate ears', or to the music of Schweitzer's *Rosamunde*, in which he found 'nothing natural, everything exaggerated, and badly written for the voices'. Mozart recurrently stressed the virtues of moderation, the unforced, the thread ('il filo') that allowed one musical thought to follow naturally upon another.

The interpenetration of French, Italian and German music during the last part of the 18th century – long disregarded by scholars more intent on studying the quirks of 'sonata form' or defining the 'classical style' – is indisputable, and argues in favour of a 'classical' moment, if not period. Similarities in musical discourse at Naples, Paris and Berlin outweighed the dissimilarities, a situation that did not obtain 50 years earlier, when critics could perceive only national differences. A cosmopolitan style, cultivated in all the great capitals, was carried, through



massive diffusion by prints and copies, to every corner of Western civilization. The coining of this *lingua franca* does not necessarily depend on knowledge of the Viennese 'classical idiom'; rather, its common denominator – the irreducible core of stylistic unity – would seem to rest upon the uncontested dominion of Italian opera. Dent went so far as to state 'the classical tradition is nothing more or less than the Italian tradition'.

2. EARLIER 'CLASSICISMS'. Humanist leanings tended to promote the subsuming of definitions (i) and (ii) above under (iii), especially in France. But even in France, antiquity's models of excellence were deemed to have been equalled or surpassed about 1670–85 by modern writers like La Fontaine, Molière and Racine ('nos auteurs classiques', as Voltaire later called them). They, and Voltaire himself, became literary models for all Europe during the 18th century, and were accordingly given status as 'classical'. By analogy with literature, some scholars have attached the same sobriquet to French 17th- and 18th-century music, although it had not nearly so wide a sway. According to Dufourcq, 'la musique française classique' stretches from the founding of Baïf's Académie in 1571, the most important musical consequence of French humanism, until the Revolution. Setting in opposition 'l'opéra française classique' (from Lully to Gluck) and 'romantique' (the 19th century) betrays the literary distinctions that were imported into France pursuant to Goethe's vexing dichotomy (iv above).

The Arcadian Academy founded at Rome in 1690 became the focal point of Italian literary 'classicism'. It promoted a more sober approach to form and language, avoidance of 'Baroque' hyperbole (so-called 'Marinismo') and explicit submission to antique models (but implicit recognition of French models as well). Reform of the opera libretto by Zeno and Metastasio was a direct consequence of Arcadian 'classicism'. While refining diction and polishing language for specifically musical purposes, Metastasio separated the comic and serious genres and raised the latter to an elevation of style it had not known. In his aria texts, in particular – which he considered to be comparable in function to the choruses in ancient tragedy – he reduced vocabulary to a small number of quite simple, universal images (*see* OPERA SERIA). By the time he left for Vienna in 1730 he was already regarded as the most influential model in the field, the final codifier of aria opera. His debts to the French tragedians were, somewhat to his embarrassment, recognized as such at the time (as were the debts, more freely admitted, owed by Goldoni to Molière). There is nothing extraordinary in that one literary 'classicism' should stand on the shoulders of another, imitation belonging to the phenomenon by nature.

Quite extraordinary, on the other hand, is the effect that Metastasian elegance had on the tonal art. The poet's mellifluous language and clarity of expression taught musicians similar virtues, or so they believed. Eximeno (y Pujades) (1774) specified that it was Metastasio's 'dolcezza' that prompted Italian composers and singers to raise music to its 18th-century peak of perfection. Arteaga (1783) equated the reform of the libretto with the beginnings of 'modern' music. By their own admission, 'modernists' as diverse as Hasse, Jommelli, Rousseau, Grétry and Paisiello claimed Metastasio's verses as their main source of inspiration. Mozart, typically, cut his compositional teeth by setting Metastasian arias, and was involved with the poet's works right up to the end, in *La clemenza di Tito* (the very drama that Voltaire proclaimed 'equal, if not superior to the most beautiful productions of the Greeks'). Haydn rated his setting of Metastasio's *L'isola disabitata* among his best works. Cimarosa was still setting Metastasio, albeit with many modifications, to the end of his life. The Berlin critic Krause, in what might be called a poetics of Metastasian opera, *Von der musikalischen Poesie* (1752), wrote that 'good taste consists in flattering the ear and touching the heart; it has reached perfection in the Italian operas of Hasse and Graun'. C.P.E. Bach still subscribed to this view when he wrote in his autobiography of 1773 that 'Berlin [Graun] and Dresden [Hasse] represented a new era in music as a whole and in its most accurate and fine performance in particular', a highpoint which he feared had since passed, owing to inroads made by the comic style. Hasse was widely considered the leading figure of the style the 18th century called 'galant' and as such was one of the main predecessors of the 'classical' synthesis. This style prevailed up to and beyond the middle of the century (well beyond in Berlin) and constituted one of the most admired translations of Arcadian classicism into music (Metastasio preferred Hasse above all other composers). At the same time two other Arcadians, Goldoni and Galuppi, raised *opera buffa* to a peak of literary-musical excellence, the one inspiring the other to new heights of parody, irony and wit (providing worthy forerunners on the path leading to the collaborations between Da Ponte and Mozart). Galuppi's definition of good music, told to Burney, was 'vaghezza', 'chiarezza' and 'buona modulazione'; his own music shows that even the last applies mainly to melody. What sounded 'modern' to the generation that matured around the mid-century was elegant, affecting melody, of a periodic nature, tastefully 'graced' with many fine nuances, and simply accompanied. Even C.P.E. Bach was so caught up by this aesthetic that he deprecated the operatic arias (but not the oratorios) of Handel, saying of him 'he could never have become a Hasse or a Graun even if he had had the opportunity'. Instrumental music found no rationale with Quantz and Bach except as an imitation of fine singing: Italian singing, to be sure, and above all that paragon of the age, the castrato.

3. NEO-CLASSICISM, ROMANTIC CLASSICISM. Forces were abroad in the mid-18th century that would eventually overthrow the notion that music existed to 'flatter the ear' (but not its corollary about 'touching the heart'). At first less literary than artistic and archaeological, they proceeded from the emotional rediscovery (once again) of the force and sublimity of antique monuments, whether intact or, more characteristically, in ruins. The movement began in the 1740s with the coming together of Piranesi and members of the French academy in Rome. Hugh Honour described their artistic breakthrough as follows: 'Encouraged to look at Antiquity with fresh eyes, they sought its essence in the primitive – painters in the spare drawings of Greek vases and architects in the robustly masculine, austerely undecorated Doric temple at Paestum'. An important turning-point was the expedition led by the Marquis de Marigny (brother of Mme de Pompadour) to Paestum in 1750, the occasion which produced Jacques Soufflot's famous sketch of the ruined temple of Neptune from location (see illustration), a sketch that was later engraved, used for an actual stage-setting (1755), and influenced subsequent ruins shown on the operatic stage.

'Temple of Neptune' at the Sanctuary of Hera, Paestum: engraving by Jean-Baptiste Bichard after Jacques-Germain Soufflot from 'Suite de plans de trois temples antiques à Paestum' (Paris, 1764)

Out of a collective vision of an antiquity to be revived in all its sombre, even primitive qualities emerged what art historians now call 'Neo-classicism' or 'Romantic classicism'. Theorists and critics were quick to seize upon the trend, among them Caylus, who started bringing out his illustrated *Recueil d'antiquités* in 1752; Laugier, who in 1753 attacked both the Italian Baroque and the French Rococo for having strayed from the simple truths of nature; Lodoli, whose rigorist ideas on architecture were codified by Algarotti the same year; and Winckelmann, whose better-known work appeared in 1755, mixing sentimentalism with an idealistic nostalgia for everything Greek, in which he saw 'noble simplicity'. These and similar works represent a reaction against the earlier 18th century's playful treatment of the antique heritage – against 'la mythologie galante', as it has been termed. Longing for the grandeurs of a greater past (whether that of antiquity, the Middle Ages, the Renaissance, or Louis XIV) back beyond the immediate past accounts for the beginnings of both 'romantic' and 'neo-classic' art; the latter has been called a dialect within the language of the former.

Algarotti was in the vanguard of operatic as well as architectural reform. In *Saggio sopra l'opera in musica* (1755) he advocated a return to first principles, suggesting a closer look at ancient drama and even at ancient amphitheatres. Larger and better opera houses in Italy had provided the models for the rest of Europe since well before Algarotti's time, but no one spelt out as he did the needs with regard to both sight and sound. Larger orchestras were the consequence of increasingly large theatres, and ultimately a style of music to fill them, truly symphonic and grandiose, instead of chamber-like (as in the early symphonies of Sammartini). Concomitant with this passion for grandeur along antique lines, which increased towards the end of the century, was the revival of interest in the operatic chorus. Before Algarotti even Krause had awarded the palm to French opera in this respect, and for integrated ballets, saying that Italian opera could only be improved by adding these resources to its basic strengths.

That is what happened at Parma a few years later when Frugoni adapted some of Rameau's librettos for setting by Traetta; in the preface to *Ippolito ed Aricia* (1759) Frugoni defended the introduction of choruses by referring specifically to Greek practices. Earlier, at Rome, Jommelli had taken the bold step of ending his *Attilio Regolo* (1753) with an impassioned obbligato recitative and a chorus. It is no coincidence that Rome and Parma, two of the main centres of 'neo-classical' art in the 1750s, were the main meeting-grounds of French and Italian ideas, nor that Jommelli and Traetta worked for patrons who played such a role in the archaeological excavations.

Jommelli's appointment at Stuttgart in 1754 had an electrifying effect on German music similar to Hasse's at Dresden 20 years earlier. Traetta reached tragic heights in his works for Vienna (1761, 1763) and Mannheim (1762) for which Heinse could find no better praise than to call them 'classical' and 'worthy of the ancient tragedies'. A certain mutual strengthening between artists, such as Haydn and Mozart later experienced, is evident in the relations between the Neapolitan Traetta and the Bohemian Gluck around 1760; as a result, Vienna's future eminence was already well launched. Gluck, like Traetta, had been much involved with French dramatic music in the 1750s. In setting *opéra comique* he acquired the popular tunefulness that this genre promoted, corresponding with its seeming naturalness. His involvement with ballet, too, together with his experience as a composer of *opera seria*, endowed him with a fund of resources with which to create a new supra-national kind of musical tragedy. The vision he achieved in *Orfeo ed Euridice* (1762, Vienna), with the important collaboration of his poet, Calzabigi (as well as the choreographer, Angiolini, and scenographer, Quaglio), represented a triumphant expression in opera, the total art form, of the new wave of radical severity in expression. His contemporaries viewed Gluck's control of vast time spans as epochal: the working against each other of the Infernal and Elysian scenes in *Orfeo*, for example. They also singled out his painting of gesture in music (which influenced subsequent composers of melodramas, dramatic ballets and symphonies; *see* STURM UND DRANG).

The publication of *Orfeo ed Euridice* at Paris in 1764 caused little stir. A decade earlier the style that subsequently came to be known as 'Rococo' had been superseded, almost overnight. Much notice had been taken of a turn towards 'Greek simplicity' in spoken drama with Guimond de La Touche's *Iphigénie en Tauride* (1757), which Grimm and Diderot praised because 'it suppressed all *galant* intrigues such as had heretofore disfigured the genre'. But Grimm could not bring himself to credit Calzabigi for doing the same in opera, and his prejudices against non-Italian musicians prevented him from recognizing in Gluck's score a similar turn towards simplicity and stark, unadorned pathos, nourished by dreams of ancient glories. Only later, after Gluck's personal triumph in Paris, did Grimm admit that his music represented a transgression of earlier boundaries, going beyond Metastasio's vision of Arcadia, to achieve that same sobriety and gravity that he applauded elsewhere in the arts.

The tragic tone of Gluck's *Orfeo* and *Alceste* (1767) helped feed the subsequent wave of 'Sturm und Drang' pathos in the Viennese symphonists, and even contributed to the deepening of Haydn's symphonic style (according to Feder). These operas, together with Gluck's masterpieces for Paris in the 1770s (pronounced 'classiques' by Grétry), established the bases upon which musical tragedy could continue to evolve. Piccinni's, Salieri's and Sacchini's French operas, as well as those of Méhul and Le Sueur, extended the lineage, which came to a magnificent climax of tension in Cherubini's *Médée* (1797), a work which subsumes Haydn's symphonic development as well as various French and Italian operatic styles, and which, moreover, had a powerful impact on Beethoven. In explaining his *Mort d'Adam* (1809), Le Sueur made a statement that characterizes the attitude of this whole school; he had 'avoided all semblance of the musical Gothic and followed only the grand taste of the antique, so that the work was not directed to one country, or one people, but rather to the brotherhood of the human race'. Similarly, Rousseau believed that his invention of *mélodrame* revived the *mélopée*of the Greeks. Previous claims to the contrary notwithstanding, it is clearly necessary to consider antiquity (definition iii) in relation to what was 'classical' in music, because that is how musicians themselves then thought.

The various 'classicisms' in the arts of Europe are not contradictory, but rather like a series of waves piling towards the same shore: the one phase builds upon the other, just as a single art is nourished often, and reciprocally, by a sister art. What the Viennese 'classics' attained could not have come about without passing through the purifying fires of that mid-18th-century upheaval which generated 'Sturm und Drang' and 'Romantic classicism'. It was fortunate that the most revolutionary creative spirits, those seeking raw antiquity and primitive passions, had the strengths of Arcadian 'classicism' to fall back upon, as necessary, and even beyond these, the achievements of French 'classicism'. In a work like Mozart's *Idomeneo*, of crucial significance to his subsequent artistic development, the contribution from each of these phases can be identified, which does not deprive the opera of its purity, consistency or tragic dignity. Mozart's motivic and tonal control extended over the span of an entire opera for the first time in *Idomeneo*. Such careful relating of every detail to the whole can be regarded as fully 'classical', in contrast with the more random stringing together of tonalities characteristic of Hasse and the *galant* phase. Haydn achieved the same organic unity in his last period, most superbly in *The Creation* and *The Seasons*, two monuments that serenely summarize his life's work, while mirroring his lifelong and deep-seated feelings for nature.

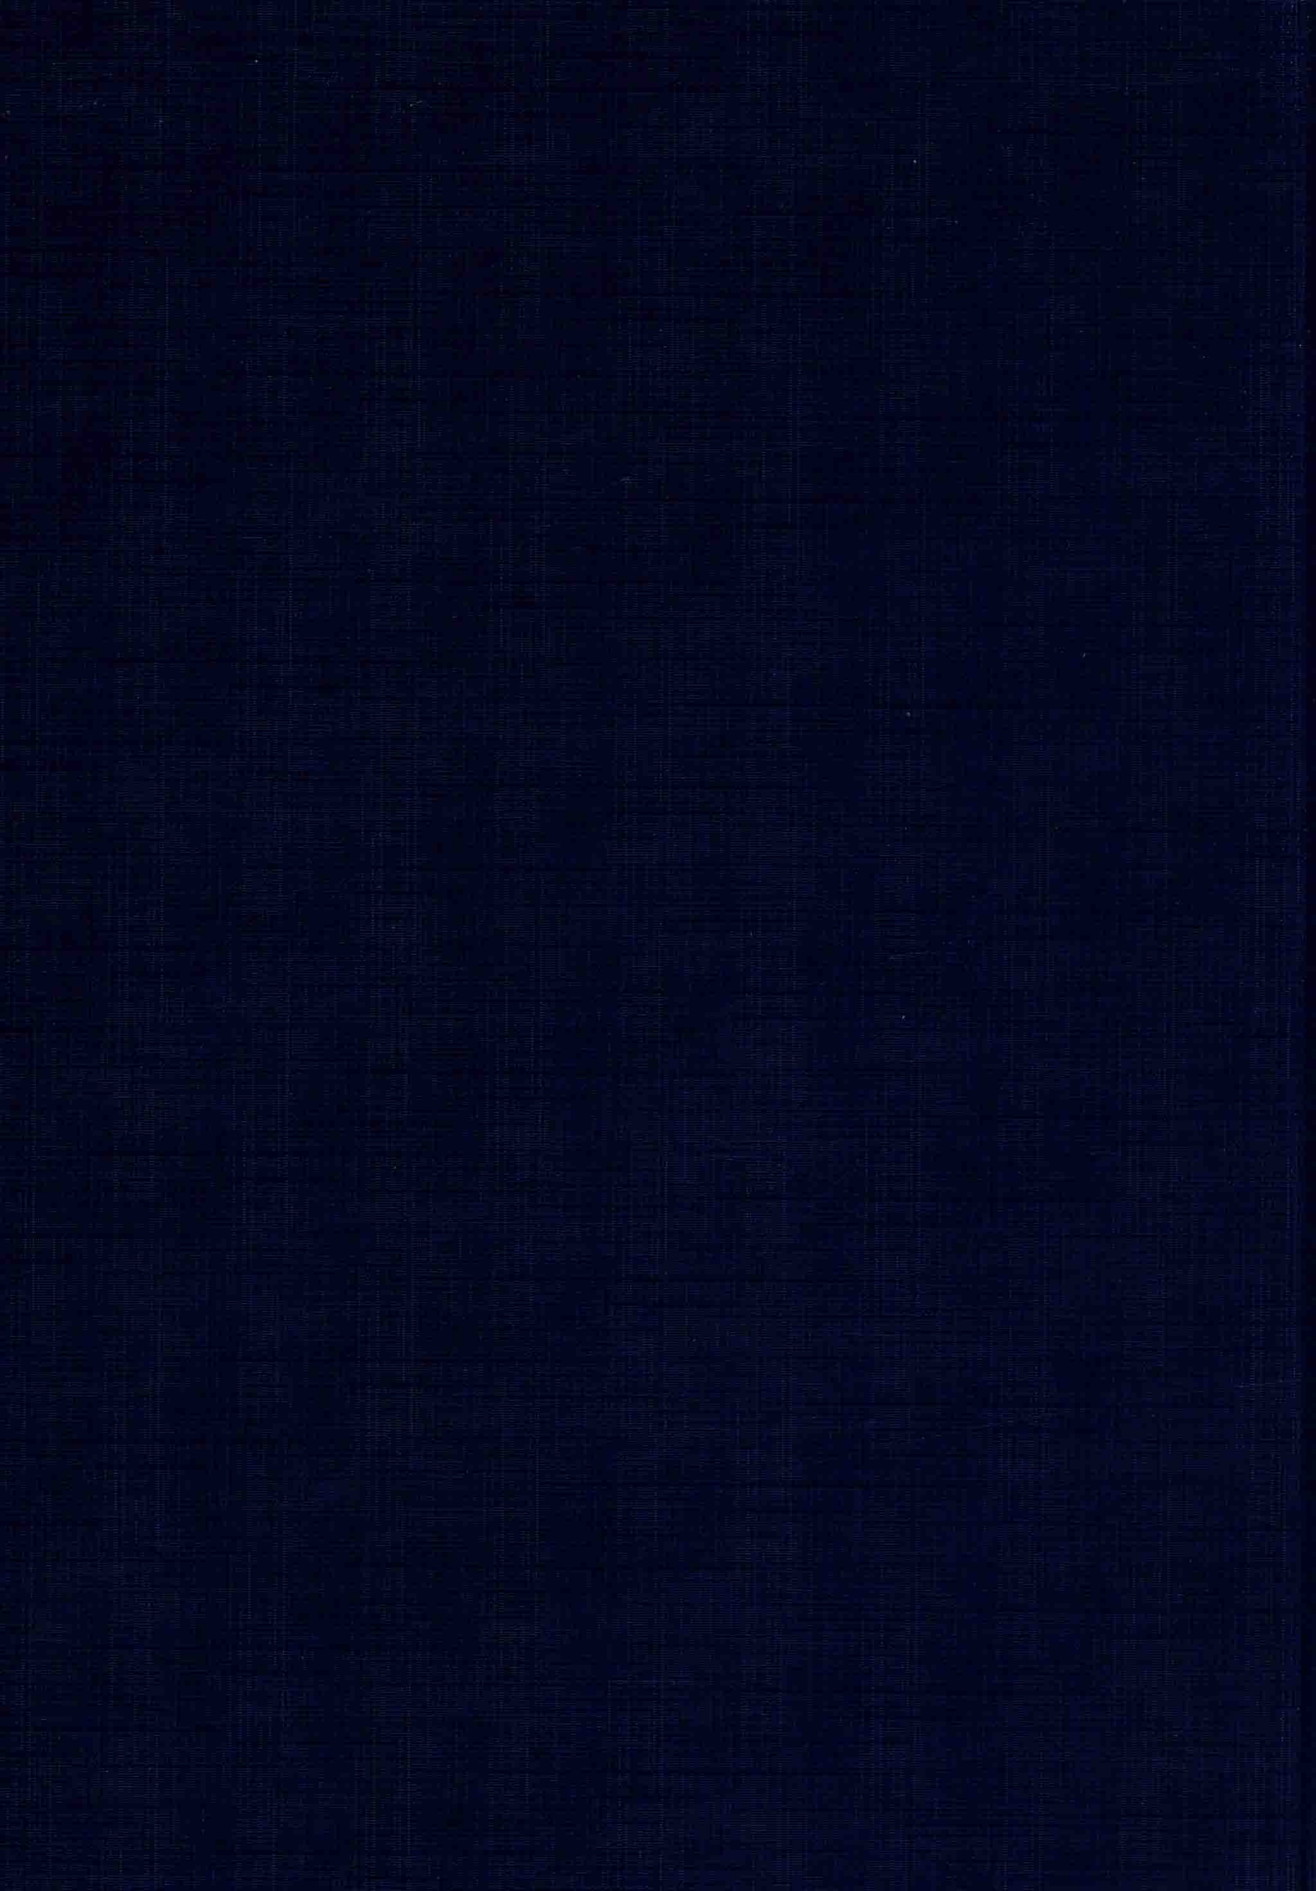
Classical Concert Society. London society founded in 1908 to continue the work of the Joachim Quartet; *see* LONDON, §VI, 2(iii).

Classical Harmonists. Choral society founded in 1851 in BELFAST.



Classic rock. A term identifying the incorporation of classical music referents into some rock, from the late 1960s onwards. The term is common in the USA and all but unknown in the UK, and should not be confused with the idea of the classic rock song, whose popularity and frequent playing have made it a standard part of rock repertory.

The earliest notable example was Procol Harum's *A Whiter Shade of Pale* (1967), whose scalic descending bass and close part-writing recalled late J.S. Bach. From there it spread to various British progressive bands such as Yes, whose re-orchestration of the third movement of Brahms's Symphony no.4 appeared on *Fragile* in 1971, the *Concerto for Group and Orchestra* of Deep Purple in 1970 and the work of arranger David Palmer with Jethro Tull, particularly in that group's regular concert performances of a Bach bourée. Even Queen's *Bohemian Rhapsody* (1975) was perceived to overflow with the sentiments of Italian grand opera. Emerson, Lake and Palmer made use of East European material, transcribing Musorgsky's *Pictures at an Exhibition*, Bartók's *Allegro barbaro*, Janáček's Sinfonietta, works by Tchaikovsky and later those of Copland and Ginastera. Subsequently heavy metal guitarists from Ritchie Blackmore to Yngwie Malmsteen would rely on Baroque violin figuration, particularly from Tartini, Vivaldi and Corelli, to inform their virtuosic techniques.
